JOAN OF ARC SMITH

(Continued from Page 9)

"But whatever you say about me, don't forget this," she says, talking now high and serious: "Don't forget to say I'm like Brawny Bill Wolfert—I'm out for economic justice first, last and always, for man, woman and child!"

So they went off to the telegraph office and sat down and filled up all the yellow paper there with that heart-throb woman stuff, and sent it in to the editors in the city, where they sit there always in their big costly armchairs, sighing and sobbing for it. And they all jumped up when they seen it, and took off their coats, and put it into all the papers the next morning with headlines a mile high.

"The woman of mystery," they says—"who is she? Such is the question on all lips in the great Manumuxit Valley strike to-day. Young and tall; strong, athletic, yet divinely fair and strangely beautiful; of evident refinement, yet dressed in the blood-red guise of anarchy and socialism; though refusing all information of herself but for the statement that she may yet prove the Joan of Arc of this portentous industrial struggle—this strangely fascinating and alluring figure is the goal of all eyes in this now silent center of whirring looms and bobbins to-day.

"All lips now frame one anxious question: Will she, if the militia is introduced here, lead the workingmen to the point of war and bloodshed in this peaceful valley? The mill managements are quite evidently nonplused by this new appearance; and the strike leaders, though reticent, are clearly expectant over this dramatic turn in the situation, and new developments are awaited hourly."

"There's spreading some truth for you!" they says to Brawny Bill Wolfert at the strike headquarters.

"She's a wonder!" says Bill, not showing it, though his heart was full of joy and pleasure, seeing what advertising all this was starting bringing him and his strike. "That woman last month that stripped off her diamond and ruby rings and gave them to the cause," he says, "was just the first letter in the book to this one. She's the best I've seen."

"You ought to know, Bill," they says, for he always had his string of women doing stunts for him and his cause. He was that kind—hard and still and desperate—that the women always fall for, especially the lonely, dissatisfied, investigating kind.

He worked with her the usual hard way, urging her to go on, by giving hints of all he'd done for the cause.

"Don't let the police bluff you," he says to her, for they were all threatening now to lock her up. "They're a pack of boobs. Noise is the most dangerous thing they have on them. Take it from me! I know from experience. If you've got anything to do don't mind them. Go and do it," he says, pushing her along, and so she went and done it.

This time, when she got up to speak the next day, she started after them, wild and fierce, on the question of the militia, giving them the statistics Bill handed her about the strikers fighting the battles of America.

"Three-quarters of these men—these strikers—were in the war over there!" she says, repeating his dope just as he handed it to her. "And two-thirds of them were wounded, fighting our battles for us. Such is not the stuff of economic slavehood," she says. "And before they press too far with their threats and their militia, let them beware! Let them look first!" she says. "Men have rebelled before," she says, "under the lash! And even under the leadership of a weak woman driven by a power beyond herself!" she says, alluding to that Joan of Arc thing in all the papers, and all the strikers on the common laughed and hollered and cheered her until the police came in and hushed them up.

And after that all the reporters come up and begged and pleaded with her to give them just the initials of her name if nothing more, for the public were clamoring and restless for it. And she said no, though maybe she might later—give them the initials anyhow. But she wasn't sure, for a particular reason, and that was because her family—her father—would be dead set against her coming into this investigating work and all this radical work when he knew it. And she could not have him know that she was there—not yet. But one thing she would say, now and all the time, and never let them forget it in their writings: That she was always, like her great leader, Brawny Bill Wolfert, always out for just one motto—that same motto that he always had—economic justice for all, man, woman and child, share and share alike; or else there would be bloodshed or worse, and she was going to tell her father that some day.

So the reporters went away well pleased that she was holding back her name yet, making more mystery and easy writing for them for some days yet, perhaps; and went over and sat down in the telegraph office and exchanged their notes, one with the other, and got their stories out; and then all went back to the place where they were playing poker again. And in the morning all the papers came out with miles and columns and tons of ink, starting in under full mourning headlines:

Scrutinized by thousands of inquiring eyes when, dressed in the blood red of the social revolution, she preached the most flagrant doctrines of Marx, Robespierre and Bakúnin; her identity still undeciphered at the end of another twenty-four hours replete with thrills for all who participated in the great strike of the textile workers in the Manumuxit Valley today, and finally warned by the police against possible violence, the beautiful young woman, now known through the confines of the United States only as Joan of Arc Number 2, declared that she would lead, if necessary, a new crusade—based, she stated, upon Brawny Bill Wolfert's famous motto, economic justice for one and all; and, if need be, would go down to death defying the state's soldiery.

Who is she? becomes more and more the moot question of the hour, baffling so far every investigator. It was learned from her one-time associates that at first she called herself Smith, though this, she now maintains, was used merely to conceal her real name, which later—when her father should consent—she might in part, at least to the giving of initials, reveal.

Asked if they had further information on the subject of the mysterious newcomer's personality, the mill managers professed ignorance and indifference; but they were clearly disturbed over the developments of the strike centering about this strangely mysterious figure. The strike leaders, including the radical Brawny Bill Wolfert, although professing equal lack of information, openly looked for developments of great interest to-day. And all through the historic Manumuxit Valley to-night the query trembling on every lip is: Who is she? What will she do next? What will the morrow bring to us? Shall a second Joan of Arc be leading us to civil war with an all but religious fanaticism?

"Is she getting away from you a little, Bill?" says the boys at the strike headquarters.

"No," he says. "There'll be no fighting; you know that. The worst she can do is get herself arrested and let us bail her out, and in the meantime we've got all the papers sitting up and hollering for our stuff that she's handing out to them."

"Spreading more truth," they says to him, "all over!"

"I've been twenty years in the business," says Bill, "and I never seen one like her. She's the queen of advertisers. She puts more pep into self-advertising than any woman I ever seen in the radical movement," he says. "And that's high praise. That one here a month ago," he says, "that took off her shoes and stockings and walked up and down Main Street to see how the Polack women felt going around in the wet was a piker to her. She never came back for the second day. But this girl is a raving genius," he says.

"But just the same," he says, "I'll keep my eye on her. They're all light in the head when they get that way, and they need a man to guide them."

And they laughed, remembering Bill and all his other women he'd guided. And he went off and spoke to her, and held her back just a bit.

"Ease up," he says to her, "just a trifle."

"What do you mean?" she says. "Ease up? Keep back my principles of economic justice for one and all?"

"Or do you want to get into the calaboose?" he says to her.

"What do I care?" she says.

"I'm telling you this," he says, "not for my sake," he says. "For me it would be good—more than for you! So I'm telling you just like I would my daughter," he says, starting in with her the way he did with those young high-spirited ones at first. "My daughter!"

"You're as bad as my father is," she came snapping back.

Boston

A Distinctive Strip-shingle

The Ruberoid Strip-shingle is unrivalled in its unusual features. Here is a shingle which, due to its patented form, gives you maximum quality—that is, true Ruberoid quality —at minimum cost.

Consider what this means. For over a quarter century Ruberoid Roll-roofing has set the standard by which Roofing products have been judged. Now this quality is found in a strip-shingle, the price of which is within the reach of everyone.

From a decorative standpoint this shingle offers decided advantages. It gives you an opportunity to select your roof from nine attractive designs, each of which may be laid in solid colors, or in artistic blends of sage green, steel grey and Venetian red. The evenly crushed slate surfacing is permanent in color and the granules are deeply imbedded in the underlying coating—and stay there.

On request we will gladly send you an attractive folder picturing the designs and color combinations in which Ruberoid Strip-shingles may be laid.

Ruberoid Products are sold by leading dealers throughout the country.

(Continued from Page 138)

"I'm old enough to be your father, at that—don't forget that!" he says, patting her arm the way he worked on with them. "For I had a daughter," he says, "to tell the truth, that would be about your age."

"You had!" she says, looking up sharp. "Is she dead?"

"No," he says. "But my wife took her away from me years ago—when she got up and left me for no reason at all! I've not seen the one or the other of them for years."

"So then you're married," she says, starting up and moving away from his hand like so many of them did at first. So he told her how it was.

"Yes," he says—"to my sorrow! I don't speak of it much. But I don't flinch it neither. She was no wife to me. She was a puling, peevish, pindling thing that was always pretending sick. I never could get along with a woman that held me back. With no brains," he says, "and no intellectual strivings," he says, appealing to her, telling her his troubles like a man with his experience does to the woman he's pleased with at the time. But he didn't change her much, he could see. She still took the news kind of hard.

"So you're married," she says to him again, her voice harder than ever.

"If you call it so, yes—when I haven't seen her now for sixteen years, nor seen my little daughter neither," he says, looking down long and sad. "But here," he says, breaking off finally with a wrench and going onto another more agreeable subject, "I'm doing all the talking. You tell me now," he says, "what's your name? Who's your father?" he asks, but without results still. For he could feel the flesh of her arm harden where he tried to put his hand again upon it.

"I'll tell you that later," she says, "maybe, if you still want to hear it. I've got an idea maybe sometime I might bring you face to face with him," she says, "and let you see him plain and personal. And we could go over and consider all this stuff on economic justice and all that together," she says, and gave him a kind of a hard laugh. "It might do him good—and us too maybe."

"Sure! Any time! Lead me to him!" says Brawny Bill, leaving it there, seeing it was no use to go on further for that day.

So out she come the next day in her speech and sung out louder and louder yet for the economic justice and the revolution—and bloody war, if needed.

"Will you not give us your name yet?" the reporters were gathering around her to say before her speech. For she was still as unknown as the first king of Ireland. "The public is crazy and clamoring for it," they said, "from Maine to California. At least you might give us your initials, like you said."

"No," she says, thinking. "Not yet. But maybe not so long after I will give it to you. For I'm aroused now," she says. "And I've been thinking heavy of doing what I should—of going to my father and appealing to him personally in this cause of economic justice, and if I do I'll let you all know."

"You'll give it out all even to us if you do?" says one of the reporters. "Will you?"

For she was a grand thing for them. They could go off and play poker all day in this quiet place they'd found there, and when the time come work in together and send their story out and report the strike in full, writing what they got from her.

So she said she would—all even, with no favorites. And they went out in a body over to the telegraph offices and done their day's work up together.

"Will she lead the strikers against the militia?" they writes. "This, on this evening fraught with possibilities, after a day more than ever threatening, is the deep question of the hour in the minds of the thousands who stand waiting, watching tensely, in the crisis of the Manumuxit industrial struggle, the figure of the unknown, athletic and beautiful woman leader who, although wrongly giving her name as Smith, still, under the blood-red banner of Tolstoy, Brutus and Garibaldi, defies the police and the militia of the sovereign state of Massachusetts under the assumed but unquestionably popular name of Joan of Arc.

"'Economic justice for all—man, woman and child'—the motto of Brawny Bill Wolfert, which she has proclaimed for hers also, has here become the watchword of the hour, on what may yet prove to be the eve of the clash of arms in what the leaders of the strikers describe as the possible final upheaval for communism, socialism, anarchy and French syndicalism throughout the United States and civilization as a whole."

And so that next day, when she goes to speak once more upon the common, the head of the police, after once warning her to desist from stirring up the crowd again to this anarchy, communism and general devilment, has her arrested and led over to the women's lockup in the basement of the city hall, where she sits in her blood-red dress, tossing back her bobbed yellow hair, defying them, until Brawny Bill and the rest come over and bail her out, scowling at the officers.

"What'll you do now?" says the reporters, coming up, stepping on their cigarettes. "Will you make your statement to the press? Will you give your name out now?"

"I will not," she says. "Though I may soon. I may soon," she says when they drew in closer to her for this reason: "For I may have finally to bring my father into this, after all," she says. "For I am greatly aroused and much in earnest since my arrest," she says, "and willing to take any means to enforce the motto of Brawny Bill Wolfert, that noble leader, of economic justice for all—man, woman and child. And my father," she says—"though I have withheld this from you before for family reasons—is a very celebrated and powerful man, who could do more for the economic justice which I have come to be so interested in," she says, "than I think any man living.

"So for this reason," she says, "during the hours and minutes of my imprisonment here I have worked out this plan, if my leader, Brawny Bill Wolfert, will consent," she says, now turning to him.

"Consent!" he says. "Did you ever see me flinch yet from anything put up to me for the economic justice of the worker?"

"Well then, I will take you with me," she says, "and bring you face to face with my father, so that between us we can convince him, no doubt, of the rightness of the demand for full economic justice for man, woman and child. Will you come?" she says.

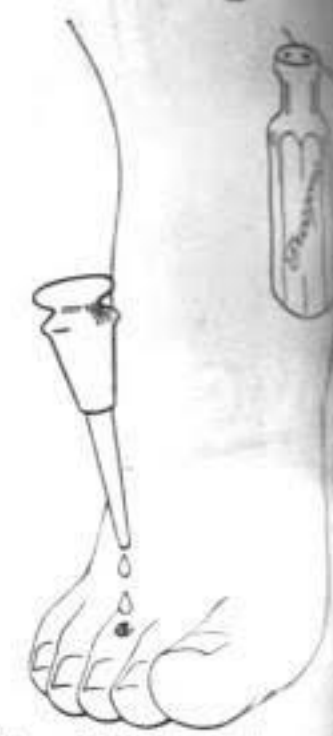
"Why not?" says Brawny Bill. "Who'd hinder me?"

"Only this," she says to him and the reporters: "For justice to my father, who might not desire to be drawn in, nor implicated or involved in this idea, you'll have to do this: You'll have to go some miles with me in a taxicab, consenting to be blindfolded."

"Blindfolded?" says the reporters, looking at one another with a happy smile, for they could see more columns and miles of print, being mostly, as they were, on piece work. And Brawny Bill, though he looked brawnier and uglier than ever outside, stood shining brighter and brighter inside him, for he seen what a genius he had with him, and what advertising she was getting out day after day for him and his strike.

"Yes," she says, answering them back. "For it's only fair to my father that he has the right or not to say whether his influence and name is used in all this thing—and whether or not we convince him. For, after all, I'd be the one, not him, that would get plunged into this war for equal and level economic justice for all, if he wasn't let to decide this much for himself. And so no one, not even Mr. Wolfert, should know who or where my father is until he meets him face to face, and lets him decide whether he will come in with us and lend the influence of his great name to this justice we are speaking of," she says. "But if he does," she says, "it will have great weight in getting him. For I'm telling you no lie when I say he is a greatly celebrated man, and his decision will have deciding weight in this matter that I'm after. But still and all, that is his option, and you may or may not hear his name after all," she says to the reporters. "That will be according to how he sees it.

"Will you do this then—will you come with me to meet him blindfolded?" she says now to Brawny Bill, stretching out her hand.



"Do you see me quitting?" he says, biting down and weaving the big, hard muscles of his jaw back and forth.

"And do you consent and agree, on your honor as a man and a leader, if we do not get my father's consent nor convince him, and yet you learn afterwards his name—you will never give it out?"

"I do," says Bill.

"So the newspaper and movie boys with the picture machine took their photographs of them shaking hands, and Brawny Bill blindfolded, and her with a pair of handcuffs hanging from her wrists, showing how she had been arrested, and went off back to the telegraph office and wrote more miles and columns on the yellow paper on this thickening mystery with a woman in it, throwing more strong searching light upon the question of the strike.

"Who is her father? This query—now in every heart—may serve as the turning point in the immense and terrible industrial warfare still threatening revolution at the closing of the day's climax in the great industrial drama in the Manumuxit Valley to-night.

"Arrested before speaking to the multitudes gathering eagerly in the ancient common to-day to await until in her familiar red garb she would no doubt urge them under her leadership to withstand the authority of the state's guardsmen; thrown into prison; bailed out by Brawny Bill Wolfert, veteran leader of the strikers; confessing that her name was not only not Smith, but that she was the only daughter of an international figure of great celebrity; planning, with Wolfert blindfolded by her side, to ride and plead with her father for economic justice, which he is in a position to secure—such were the additions made to economic history along the far-famed Manumuxit River by the blood-red Joan of Arc by nightfall to-day.

"Awaiting this visit, which may or may not settle a desperate clash between the strikers and the militia, the whole valley sleeps fitful and uneasily to-night. This unrest has even reached the capital of the state. The governor, when approached upon the matter, said in an exclusive interview with your correspondent to-night: 'While I have no information on the subject whatever, I believe that something may or may not occur to change the general current of events to-morrow.'"

"What is this you're pulling? Is this thing on the level? Are we going on? Or is this all a stall?" says Brawny Bill when they were by themselves, for by this time she had him thinking foolish.

"Certainly we're going on," she says, not turning a muscle in her face, though it was flushed still, and excited, "and it's no stall." And he wondered now was he crazy or was she.

Yet, nevertheless, he let her put the blindfolding on, and they started out that night in a big machine, and whirled around for good luck till they were sure they had shook the machines of the reporters finally. And then the old ark of a hired limousine they had laid down close to the ground and went somewheres for two hours or so with most astonishing speed, rumpling and disturbing and bumping Brawny Bill half insensible when he laid back and tried to get a nap, after he'd finally given up the idea of getting her to tell him where they were going.

It grew better running then, and he knew now he was slipping into the streets of a big city, hearing the noises and feeling the stronger lights of the street lamps as they flashed by on his blindfolding.

"What's this?" says Bill when finally he feels them stop after turning and twisting through the streets of the big city for some time. For, though he couldn't see, it didn't sound nor smell like the high aristocratic section that he thought to find himself stopping at, and he was beginning to get a little leery.

And then they gets up and she leads him blindfolded up into a house.

"Here's some stairs," she says. "Look out."

And he come on, for he couldn't back out now, no matter how leery he was getting.

"And here's the threshold."

And he stepped over it.

"And here we are!"

And he heard the door close in behind him.

"And now you can take the blindfolding off," she says.

And he done so, blinking and all ready for action, if needs be.

"What's this?" he says then, surprised.

For he stood looking at a figure in a mirror; one of them high dark mirrors they used to put in their big fine houses fifty years ago. And it moved then—the figure—when he moved. And he seen now he was just looking at himself.

"What the ——" says Brawny Bill, not finishing the sentence, when he looked around the room. For it was fitted up nothing grand like he had expected—outside the mirror—but more like a poor city boarding house. And then, staring, he seen the figure of that thin small woman, standing white and shrinking behind the big old-time black-walnut bed.

"Don't you recognize her?" says this big Joan of Arc, standing stiff, watching them, breathing hard, yet with a plenty of color in her cheeks too.

"Min!" he says, staring. "Min!" For he seen, of course, naturally, who it was facing him after all them years.

"And you!" he says, turning, cursing, and stopping when he saw the look upon her face—this Joan of Arc's.

"You ought to know her, too, Bill," says the older woman with her voice trembling. "You ought ——"

"Call me Joan of Arc, that'll do nicely!" says the one with the bobbed light hair like Bill's, stepping over and stopping her with a kind of small hard smile upon her face. "For I'm afraid of no one when I'm right," she says, holding her head upright. "And my motto," she says to him, "is economic justice, equal and level, for man, woman and child. The last two just like the first! And it's a good motto," she says. "I got it from my father."

And he stopped still, growling in his throat, torn between the longing to smash her and the knowledge that he could not neither.

"So now," she says, going on when he did not, "I've kept my promise. I told you I'd bring you face to face with my father, and I've done so." And following the direction of her pointing, he looked opposite himself again, into that big, dark, old-time mirror you'll see in them old mansions that are made over into boarding houses. "I've brought you face to face with him."

And he stood there, watching at the face across grow mad and red and ugly in the mirror.

"My father," she says, pointing now in the other direction, "and what he done for economic justice!"

And the small sick-looking woman across the room sat down sudden and weak in an old boarding-house bedroom chair.

"Cut out the comedy!" says Bill. "What do you want?"

"I want," she says, "just what we came here for—a talk on economic justice for one and all, man, woman and child.

"Sit down," she says to him, where he stood staring, his face redder than it was healthy for it to be. "Maybe I ought to start in telling you from the first just how much economic justice has come to us two so far," she says, and then she went on and told him with that high-headed look still higher on her and the hardness still harder in her voice.

"For, no doubt," she says, "you will want to hear the whole story of what we've done," she says, "since you jumped up and left us, with that other woman," she says; "and how we fared for economic justice."

Every Season Claims
This All-Wear Jacket

It belongs to every season, too; "travelo" is for June, July and August as well as for October, November and December! But, here's the big idea about this handy, dandy jacket. No matter when you buy it or for what, you still have your "travelo" for its countless other uses—for work or play, traveling, motoring or lounging. But please remember this: Only in "travelo" do you get the wear, fit and shape which the exclusive "travelo" elastic-knit process makes sure.

Over 5,000 Dealers sell "travelo" in a variety of models and colors, including many handsome heathers. However, write us if you don't find them; and mention style, size and color preference

$75.00 in 5 Days!

"During the past five days," writes Mr. Frank H. Thompson of Washington, "I have earned $75.00 by your plan. On my best day I cleared over $21.00."

Year 'Round Extra Profit

Of course, Mr. Thompson doesn't earn $21.00 extra every day. But he does earn generous profits month after month, the whole year through. In February it was about $50.00; in March about $60.00; in April $50.00; and so on. That extra money helps him in many ways—just as an extra pay check would help you every month.

Thousands of men and women now earn extra money by the profitable Curtis plan. Is there any reason why you shouldn't? Subscriptions for *The Saturday Evening Post*, *The Ladies' Home Journal* and *The Country Gentleman* are easy to sell—you need no experience in salesmanship to be successful from the start. An inquiry about our offer involves no obligation to accept it.

And when she said this the older woman over on beyond the bed shrunk back and down till she was almost out of sight in the worn and tattered boarding-house arm-chair. But she went along herself, her voice always growing harder.

"The fact is," she says, "my mother and me have been batting and slamming about the world for the sixteen years since then, unseen by you, with no great economic justice from anyone, and least of all from you, and it's about time we had some," she says.

And then she told him how she had put herself through school and college, by her own work some, but more by her mother's, and had come finally to study all these economic questions of the day, and investigate them, and finally get some money from doing so.

"And so finally," she says, "seeing your name in the paper on that line so much, and seeing how you made your living by it, I come to the conclusion, if all was to have this economic justice you swore so by in the public press, I'd grab off and secure a little of it for my mother and myself.

"So then I brought you here to see whether we get some. It all depends on my father," she says, speaking in a sweet hard voice—"what he decides—whether we'll get it!"

And he sat there looking at her, his big, red, scarlet face showing all the big, heavy eating and drinking and the rest of the past twenty-five years and more, and his hard, wise, bloodshot eyes upon her, for naturally he understood how she had him cornered.

"Or shall I feed it all," she says, "to the fierce and wild and ravening press—the whole mad wild tale of Joan of Arc Smith, and the motto of the economic justice for all, which she took and used from her grand and celebrated father, and laugh you out of the labor movement and the world, as I've got the stage all set to do?"

"How much do you want?" he says, snarling finally, and she told him what she thought would be reasonable, considering what he had been gathering in all these years for his work and lecturing for economic justice.

"And how soon will you ge[t] says.

"Not over two hours from the [time] your check is good," she says.

So he gave it to her and went [away] to Manumuxit by train.

"What did you find?" "Was [you] view successful?" "Where is she?" "[What] her father? And what did he say? [Was] the reporters all together, [calculating] when he got off the train at the [station]

"His name you'll never know," [she] "He did not mention it, nor did I [ask]

"But where is she?" they says. [Why] does she not come back with you?"

"'Tis a long story," he says. "[The] gist of it is this: We did not [get] He was too much for us. On the [train] he commanded her to stay, and [that] her no more in this strike nor [any] and that's all I'll say.

"Only this—only this!" he says, [with] his throat kind of gruff and [pulling] collar: "With her or without her, [or] body else, we stand here for [one] tice for all, and we'll raise hell [before] get it."

And so they went away, sore [and] hearted and wrote out one last [dis]ting ready to pull up and leave [the]

"Was she what she seemed, or [was] a coldly calculated impostor?" [he] "That is the doubt which the [mind] unexplained disappearance, with [the] piciously sensational collapse [of] leaders of the strike, of the so-[called] of Arc, who was at one time [the] Smith, has forced upon the [whole] thinking population of the Mill Valley during the clearly waning of the textile strike, under the [direction] the much-advertised Brawny Bill, the radical, to-night."

And Brawny Bill, sitting [by] headquarters, stared, glaring [at] with the local leaders whispering corners. For the newspaper [men] scarcely been near him all that [day]

He seen already the finish [of] for the publicity was all dead [and] not only got off with his good [name] she'd killed his strike, one [of the] strikes he'd ever started.

IN an "Old Town," all waterways are open to you—quiet streams, wide lakes, and swift-flowing rivers. "Old Towns" are the fastest canoes made. The lightest and strongest, too! And the lowest priced. Easiest to paddle, and hardest to wear out. $54 up from dealer or factory. *New catalog shows all models in colors. Free. Write for it TODAY.*

The FRANKLIN SEDAN

AT THE NEW PRICE

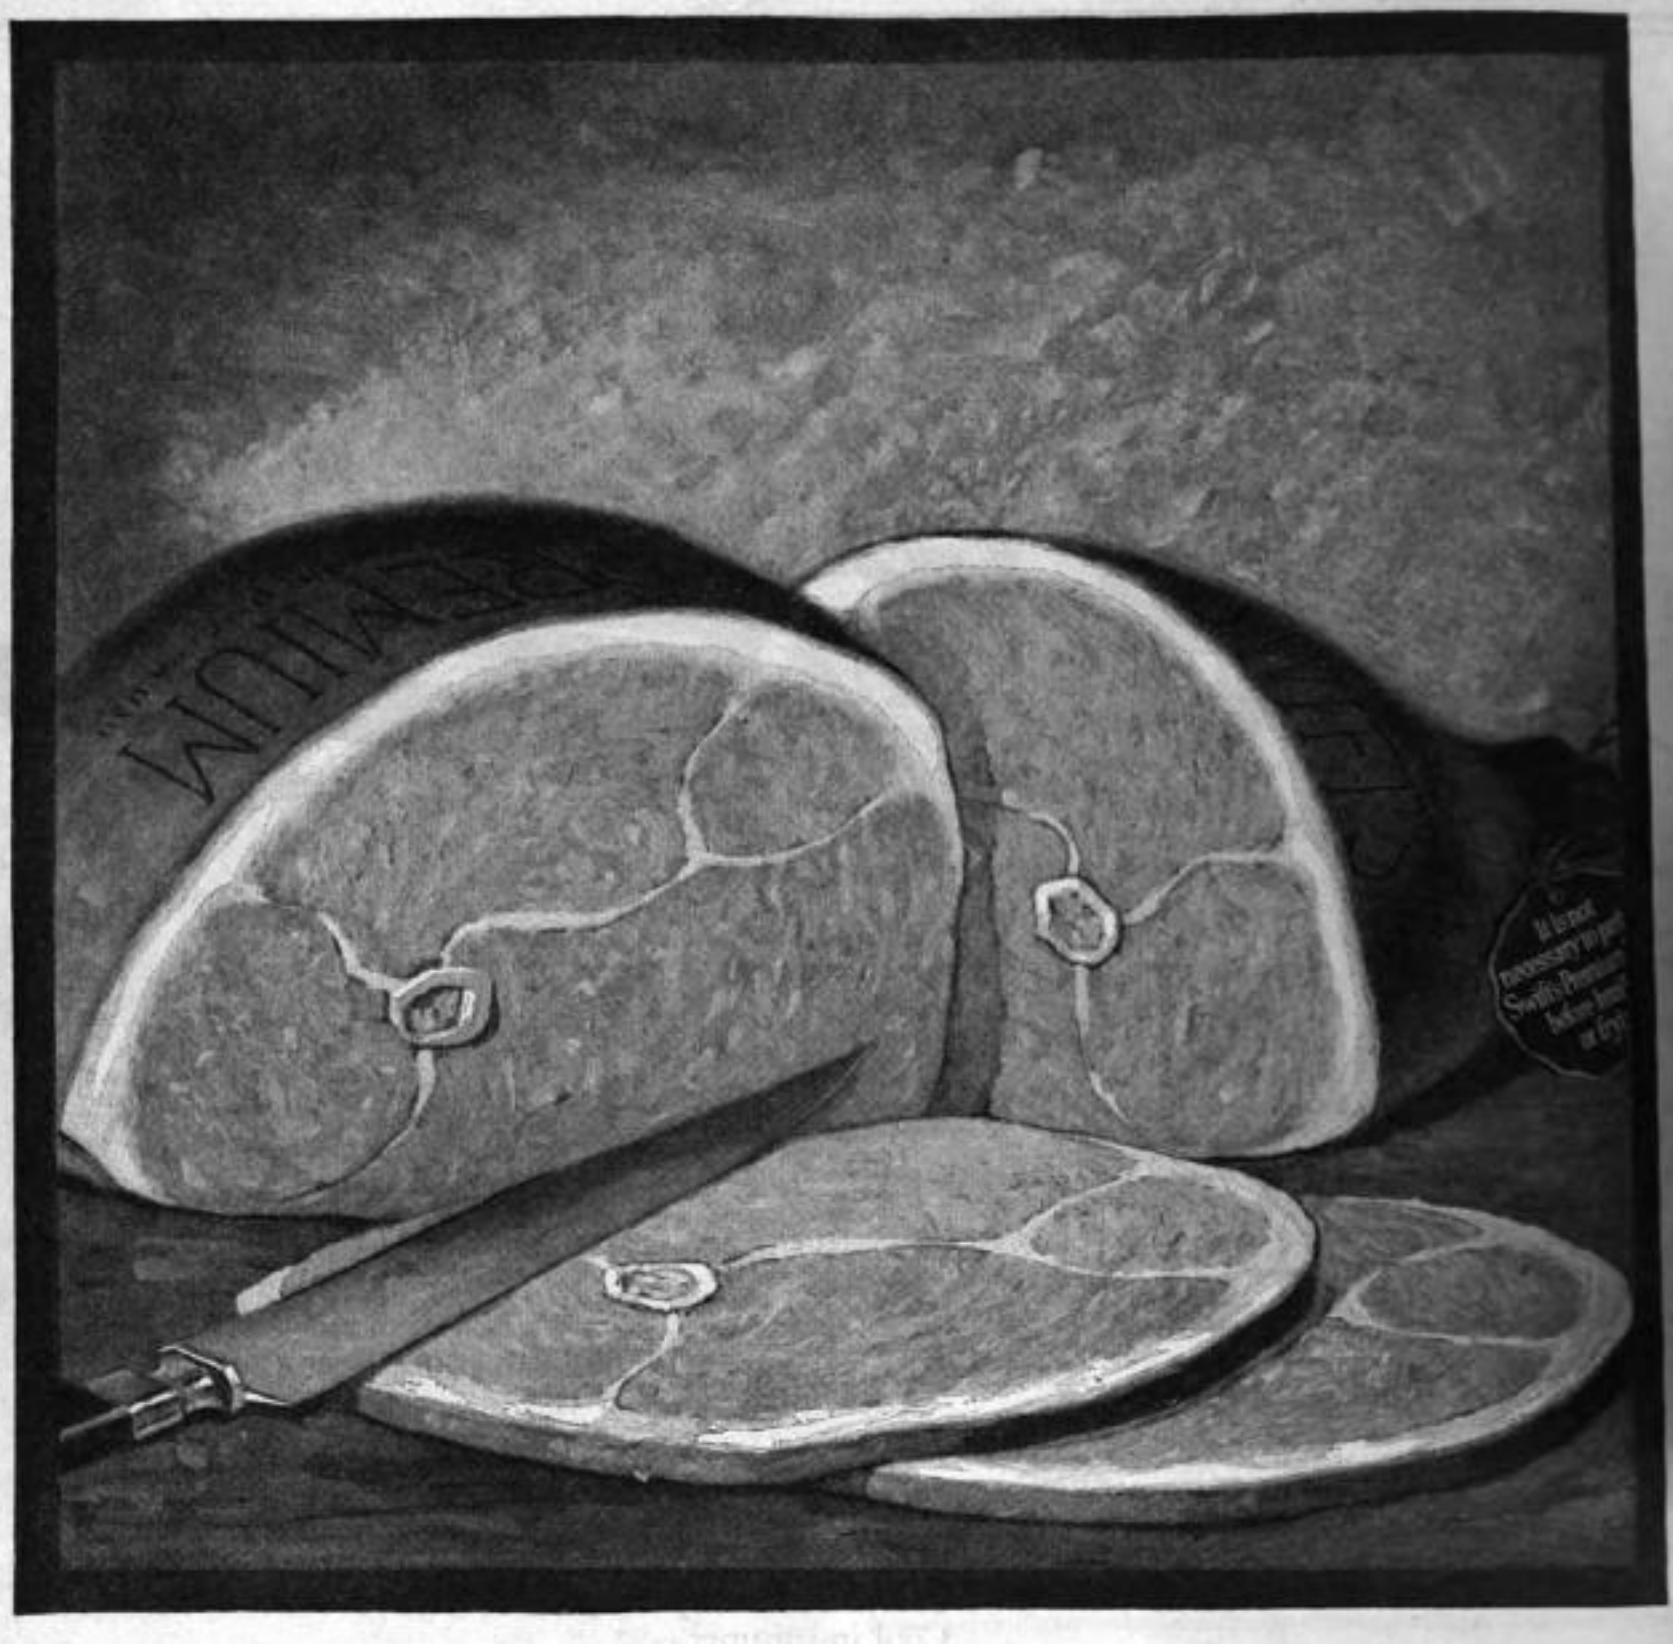
$2850

THE finest Franklin in 20 years of quality manufacture—at the lowest price in its history, except for four months in 1916.

The first car of this type, suitable for all-round use, in America. Light, flexible and direct air-cooled—no radiator—it is more widely usable than any other car, enclosed or open. Cool in summer.

From its very beginning, the most popular enclosed car built, in proportion to total output. Last year Sedans formed 42½% of Franklin's entire production.

If you have never owned a Franklin Sedan, you do not yet know how much a car can do, how well it can do it, nor how little that service need cost.



* * *

Motorists' desire for better service made April, 1922, Franklin's biggest April. And as we go to press, still another record is broken. On May 1, over three times as many Franklins were delivered as on any previous day on record.

Touring Car $1950 *Demi-Coupé $2100* *Runabout $1900*
Demi-Sedan $2250 *Coupé $2750* *Brougham $2750*
Touring Limousine $3150 *(All prices f. o. b. Syracuse)*

Stands the Tread of Trampling Feet

iness
ors

ALL day long the feet of busy people tramp back and forth over this office floor—and at night a man with a wax polisher quickly restores its spick-and-span brightness.

The floor is Armstrong's Plain Brown Linoleum. It makes this office of the Quaker Oats Company a quiet place in which to work, because it deadens the sound of footsteps and reduces other office noises which are reflected from hard, non-resilient floors.

Floors of Armstrong's Linoleum are inexpensive in both first cost and upkeep. They are kept in good condition by waxing and polishing, and they never require expensive refinishing.

Because Armstrong's Linoleum is made chiefly of cork, these modern floors are elastic and springy to the tread, comfortable to walk on and stand on.

A good way to install Armstrong's Linoleum as a permanent floor is to cement it down firmly over a layer of deadening felt. Such a floor will remain smooth and solid, and will give long wear under the hardest usage.

If you are planning to build, if you need new floors in your store or office, consult your architect, contractor, or any good linoleum merchant about Armstrong's Linoleum. We will gladly send him data and specifications.

Our free book, "Business Floors," contains photographs of installations, plates of colors and designs from which you can choose, and directions for installation and care of linoleum floors. Write for it. All Armstrong's Linoleum is guaranteed to give satisfaction.

Look for the **CIRCLE "A"** *trademark on the burlap back*

Westclox

For good time on your vacation

FOR summer work or play, carry a timepiece that will take a flop or a jounce without missing a tick.

Pitching camp, wrestling tires, climbing rocks, it's all the same to a Westclox watch. It keeps time in any pocket.

For boys, for workmen, for campers, for any one who needs an all around watch, Westclox watches are big enough and strong enough to stand up.

Pocket Ben with white dial for daytime use, Glo-Ben with radium coated numerals and hands, for day or night time-telling.

The name Westclox on the dial and orange-bordered, six-sided tag means they have proved their timekeeping ability before you could get to see them.

For summer cottage or camp, choose a clock with the trade mark, Westclox, on its dial and tag. It's a mark of satisfactory timekeeping.

XPOSED TO BOLSHEVISM

By Eleanor Franklin Egan

tYBODY who visits Russia these ys comes out of that land of sov- and sorrow with a story to tell, the fact that no two stories are like even in general tone merely serves to prove that the s not a simple one, that it is many-sided, exceedingly ovocative of numerous and conflicting emotions, and s a various appeal to variously constituted indi-

r of somewhat important contributors to the d of information on the subject have lent rigorously to the defense of the system that blished in Russia and, accepting the prom- performance, have written about it as ere a realization at last of Utopian s having led a considerable citizenry ve souls to fear that there is some- ible in the philosophy of Bolshevism ve that the best thing for a sane is to avoid contact with it.

I likely to leave the United States time for almost anywhere it that my little circle of associates f my announcement that I was e for Russia than was entirely caused them to unite in a very st. Their primary objections ere due of course to the some- and sometimes well-defined early every so-called normal ith regard to the Russian sit- ter I had induced them to stop their minds the risks I was nection merely with my per- ey all began to predict that I d morally and spiritually. In would go into Russia, place my- tion with a lot of wild radicals yself as one of them.

Anna Went Back

rom the character of the evidence etting from persons of our own itish and American—who were in time or who had been in Russia, this ed to be happening to nearly every- yself wondered if I, too, would have e a really convincing promise in the m, once I saw it in actual operation. I was expose myself to the contagion—along with s that go with Bolshevism—and tried to per- at I was entirely open-minded on the subject. owever, was to believe nothing but my own eyes, at once that I have found even this exceedingly

as one of my first surprises I think I must begin by olshevik," "Bolsheviki" and "Bolshevism" are words hears in Russia, though they are not regarded by the selves as being in any sense terms of opprobrium. They n" and take great pride in it, but the simple fact is that the party in is the Communist Party, and for purposes of ordinary conversation one nunist or a Noncommunist.

ough, the words Bolshevik, Bolsheviki and Bolshevism are employed hose Russians who are known as returned Americans than by anyone lue to the fact that most of these unfortunates are newly converted to nterpretation of what Bolshevism amounts to and make use of it ay of relieving their feelings.

ho used it oftenest in talking with me was a maid in the employ of the ertain American relief station. She did the bedroom work and waited he personnel residence, where I happened to be a guest for a while. She English and what she had she evidently had acquired in a most nvironment. She knew a lot of cuss words and seemed to think that indispensable prefix of all adjectives, to say nothing of other parts of speech. The whole burden of this young woman's almost incessant babble was a burden of complaint against the "damn Bolsheviki."

Eleanor Franklin Egan, Photographed at Petrograd in "Cootie-Proof" Clothes

No matter what occurred that was displeasing to her she laid it prayerfully at their door. If the lights went out and candles had to be produced; if fuel could not be obtained and the stoves got cold; if there was nothing to be found in the markets to eat but a bit of stringy, starved-to-death sheep meat; if the water pipes froze and burst and household activities were temporarily suspended; if the price of bread went up another notch; if a thief got into the kitchen and stole some food—all of which happened in the course of a week; if it snowed some more; if the day was dark and dreary—it was all the fault of the Bolsheviki. I shall never forget the sob of mingled sorrow and exasperation in her voice when she would say, "Ah-h-h, dese-a damn Bolsheviki, dey all time make bad!"

One day I questioned her.

"Anna," I said, "where do you come from? Where did you learn your English?"

"Me?" she replied in grieved astonishment. "I am American!"

"What!" I exclaimed. "You an American?" It had not occurred to me to suspect that she might be one of the returned. In all the essentials she was such a simple soul, and up to that time I had encountered only the complex and so-called intelligent variety.

"Yes," she replied, "I go live New York three year."

"But why on earth did you ever come back to Russia?"

"Jus' damn fool! Two year now I live Russia! They tell me in New York Russia make fine; ev'thing good; all poor people get be rich people; me, I get fine house, fine dress, ev'thing fine; no gotta work; Russia poor people heaven!"

Shattered Illusions

SHE began to cry and each of her short sentences was a convulsive sob.

"I come; use all my money; they tell me no need have money in Russia; got two chil'n; baby girl; awfu' purty; awfu' sweet; Bolsheviki take away; put big house for school; not can have now, no more; gotta work or starve; last year they come get me; some soldiers; make me clean streets! Now I want go back America; not can."

By this time she was weeping bitterly and I had to set myself to the task of comforting her while being careful not to commit myself to a promise that I would help her to get back to my beloved country. That is what the returned almost invariably ask one to do. And it is astonishing how many of them one meets. I had no idea there had been such an exodus of Russians from the United States. They are everywhere in Russia, and in all kinds of employment. And they are particularly conspicuous in American relief circles; this being because their knowledge of English makes them useful in the relief work, which is directed exclusively by Americans.

When two of them meet for the first time they usually ask each other: "Did you return to Russia of your own accord or were you sent?"

When I heard this it struck me as being exceedingly funny and I laughed with great enjoyment, but I soon learned that it is a serious question. In radical Russian circles it is only natural that our deportees should be held in somewhat higher esteem than those who withdrew voluntarily from our unendurable midst. The deportees at least took an active part in the campaign against the accursed American capitalistic tyrants and oppressors, and therefore are to be regarded as veterans of the world revolution. They have won their laurels, and that very few of them have obtained anything in the way of visible or tangible rewards proves nothing against their philosophy and detracts nothing from the nobility and sacredness of their principles. This is more or less the way they talk when they are not talking about ways and means of

Digitized by Google

keeping soul and body together in Russia or of the vague possibilities of getting back to the United States.

But to go on from where I started: Before I left home my friends had grown tired of asking me if I couldn't think of some better country than Russia to go to, and had begun to ask me if I wouldn't, please, as long as I had to go to Russia, try to write something about the country that a gentle reader could get his teeth into. They complained of being fed up on glittering generalities and learned analyses, and, being for the most part distressingly bourgeois and disgracefully prosperous, they wanted to know what they might expect if the same sort of thing that has eventuated in Russia should eventuate in the United States. And all at once I realized that I, too, was strangely unenlightened.

Though I had followed the Russian story in a casual way in the daily press, as per the average citizen, had read nearly all the current books as they had come out, as well as a good many books about Communism in general and Russian Communism in particular, about the Russian revolutions, the Russian economic situation and various related subjects, I suddenly discovered that so far as really illuminating information was concerned I had accumulated very little. I had no picture in my mind of what life is like in Russia as a result of the communistic experiment. I knew that in communistic theory the element of personal incentive is omitted from all the calculations with regard to the common activities, but I found myself unable to visualize the effect of this omission in specific instances. And this must be what so many Russians mean when they say that conditions cannot be realized by those who have only read about them at a safe distance. The situation must be seen and felt and lived in.

I knew the program of the Third International, and had done my share of boiling with indignation about its brazen impertinences. I knew something about the propagandist activities of the Internationalists in my own country and I knew a lot of the patter of the tribe that has risen among us to destroy, and that—itself being anything but proletarian—makes its appeal to the least sanely and soberly thoughtful element in the world body politic.

An American Relief Administration Outfit Unloading Provisions

A Self-Styled Proletarian

IF ONE grants the existence of a world body politic. And one does. I myself am an internationalist within the limits of the necessities of international association, but internationalists with a capital "I," forsooth! It is my opinion that this kind of internationalism is for some persons a lucrative profession, but for very few an honest belief.

The Russian Communists are the leaders, the vanguard, the chief proponents of Internationalism as its aims are directed against the national existence of other peoples' countries, but I have never met one of them who really understood what I meant when I asked him if he would support Internationalism at the expense of the national existence of his own country.

You see I am not very intelligent, so I find it difficult to grasp the idea that, once all the capitalistic-bourgeois governments are overthrown, in the International organization each country would continue to be itself while being a part of a perfectly blended and completely harmonious whole, under the direction of an all-wise central authority. If you ask upon what happy spot they expect to effect their centralization you are told that the headquarters of the International are in Moscow.

"God bless and save us!" says you to yourself.

If you ask from what source they expect to draw their supermen for the superjobs in the International Government you may get nothing but a smile of patient tolerance, but the answer is likely to be, "From the proletariat, whose interests are above all other interests."

I was talking one day with a man in Petrograd who holds an important position in the government as a representative of the Central Soviet at Moscow. I asked him these questions, and these, sketchily recorded, were his answers. Then I said, "Just what do you mean by the proletariat? Are you a proletarian?"

"Certainly I am!" he replied. "I'm a sailor!"

He bristled when he said this, and drew his eyebrows down in a heavy frown, and I suddenly remembered that his proud boast was that he had more accursed bourgeois blood on his hands than any man in Russia. But I was not going to be intimidated by a mere growl.

"No, you are not," I said. "You are a government official, just like any other government official. You work here in this fine office; you wear good clothes and have plenty to eat and drink; you live in a fine house in warmth and comfort, and incidentally you are a great boss; in your official capacity you have a right to [illegible] anyone who offends you in any way."

He looked at me for a moment with [illegible] odd sort of gleam in his eyes, and [illegible] queer fascination I felt I was prompted [illegible] add, "Moreover, I am told that you [illegible] ercise this right on the slightest provo[illegible] tion." It was a good deal like [illegible] food calories with an anaconda.

He continued to regard me for a [illegible] with a question in his eyes, then [illegible] "I'm a representative proletarian."

"Oh, I see," I replied. Though I [illegible] in the least, and was therefore perfe[illegible] As Wallace Irwin's Japanese [illegible] would say, I asked to know: "If you [illegible] a proletarian, what am I? Am I a [illegible] tarian?"

"Certainly not!" he answered, [illegible] with just a little more scorn than [illegible] to express in such a connection. "[illegible] have never worked with your hands."

I was glad they were gloved [illegible] in comparison with his they were [illegible] badly kept. But I was living [illegible] down among the submerged bourgeoisie [illegible] where, aside from the lack of [illegible] the easy maintenance of the [illegible] was too full of a number of things [illegible] mit of concern about inconsequential [illegible] merely exterior effects.

I felt an urge to defend myself, so flashing [illegible] back down the years of my life, I exclaimed: "I have [illegible] I have milked cows and hoed potatoes and [illegible] and washed dishes and scrubbed floors and [illegible] ter and raked hay and chucked it in the haymow [illegible] pigs and cooked for harvest hands and mended [illegible] made my own clothes and ——"

An American "Peasant"

I WAS out to enumerate all the things I had [illegible] with my hands, but a great light broke upon [illegible] he interrupted me to say, "Oh, I see. You are a [illegible] intellectual."

I sat quite still and looked at him for a moment. [illegible] I asked, "Have you ever been in my country?"

He seemed to be pleased to be able to answer [illegible] never have. I am not a returned American."

"Well," said I, "in a way it's a pity you are not [illegible] as an influential member of the International [illegible] tion it might be useful to you to know that [illegible] States of America they ain't no such animal as a [illegible]

He smiled upon me with a superior air and [illegible] in his beard, "Merely a difference in terms."

"Not a bit of it!" I exclaimed with considerable [illegible] hemence. "The difference is a difference in principle [illegible] fundamental [illegible] ceptions."

"Ah," he [illegible] "fundamental [illegible] fundamental [illegible] the world [illegible] ization may [illegible] difference [illegible] background [illegible] phenomena [illegible] practical [illegible] is universal [illegible] cal." He spoke [illegible] ing English [illegible] of his type [illegible] spent many [illegible] England.

While I was [illegible] that argument [illegible] on my b[illegible] I wanted [illegible] from what [illegible] ism-istical [illegible] he had pa[illegible] whether [illegible] would th[illegible] in an atte[illegible] lot of [illegible] farmers [illegible] themselves [illegible] identical [illegible] Russian [illegible] instead [illegible] quiet [illegible] them ask[illegible] knew an[illegible] the ag[illegible] in the [illegible] Congress.

Fatima would never have wasted a luebeard's chamber had the door been left firm of the magnitude and importance of ews & Brandling is a magnet to espionage. mployes numbered over fifty thousand, the nts of an entire neighborhood answering to of the huge siren from the central power ronging the galleries, workshops, stores and he mighty concern. Diplock, Mathews & le everything from a dreadnought to a lady's In a sense they stood for the might and the gland, and were as much a part of its gov- e cabinet itself. It follows naturally that attracted the notice of the entire world, neivilized; and it would be no exaggeration millions were spent yearly by inquisitive to ascertain what was taking place in the industry sheltered behind the twenty-foot alls.

war it was generally understood to be an tice to ask questions at Diplock's. The ing an answer were remote, but the risk of ull cracked by a shifting spanner amounted tainty, assuming that no more permanent penalty was exacted. Quite a number of very plausible gentlemen whose bearing and accent were seemingly as English as a length of Harris tweed faced a firing party as a direct result of overmuch curiosity in that quarter.

But these be matters of long ago, and at the time in which these incidents take place the waters of the world run smoothly, everybody is minding his own business. Thoughts of war excite the blush of shame, the scarred barrel of the siege gun is reforged into the shining plowshare. The dove of peace has settled upon the land, and Messrs. Diplock, Mathews & Brandling have reduced the personnel of their detective staff from a war establishment of three hundred and eighty-six to a permanent *cadre* of three hundred and seventy-nine. Here is matter that speaks for itself.

In the general way, the individuals composing this force were given every latitude for private investigation and private action; that is to say, they were not encouraged to trust one another unduly. Very often half a dozen would be working on the same case oblivious of one another's presence. The results were satisfactory, for what one man failed to discover another might very well find out.

There was a central bureau under the charge of a gentleman named Butterwick, but in the main he interfered but little with the doings of his subordinates. Butterwick was a small man, seemingly of nervous habit. A person of average height rarely saw more of him than the top of his head, since it was his custom to keep his chin on his chest and his eyes lowered. He appeared to be everlastingly examining his shoes, hypnotized, as it were, by the bright spots of light upon their toes. He said "Yes, yes, yes" nearly all the time, and he smiled a great deal more than the humor of life would seem to warrant. He could not tolerate persons who gave reasons for their findings; being interested solely in results. His grasp of any subject coming within the scope of his particular avocation was miraculous, but of the ordinary affairs of every day, of literature, art and home politics and small talk his ignorance was abysmal. Apart from work his only sources of relaxation and entertainment were contained in eating walnuts and playing bowls, in both of which practices he showed no small skill.

With the exception of Mr. Diplock, Senior, Butterwick was the only man in the firm acquainted with everything that was going on.

Prior to beginning on his designs for Type B, Martyn Saville had an interview with Butterwick in that gentleman's private office. It was a small room with double walls and windows looking out upon a narrow canal, into which flowed the waste products from the workshops, swill from lathes, engine drippings, paraffin and wash down from the floors. The oily water treacled slowly over its surface as colorful as a rainbow. Mr. Butterwick declared that he chose the room on account of its view. "Love opals," he said, "and those coal-tar dyes." But the real reason was the privacy insured by having one's castle protected by a moat.

Martyn Saville set forth his program frankly and minutely. Being essentially a modern in the way of speech he was ashamed of the inevitable technicalities, and garnished them with up-to-date formulas. Thus he spoke of jolly old dihedrals, and not infrequently addressed his audience as Old Fruit.

Butterwick filled in the gaps with more than the usual establishment of Yes-yes-yeses, and never once relaxed his smile. At the end he remarked: "Wonderful. I s'pose you'll do it."

"Bet your life," said Martyn.

"Yes, yes, yes. Nature's very odd, revealing such an idea to a harum-scarum fellow like yourself. Should say you're always getting into trouble?"

"I'm a bit unlucky," Martyn confessed.

"Yes, yes, yes. So our responsibilities increase! S'pose you're aware that this preventive weapon of yours would, in improper hands, constitute the greatest menace the world has ever known?"

"Sure thing."

"Yes. Seems a pity, really. However, must take our chances. All in the way of progress. You're beginning at once?"

"Just waiting for the flag to drop."

"There'll be a lot of bother about this. Yes; oh, yes. You know, of course, that the regular service is being informed?"

By the regular service Mr. Butterwick referred to the secret forces of the Crown.

"It's an R. A. F. stunt," Martyn replied. "So they were bound to be in it."

Mr. Butterwick shrugged his shoulders and cracked a walnut between his finger and thumb.

Digitized by Google

"As if I couldn't manage much better without 'em! Oh, well, I'll take care of you, Mr. Saville."

"Stout lad," said Martyn.

"But try and keep out of mischief."

"I will."

Mr. Butterwick ate his walnut in silence and dropped the shells into the waters of the canal. Then he said, "Yes, yes"; and added, "You won't."

Martyn Saville turned at the door, laughing.

"I'll be marrying soon and settling down."

"H'm! Why not marry first? Tackle this job afterward, eh? Hey?"

"No jolly fear, old top. Want a bit of rope after that event."

"Much safer," said Mr. Butterwick, and cracked another nut.

II

WHEN Martyn Saville confessed to being a bit unlucky he in no way implied that Fate had set her frown against him. It was merely that some of the scatter-brained enterprises in which he engaged—always with motives of the highest altruism—were wont to react upon himself in surprising fashion. He belonged to the class of individuals that are ever ready to enlist in hazardous causes for the betterment of friends. He could not persuade himself to stand by at another's funeral, but would hustle the bearers aside and lend a shoulder to the coffin, even though previous experience had taught him that it not infrequently slipped and delivered its weight upon his toe. Personal risk was with him rather an incentive than a deterrent, and danger was the little spark that ignited the slow gases of life and made the old world spin.

His happiest years were between 1914 and 1919, when the pleasant odors of fire and brimstone were borne upon every breeze. Do not imagine that Martyn Saville liked being shot at; he hated it as cordially as any other healthy-minded man. It was the reason that brought him under rifle and shell fire which intrigued him to the extent of forgetting these unpleasant addresses. Imminence of death is an admirable tonic for the wits and abolishes the dull vapors of every day. It was therefore with no unalloyed delight he read of the armistice and realized the end of the greatest adventure of all.

However, time heals most sorrows and having completed his mourning duties for the old love he sang her requiem and betook himself to the wooing of a new.

Leslie Kavanagh was the first serious affair in Martyn's life, probably because the girl had a serious turn of thought and expression, which made her smile better worth winning. She was grave and lovely, and very sincere indeed. She admired in Martyn the very characteristics which he held in lightest esteem. Martyn admired himself but as a sportsman, as a game and inarticulate male of 1921. His own inventive genius and constructive ability he disparaged as being assets more appropriate to a grave and reverend signior.

He knew himself to be extraordinarily gifted and was ashamed that he should be so, having a healthy and modest distaste for any outstanding feature that distinguished him from the standard man. His efforts to avoid notoriety in any shape or form, except as a sportsman, were as unceasing as they were fruitless. Popularity he loved—notoriety he abhorred. He would blush with pleasure all day should he hear "That's Saville, who knocked out Billy Watkin in the Amateur Championship"; but should a whisper go round to the effect that he was Saville of the Naval Gun Works, who invented so-and-so, he would bolt in shame and affright. His philosophy in life was "to put to proof Art alien to the artist," a phrase for which Browning was responsible. Incidentally Martyn used to read Browning with secret delight, but it was a practice he never indulged in without a copy of the Winning Post convenient to hand wherewith he might mask the volume should a visitor intrude.

Armed With a Drink He Disposed Himself Luxuriously, While Martyn Heaved Clothes Into a Capacious Gladstone Bag

Having possessed herself of the affections of this amiable young man Miss Leslie Kavanagh set about to regenerate him, and it was a task of no mean dimensions. She proposed to turn Martyn from paths of adventure and folly into the graver avenues he was reluctant to pursue.

Leslie herself stood about five foot nothing. Her hair was bobbed and curly, and you could have weighed her on a chemist's scale. Of such proportions are lion tamers made. She was one of the littles who go a long way—a homeopathic dose of pure and crystalline womanhood.

Of course Martyn didn't stand a chance, for he was six foot two, and there is an old song about that which speaks the truth. The line of her eyes was exactly level with his heart, which gave her an unfair advantage, since it will not be denied that the woman who can control a man's pulses will inevitably overrule his mind.

Leslie established herself firmly before dictating terms upon which she might consent to an engagement. In saying she established herself firmly, deed rather than word of mouth prevailed. Martyn's encircling arms wrought irreparable havoc to the flimsy escalloped frock she was wearing, but she spoke not in reproof. Martyn's head crushed the pretty French flowers at her shoulder and brilliantined them, but she did not bid him beware. And even when he kissed her nose until it was quite shiny she smiled with her eyes at a range of nearly half an inch. It was a wonderful evening; never before had they known such an evening; the air had a nip of frost in it, an oily drizzle had drifted up from the sea and there was a touch of fog. Thus for their wooing they had need to seek refuge in a bathing machine which smelt very powerfully of damp towels and seaweed. Wherefore it was a very wonderful evening, for there is nothing much the matter with a [illegible] that doesn't mind getting its feet wet.

Martyn had kissed many other girls in his [illegible] past, but these were affairs of paper lanterns, [illegible] tories and distant jazz bands bespeaking their [illegible] turn to Swanee. They were part, in fact, of an [illegible] without which no man should be free of the city of [illegible] fellows. Memory of these did not stir his soul at the [illegible] of day, but on the morning after he and Leslie [illegible] covered [illegible] he never [illegible] all, for the [illegible] reason that [illegible] been to the [illegible] lain in bed [illegible] the livid grey [illegible] vermilion [illegible] amazement [illegible] curve in the [illegible] before him.

They knew [illegible] other for the [illegible] thing, [illegible] lute; and [illegible] by this [illegible] Martyn was [illegible] rushing at the [illegible] for all the [illegible] though it [illegible] running [illegible] was knocked [illegible] heap when [illegible] pronounced [illegible] ment against [illegible] holy expedition.

"But, my [illegible] sweetheart." [illegible] tested, "[illegible] married first [illegible] the talking [illegible] wards."

"No," said [illegible] "we won't."

A man who [illegible] love has the [illegible] having relinquished [illegible] every care [illegible] world, but [illegible] so with a [illegible] For the first [illegible] perhaps, the [illegible] of the true [illegible] of response. [illegible] Before he [illegible] her, man [illegible] a grown-up [illegible] tion; but [illegible] he stands [illegible] a helpless [illegible] unless cave- [illegible] trolled is [illegible] into every [illegible] mischief.

formation is complete—her every attitude and [illegible] organized; for although it may not be widely [illegible] more than a kiss separates a sweetheart from [illegible] a nurse whose first charge is the man who [illegible] imagines himself her protector.

"Why, you great, clever, stupid old thing," [illegible] "you don't imagine I'd risk you as you are."

"But, dammit ——" said he.

"I wouldn't. I hardly know anything about [illegible]

"But there's nothing you can't know. I've [illegible] fool a bit and ——"

"Oh, Martyn, not that sort of thing. It's—[illegible] such a flibbertigibbet. Never in the same [illegible] seconds."

"I'll settle down first rate after marriage. What [illegible] honeymoon in the Rockies? We could have [illegible] time if you're fond of climbing and shooting."

"There you go," said Leslie, wagging a finger. "Don't you realize you're a frightfully important [illegible] you've got to be that?"

"Chuck it," he implored.

"You're thirty-five, Martyn."

"Not until to-morrow. I'm only thirty-four [illegible]

"And you're just as irresponsible as a schoolboy."

"No, I ain't, my dear."

"But everybody says so."

"Rats to 'em!"

"You are! I should be terrified every time I [illegible] of my sight, expecting you were doing a [illegible] along the telephone wires."

"Wouldn't mind—if you were at the other [illegible] get married."

"No," said Leslie; "and until I've seen a [illegible] of improvement I shan't even allow the engagement [illegible] announced."

If a very ordinary fly could hover indefinitely in the air, what was to prevent a man from doing likewise? This was the question he asked, and had pledged himself to find the answer. But that was not enough. The hovering fly made a deal of buzzing and doubtless expended a lot of energy. It was Martyn's ambition to invent a machine that neither buzzed nor expended energy. In the ideal achievement the only energy wasted should be just enough power to prevent drift. He had an agreeable vision of anchoring in the sky, of being able, if necessary, to remain in one atmospheric square for days on end, too high up to be observed, too silent to be apprehended. The project was attractive. It had attracted others before him. He drove his inventions department exhaustively, and it gave him but one solution to the problem—an association of gas and metal; and upon this principle he worked.

The eventual result of his labors was extraordinarily simple, and differed in appearance but very slightly from the original type, which had crashed so disastrously. It was in fundamental principles that the change lay. Had the two blue prints been laid side by side scarcely one man in a dozen would have spotted the difference between the machine that had failed and the one that would succeed.

Martyn's finished drawings were miracles of neatness and completeness. On a single sheet he contrived to set forth not only the design of the whole and of every moving part but also the formula of the gases to be used. From A to Z the entire mystery was revealed at a glance—a working drawing so comprehensible that any mechanic of average skill could begin operations forthwith.

Each evening at 6:30 Martyn put the drawings in a huge safe behind his writing table. The door of this was secured with two keys, which in turn were placed inside another smaller safe with a five-letter combination lock. Then he rang a bell and one of Mr. Butterwick's men entered the office and touched his hat.

"Good night," said Martyn.

And "Good night, sir," said the man.

On the step outside two other men would offer him the compliments of the evening, their polite salutation synchronizing with the click of the latch and sound of a bolt being shot within.

Martyn Saville would then turn to the left toward the general offices. Proceeding down a long corridor he would enter the study of Mr. Diplock, Senior. Being well assured that no one was about he would greet the old gentleman in some such wise as this:

"It's a fine night, James."

And Mr. Diplock, whose Christian name was Stanley, would reply "Yes, yes; to be sure."

Sometimes, by way of variety, Martyn would announce, "Looks like frost."

Again Mr. Diplock would agree.

On one occasion a clerk entered unexpectedly, whereupon Mr. Diplock said "I hardly think so."

So Martyn had retraced his steps to his own office, sent the detective to wait outside, occupied himself for a moment with the combination lock of the second safe, and returned to his employer with the words, "That was silly."

"Quite so," said Mr. Diplock; "very silly. Good night, Saville."

It was not until the designs were approaching completion that a third party was admitted to the secret of the safe. This person was a gentleman in the employment of the secret service, who in pursuance of his calling went by a variety of names. To his intimates he was known as Old George Wedderton—the "old" applying more to his amiability than advancement in years. In appearance he was for all the world like any middle-aged guest at a shooting party. To be more precise, he was of medium height and fairly heavy build. His complexion was bronzed, his hair dark brown and his mustache a light sandy color. His eyes were very blue and rather small. Outwardly he seemed as comfortable, good-natured and lazy a kind of fellow as you would wish to meet.

He Spoke of Jolly Old Dihedrals, and Not Infrequently Addressed His Audience as Old Fruit

"What is your friend Mr. Wedderton like?" Leslie had asked, for Martyn and George were old associates.

"Lord, don't ask me—nothin' in particular."

"But what's he look like?" she insisted.

"Forty-five," replied Martyn, and hit off the type to a hair.

Easy-going and affable, George Wedderton strolled through life with his hands in his pockets, picking up acquaintances by the thousand. He could be all things to all men. His honest simple countenance soaked up confidence like a sponge. Comparative strangers, beholding in him a tolerant and sympathetic listener, uninvited revealed their mysteries and their woes. He was so kindly and so obviously harmless that even the most astute failed to detect the possibility of another side to his nature. Women adored him, for he possessed to a singular degree the power to make them feel like nieces.

When asked what he did, his usual reply was, "I just fool round a bit—travel and that sort of thing. Dull life."

Had he spoken the truth, however, he must have confessed to something far removed from dullness. Very few men had looked down the barrel of a revolver more often than Old George Wedderton; or, for that matter, had given others the opportunity of doing likewise. His part in the Great War was not perhaps conspicuous, but it had certainly

(Continued on Page 56)

SECRET MOVEMENTS

By George Kibbe Turner

ILLUSTRATED BY DOUGLAS RYAN

SECRET movements—said the fat foreman—secret and educational. The world is full of them to-day, all whispering and pointing and drilling up the worker for the great secret revolution which hangs beetling over us now. It minds me of old Mike Slattery and them three radicals there this spring in the D. U. tower.

'Tis a lonely job and speechless in them towers—especially one like that one where he was, out there in the woods six miles back of nowhere. You get fed up with the yelling of the frogs and crows and all them hekaty-dids and bull insects, till the sound of the human voice—if only from a passing freight—falls like soothing sirup on a raw and wounded soul.

So, naturally 'tis a grand spot for conversation—when you can get it. And Slattery got all he could by fair means or foul—though strictly speaking it was agin the rules to let others up there with him in his place. And more than all else he'd try to get them radicals up there, talking all their deep and secret plans for revolution, for then he would be sure to get his fill of human speech, the radicals furnishing the speech and him the tobacco.

He was sitting there this day and the local freight had dropped a driving rod from the engine and been shoved in on his siding, and three of them different radicals was up in there with him—two shacks, or brakemen, as you'd call them, and this here Russian gandy-dancer, or trackwalker, that stopped in there now and again. And Slattery was getting them going on one of their radical arguments—to fill and satisfy his craving for the pleasant noise of the talk of men.

"What show has this man Foster, the old steel-strike man, got raiding old Sammy Gompers with this new secret boring-in scheme of his?" says Slattery, aiming his question at that Twohey, the radical he was satisfied was working in with that boring bunch in the Trainmen Brotherhood.

A tall slim fellow he was—a good slick talker, with a still small smile at the far corner of his mouth, and a mysterious look down deep in his eye.

"If you want my opinion," he says, "he's got a damned good show."

And the Wobbly brakeman and the Russian said nothing yet.

"It's a slick scheme at that," says Mike, persevering on. "The way he plans to work it."

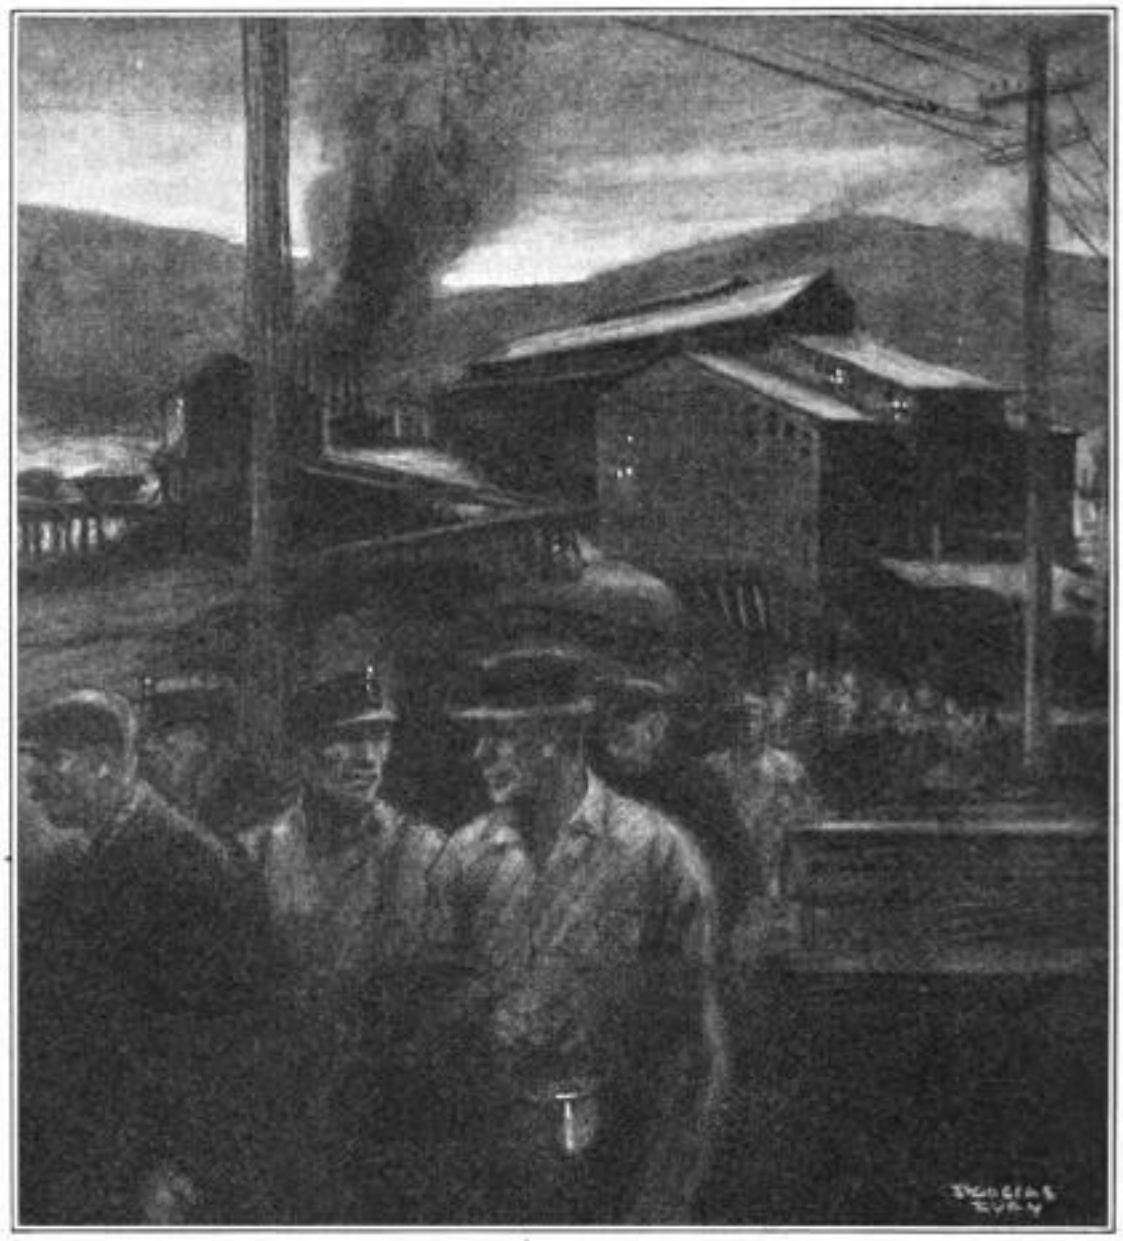
"It is," says Twohey, "with all them nuclei."

"Them nuclei?" says Mike.

"Them nuclei, yes," he says. "Them one thousand men he wrote them secret organizing letters to in all them one thousand towns and cities—one only in each place, each one a good and reliable and red-blooded radical that can be trusted not to be a company dick or spy."

"You're right, probably," says Mike, watching the others from the corner of his eye.

"And from there, in them one thousand cities, each man—each nuclei," says Twohey, continuing, "builds up his hand-picked bunch of borers, to make their own branches again—each one of these last to work and bore in soft and secret inside its own particular union—until they eat it up and consume it and take it over."



"And it's in the railroad unions that they're starting first, they tell me," says Mike.

"It is," he says. "But that's only a start to boring out through all them millions more."

And now Slattery turned his head around, for he seen at last he had them going.

"A swell chance that pie-cart artist has got," says the Wobbly, talking out finally in that hard, rough, sneering way those Wobblies, or I. W. W.'s, as you'd call them, talk. He was one of them old-time boomer brakemen with a hard-boiled eye and a smile hard as a crack in a china plate. Smear, they called him, as a nickname.

"You don't think he's all there is to this thing, do you?" says Twohey, staring at him, and chewing hard and hostile.

"From There You Come Into the Federation, Through the Mine Workers, by Far the Biggest Union"

And just then, when he had them started, Mike had to turn, for they was calling him from down the line on his telephone.

He talked, with his back to them, and swung round again. And then he seen them there—all three silent. The two shacks just sitting there, and the Russian staring out the window that meek and humble way he had.

"That's strange and odd," says Mike then. "They've stopped their arguing!"

For usually by now they'd been tearing the tower down. But instead this Twohey, the borer-in, the minute Slattery turned back, started in talking to him, and not to the Wobbly—talking and kind of holding onto his eye.

"You know what the big secret move that's framing up all over this country now is, don't you? Or do you?" he says to Slattery, low and mysterious.

"I dunno," says Mike. "What is it?"

"They're raising us up to where Europe is."

"Raising us up to Europe?" says Slattery. "How? In what way?"

"By organizing the workers together, way down deep—so they'll get the power, the way they've got it over there."

"Is that it?" says Mike, still with his eye held in his.

"It is," he says. "All them millions—all together. And do you know how bad they've got us beat over there?"

"I do not," says Mike.

"Take England," he says, going on giving it to him. "Take England, for instance, with her one union member to her every six of the population; and Germany with one to every four and a half—while here we have a mere paltry one in twenty-seven."

"Is that right?" says Mike, listening without avail for the Wobbly to break in and argue. But not a word.

"It is," says Twohey, going on holding him with his eye. "And you know what that would mean if we were fixed up right in this country like Europe."

"I do not. What would it?" says Mike, wondering more and more why this one was doing all the talking alone.

"From twenty to twenty-five [illegible] workers, all banded in together [illegible] of the mere paltry four or five [illegible] split up, like it is now."

"Is that right?" says Mike, [illegible] ing his mind up now he'd [illegible] eye away when he could [illegible] silence of them other two [illegible] him—or the Wobbly, anyhow [illegible] getting more and more [illegible] and oppressing.

"Twenty millions at the [illegible] says Twohey, going on [illegible] tery's eye back. "And do you [illegible] why it is that Europe's [illegible] so—and we're so behindhand [illegible] country?"

"Go on," says Mike. "Tell

"It's the old-time crafts [illegible] he says, "splitting us all up [illegible] million pieces. For of all the [illegible] this one country alone preserves [illegible] old antiquated and moldy [illegible] just crafts—all the rest being [illegible] ized industrially—that is, by [illegible] big industries, and not little [illegible] and fractions of them."

"You're right without a doubt," says Mike, hearty, but still [illegible] and wondering.

"I am," he says. "And I [illegible] known. For here, more than [illegible] rest of the world, the capitalists [illegible] all bound together in their [illegible] huge Wall Street syndicate [illegible] their great enormous trusts [illegible] we toilers are all split up [illegible] these little dinky crafts and [illegible] now we're getting together [illegible] capitalists, and we'll have [illegible] these old unions of the [illegible] came over on the Mayflower [illegible] George W. Washington [illegible] stroy them—and organize [illegible] the worker by industries, [illegible] by countries, and then by the [illegible] like they're doing now [illegible]

"Is that right?" says Mike [illegible] of absent—but keeping him [illegible] ing and orating.

For now he'd been stealing a look at the two behind [illegible] seen them—the Russian still staring out the window [illegible] and innocent, and the Wobbly sitting staring up [illegible] and neither one paying no attention to this [illegible] that was running on, spreading his ideas, alone [illegible] out contradiction.

"What's going on here?" says Slattery to himself [illegible] and more suspicious. "They ain't arguing to-day [illegible]

"We must all reorganize still and secret, all [illegible] says Twohey, now talking over to the Wobbly [illegible] seen Mike looking around at. "Am I right?"

"You are," he said back.

And Mike gave a still worse jump inside—to [illegible] two agreeing on anything!

"We must organize right—by industries, as [illegible] have long ago!" says Twohey.

"What's been hindering you then, all these [illegible] says Mike—to say something.

"Rank, rotten and diabolical deceit! Deceit [illegible] bery of the worker. Am I right?" says Twohey [illegible] now again to the Wobbly that he'd seen Slattery [illegible] upon once more.

"You are," says the Wobbly right away.

And Slattery could see now pretty certain that [illegible] thing was going on there wrong. And growing [illegible] ute more and more restless and uneasy and looking [illegible] still and careful around, Slattery's heart now [illegible] den bounce in his bosom, for he seen now what [illegible]

He had his coat hanging on its regular old [illegible] side wall where that Russian Hunk was looking [illegible] and innocent through the window. It hung [illegible] inside out, and in the inside pocket of it [illegible] money—that three hundred dollars he had drawn [illegible] the savings bank that morning to pay off on [illegible] that night.

"It's gone!" says Slattery to himself, starting [illegible] inside—but by no means outside, so they [illegible] "Them radicals have got it!" and he thought [illegible] self for his foolishness.

He kept his eye out always, naturally [illegible] radicals were in there, and especially that [illegible]

Slattery Was Getting Them Going on One of Their Radical Arguments

know it just as well. And that makes it all the worse for them!"

"Worse?" says Slattery.

"Certainly," he says. "For they're going after them old-time unions, and hammering them down with insane and foolish haste—each smash driving the poor old doddering federation lower to its knees—and their murdering bloodshot system of capitalism with it. And both to-day are starting on their way together in this country, staggering on to one common grave, like crafts unionism and capitalism have done already there in Europe."

"Is that the case?" says Slattery, still striving to look back of him unseen.

"It is," he says. "For crafts unionism is starting now to go down here—as it done eight or ten years ago in England, just before the toilers there started in making their tremendous strides they've made since. And it's going on fast here now, with the falling and crumbling down finally of that old Noah's Ark, the American Federation of Labor."

"The federation's gone then?" says Mike.

"It is," he says. "They're fighting and quarreling already—the inside gang—amongst themselves. And every day the whispers of it are growing louder and more public. For the first time in years they've had a real genuine contest for the presidency. The tried-and-true staff of paid organizers and professional politicians of Gompers' have been out on extra vacations to save money for the busted treasury—all grumbling against their master for having to do so on account of the money he wasted during the war. The old inside political boss of the closest run political machine in the land—after a good lifetime of continued office—goes tottering to his fall, and the eyes of any man can see that the time is close at hand when old Sammy Gompers will walk no more like a little sacred duck at the head of American labor, uttering wise-sounding noises."

"Is this right?" asks Mike, thinking uneasy of what that Wobbly and Russian might be doing behind him, but still not able yet to get a good clear look at them.

"It is," he says. "And taking advantage of just this exact and critical moment, the wise silent boys in the know inside start now their boring-in plans—their great far-spreading secret movements."

"Secret movements, yes!" says Slattery in his mind, and gave a still secret movement of joy inside, himself. For now for just a second he got his eye loose from Twohey's, and he caught good and plain for once what the Wobbly was doing. He was motioning and waving at the Russian, who was beyond him at the window—shaking and threatening at him with his fist, and trying to catch his eye and point him to the stairway out, and having no luck at doing so, for not a motion did the Russian make at the window that showed that he was seeing him.

"Aha!" says Mike to himself. "So that's how it stands!"

And he felt better, for now he had his roll located.

He seen how it was, probably—just as he suspicioned it might be at first. The Russian had been pulling out the wallet from his coat pocket, secret, for himself. And they'd caught him doing it. And now they'd got to get him outside some way and get their slice out of it—before their train pulled out, and also without Slattery's getting onto them. So by winks and nods and silent movements while he was telephoning, they had without a doubt divided up the work of doing this between them—this Twohey, the trainman, going on eloquent and blandandering on the revolution of the workers, while the other one was to sign and motion at the Russian to come out and divide up with them at once—or they'd murder him and mash him and leave him for dead the next time they ran across him.

But the Russian still stood there at the window—pretending not to see nor notice him, with that sad humble way those Hunks and Wops all have of never noticing nor understanding what they don't want to.

"Secret movements," this Twohey, the trainman, was going on when, with one swift and noiseless look, Mike was taking all this in. "Secret movements. And you may see now what they will be built and founded on."

"What will they?" says Mike, drawing his eye back and fixing it again in haste on his, for now he seen what he must do. He must play in from now on

Squire Truman Turns a Plank

By Clarence Budington Kelland

ILLUSTRATED BY J. C. SHEPHERD

"THIS here court," said Squire Truman with a patience that showed signs of wear, "calc'lates to take notice of the disposition of every dawg in Amity Township."

"But," expostulated the youthful attorney, "no court can take judicial notice of a dog. I refer your honor to ——"

"Can't, eh? Can't, eh? Wa-al, young man, you jest keep your eye peeled onto this proceedin' and you'll see it done. That'll do. Set down! Verdict fer the plaintiff. Seven dollars 'n' a half 'n' costs."

Both lawyers, young men imported from the city to try this *cause célèbre*, leaped to their feet protesting.

"I want to offer evidence ——"

"Offer it," snapped the squire, "some'eres else. If you young fellers has got the time and inclination to listen to witnesses gabblin' all day, why, take 'em over to the barber shop. Next case, constable."

"I shall take an appeal," declared the defendant's counsel. "This court cannot ride roughshod over the right of my client to present his case."

Squire Truman put on his glasses deliberately, and the crowd which packed the court room sighed with relief. It had come in the confident expectation of rare entertainment, but the squire had shown unexampled patience with the youthful counsel, and had ended the proceedings with what seemed to the crowd unfair suddenness. He allowed the plaintiff to testify how his dog had been shot. At this point he interrupted counsel to ask a question of the defendant.

"Jake," he demanded, "do you deny shootin' the critter?"

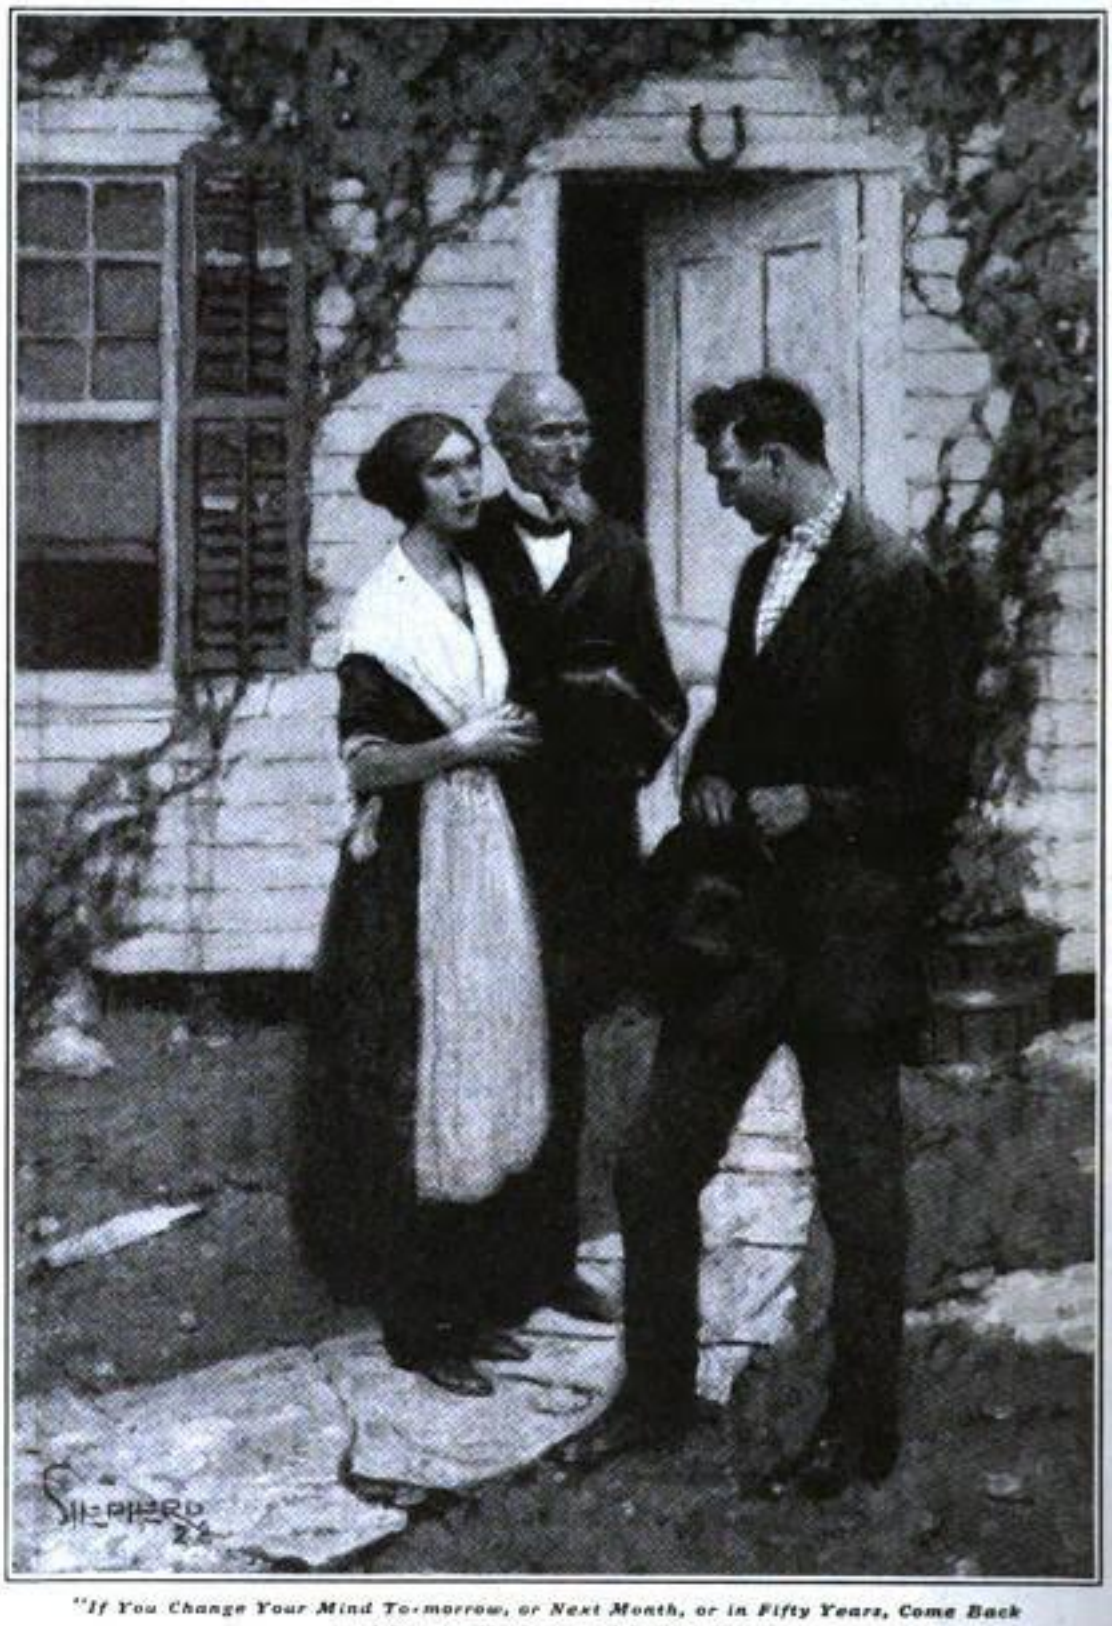
"I shot him, squire, but ——"

"Shet up! I know this here dawg Ranger. The' hain't been a day in months I hain't stoned him away from my swill pail. Knew his mother before him, and, if markin's is any token, I knew his father. He never harmed nobody and never offered to harm nobody—that didn't come a-prowlin' in the nighttime."

It was here objection was made to the court's taking judicial notice of the character of a dog. The squire put on his glasses and the crowd became hopeful. They were glassed with rectangular lenses such as old gentlemen used to wear some fifty years ago. Indeed these had been worn by an old gentleman fifty years before, for the squire inherited them from his father. Personally he had no need for them except for judicial purposes, for his eyesight was of the keenest. When he put them on he was careful to set them so far down his nose that they could not interfere with his vision, and when he put them on one might await consequences.

"Appeal, did you say, young man? Appeal? When this here court makes a decision it calc'lates it to be final. I don't tolerate no appeals. The courts of this county's got plenty to do 'thout potterin' with things I'm amply able to take care of right here. When I give out a verdict it goes as it reads. I hain't never yit found a case so complicated that Tiffany's Justices' Guide and me couldn't git to the meat of it. Now don't go quotin' no law to me! I aim to foller Tiffany so long's he runs in a line with what's fair and right, and so long as he 'n' me don't disagree. If I don't know what law's good for Amity Township after livin' here sixty-two year, then you kin bet your bottom dollar no court forty mile off does. Young feller, the' won't be no appeal."

"I've a right to appeal. The statutes governing practice in the justices' courts give me the right to appeal."



"Um-m! You got a right to go clerkin' in a grocery store too—and it might be better for all concerned if you was to avail yourself of it—but you don't do it. Uh-huh. Jake"—he turned to the defendant—"heard my verdict?"

"Yes, squire."

"Aim to appeal?"

"No, squire."

"Shows ye got some sense left. Now clear out of here, all of ye, and as fer you, young spriggins"—this to the attorney—"when next you come practicin' in this here court, check your college learnin' at the hotel and fetch your brains, sich as they be. Looks like you was so plumb full of statutes and decisions that they've kind of crowded your intellec' out through your ears. . . . Next case, constable."

"If You Change Your Mind To-morrow, or Next Month, or in Fifty Years, Come Back and Rap on My Door and I'll be Here"

"Jim Finch agin Susan Briggs, replevy," bellowed Ollo Dawdy.

"Involves a silver cornet, don't it?" asked the squire.

"Uh-huh," said Ollo.

The squire fixed Jim Finch with a stern eye.

"Now you look here, Jim, your house hain't more'n fifty feet from mine. Think I'm goin' to tolerate a cornet in it? You'd be yowlin' into the thing continual from mornin' till night. You kin take your choice, Jim. Either dismiss this here case or git fined fer contempt of court. If blowin' a cornet in the court's ear hain't contempt, I'm dummed if I know what is. . . . Next case, constable."

He motioned to Ollo with his finger and Ollo bent over the desk.

"Mighty int'restin' case—the dawg shootin'," said the squire.

"Didn't observe no special
tures," said Ollo.
"Um-m! What was the
shot with?"
"Buckshot."
"In the head," said the squire. "Where was it
"Just to the no'th of Jahala Bond's barn."
"Funny place fer Jake Morrow to shoot John
dawg. Seems like neither of 'em had a right to be

Jahala and Young Paul Sprague Seemed to Select Each Other, Simply, as if by Some Natural Law

"What kin I do fer ye then?" he asked.

"I want you should go with me to see Jahala," said Paul, and the squire put on his hat and went with him.

"Ask her to come out here," Paul said when they arrived at the home of his sweetheart. So the squire entered her door without rapping, which was his custom, and called.

She came out to him, hiding as best she could her grief, for somehow grief, in Amity, is a thing which must not be displayed. Jahala was not resentful. Her mood did not accuse her guardian; it wept for him.

"Paul wants you sh'u'd come out," said the squire.

"Poor Paul! Poor boy," she said—that was all. Amity is not effusive. She offered him her lips when she came up to him in the yard, but he would not accept her proffer—ignored it.

"I'm going away, Jahala," said Paul. "I've got to go away."

She nodded.

"When shall I be ready?" she asked simply.

At this his eyes became hungry and his clenched hands opened and shut. It was the utmost she could have done. Nothing could have been added to it. He was going; she offered to accompany him. For a moment he did not speak—could not speak for the amazement that filled him at her fineness and her fidelity. Then he shook his head, but his eyes were not dry.

"I can't take you, Jahala," he said. "I've come to say good-by and give you back your promise. There's that in my blood that makes me unfit to marry any woman, you most of all. It's blood that mustn't be passed on to others."

This was an amazing speech, for in Amity one does not refer to unborn generations. She waited, knowing him too well to attempt to dissuade.

"We'd both remember always what—what he did," Paul went on. "It would stand between us. You'd be watchin' for it to crop out in me. We'd be watchin' for it to crop out in them.

"Every week money'll be comin' to you—every cent I don't need to keep body and soul together—until it's paid, principal and interest."

"I don't want the money, Paul," she said, and he understood what she left unsaid. She didn't want the money; she did want him.

"I'm obliged," he said in the idiom of the place. "I fetched the squire to witness—and, if you need advisin', to give you advice."

"I need no advice," she said. "What you must do, you must do. You know that best, Paul. But if you change your mind to-morrow, or next month, or in fifty years, come back and rap on my door and I'll be here, Paul, waiting for you."

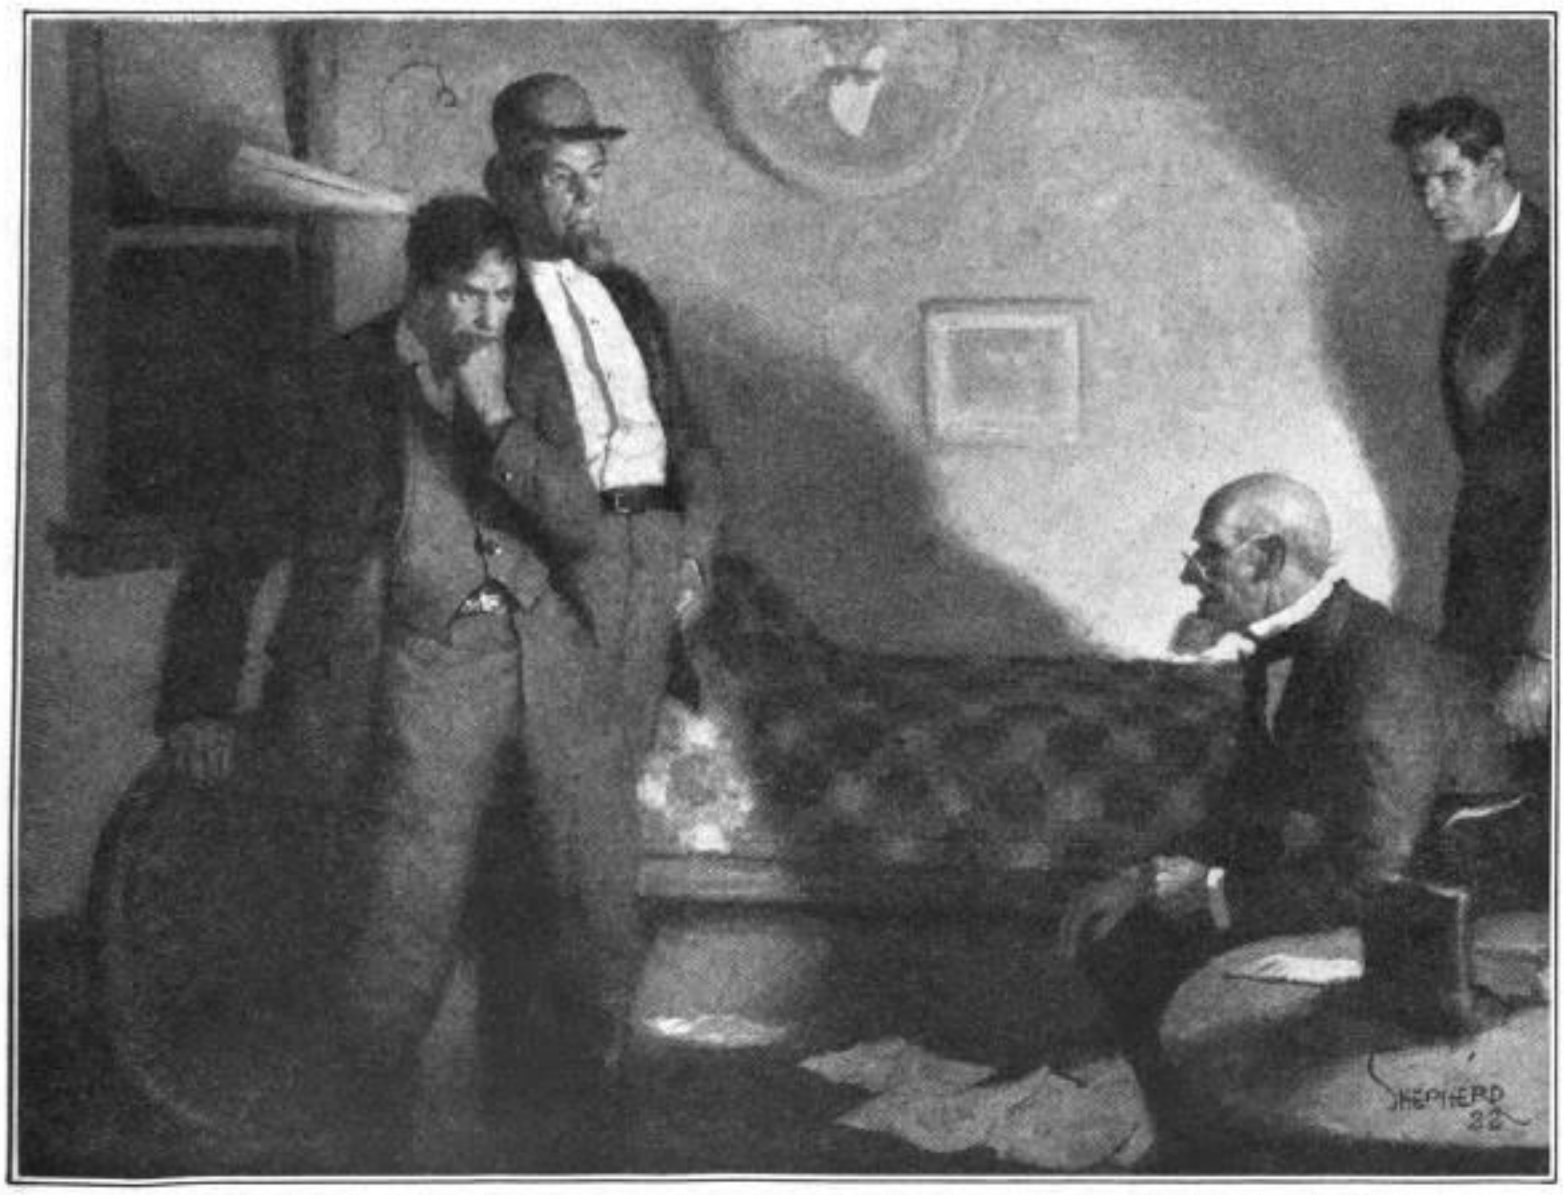
"Good-by," he said, not offering his hand, not asking for the kiss she would have given so gladly. In its morality Amity is austere. In matters involving honesty it is hard and exacting.

"Good-by, Paul," she said, and stood watching him until he passed out of the gate with the squire, and until he turned the corner, which seemed to shut him out of her life.

That was two years ago, the squire recalled. Every Monday since that day Jahala Bond took from the post office an envelope containing a money order in her name. These she accepted without question, even though she knew the sacrifices and privations Paul underwent in order to send them. She knew they were privations she had not the right to deprive him of. But she did not touch the money. Every penny of it lay in the bank, and she regarded it as accursed.

Jahala went to teaching school; picked up her life at the point where it was broken and carried it on in a manner considered by Amity to be admirable. She did not complain, she did not pine; but neither did she take on again the lightness and gayety which had been hers before Fabius Sprague's death. She walked steadily, but quietly. She was not subdued so much as grave, and dignity so sat upon her that she seemed older than her years. Amity knew, as Squire Truman knew, that she would not change. Neither would she be faithless to Paul. Each year would add to her age; she would merge from maidenhood to spinsterhood, and that would be her story.

"Ollo," said the squire, "did ye ever think how many innocent folks suffers, while guilty ones slips off scot-free?"



"The sins of the fathers," said Ollo. "That's Scripture fer it."

"I wonder if Gawd intends it so," said the justice, "or if it's jest the result of human fumblin'. Man has undertook the job of ladlin' out punishments. Near's I kin see, the idee is to hurt somebody, it don't matter who. Kind of a gen'ral gettin' even, as ye might say. One man up and commits a crime, and then justice sort of lashes out regardless, 'thout lookin' to see who it hits."

"Thinkin' of Jahala and Paul?"

"Uh-huh," said the squire. "On account of a matter of twelve-fifteen thousand

WOMEN I'M NOT MARRIED TO

By Franklin P. Adams

ILLUSTRATED BY TONY SARG

Elaine

THERE have been more beautiful girls than Elaine, for I have read about them, and I have utter faith in the printed word. And I expect my public, a few of whom are—just a second—more than two and a quarter million weekly, to put the same credence in my printed word. When I said there have been more beautiful girls than Elaine I lied. There haven't been. She was a darb. Blue were her eyes as the fairy flax, her eyebrows were like curved snowdrifts, her neck was like the swan, her face it was the fairest that e'er the sun shone on, she walked in beauty like the night, her lips were like the cherries ripe that sunny walls of Boreas screen, her teeth were like a flock of sheep with fleeces newly washen clean, her hair was like the curling mist that shades the mountain side at e'en, and oh, she danced in such a way no sun upon an Easter day was half so fine a sight! If I may interrupt the poets, I should say she was one pip. She was, I might add, kind of pretty.

Enchantment was hers, and fairyland her exclusive province. I would walk down a commonplace street with her, and it would become the primrose path, and a one-way path at that, with nobody but us on it. If I said it was a nice day—and if I told her that once I told her a hundred times—she would say, Isn't it? My very words to Isabel when I telephoned her this morning!" So we had, I said to myself, a lot in common.

And after a conversation like that I would go home and lie awake and think: "If two persons can be in such harmony about the weather, a fundamental thing, a thing that prehistoric religions actually were based upon, what possible discord ever could be between us? For I have known families to be rent by disagreements as to meteorological conditions.

"Isn't this," my sister used to say, "a nice day?"

"No," my reply used to be; "it's a dreadful day. It's blowy, and it's going to rain." And I would warn my mother that my sister was likely to grow up into a liar.

But, as I have tried to hint, beauty was Elaine's, and when she spoke of the weather I used to feel sorry for everybody who had lived in the olden times, from yesterday back to the afternoon Adam told Eve that no matter how hot it was they always got a breeze, before there was any weather at all.

It wasn't only the weather. We used to agree on other things. Once when she met a schoolgirl friend in Hyde Park whom she hadn't seen since a year ago, out in Lake View, she said that it was a small world after all, and I told her she never said a truer word. And about golf—she didn't think, she said one day, that it was as strenuous as tennis, but it certainly took you out in the open air—well, that was how I felt about it too. So you see it wasn't just the weather, though at that time I thought that would be enough. Well, one day we were walking along, and she looked at me and said, "I wonder if you'd like me so much if I weren't pretty."

"Whene'er I take my walks"—you know
The rest—"abroad," I always meet
Elaine or Maude or Anne or Flo,
Belinda, Blanche or Marguerite;
And Melancholy, bittersweet,
Sets seal upon me when I view—
Coldly, and from a judgment seat—
The women I'm not married to.

Not mine the sighs for Long Ago;
Not mine to mourn the obsolete;
With Burns and Shelley, Keats and Poe
I have no yearning to compete.
No Dead Sea pickled pears I eat;
I never touch a drop of rue;
I toast, and drink my pleasure neat,
The women I'm not married to!

Fate with her celebrated blow
Frequently knocks me off my feet;
And Life her dice box chucks a throw
That usually has me beat.
Yet although Love has tried to treat
Me rough, award the kid his due.
Look at the list, though incomplete:
The women I'm not married to.

L'ENVOI

My dears, whom gracefully I greet,
Gaze at these lucky ladies who
Are of—to make this thing concrete—
The women I'm not married to.

MARGUERITE

ELAINE

It came over me that I shouldn't. "No," I said, "I should say not."

"The first honest thing you ever said to me," she said.

"No, it isn't," I said.

"It is too," was her rejoinder.

"It's nothing of the kind," I said.

"Yes, it is!" she said, her petulant [illegible] getting the better of her.

So we parted on that, and I often [illegible] lucky I am to have escaped from [illegible] distrust of honesty, and from her [illegible] passionate temper.

Maude

MAUDE and I might have been [illegible] together. She was not the [illegible] couldn't be candid with. She used to [illegible] admired honesty and sincerity above all other [illegible] she was deeply interested in me, which was natural [illegible] as I had no reservations, no reticences from her. I [illegible] that when you cared about a girl it was wrong [illegible] secrets from her.

And that was her policy, too, though now and then [illegible] carried it too far. One day I telephoned her and [illegible] her what she had been doing that morning.

"I've been reading the most fascinating book," [illegible] said.

"What book?" I asked politely.

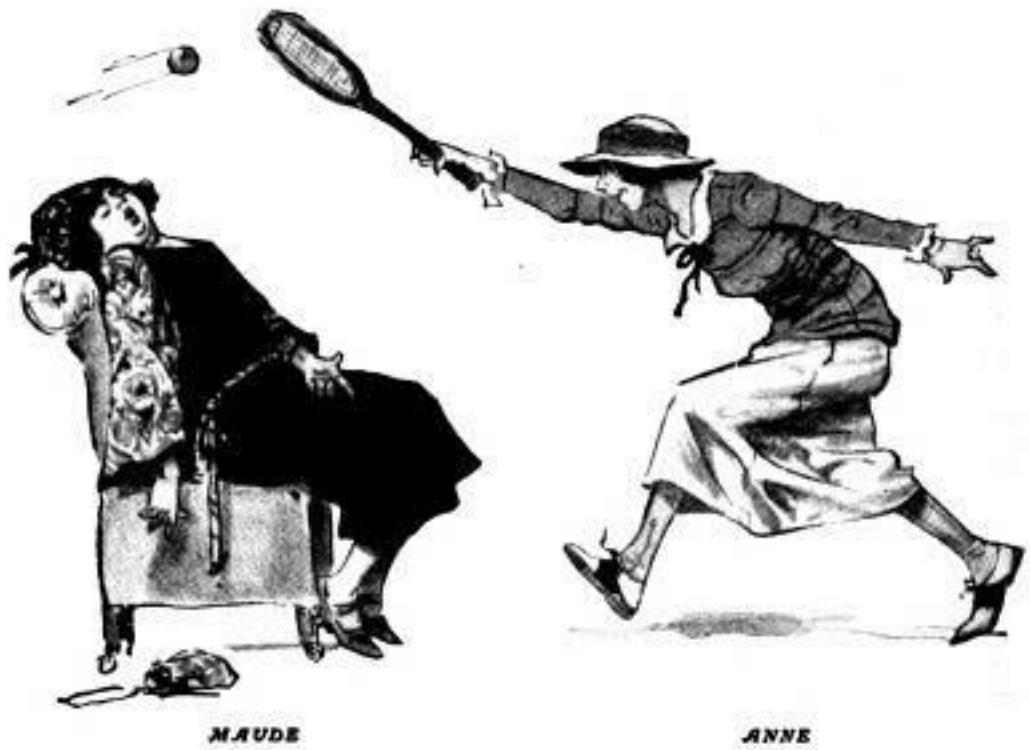
"I can't remember the title," she said, "but it's [illegible] a man in love with a girl, and he ——"

"Who wrote it?" I interrupted.

"Wait a minute," said Maude. I waited four [illegible] "Sorry to have kept you waiting," she said. "I [illegible] the book. I thought I left it in my room and I looked around for it, and then I asked Hulda if she'd seen it, she said no, though I asked her that the other day [illegible] something else, and she said no, and [illegible] found out that she had seen it and put it in a drawer, so I went to the library [illegible] book wasn't there, and then I went to my room and looked again, and I'm coming back to tell you I couldn't when here it is, guess where, right on the telephone stand. Who wrote it? He is the author. A. M. S.—no, wait a minute—A. S. M. Hutchinson, not He. There's an *n* in it. Two *n*'s really mean an *n* between the *i* and the *s*. it's Hut-chin-son, and not Hut-ch—what's the difference who writes it as long as it's a good book?"

There may have been more, but reasonably certain that the author was Hutchinson, so I hung up the receiver, though I felt at the time was that hanging was too good.

I had dinner with her that night at a restaurant.



"Coffee?" asked the waiter.

"No," I said. And to her: "Coffee keeps me. If I took a cup now I wouldn't close an eye. Some folks can drink it and not notice it, but take

IEN I'M NOT MARRIED TO

By Dorothy Parker

ILLUSTRATED BY TONY SARG

No matter where my route may lie,
No matter whither I repair,
In brief—no matter how or why
Or when I go, the boys are there.
On lane and byway, street and square,
On alley, path and avenue,
They seem to spring up everywhere—
The men I am not married to.

I watch them as they pass me by;
At each in wonderment I stare.
And "But for heaven's grace," I cry,
"There goes the guy whose name I'd bear!"
They represent no species rare,
They walk and talk as others do;
They're fair to see—but only fair—
The men I am not married to.

I'm sure that to a mother's eye
Is each potentially a bear;
But though at home they rank ace-high,
No change of heart could I declare.
Yet worry silvers not their hair;
They deck them not with sprigs of rue.
It's curious how they do not care—
The men I am not married to.

L'ENVOI

In fact, if they'd a chance to share
Their lot with me, a lifetime through,
They'd doubtless tender me the air—
The men I am not married to.

Freddie

BOY!" people say of Freddie. "You t ought to meet him sometime! He's lot, that's what he is—more fun than

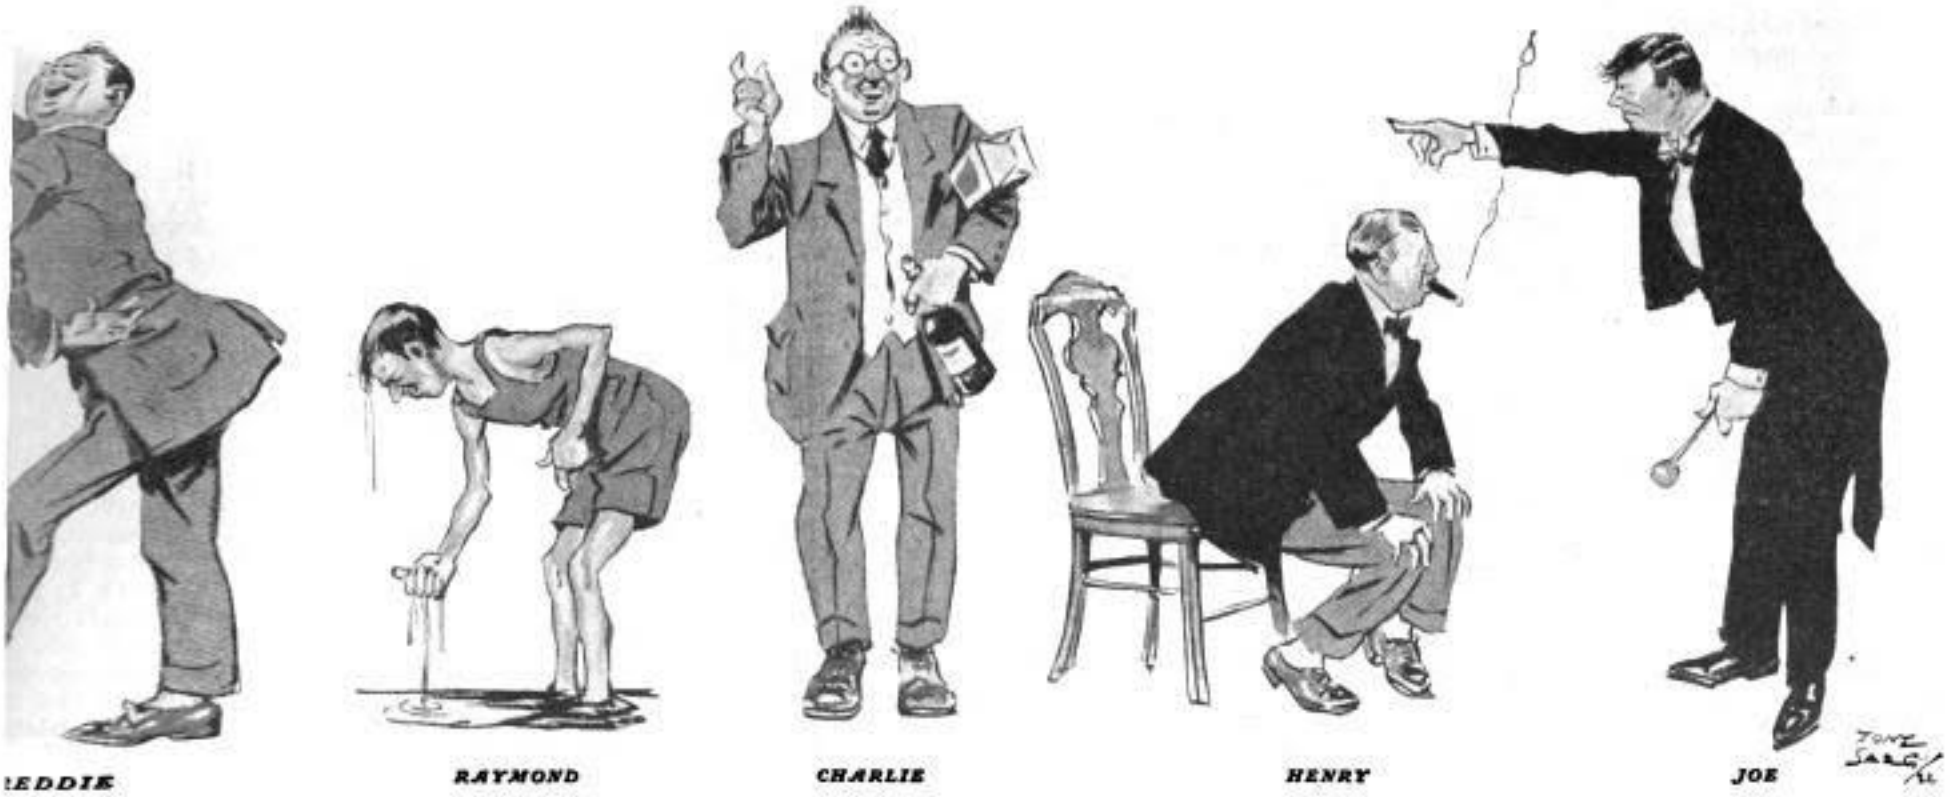
in himself. He is never without a new story of what Pat said to Mike as they were walking down the street, or how Abie tried to cheat Ikie, or what old Aunt Jemima answered when she was asked why she had married for the fifth time. Freddie does them in dialect, and I have often thought it is a wonder that we don't all split our sides. And never a selection that every member of the family couldn't listen to either—just healthy fun.

Then he has a repertory of song numbers too. He gives them without accompaniment, and every song has a virtually unlimited number of verses, after each one of which Freddie goes conscientiously through the chorus. There is one awfully clever one, a big favorite of his, with the chorus rendered a different way each time—showing how they sang it when grandma was a girl, how they sing it in gay Paree and how a cabaret performer would do it. Then there are several along the general lines of Casey Jones, two or three about negroes who specialized on the banjo, and a few in which the lyric of the chorus consists of the syllables "ha, ha, ha." The idea is that the audience will get laughing along with the singer.

If there is a piano in the house Freddie can tear things even wider open. There may be many more accomplished musicians, but nobody can touch him as far as being ready to oblige goes. There is never any of this hanging back, waiting to be coaxed or protesting that he hasn't touched a key in months. He just sits right down and does all his specialties for you. He is particularly good at doing Dixie with one hand and Home, Sweet Home with the other, and Josef Hofmann himself can't tie Freddie when it comes to giving an imitation of a fife-and-drum corps approaching, passing and fading away into the distance.

But it is when the refreshments are served that Freddie reaches the top of his form. He always insists on helping to pass plates and glasses, and when he gets a big armful of them he pretends to stumble. It is as good as a play to see the hostess' face. Then he tucks his napkin into his collar, and sits there just as solemnly as if he thought that were the thing to do; or perhaps he will vary that one by folding the napkin into a little square and putting it carefully in his pocket, as if he thought it was a handkerchief. You just ought to see him making believe that he has swallowed an olive pit. And the remarks he makes about the food—I do wish I could remember how they go. He is funniest, though, it seems to me, when he is pretending that the lemonade is intoxicating, and that he feels its effects pretty strongly. When you have seen him do this it will be small surprise to you that Freddie is in such demand for social functions.



ALBERT

But Freddie is not one of those humorists who perform only when out in society. All day long he is bubbling over with fun. And the beauty of it is that he is not a mere theorist, as a joker; practical—that's Freddie all over.

If he isn't sending long telegrams, collect, to his friends, then he is sending them packages of useless groceries, C. O. D. A telephone is just so much meat to him.

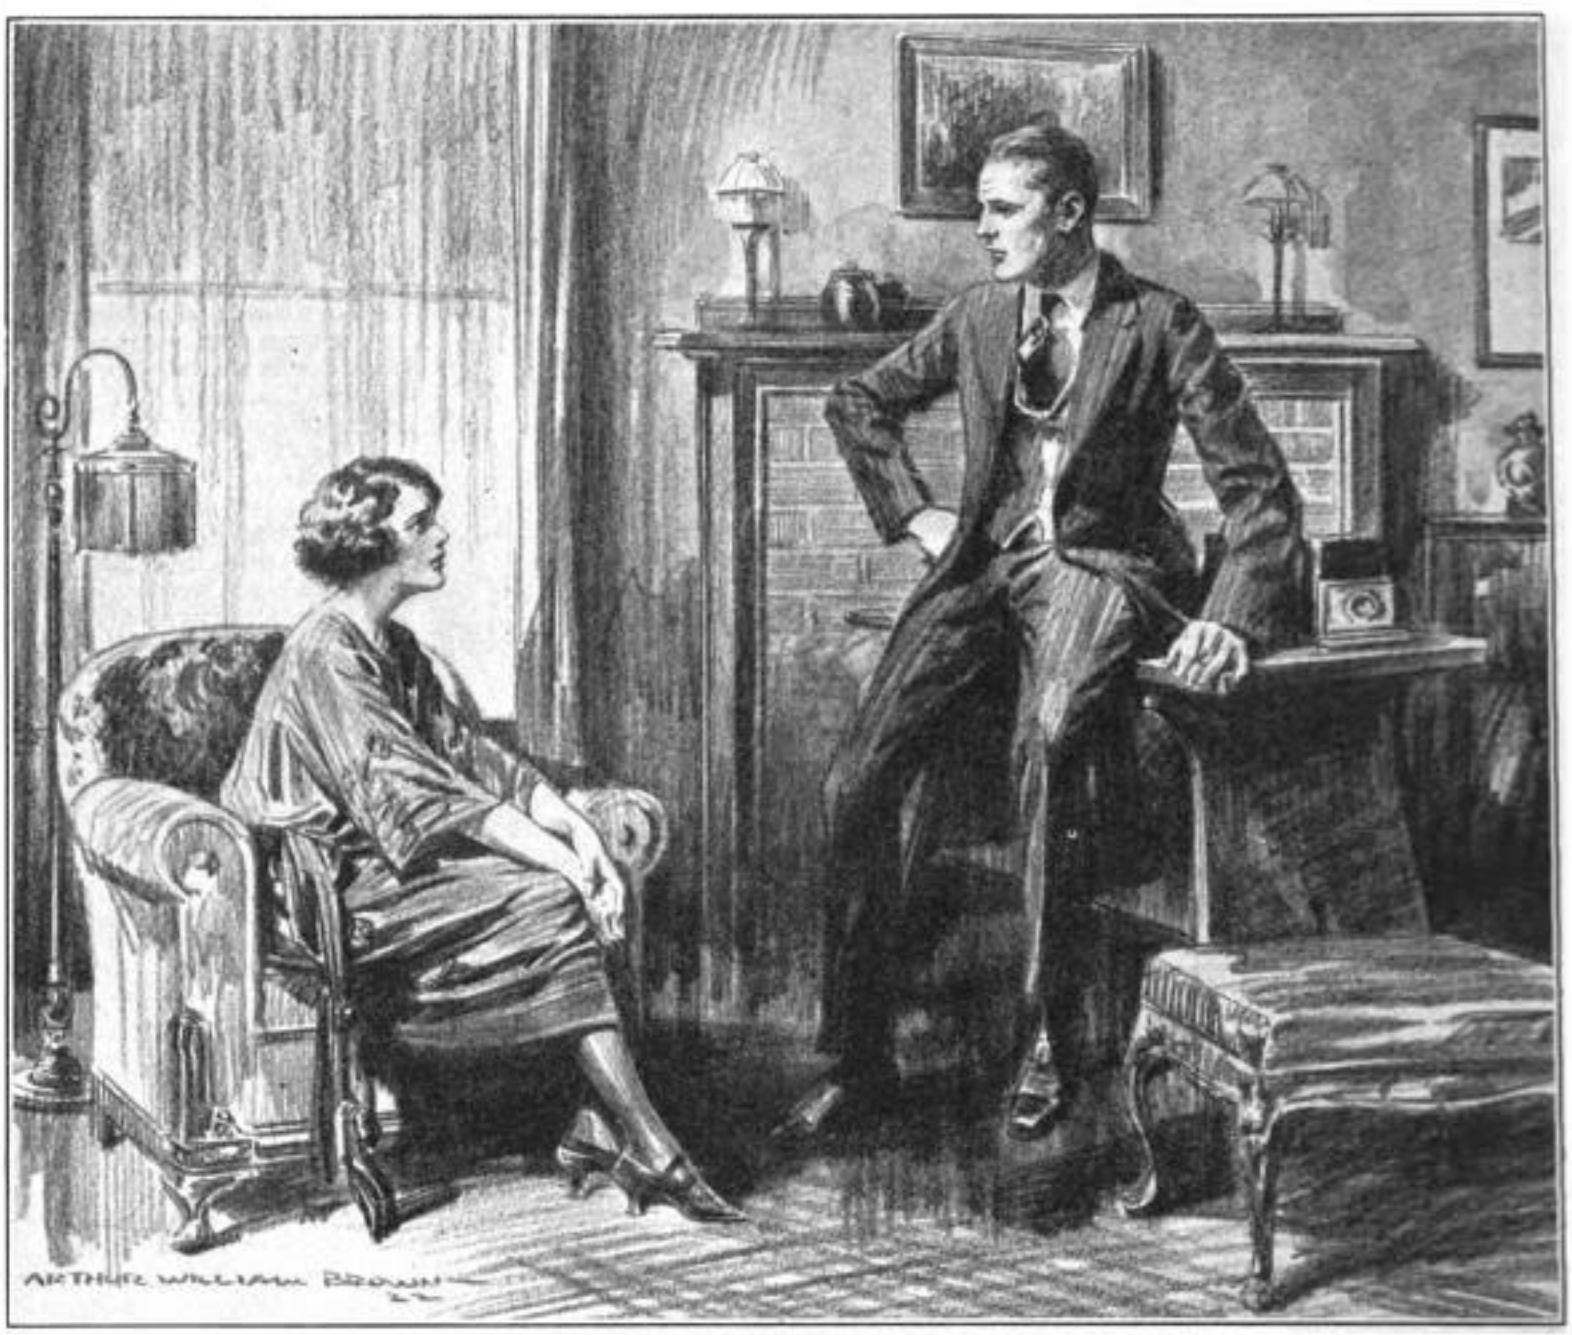
THE BUCKET BOO

By Maximilian Foster



ILLUSTRATED BY ARTHUR WILLIAM BROWN

THE day was Saturday—pay day. My envelope I'd brought home with me from the insurance office, the place in Pine Street where I worked; and I was meaning to give Josie hers for the house, after which I'd hold out the usual five-spot I was tucking away each week in the savings. Bert Gerken, though, was giving a party that night, it seems; and Sadie, his wife, she'd called up on the phone asking Josie and me to go along. Bert was putting up for the tickets; but I'm no sponge—I was through with standing him up like that. If Josie and I went along again I meant to pay my way.

"We're going, aren't we?" Josie asked me.

I wasn't sure. I wanted to talk it over first. It would cost us a good five-specker, I was certain; and the way Bert and his wife were spending money—the theater first, and a rabbit afterwards, then a cab, maybe, to come home in—for all I knew, it might set us back even more.

"But it's only this once," pleaded Josie. "Besides, we haven't been out for days."

It Was Wall Street That Scared Her. She Hadn't Guessed the Risk I Was Taking

She'd been making a dress, it seems. It wasn't a new dress, I mind, but one she'd turned and made over; though that's neither here nor there. The dress was so much like a new one, she was just hankering to have someone see it.

"See!" she said. "I'll put it on to show you."

She was running out of the room when I called her back again. "I guess we'd better not go," I said.

And I said, too, I remember, if we went we'd be kept out till late; and with all the work I'd been doing down to the office I was pretty tired. "Besides, Josie," I told her, "there's all that money it'll cost."

The look she gave me I remember yet.

"Then you're not going, Jim?"

It was what I meant, all right. The bills, the household accounts, had been pretty stiff that week; and leaving out the rest of it, I'd been a good deal worried. That wasn't all of it either. What with all the hard times going on, down at the insurance office they'd been laying off men right and left. Josie, though, turned away from me while I was talking and went toward the door.

"Boker was right," she said. "What he says is true!"

"What's that?" said I.

Boker, I'll add, was a fellow the Gerkens knew. He was a Wall Street man, a bird who dealt in stocks; but it was news to me Josie had ever heard about him.

"He says that all your life you're going to be a clerk," she said.

It wasn't what Boker had said to me, though never mind. What Josie said fixed it. It was because of that, the Monday after, that I went downtown and did what I did.

II

A CLERK all my life, was what she'd told me. That wasn't the first time, either, I'd had it said to me. The kick in it, though, was that it was all straight goods, the truth. I'd tumbled myself to what I was.

That Saturday night I still remember clearly. It isn't likely, in fact, that I'll ever forget it. Josie gave me my dinner; but it wasn't much of a meal, I'll say. She just sat there, looking straight before her; and as for myself, I didn't have much appetite, either. After the meal was over and she had cleared away the things she came into the front room where I was trying to read the evening paper, and sat down and began to rock. She was still just looking straight ahead of her; but after a while she spoke.

"They're just starting now," she said.

I knew what she meant, but I said nothing. A little later she spoke again.

"The curtain's just going up," said Josie.

I still kept silent; and Josie went on rocking, her eyes fastened on the wall. A while afterwards she stopped rocking, and got up from the chair.

"If we keep on saving," said Josie, "maybe in fifteen or twenty years we can buy a farm somewheres out in Connecticut." She was at the door when she said it. As she went down the hall she spoke again. "We might as well be dead," she said.

I thought so too. Anyway, after she'd gone I laid down the paper I'd been trying to read; and for an hour then, like Josie, I sat there staring before me at the wall.

If you're a clerk, a chap like me, stalling along on a salary, you'll understand, I wouldn't wonder, what went on in my head that night. As I've said, it wasn't all of it new to me. A year before, a friend of mine—a fellow down at the office—had tipped me off to where I was heading; but it hadn't sunk in very deep. That month I'd had a raise to fifty per; and at the time it had looked to me like all the money in the world. Let that go, however; I'll get to it later on. Just now I'm telling what went on in my head that night.

It was myself I thought of, of course. I seven years now, nearly eight, I'd been ing down the job; and the seven years sat there mulling it over, went by me li parade. Th were all a each one cut out of the same; one year in and out I made myself a over my bea ing the same over and again. The about two see too. I were living nothing to while I was my own ag others and Young m though the all like m clerks of and for a night we day after sat there ing them. did they of it, I wo What co out of it I wonder what it w kept on going aw that. W all—my chained I of being barr that's t The b I'd quit w to wear what I w were d night. day I w of. I d much

that. I got to thinking of Bert Gerken and h Bert could give Sadie all she was getting wh I give it to Josie too? Under my collar I began t I remember. Gerken I hated. It was the cash h roll he was flashing nowadays, that had caus trouble for me.

Bert was clerk in another insurance office. Li he got only fifty per; but Sadie had all the new clothes she wanted, and she was keeping a cook girl, besides. Bert had a car too.

"Say, how do you do it, Bert?" I asked him.

He tipped me a wink.

"Boker," he said; "Wall Street."

I can see the swagger he gave. A chap like learned since, puts on a lot of lugs just because stocks. It scared me, I'll say, however. Down office Potter, the head clerk, always was warning playing the market. If we got caught at it we we understood.

"Rats!" said Bert.

I made him sick, he said. According to hi Potter said was bunk. It was the regular dope handed out to clerks like us just to keep us clutches. I could ask Boker if I didn't believe

Boker, however, I didn't have to ask, because I'd begun to dope it out for myself. Alone there in the front room of the flat, I doped it more. Then, getting myself a pencil and some fell to figuring. If Bert, a big boob like him, away with the game, why couldn't I, myself? struck; and I still sat there figuring.

It wasn't the first time I'd done that. Night I'd been doing it; and between times down at I'd been doing it some more. It's the regular fact, with the boobs and simps, the boob that Boker trim. The evening paper I had two or open at the financial page; and what I was

under. What I'm trying to make clear is only what happens to the simps, the boobs. It isn't just greed, you know, that makes all the come-ons so easy. Ask yourself, for instance, how you'd like to have a job like mine staring you in the face the rest of your natural. If you have a wife how would you like it, too, to have her up against it like Josie?

At nine that morning as usual I was at my job downtown. The time clock was in the basement; and after I'd hung up my hat and coat I got into line with the others. There were forty or fifty of them in all, fellows like myself; and the grouch I had on you could have cut with a knife like a London fog they tell about. "Hey! Quit digging me in the back," the fellow in front of me said.

I didn't say anything back to him, though it's a wonder. When I got to the time clock I shoved my card into the slot; then I gave the clock a smash that rattled the works inside.

"Say, what's eatin' you, anyway?" said the fellow ahead.

I stuck out my jaw, I remember. Then I shoved him out of the way.

"Get upstairs to your stall, you horse," I said.

I thought for a moment he was going to biff me. He didn't, though.

I could see his face change, his jaw dropping; then he slouched on up the stairs to his desk.

He was thinking; and what I'd said, I wouldn't wonder, hit him harder than if I'd given him a poke in the ribs. A lot I cared! Old Potter, the head clerk, was sitting there, waiting, as usual, to see we got to work; and after I'd slammed over to my desk and rattled around a bit, making all the noise I liked, there was a sudden crash. It was old Potter slatting the desk with his ruler.

"Order!" he snapped.

I slammed the desk just to show him what I thought. That was how I felt, you know. Afterwards I fell to studying Potter the way I'd been doing for a fortnight past.

He was a seedy, worn-out old fellow. For twenty-five years or more he had sat there in that room, drudging away at the job; and the more I looked at him the more I saw what I was heading for if I kept on as I was. Potter, true, was head clerk in the office; but as I figured, if for twenty-five years or so I was steady and careful, and if every morning I punched the time clock regularly, why, at the end of all those years the best I'd get would be a job like his. And even if I did, too, that was no license I'd go on keeping the job. Already, in fact, there was a whisper going the rounds that they meant to put the skids under Potter. He was getting old, and they meant to give him the gate.

I wasn't much good that morning. The work I did wasn't worth the ink I wasted. I just sat and studied Potter. Added to this, there was something fishy and queer that day about him that began to catch my eye. He had a newspaper spread open on his desk, and he seemed to be figuring something from it. Every time, though, any of the clerks came near him he would shove it out of sight. I wondered what he was up to. Then, along toward eleven o'clock he got up from his desk, tucked the paper in his pocket and scuttled to the door.

That settled it for me. He hardly was out of sight when I was up and out of the room. Five minutes later I was over at the bank, the savings, where I'd tucked away our nest egg. It was a joint account Josie and I kept there; but the whole eleven hundred I didn't draw out in a heap. A hundred was all I got. I wanted to go slow at first, you know. I remember, though, I shook a little as I took it from the teller; and as I went down the street, the hundred in my pocket, I had my mitt on the money. The joke was I was afraid someone on the way to Boker's would get it off me.

"Why, hello!" said Boker as I pushed open the door of the place.

The room was upstairs in an office building. A big blackboard ran across the place; and the board was filled with columns of figures. At the ends of it, too, were a couple of stock tickers clanking and stamping away; and at the back was a set of other rooms, the private offices. It was all pretty swell, I'll say, its furniture new and shiny, and on the floor a big expensive rug.

In front of the board were four or five rows of chairs; and on these sprawled a lot of men, the customers, most of them talking and smoking. At the back and sides stood other men. The place, in fact, was crowded; but the minute I opened the door Boker had seen me. He seemed to keep his eye on the door most of the time, I'll mention; though I won't take time with that.

"How's the market?" I asked him.

The Reminiscences of a Stock Operator

By Edwin Lefèvre

DECORATIONS BY M. L. BLUMENTHAL

I SAW Livingston many times in his office and at his home. Mostly he philosophized about the market. Now I wanted less of his mature wisdom and more of the early Larry Livingston. It would help me to understand him in his prime. One evening when I spoke about his unusual ability to read the tape he merely nodded.

But I persisted: "You were born with it. But how did you come to develop it?"

"My early training. The first job I ever had."

"I'd like to hear about it," I said.

But that evidently was not enough, friendly as we had become. It is not difficult to start a man at talking. But to get him to narrate you must work on him when he is in the mood. Any professional writer of fiction knows that there are times when story-telling comes easier than at others.

"There isn't much to tell," he said.

But I saw in his eyes that he saw in mine that I was listening with my very soul. And then I knew the story was coming. He spoke in a matter-of-fact voice, unhesitatingly, remembering facts, unconcerned with people. At times I asked questions, and he answered without the slightest impatience and went on, steadily and emotionlessly as a machine. I have suppressed some of my questions, leaving his answers.

"I went to work when I was a kid out of grammar school. I got a job as quotation-board boy in a stock-brokerage office. I was quick at figures. At school I did three years of arithmetic in one. I was particularly good at mental arithmetic. As quotation-board boy I posted the numbers on the big board in the customers' room. One of the customers usually sat by the ticker and called out the prices. They couldn't come too fast for me. I have always remembered figures. No trouble at all.

"There were plenty of other employes in that office. Sure, I made friends with the other fellows, but the work I did, if the market was active, kept me too busy from ten A.M. to three P.M. to let me do much talking. I don't care for it, anyhow, during business hours."

Learning to Read the Tape

"BUT a busy market did not keep me from thinking about the work. Those quotations did not represent prices of stocks to me, so many dollars per share. They were numbers. Of course, they meant something. They were always changing. It was all I had to be interested in—the changes. Why did they change? I didn't know. I didn't care. I didn't think about that. I simply saw that they changed. That was all I had to think about five hours every day and two on Saturdays; that they were always changing.

"That is how I first came to be interested in the behavior of prices. I had a very good memory for figures. I could remember in detail how the prices had acted on the previous day, just before they went up or down. My fondness for mental arithmetic came in very handy.

"I noticed that in advances as well as declines, stock prices were apt to show certain repetitions. There was no end of parallel cases and they created precedents to guide me. I was only fourteen, but after I had taken hundreds of observations in my mind I found myself testing their accuracy, comparing the behavior of stocks today with other days. It was not long before I was anticipating movements in prices. My only guide, as I say, was their past performances. I carried the dope sheets in my mind. I looked for stock prices to run on form. I had clocked them. You know what I mean.

"You can spot, for instance, where the buying is only a trifle better than the selling. You can see the gradual overcoming of resistance, the carrying of defenses. A battle goes on in the stock market and the tape is your telescope. You can depend upon it seven out of ten times.

"Another lesson I learned early is that there is nothing new in Wall Street. There can't be because speculation is as old as the hills. Whatever happens in the stock market today has happened before and will happen again. I've never forgotten that."

"No," I said, "you don't forget what has happened. But you also manage to remember when and how. You carry the precedents in your head and can utilize them. That is experience—the fact that you remember."

"Why shouldn't I remember?" Livingston asked simply.

"No reason," I said with conviction, and thought of Paul Morphy's memory. Then I thought of the mind of the average stock speculator. No wonder!

Livingston went on:

"I got so interested in my game and so anxious to anticipate advances and declines in all the active stocks that I got a little book. I put down my observations in it. It was not a record of imaginary transactions such as so many people keep merely to make or lose millions of dollars without getting the swelled head or going to the poorhouse. It was rather a sort of record of my [illegible] misses, and next to the determination of probabilities I was most interested in verifying whether I observed accurately; in other words, whether I was

"Say that after studying every fluctuation of the Sugar I would conclude that the stock was behaving always did before she broke eight or ten points. I would jot down the stock and the price on May remembering past performances I would write down it ought to do on Tuesday and Wednesday. Later check up with actual transcriptions from the tape.

"That is how I first came to take an interest message of the tape. The fluctuations were from associated in my mind with upward or downward ments. Of course there is always a reason for the but the tape does not concern itself with the wherefore. It doesn't go into explanations. I the tape why when I was fourteen, and I do today, at forty. The reason for what a certain today may not be known for two or three days or months. But what the dickens does that matter business with the tape is now—not tomorrow. son can wait. But you must act instantly or be and again I see this happen. You'll remember the Tube went down three points the other day was of the market rallied sharply. That was the fact following Monday you saw that the directors dividend. That was the reason. They knew were going to do, and even if they didn't sell themselves they at least didn't buy it. There was buying, no reason why it should not break."

Livingston's First Tip

"WELL, I kept up my little memorandum book six months. Instead of leaving for home when I was through with my work, I'd jot down the wanted and would study the changes, always the repetitions and parallelisms of behavior—I read the tape, although I was not aware of it at

"One day one of the office boys—he was older came to me where I was eating my lunch and the quiet if I had any money.

"'Why do you want to know?' I said.

"'Well,' he said, 'I've got a dandy tip on I'm going to play it if I can get somebody to go

"'How do you mean, play it?' I asked. 'I people who played or could play tips were the old jiggers with oodles of dough. Why, it even thousands of dollars, to get into the game like owning your private carriage and having a

"'That's what I mean; play it!' he said. you got?'

"'How much you need?'

"'Well, I can trade in five shares by

"'How are you going to play it?'

"'I'm going to buy all the Burlington the will let me have with the money I give him,' he said. 'It's going up sure. It's like picking We'll double ours in a jiffy.'

"'Hold on!' I said to him, and pulled out book.

shops to get sore on me for beating them. I'd walk in and plank down my margin, but they'd look at it without making a move to grab it. They'd tell me there was nothing doing. That was the time they got to calling me the Kid Plunger. I had to be changing brokers all the time, going from one bucket shop to another. It got so that I had to give a fictitious name. I'd begin light, only fifteen or twenty shares. At times, when they got suspicious, I'd lose on purpose at first and then sting them proper. Of course after a little while they'd find me too expensive and they'd tell me to take myself and my business elsewhere and not interfere with the owners' dividends. Once, when the big concern I'd been trading with for months shut down on me I made up my mind to take a little more of their money away from them. That bucket shop had branches all over the city, in hotel lobbies, and in near-by towns. I went to one of the hotel branches and asked the manager a few questions and finally got to trading. But as soon as I played an active stock my especial way he began to get messages from the head office asking who it was that was operating. The manager told me what they asked him and I told him my name was Edward Robinson, of Cambridge. He telephoned the glad news to the big chief. But the other end wanted to know what I looked like. When the manager told me that I said to him, 'Tell him I am a short fat man with dark hair and a bushy beard!' But he described me instead, and then he listened and his face got red and he hung up and told me to beat it.

"'What did they say to you?' I asked him politely.

"They said, 'You blankety-blank fool, didn't we tell you to take no business from Larry Livingston? And you let him trim us out of $700!' He didn't say what else they told him.

"I tried the other branches one after another, but they all got to know me, and my money wasn't any good in any of their offices. I couldn't even go in to look at the quotations without some of them making cracks at me. I tried to get them to let me trade at long intervals by dividing my visits among them all. But that didn't work.

"Finally there was only one left to me and that was the biggest and richest of all—the Cosmopolitan Stock Brokerage Company.

"The Cosmopolitan was rated as A 1 and did an enormous business. It had branches in every manufacturing town in New England. They took my trading all right, and I bought and sold stocks and made and lost money for months, but in the end it happened with them as usual. They didn't refuse my business point-blank, as the small concerns had. Oh, not because it wasn't sportsmanship, but because they knew it would give them a black eye to publish the news that they wouldn't take a fellow's business just because that fellow happened to make a little money. But they did the next worse thing—that is, they made me put up a three-point margin and compelled me to pay a premium at first of a half point, then a point, and finally, a point and a half. Some handicap, that! How? Easy! Suppose Steel was selling at 90 and you bought it. Your ticket read, normally: '*Bot ten Steel at 90⅛*.' If you put up a point margin it meant that if it broke 89¼ you were wiped out automatically. In a bucket shop the customer is not importuned for more margin or put to the painful necessity of telling his broker to sell for anything he can get.

"But when the Cosmopolitan tacked on that premium they were hitting below the belt. It meant that if the price was 90 when I bought, instead of making my ticket: '*Bot Steel at 90⅛*,' it read: '*Bot Steel at 91⅛*.' Why, that stock could advance a point and a quarter after I bought it and I'd still be losing money if I closed the trade. And by also insisting that I put up a three-point margin at the very start they reduced my trading capacity by two-thirds. Still, I had to accept their terms or quit trading."

"And you beat the game at that?" I asked Livingston. It was more than interesting, more than incredible; it was positively uncanny.

"Yes. Of course I had my ups and downs, but was a winner on balance. However, the Cosmopolitan people were not satisfied with the awful handicap they had tacked on me, which should have been enough to beat anybody. They tried to double-cross me. They didn't get me. I escaped because of one of my hunches."

Uncanny Tape Reading

IN PREVIOUS conversations we had discussed what people call hunches. Livingston described it as a distinct message from the tape, a feeling that the little paper ribbon is telling him to get out and stay out until the sky clears again. Later, when he told a half dozen stories in illustration of his meaning I came to the conclusion that it was the curious ticker instinct to which I have referred. Livingston has it to a greater degree than any other operator I ever met. But James R. Keene possessed that same sixth sense, and although he always denied that he acted on blind impulse I am convinced that the only reason the Whitney-Ryan group didn't get Keene on two historic occasions was that Keene smelt the trap. Born operators of the type of Keene and Livingston are often able to do the right thing instantly because they do it instinctively. Livingston went on:

"The Cosmopolitan was my last resort. It was the richest bucket shop in New England, and as a rule they put no limit on a trade. I suppose I was the heaviest individual trader they had—that is, of the steady, everyday customers. They had a fine office and the largest and completest quotation board I have ever seen anywhere. It ran along the whole length of the big room and every imaginable thing was quoted. I mean stocks dealt in on the New York and Boston Stock Exchanges, cotton, wheat, provisions, metals—everything that was bought and sold in New York, Chicago, Boston and Liverpool.

"You know how they trade in bucket shops. You give your money to a clerk and tell him what you wish to buy or sell. He looks at the tape or the quotation board and takes the price from there—the last one, of course. He also puts down the time on the ticket so that it almost reads like a regular broker's report—that is, that they have bought or sold for you so many shares of such a stock at such a price at such a time on such a day and how much money they received from you. When you wish to close your trade you go to the clerk—the same or another, it depends on the shop—and you tell him. He takes the last price or, if the stock has not been active, he waits

The Voice of Blanche Perkins

By IDA M. EVANS

ILLUSTRATED BY LESLIE L. BENSON

He Called Her "Berry" Twice and "My Dear" Once. And He—He Half Proposed

WITHIN Chicago, great bulging town that it is, are many Chicagos—like raisins in a bun; and a bun which, say many folks, is not sugared, or even properly baked. Be that as it may, chunked together like shale and sandstone, quartz and limestone, granite, cat's gold and gravel are segments, suburbs and sides, streets and neighborhoods, locales, sections, subdivisions, additions, districts and parks, so that old inhabitants grow confused and make comparisons that are peevish.

There is Hyde Park, beautifully gray and Gothic to its south, and unbeautifully discordant and rattling to its east. There is Evanston, where culture and human nature have a daily boxing match. The Wilson Avenue district, which buys silk stockings for its ankles before ever it pays its kitchenette rent. Ravenswood, soul mate to a Flatbush. Butchers' Row, whose rich butchers, having climbed their little while, are now for the most part dead and will climb no more. There is Austin, home of the newly married young business man from the Loop. The preoccupied Loop itself, ping-ponged with skyscrapers and great green busses. The Gold Coast. The Rialto. Ghetto. Mich' Boul'. Cottage Grove—oh, ghastly misnomer! Maywood, whose woody adjacences blossom in May and eleven other months with constabulary brightly ready to pluck speeding joy-riders.

And, out north, beyond the candy and florist shops of Wilson Avenue, is Edgewater, where Blanche Perkins was born and attended school—public school. Lithographs of Blanche now hang in every North Side drug store. Phonograph shops all over Chicago are particular to keep her records in stock. The world has changed since Bible times. The modern prophet collects all due honor in her own country; provided foreign musical journals carry full-length photogravures of her in a chinchilla-and-rose-velvet evening coat.

Not many years ago the old-fashioned cable cars of North Clark Street clanked at Edgewater's back door, while the cold lake winds tore across high prairie grass to its front.

Ten-year-old Blanche Perkins used to whimper tearfully wintry noons as she breasted that cold wind seven blocks from the schoolhouse to the Perkins five-room cottage on Hood Avenue. So Rance Whitely used to walk four blocks out of his own way to hold his overcoat in front of her black curls and soft pink-whipped face as windbreak.

For a decade or so Edgewater tossed up ornate six to ten room cottages and two-flat buildings as a white-coated individual in a lunch-room window tosses flapjacks.

The cable cars were finally discarded and became a memory; along with marble-topped bureaus, board sidewalks, Altgeld arguments and kerosene street lamps. The strip of frontal territory between Edgewater and Lake Michigan took on, decoratively and as windbreak, a series of golf links, a Sheridan Road connecting even as far north as Milwaukee with the Auditorium and the Fine Arts Building, and along the road numerous stone mansions whose well-to-do inhabitants could afford to make regular use of links, road and Fine Arts Building.

With the years there came, too, other changes than landscape and architectural. Between blue-eyed Berry Stay, racing her black roadster past the links, and two feverish motorcycle persons who had caught her, Rance Whitely had to act one autumn noon as somewhat amused, somewhat annoyed buffer.

"And I had to say you were suddenly taken ill, ready to faint, and lost control of the wheel," he objected.

"I am never ill! I am not in the habit of fainting!" stormed Berry; she was of the valiant and healthy younger generation. "If I'd heard you"—indignantly—"I'd told 'em it was a lie." But there was the kind of gratitude in her upturned dark blue eyes, ridiculously candid, ridiculously long-lashed eyes, which caused Rance Whitely to flush in a slight awkwardness and to pretend to look at something across the adjacent professionally green turf.

A man does not flush awkwardly and pretend not to have seen it when he is anxious to get such a look of gratitude from young blue eyes. Presently he asked Berry to let him out—he had an appointment on his way back from lunch to business.

Berry had picked him up on his after-lunch way to his place of business, the Whitely Plumbing Supplies.

She often picked Rance Whitely up—on his way somewhere or back from somewhere. This in spite of his fourteen years' seniority, and as well in spite of her having heard, from several different people, all about Blanche Perkins. Berry lived in one of the newest stone houses on the road. The Stays had bought it considerably after the flapjack period.

It was during the early years of that period that Blanche Perkins left Chicago, thereby blighting Rance Whitely's life, as he grimly felt and as Edgewater gossip declared.

Edgewater did not blame her for leaving or for the blighting. Nor did Rance Whitely. She had a right to go.

Her voice was her right. If she had not also had a face——

At ten Blanche had been a soft, pink-cheeked, plump thing with long black curls who was always called upon Children's Day or Christmas Eve to sing We are Happy Children or God Rest You Merry, Gentlemen—or Angels' Carol.

At sixteen she was a tall, lovely white thing with a great knot of lustrous black hair at the nape of a perfect neck. She had copied the knot from an operatic pose of Frieda Hempel.

Sundays, after the morning service at Second Church, when she had sung devoutly Love Divine, All Love Excelling—solo—many young men of Edgewater went to their homes or rooming houses and spent the afternoon figuring just how much a cottage on Hood or Rosemont Avenue, or a two-flat building, would cost; monthly payments of course, thirty-by-one-hundred-and-fifty lot, which allowed a nice space for cement sidewalk, eight tomato plants and a young onion bed in the back yard. Possibly a garage later.

She had a contralto voice of remarkable range and clarity. It had a peculiar birdlike note. It recalled to your mind Shelley's lark, dew on tulips, spring without wo and such mu

tations of his friend on a natural event were
proffered that Fred hastily changed the sublowest estimate for open plumbing for six rooms, including hot-water tank attached to the furnace and to the gas stove.

When Fred Ordwood had departed, whistling over plumbing and Minnie, Rance wretchedly returned to a desk drawer the dead pink rose concealed in his left hand. He had slipped one flower from the dozen after Blanche's face at the station had been pinkly buried in them a minute, and at intervals since he had taken it out for wretched consolation.

In the immediately following years Rance Whitely became older and a better business man. In growing Edgewater the plumbing-supplies business at that time was an excellent and absorbing matter.

He did not grow wrinkled exactly, or gray, because young men seldom do either between the vital ages of twenty-one and thirty-three. Especially in this current century, when airplanes, wars and illustrated Sunday newspapers flutter around and keep life interesting even when it is mournful. But he became rather a serious man, youngish, not young, and he kept one of his desk drawers locked.

Sadie Gustafson, a typist who had more lust for information than honor, pried it open one noon with a hairpin and afterward told its contents to the Whitely shop force: One dead rose, one copy of the Edgewater Social Club's Musical Events of 1909–10, one small gray silk glove, one lace-edged handkerchief and thirty-two pictures of Blanche Perkins, mostly snapshot or clippings from newspapers and illustrated magazines. But that is irrelevant. Sadie was afterward discharged. That was irrelevant to Sadie. The war was on and wages were high and typists could airily choose their typewriters.

In the year following Blanche's departure her father took to smoking his pipe Saturday evenings only. He said firmly tobacco hurt the heart anyway. Then, coming home on the street car one evening, he blushed because Henry Huston, who lived next door, caught him reading headlines over a woman's shoulder. Thaneus Perkins' overcoat pocket held no evening paper. Nor thereafter.

The spring following he watered the small strip of Perkins front lawn with an old leaky coffeepot. The hose for such purpose had worn out. No new one was bought, and Blanche's father explained to the neighbors that it really was handier to water grass with a coffeepot.

It was that first summer, too, that he began to talk discursively with acquaintances on the evils of too much meat on the ordinary American table. At church he had already minimized his regular weekly contribution, dropping a nickel instead of the former quarter. This with a stiffening of the back of his middle-aged head, as if to defy anyone who might be peering over his shoulder to note the size of coin.

As time went on, too, the lives of Thaneus Perkins' shirts were so unduly prolonged that on either side of Hood Avenue the neighbors pointed silently Monday mornings to a line of painfully patched garments. In time, therefore, Thaneus Perkins, hitherto an ordinary-appearing man, came to exhibit that pinched economizing-every-day-and-Sunday look which is like the wrinkles of midforties in that, once painfully acquired, it is seldom eradicated.

And perhaps Blanche's small, thin mother got the look sooner than Thaneus.

Once Blanche had stepped on that departing day coach, Mrs. Perkins could not have bought an actually new article of clothing for many a year. The dress which at the time was her best, a brown crêpe, she turned and pressed and sponged and cleaned and retrimmed and re-turned and cut over and dyed and remade so many times that as the years rolled on Edgewater ceased to take interest in its length of wear and accepted it as something perpetually enduring and unprepossessing, like a rusty water hydrant.

Her gloves were mended almost beyond mending. Her old blackened best shoes were sad sights. She never bought a new pan or skillet. She said, with a fine assumption of absent-mindedness, that she did not care for that bright aluminum, newfangled stuff, which was just then flooding the market and which other women were cordially buying.

These same other women, however, went to her, when in a pinch, to learn how to make meat balls without meat, or puddings without sugar, or cakes without too many eggs.

"Eggs?" she would say. "Oh"—very positively—"one egg is plenty for any cake." Never a quaver in her voice. "Thaneus and I both think eggs make a cake too rich. We prefer ours without any at all."

Like its two inhabitants, the Perkins cottage on Hood Avenue took on pinchedness, shabbiness, signs of stringency. It needed paint. The front strip of cement walk

"You Listen With Such Interest and Sympathy, Rance." One White Finger Played Softly Up and Down Three Running Black Keys

Digitized by Google

HOMESPUN SILK

By Octavus Roy Cohen

ILLUSTRATED BY ERNEST FUHR

JIM HANVEY was not at all the type of man one envisions when the word "detective" is mentioned. He was immoderately large and shapeless and his cheap ready-made clothes flapped grotesquely about the ungainly figure. Above a collar of inconsequential height but amazing circumference arose a huge head which contained a face of incarnadined complexion, scant and unkempt hair, pendulous jowls and twin chins. His lips were large and loose, ears flappy, and his eyes ——

The eyes were the outstanding feature of Jim Hanvey's topography. They were strikingly inexpressive; great sleepy orbs of fishy hue, impressing one with the idea of sightlessness. It seemed impossible that those eyes were capable of vision. They sat glassily in the red pudgy face beneath a hedge of overdeveloped brows. And Jim's blinking—as a matter of fact, he didn't blink; he yawned with his eyelids. An interminably slow process of drooping the lids over the dull-gray eyes, of holding them shut for a moment, and then of uncurtaining them with even more maddening deliberation.

Jim emerged heavily from the dilapidated taxicab which screeched to a halt before the ornate portals of the Hanover Apartments. He turned hesitantly toward the taxidriver, who made no effort to conceal the vastness of his contempt. "How much I owe you, son?"

The meter was consulted—a mere matter of form. "Dollar forty."

Jim Hanvey whistled in protest as he counted out one wrinkled dollar bill, a quarter, a dime and a nickel. Then as he waddled into the Hanover he shook his head slowly. "Dollar forty! Holy smokes! An' I thought I knew every professional crook in America."

He walked uncertainly through the cheaply magnificent lobby. The ebony lad at the switchboard eyed him insolently. Jim paused, toying with a gold toothpick which hung suspended from a watchchain of hawserlike proportions.

"Mr. Arthur Sherwood in?"

"Yeh. Who wants to see him?"

Hanvey's bushy eyebrows arched in surprise. "Why, me, of course."

"Who you is?"

"Hanvey is my name. Mr. James Hanvey."

"Huh!" The boy plugged in viciously, and then, into the transmitter: "That you, Mistuh Sherwood? . . . There's a guy down here wants to see you. . . . Says his name is James Hanvey. . . . Yeh! Hanvey. . . . All right, suh." He turned back and vouchsafed his information grudgingly. "Mistuh Sherwood says come right up. Apahtment Fo'-twelve."

Hanvey moved a couple of steps toward the elevator, then turned for a moment. "Son!"

"What?"

"Next time I come remember I ain't no guy. I'm a feller."

Sherwood answered Hanvey's ring in person; a slender man of medium height, distinguished in appearance, exquisitely groomed, very much at ease. He ushered his visitor into a richly comfortable library, where he motioned toward a chair, into which Hanvey thumped gratefully. He stared about the room in frank approval.

"Awful soft, eh, Arthur?"

The host smiled, exhibiting twin rows of even white teeth. "Rather comfortable."

"Business must be good."

"It is. Very."

"H'mph!"

Hanvey yawned with his eyes, inspecting the rich furnishings, which gave testimony to the unerringly fastidious taste of the owner. Still gazing Jim produced from a tarnished almost-silver cigar case two projectiles of profound blackness. He handed one to Sherwood, who accepted it gingerly, smelled of it suspiciously, and then emitted a single exclamation of protest.

"It ain't the worst in the world," remarked Hanvey.

Sherwood produced a bottle and glasses. Hanvey joined him with gusto. "Here's to you, Arthur. May the judge give you a light sentence."

Sherwood smiled with his lips, but in his eyes lay a faint light of apprehension. He made no comment upon the detective's toast. For a few minutes silence maintained between them, Hanvey draining his liquor at a gulp, Sherwood sipping his with the relish of a connoisseur. It was the visitor who broke the silence.

"It's gonna be pretty tough, Arthur—givin' up all of this."

"Is it?"

"Uh-huh. But you shouldn't have t[aken]. It was patent that Sherwood was very [much] on guard. "Done what?"

"Steal them jools off Mrs. Haley."

"I?"

"Yeh—yes. [It] a pretty [slick] work, Arthur. [But] wasn't [quite] enough."

Sherwood [sat] himself [opposite] tective and [crossed] leg over the [other] lighted a [cigar] own, a rich, [long] expensive [thing].

His tone [was] argumentative [and] replied:

"I think I [was] enough, Jim."

"Aw, Arthur, s'prised at you."

"I was [sitting] at myself, Jim. matter of fact, I believe you'[re] arrest me for [the] affair."

"Why not?"

"You [can't] thing. And [you] me without evidence to [convict] you'll have the disappointment ing yourself ridiculous while [trying] And safe."

Hanvey [thought] agreement. "[It's] awful plausible Arthur." He [leaned] ward in his chair between [them] did steal the didn't you?"

"Between [us]."

"Uh-huh."

"Yes, I [did]. But you can't Jim."

"M'm! I [don't] rest you [any] that you [couldn't] stole 'em."

"It would you. Any [fool] do that [any] wishes—but [I]

"You're Playing a Lone Hand, Arthur, But I Ain't. Real Detectives Never Do"

secure a conviction. What you need, Jim, is [a confession] and evidence is the one thing you can't get. [If you] me and say that I confessed I'll simply deny [it], will you be? You need proof, my boy; proof."

Hanvey reflected heavily.

"Reckon you're right, Arthur. I was hoping [you'd] put me to all the trouble of gettin' it. I was [going] away on a little fishin' trip."

Sherwood was more at ease. "What makes [you think] I got that stuff?"

"I don't think it, Arthur; I know it. I [was] and then I checked up. I'll hand you [one] you sure are—what-you-call-it?—an opportunist."

"Am I?"

"You are. I'm handlin' this affair for the [insurance co.] Mrs. Haley's jools was insured in, and I've been [helping] N'Yawlins checking up. I reckon I know more [about the] affair than you do."

"That's interesting."

"Ain't it? An' seein' that you've been so [anxious to] admit that you done it, p'r'aps you'd like to [hear] I know about it myself, eh?"

"Yes."

Jim's voice, flat and expressionless, [echoed] expensively furnished room.

"Startin' at the beginnin', Arthur, there [was] Grover Haley, wife of the president of the [L. & N.] Railroad. Hubby traveled the usual route [to] wealth—engine wiper, fireman, engineer, [superintendent]. Then he made a killing in oil. They elected him [president] of the road. Worth close onto twenty [million]

briefly. "I've got it pretty straight so far,
Arthur?"
e man smiled. "That much is fairly common
."
it is. Well, to go on, this here Mrs. Haley
rom Chicago about a month ago in her private
d for Palm Beach by way of Memphis an'
She carries with her a maid an' a chef an' a
o she carries with her about one hundred and
nd dollars' worth of joolry which she plans to
one time, just to prove that she's a lady. An'
ime she makes her plans a certain Mr. Arthur
who is playin' the races down in N'Yawlins,
it and decides to make a play for them stones.
can see, Arthur, you started out without any
. Opportunist—ain't that the word I used
figured that all you needed was to get close
em jools for a long enough time an' they were
so, as society is your fad, you went an' had
ngraved which announced that you was Mr.
ell Stoneham, said Mr. Stoneham bein' the
f the most exclusive families socially in New
they have society as is society.
t the train at Memphis and just after leaving
rd goes back to Mrs. Haley, an' that dame
dead with joy. To make it brief, she lassoes
e great Stoneham family and makes him her
ks like the first real break-in she's made in
s it gives her an elegant excuse to drop in on
Stoneham when she gets to New York next time. And so Mr. Sherwood, alias Mr. Stoneham, gets an awful warm welcome on the private car, an' Mrs. Haley wears a hundred and fifty thousand dollars' worth of joolry every time she comes within range of his eyes." Jim lighted another cigar. "Wasn't your fingers itching to grab them stones an' run, Arthur?"

"I'm very fond of jewelry, Jim."

"Sure! Or you wouldn't have taken all them chances. I've checked up, you see. To get ahead: You reached N'Yawlins at eight o'clock. You had been down there at the races, an' you had gone to Memphis to meet that train. The car was going out on a Jacksonville train at six the next morning. An' you asked Mrs. Haley wouldn't she like to go for a sightseeing drive. You went out an' hired a big touring car an' you went for the drive. You gave her an awful good feed at Emil's—they say you know how to order a swell dinner, Arthur—an' about ten o'clock that night you showed up at the Spanish Fort Inn.

"Out there you had a swell time. Bein' known to the head waiter, not to mention the proprietor, the sky was the limit. You had cocktails an' champagne an' maybe even a liqueur or six. Poor Mrs. Haley, thinkin' she was in Rome, done as the Roman did, an', to put it mild an' polite, got sweetly spifflicated. Not drunk, but terribly happy. She found herself sittin' on top of the world an' didn't care who saw her. You left the inn about two in the A.M. an' Mrs. Haley insisted on sittin' in front with you so's she could drive the car. You wasn't particularly keen about it, but you didn't kick hard enough, because same is what she done, the shoffer reclinin' in the back.

"The old dame had started out to prove she could drive—an' she proved it. I reckon she must have busted sixty sev'al times comin' into the city. Ol' gal was just naturally havin' a helluva time. That is, she was until you got 'most home. It was there that somethin' happened—because it was there, Arthur, that a cop seen the speed you was goin' at an' tried to stop you. An' poor Mrs. Haley, not carin' nothin' for no cops, with a bunch of drinks inside her, ran into him!

"What happened then, Arthur"—and Jim Hanvey shook his enormous head reprovingly—"was downright unfortunate. The cop was stunned. You stopped your car, an' just when you did the cop moved, indicating that he wasn't so terribly hurt. With which the missus slipped into gear, stepped on the gas an' let 'er rip. Cop fired one time in the air an' you were free. Mrs. Haley drove that car to somewhere in the French quarter, you got out an' slipped the scared shoffer a nice piece of change to keep mum, and back you beat it to the private car.

"That's where good luck played into your hands, Arthur; right plumb into 'em. Bein' an opportunist —— Say! That's a swell word, ain't it? I got it out of the dictionary before I come here. Bein' an opportunist like I was sayin', you'd just stuck around with the fat dame, knowin' that sooner or later you'd get a chance at them jools. An' kerflooie, her cop-knockin' experience puts everything in your paws. How? Because you knew darned good an' well that shoffer was goin' to lay pretty low on account of what they'd give him if they ever found out it was his car. The farther away he keeps from the spotlight in connection with that case the more comfortable he's gonna be.

"An' of course Mrs. Haley is now a fugitive from justice down in N'Yawlins.

"You took her back to the private car. She had sobered up more than a little, but the strong stuff was still there inside of her. Her nerves was doin' a shimmy, an' you gave her plenty more to drink. Finally she went to sleep. When that happened you grabbed the jools an' hopped the car. Mrs. Haley didn't wake up until she was on her way to Jacksonville. It was a couple hours later that she found out the jools was gone—an' you too. The old gal nearly went nuts until she remembered her insurance, then she figured she was sittin' on Easy Street. An' it may interest you to know that the insurance money has already been paid to her; one hundred thousand dollars."

Sherwood sat motionless, staring admiringly at the portly detective. By no slightest physical sign did he give indication of his genuine enthusiasm for Hanvey's deductive powers, although he marveled at them with the frank appreciation of one brainy man for the accomplishments of another.

Hanvey's story was correct to a detail. Sherwood knew the exhaustive search that the detective must have made, the painstaking probing.

And now—"You're working for the insurance company, aren't you, Jim?"

PHILADELPHIA, JUNE 17, 1922

Sunday in the Country

SUNDAY in the country, if one lives within walking or easy motoring distance of the city, is not a day of peace and rest. On the contrary, it is a day of brawl and battle.

On Sunday one dare not leave one's farm or country place unwatched and unprotected for a moment. The whole countryside is aswarm with Nature lovers from the near-by city. First come the makers of forbidden beverages, trooping across fields and lawns, picking the once despised dandelion and anything else that happens to be loose; then the happy motorists in long procession, embowering their cars in the spoil of orchards, woodlands and wayside shrubberies. If there are no flowers near the road these free and easy visitors will penetrate one's garden and break off the blooming branches of the rhododendrons or lilacs or whatever other bush happens to engage their fancy. With trowel and spade the woods are looted and sometimes, if it looks safe, an unwatched garden. Following come shy maidens, in twos and threes, daintily pulling up the woodland flowers by the roots—arbutus, azalea and a hundred little blossoms that wilt in the hand that picks them; and everywhere are bands of half-grown hoodlums helping in the spoiling of the countryside.

The bolder spirits are usually those who come in motors. They can destroy more, steal more and get away faster than the man on foot. They meet remonstrance with effrontery and resent the notion that a hick has any rights of property and privacy that they are bound to respect. The flowers, the shrubs, the orchards, and occasionally the unguarded gardens are their prey. They camp beside the woodland brook or the shaded spring, hack the trees, trample the flowers, and turn the spot into a garbage hole with their greasy papers, tin cans, bottles and refuse food. Then up and away to the snug flat in the big town, throwing out the wilted flowers as they go.

It takes a brave man to live in a countryside that is accessible to the city, and a hopeful one to beautify the roadside with shrubs and flowers. For these city vandals see beauty only to destroy it. Sometimes this is due to ignorance, sometimes to thoughtlessness, sometimes to wantonness. But none are so quick to resent an intrusion on their own rights of privacy and property as these same petty highwaymen and women.

Sunday night in the country—that is the time of rest; for then the Goths, the Visigoths, the Vandals and the Huns have gone back to town and a few days of comparative immunity from their raids are ahead. The highwaymen will be tied to the office until Saturday noon and the women will be busy making hooch from their dandelions. The countryman may plow and reap, trim up the broken shrubs, prune back the torn branches in the orchard and clear up the mess and litter in the woodland against the return of the Nature lovers at the next week-end.

The country would gladly share with the city, welcome the flat dweller to its woodlands, if so many of those who seek its roadsides did not defile and destroy their beauty. Until the manners and morals of this element improve, the countryman will view all trespassers, the just and the unjust alike, with suspicion, and delegate the pleasure of welcoming them to his bulldog.

Commercialized Athletics

COMMERCIALIZATION of college athletics has long been a peculiarly fruitful topic for debate because it offers such abundant material for honest difference of opinion and because the extremes of opposing thought are so far withdrawn from the middle ground that lies between.

College football long ago rose from the humble rank of a mere sport or pastime. Gate receipts from football at one college are said to average half a million dollars a year; and the total from Eastern colleges alone has been estimated by competent authorities to be in the neighborhood of five millions.

Captains of industry are notoriously well paid; and the magnates of the gridiron, the coaches, are no exception. Their emoluments may not seem great in comparison with those that prevail in the inner circles of the steel business; and yet, measured by the campus scale, they are lordly indeed. Beginning where the full professor's salary leaves off, they run well into five figures. The coach who will next year receive, directly and indirectly, in pay and perquisite, about twenty-five thousand dollars may not be the most highly rewarded man in his profession, but he is commonly admitted to be doing rather well. Even some of the smaller colleges have managed to pay their coaches considerably more than their presidents; but if all parties at interest are content it is not for alien hands to pry into their family affairs.

The best of these coaches are men of rare and quite extraordinary attainments. Their duties are peculiarly exacting and they perform them with amazing skill. Merely to declare that they earn their pay would be to damn them with faint praise, when the truth of the matter is that it is their high-pressure zeal in attracting promising athletic material that has brought them and their methods and the by-products of those methods so much into the limelight.

So great is their efficiency that from coast to coast no outstanding young specimen of brawn and sinew is entirely safe from them. There is no husky lumberjack in the north woods, no barrel-chested cowboy on the range, no prep-school giant beginning to feel at home in long trousers, who may not be shanghaied by the hypnotic crimps of the coaches and wake up some autumnal morning with a splitting headache in the fo'c'sle of a college gymnasium, plucking at the matriculation papers in his breast pocket and learning for the first time, as he regains consciousness, that he has become a freshman at Siwash and has signed on for courses in Semitics and the History of Art.

Soft reassuring words will silence his protest that he is practically penniless and lacks the wherewithal to pay for such impending grandeur. If that master of destinies, the head coach, has marked him for future athletic greatness all will be well. For him not to reason why. For him to be out for practice at appointed hours. At night he may make merry or even ply his books, but he must never, never break training. If his activities on the parallelograms compel him to cut lectures and the professor of Semitics forms a low opinion of his scholarship there are plenty of willing pundits to fill him with enough Semitic lore to qualify him as a major prophet, or at least to enable him to avoid a condition at the forthcoming examinations. And on the side lines or in the stands at the big games there will be some sleek and prosperous alumnus happy in the thought that he has "enabled a poor [illegible] get an education," that he has helped put dear [illegible] on the map, and that he has thereby advanced [illegible] and glory of his Alma Mater.

Defenders of this system are able to make [illegible] case for it. Gate receipts from football square [illegible] deficit and make possible track athletics, [illegible] and a dozen other wholesome outdoor activities [illegible] unable to pay their own way. There can be [illegible] high athletic standing, maintained year in and [illegible] advertises the college, attracts young men [illegible] the creation of a deep and lifelong interest [illegible] by bequest and otherwise, for many college [illegible] academic as well as athletic.

And yet there are those who have long [illegible] system is one that has the defects of its qualities. [illegible] concede its power in upbuilding, maintaining and [illegible] uating great athletic centers; but they point out that [illegible] creations are not, after all, the primary purpose of [illegible] tions of higher learning. They share the feelings [illegible] raged Nature every time they see the tail wag the [illegible] Fully alive to the benefits that accrue from well [illegible] advertising, they still appear unwilling to devote [illegible] publicity from figures that indicate winning athletic [illegible] "Take care of the stadium and the classroom will [illegible] care of itself" is an axiom for university governors [illegible] which they put little faith.

An Eastern college has lately rejected this principle [illegible] a drastic housecleaning. This action on the part [illegible] governing authorities was a nine days' wonder and [illegible] has been the indignation expressed by a large and [illegible] tial wing of the graduate body. The question now [illegible] whether other colleges will have the urge and the [illegible] to follow suit or whether they will quietly prefer [illegible] they may by this one's voluntary renunciation [illegible] desirable athletic material.

The chances are that for the long pull such matters [illegible] be settled in accordance with the preponderance [illegible] ate opinion. Our universities are becoming more [illegible] dependent upon their alumni bodies for the means [illegible] inadequate endowments; and in education, as in [illegible] other field, he who pays the piper usually calls [illegible] the tune.

It would appear, then, that the whole problem [illegible] lem, which is now more acute than ever before, [illegible] eventually solved in such a manner as to further [illegible] mate aims approved by the greatest number of [illegible] graduates. There is no compulsion that can force [illegible] lege of the future to either extreme. It need not [illegible] into a great athletic center that merely tolerates [illegible] ence of a few starved students; nor need it [illegible] unrelieved aggregation of anæmic grinds with [illegible] who regard the pigskin with supercilious indifference. [illegible] this issue as in every other there is a happy middle [illegible] and there is no reason to suppose that the [illegible] sense of the college world will not ultimately find [illegible] ground and walk safely upon it.

Little and Often

FOR some months there has been before Congress [illegible] providing that on and after the first day of [illegible] all postal employes of the United States shall be [illegible] on a weekly pay-roll basis and shall receive their [illegible] sation each and every week. This is unquestionably [illegible] excellent measure; and its passage will institute [illegible] that should have long ago been put into effect.

Considering the technical knowledge required [illegible] employes, the trust that is reposed in them [illegible] sponsibilities that are inseparable from their [illegible] are perhaps as modestly paid as any of our [illegible] ants. Private business commonly recognizes [illegible] that the lower the pay the more frequent should [illegible] pay days.

It is high time that the Government should [illegible] and be guided by the same axiom; for no matter [illegible] the inconveniences that the change might [illegible] accounting and pay-roll sections, they will be [illegible] those suffered by our great army of postal [illegible] the old system.

he Coming Empires of Business

By Robert Crozier Long

BERLIN.

ERNMENT by business, for business
nd through business is revolutionary
ermany's one contribution to the science of rule.
ness state is to supplant and annihilate the polit-
. National representation will be constructed not
certain bases of parties and politics, but on the
fined, straight and frankly egoistic lines of occu-
rofessions and economic needs. So say Germany's
n, the Rathenaus, Stinneses and Möllendorffs;
is in effect Article 165 of the republican constitu-
r which the all-German parliament of business,
swirtschaftsrat, has for two fruitful years debated
rated in the sessions hall of the abolished Prus-
e of Lords. It is no accident that Germany here
re than other nations she suffered from mere
nore than others she flourished when she stuck
cally to business. She is naturally, therefore,
European movement to liberate business from
servitude to politics, and to give it a secure
nal place as an independent, and probably later
, element in national life.

the first, Germany will not be the last. Every-
rend of government is to be depoliticized, to be
into economics. In international relations this
so far become most plain. At Genoa a first
ll-business conference took the place of the
tical conferences which followed past great
ely as in their time political conferences re-
ecumenical councils of the churches as the
l expressions of international solidarity. To
this development is natural. The most im-
licts both in Europe generally and in particu-
are no longer conflicts of frontiers, religions
hey are the opposing interests of international and national business, of creditor states against debtor states, of agricultural states against industrial states, of exporters and importers, producers and consumers, of industrial, commercial and financial interests against one another. International conferences will not regulate the international aspects of these vast issues in a day, but regularly organized business legislatures, from which politics is entirely excluded, may satisfactorily settle them at home.

The Chamber of Economy

THE parliament-of-business system to which Germany resorted in the summer of 1919 was designed as adviser to the discredited political Reichstag in the solution of every question directly or indirectly concerning the national finances, commerce and industries. The design is that business shall no longer be guided and controlled by a chance assembly of unbusinesslike individuals, elected for their political views, and grouped loosely according to an imposing but largely fictitious solidarity of opinions about everything and anything. On the contrary, business will be controlled by the expert representatives of business classes, of industrial branches and of professional occupations, chosen specially for this special aim without regard to politics, religion or geography. The all-German business parliament has no conservatives and no liberals, no monarchists and no republicans, no autocratists and no bolsheviks. It has farmers, manufacturers, merchants, shipping men, financiers, and representatives of the business side of the professions, the arts and other earning occupations. It is an assembly of the material interests of the whole republic; and though, when taken separately, these are frankly pocket interests, when taken together they express the collective interest of Germans as a people engaged mainly in producing, distributing and working, which as such has a common interest that economic affairs shall be ruled expertly, impartially and with a view to the flourishing of the republic as a whole.

The Reichswirtschaftsrat—which foreigners usually translate "Federal Chamber of Economy," and which Germans shorten into "R. W. R."—is now an essential part of Germany's constitutional mechanism. It has already powerfully influenced and in some cases practically dictated economic legislation; and its power daily grows. It has its own policies on state finance, transportation, manufacturing, foreign-trade control, national feeding, labor, social insurance and reparations. In all these matters its criticism and initiatives have greater weight with the more serious part of the public than the policies of the political Reichstag. It is a standing advertisement of the rightly acquired predominance of business interests. Home politics, it reminds Germans, has been killed by the solution at one blow of all those questions of authority and liberty, class privilege,

J. POINDEXTER, COLORED

There Was Considerable of a Good Many Things Done There That Saturday and Sunday

By IRVIN S. COBB

ILLUSTRATED BY F. R. GRUGER

IV

WELL, in the morning I arranges a snack of nuturious breakfast on a tray and takes it in to Mr. Dallas. But he ain't craving nothing solid to eat. He's just craving to lay still and favor his headache. Soon as he opens his eyes he starts in groaning like he's done got far behind someway with his groaning and is striving for to catch up. And I knows he must 'a' felt powerful good last night to be feeling so bad this morning. Misery may love company, as some say it do, but I takes notice that very often she don't arrive till after the company is gone.

He tells me to take them vittles out of his sight and fix him up about a gallon of good cold ice water and set it alongside his bed in easy reach, and then I can leave him be where he is and go on out for a while and seek amusement looking at the sights and scenes of New York City. But when I gets to the door he calls out to me I better make it two gallons. Which I knows by that he ain't so far gone but what he still can joke.

So I goes on out, just strolling along in a general direction, alooking at this and admiring of that; and there certainly is a heap for to see and for to admire. The houses is so tall it seems like the sky is resting almost on the tops of 'em, and it's mighty near the bluest sky and the clearest ever I seen. It makes you want to get up there and fly round in it. But down below in the street there ain't so very much brightness by reason of the buildings being so high they cuts off the daylight somewhat. It's like walking through a hollow betwixt steep hills.

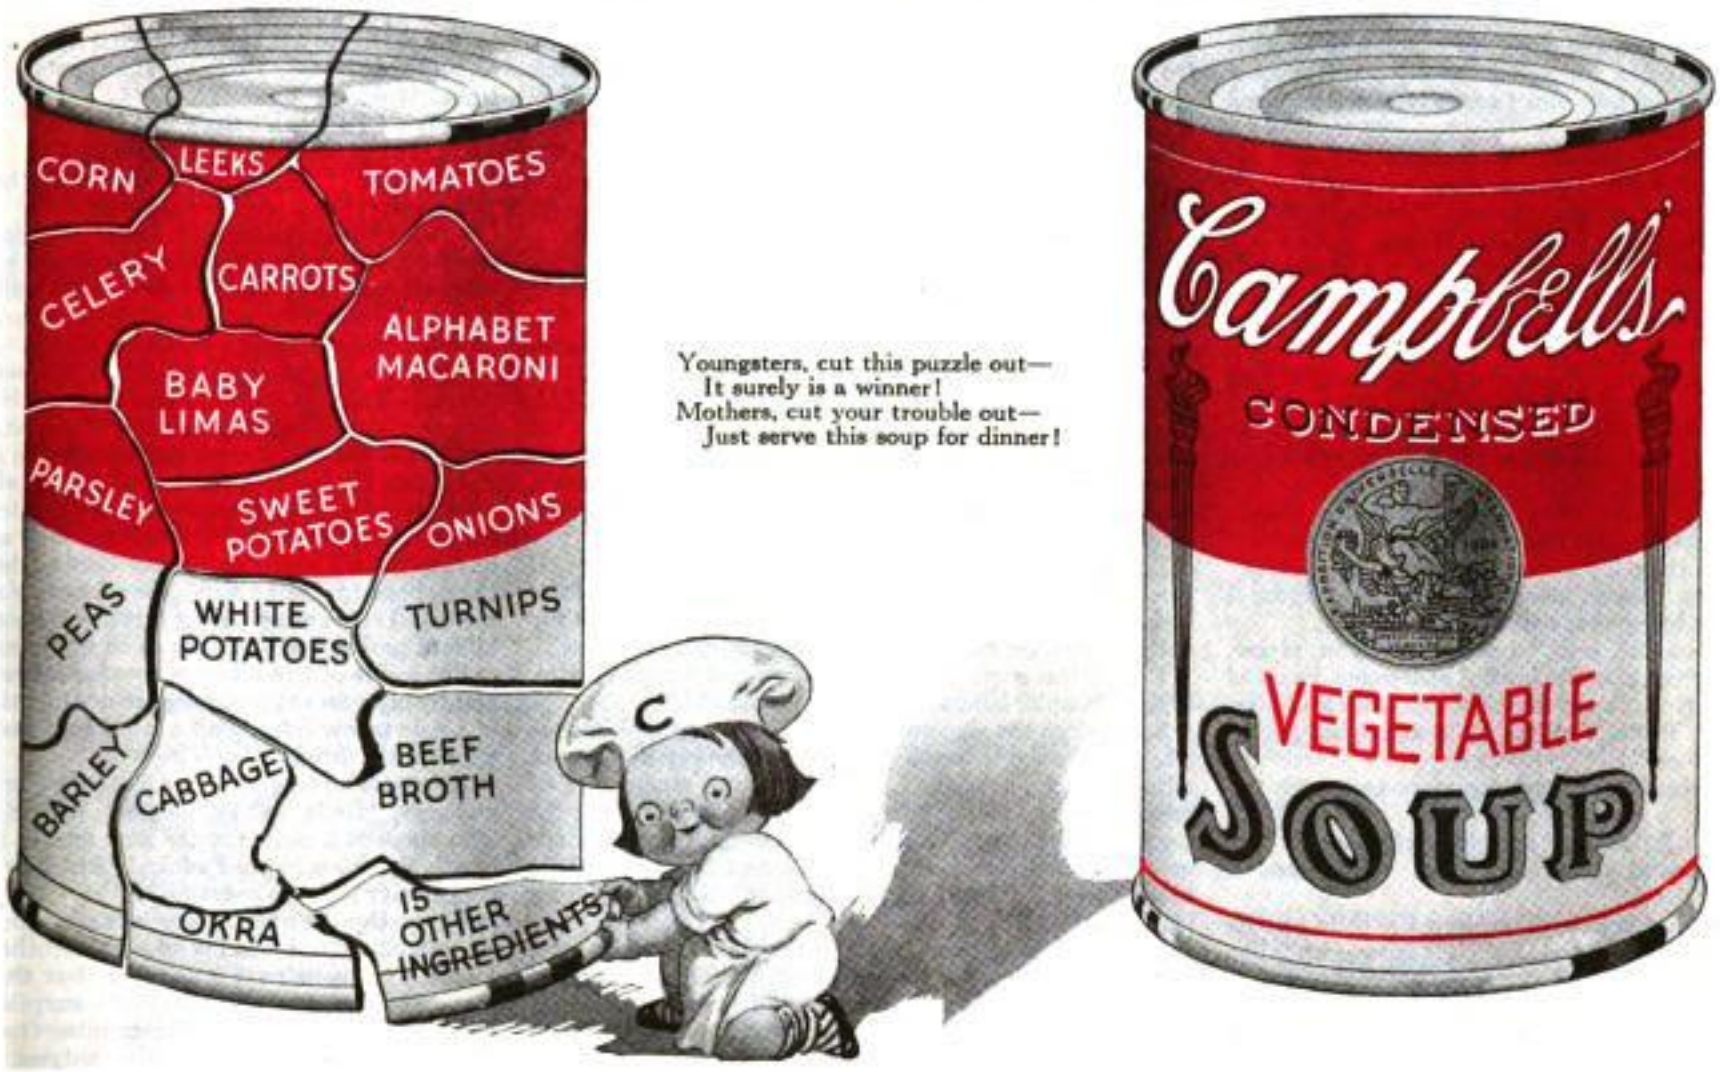
People is stirring round every whichaway, both on foot and in automobiles; and most of the automobiles is all shined up nice and clean like as if the owners was going to take part in an automobile parade in connection with the convention. Everybody is extensively well dressed, too, but most all is wearing a kind of a brooding look like they had family troubles at home or something else to pester 'em. And they ain't stopping one another when they meets and saying ain't it a lovely morning and passing the time of day like we does down home. Even some of them which comes out of the same house together just goes bulging on by without a word to nobody, and I remarks to myself that a lot of the neighbors in this district must 'a' had a falling-out amongst themselves and quit speaking.

The children on the sidewalk ain't playing much together neither. Either they plays off by themselves or they just walks along with their keepers. And there is almost as many dogs as there is children, mostly small, fool-looking dogs; and the dogs is all got keepers, too, dragging 'em on chains and jerking 'em up sharp when they tries to linger and smell round for strange smells and confab with passing dogs. Near as I can make out, the dogs here ain't allowed to behave like regulation dogs, and the children mainly tries to behave like they was already growed up and the growed-up ones has caught the prevailing glumness disease, and I is approximately almost the only person in sight that's enjoying being in New York.

All of a sudden I hears the dad-blamedest blim-blamming behind me. I turns round quick, and here comes the New York City paid fire department going to a fire. The biggest fire engine ever I sees goes scooting by, tearing the road wide open and making a most awful racket and spilling live coals out of her fire box. Right behind comes the hook-and-ladder wagon with the firemen hanging onto both sides of it, trying to stick fast and put their rubber coats on at the same time; and right behind it comes a big red automobile lickety-split. Setting up alongside the driver of it is a gentleman in blue clothes and brass buttons, which he's got a big cigar clamped betwixt his teeth and looks highly important. But he ain't wearing a flannel shirt open at the throat, but has got his coat on and it buttoned up, so I assumes it can't be the chief of the department, but probably must be the mayor. And in lessen no time they all has swung off into a side street, two squares up, with me taking out after 'em out in the middle of the street fast as I can travel.

Now every town where I've been at [illegible] this, when the fire bell rings everybody [illegible] they is doing and goes to the fire. Elsewhere in York, enjoying fires is one of the main [illegible] people; but pretty soon I is surprised to [illegible] pretty near the only person which is trailing [illegible] the department. Whilst I'm still wondering [illegible] cumstance, but still running also, a police [illegible] arm and asks me where is I going in such a [illegible]

I tells him I is going to the fire. And he [illegible] I might as well slow up and save my breath [illegible] liable to be quite a long trip for me. I asks [illegible] and he says the fire is probably three or [illegible] here, and maybe even considerable further [illegible] I says to him, that must make it mighty [illegible] all concerned, having the fires so far away [illegible] house. At that he sort of chuckles and [illegible] my way, but to keep my eyes open and [illegible] nibble me. Well, as I says to myself, going [illegible] I may be green, but I is getting some [illegible] being here, which is more'n I can say for some [illegible] these parts, judging by what I has seen [illegible] present moment.



So I meanders along, looking at this and [illegible] ing corners every once in a while; and [illegible] comes to me that I has meandered myself [illegible] ingly different neighborhood from the one I [illegible] from. The houses is not so tall and is more [illegible] looking; and there's a set of railroad tracks [illegible] through, built up on a high trestle; and while [illegible] been a falling off in dogs, there has been an [illegible] in children; the place just swarms with 'em. [illegible] children is running loose all over the sidewalks [illegible] the streets, too, but it seems like to me they [illegible] time quarreling than what they does playing. [illegible] sounds like quarreling because they has to [illegible] on account of all the noises which is occurring [illegible]

I decides to go back, but the trouble is I [illegible] know which is the right way to turn. I've been [illegible]

HAVE SOUP EVERY DAY FOR LUNCHEON

Youngsters, cut this puzzle out—
It surely is a winner!
Mothers, cut your trouble out—
Just serve this soup for dinner!

We solve your problem!

Combining thirty-two separate and distinct ingredients into one delicious soup is a problem you would find both irksome and expensive. Yet such a hearty, nourishing, full-flavored soup is just the kind you desire for many a meal. Almost without lifting a finger, you can enjoy it in

Campbell's Vegetable Soup

To rich meat broth, made from selected beef, are added choice baby lima beans, dainty peas, golden turnips, Chantenay carrots, diced white and sweet potatoes, chopped cabbage, luscious tomatoes, sugary corn, crisp celery, alphabet macaroni, barley, French leeks, okra, fresh parsley and other herbs and spices. Here is solid satisfaction for the hungriest!

Have a different Campbell's Soup every day

—for the next two or three weeks and see what a delightful variety they offer! See how much easier they make the daily planning of the meals! Order from your grocer this very day. Remember our guarantee: your money back if not satisfied.

21 kinds
12 cents a can

Campbells' SOUPS

LOOK FOR THE RED AND WHITE LABEL

Digitized by Google

(Continued from Page 24)

about so, first to the right and then to the left, that I ain't got no more sense of direction than one of these here patent egg beaters. So I rambles on, getting more and more bewildered like all the time, till I comes to another police, and I walks up to him and states my perdicterment to him very polite and tells him I needs help getting back to where I belongs at.

He looks at me very strict, like he can't make up his mind whether he'd better run me in for vagromcy or let me go, and then he says, kind of short, "Make it snappy then. Where d'ye live?"

I tells him I has done forgot the name of the street, if indeed I ever heard of it; but from the looks of it I judges it must be the chief resident street where the best families resides. I tells him we has just moved in there, Mr. Dallas Pulliam and me, and has started up housekeeping in the department house which stands on the principal corner. I tells him it's the department house where the inmates all lives in layers, one 'pon top of the other, like martins in a martin box.

"You mean apartment house," he says; "department store, but apartment house. Well, what's the name of this apartment house, then, if you can't remember the street?"

That makes me scratch under my hat, too, 'cause I pointedly doesn't know that neither.

"Nummine the name, boss," I says, "jest you, please, suh, tell me whar'bouts is the leadin' apartment house of this yere city of Noo Yawk; that'll be it—the leadin'est one. 'Cause Mr. Dallas Pulliam he is accustom' to the best whar'ever he go."

But he only acts like he's getting more and more impatient with me.

"Describe it," he says—"describe it! There's one chance in a thousand that might help. What does it look like?"

So I tells him what it looks like—how the little private road winds in and circles round the little place which is like a family burying ground, and about the hands downstairs at the front door all being from West Indiana, and about there being two elevators for the residenters and one more for the help, and about us having took over the Sublette quarters and all.

"No use," he says when I gets through; "that sounds just like most of the expensive ones." He starts walking off like he has done lost all interest in my case. Then he calls back to me over his shoulder, "I'll tell you what's the matter with you," he says—"you're lost."

"Yas, suh," I says, "thanky, suh. Tha's whut I been suspicionin' my own se'f," I says, "but I'm much oblige' you agrees wid me."

Still, that ain't helping much, to find out this here police thinks the same way I does about it. Whilst I is lingering there wondering what I better do next, if anything, I sees a street car go scooting by up at the next crossing, and I gets an idea. If street cars in New York is anything like they is at home, sooner or later they all turns into the main street and runs either to the City Hall or the Union Depot. So I allows to myself that I'll go on up yonder and climb aboard the next car which comes along and stay on her, no matter how far she goes, till she swings back off the branch onto the trunkline, and I'll watch out then, and when she goes past our corner I'll drop off. Doing it thataway, I figure that sooner or later I'm bound to fetch back home again. Anyhow the scheme is worth trying, specially as I can't seem to think of no better one. So I accordingly does so.

But I ain't staying on that car so very long; not more than a mile at the most. The reason I gets off her so soon is this: All at once I observes that I is skirting through a district which is practically exclusively all colored. On every side I sees nothing but colored folks, both big and little. Seemingly everything in sight is organized by and for my race—colored barber shops, colored undertaking parlors, colored dentists' offices, colored doctors' offices. On one corner there is even a colored vaudeville theater. And out in the middle of the street stands a colored police. Excusing that the houses is different and the streets is wider, it's mighty near the same as being on Plunkett's Hill of a Saturday evening. I almost expects to see that there Æsop Loving loafing along all dressed up fit to kill; or maybe Red Hoss Shackleford setting in a doorway following after his regular business of resting, or old Pappy Exall, the pastor of Zion Chapel, rambling by with that big stomach of hisn sticking out in front of him like two gallons of chitterlings wrapped up in a black gunny sack. It certainly does fill me with the homesickness longings!

And then a big black man on the pavement opens his mouth wide, and, nigger like, he laughs at something till you can hear him half a mile, pretty near it, which it is the first sure-enough laugh I has heard since I hit New York. And right on top of that I catches the smell of fat meat frying somewheres.

I just naturally can't stand it no longer. Anyhow, if I'm predestinated to be lost in New York City it's better I should be lost amongst my own kind, which talks my native language, rather than amongst plumb strangers.

I gives the conductor the high sign and I says to him, I says, "Cap'n, lemme off befo' I jumps off!"

So he rings the signaling bell and she stops and lets me off. And verily, before I has went hardly any distance at all, somebody hails me. I is wandering along, sort of miscellaneous, looking in the store windows and up at the tops of the buildings, when a brown-complected man steps up to me and sticks out his hand and he says, "Hello thar, Alfred Ricketts! Whut you doin' so fur 'way frum ole Lynchburg?"

I says to him he must 'a' made a mistake. And he says, "Go on 'way, boy, an' quit yore foolin'! This is bound to be Alfred Ricketts 'at I uster know down in Lynchburg, Furginia. Leas'wise, ef 'tain't him it's his duplicate twin brother."

I tells him no, my name ain't Alfred Ricketts, it's Jeff Poindexter, from Paducah, and I ain't never been in no place called Lynchburg in my whole life as I knows of.

He looks at me a minute in a kind of an onbelieving way, and then he says he begs my pardon; but his excuse is that I'm the exact spit and image of this here Alfred Ricketts, which he says he's done played with him many's the time when they was boys together. He says he ain't never in all his born days seen two fellows which they wasn't kin to each other and yet which looked so much sim...r as me and me does. He says the way we favors each other is absolutely unanimous.

He asks me to tell him again what my name is and so, and then he says to me, "Whar'bouts you say you frum?"

I says, "Paducah—tha's whar."

He shakes his head kind of puzzled.

"Paducah?" he says. "I ain't never heard o' Whar is it—Tennessee or Arkansaw?"

I pities his ignorance, but I tells him where Pa... located at. It seems like the very sound of the ... tains his curiosity. He just shoots the inquiring ... at me. He wants to know how big is Paducah an... its main business, and what river is it on or e... what railroads run in there, and a lot more ... seeing he's a seeker after truth, I pumps him f... him we not only is got one river at Paducah, we ... and I tells him about what railroads we've got ru... and about the big high water of 1913, and about the rider troubles some years before that. I tells him ... else besides; mainly recent doings, such as Judge ... having retired and the Illinois Central having ... their shops to double size. Then he excuses himself more and steps away pretty brisk, and goes into a billiard parlor, and I continues on my lonesome way.

But inside of five minutes another fellow speaks and by my own entitled name too. Only this one is of a pale tallow color, with a lot of gold teeth showing, very sporty dressed.

He comes busting up to me like he's overjoyed to and says, "Hello, Jeff Poindexter! W'en did you git You shore is a sight fur the sore eyes! How ... ever'body down in ole Paduke? An' how does ... copperosity seem to sagashuate?"

All the time he's saying this he's clamping my ha... affectionate, like I was his long-lost brother or ... I tells him his manner is familiar, but that I ... him. He acts surprised at that—surprised and hurt like. He asks me don't I remember George Ha... down home? I tells him the onlyest George ... of color I remembers is an old man which he does ... for the First National Bank. And he speaks ... prompt and says that's his uncle, which he is ... him and used to live with him out by the Illinois ... shops. He says he really don't blame me so much ... placing him, because he left there it's going on ... nine years ago, just before the big high water ... claims he used to meet me frequent and says ... changed ... the time wh... to be ... Judge Pra... says he's sure ... recognized ... 'a' met ... in China, ... New York, ... he's been ... North for ... spell now, ... owner of ... pressing ... down the ... piece, and ... trade and ... well. And ... fore I can ... word in edg... goes on to ... several ... things ... happened ... home of ... breaks in ... asks him ... he keeps ... track of ... down the... he's been ... long; and ... just natura... gone from ... town he ... regular for ... local pa... reads it fa... hence th... come he is ... well with ... going on.

Its Dependability Proves Type 61 the Greatest Cadillac

Factory Service for the First Nine Months Has Been Less Than One-Third of That Required by Any Previous New Cadillac in a Like Period

Was ever an automobile so amazingly dependable as the Type 61 Cadillac?

Ever since its debut nine months ago, the car has been the subject of an ovation in which Europe and America have joined.

Now, with more than 15,000 of the Type 61 in the hands of owners, that advance favor and faith in the Cadillac is repaid, we believe, by the reliability record it has established.

As owners of preceding types heartily testify, the Cadillac has always been singularly free from even minor servicing requirements.

But factory service for Type 61 Cadillac cars, in the first nine months, has been less than one-third of that required by any previous new Cadillac in a like period.

Even this pointed tribute to Type 61 dependability is overshadowed by the positive expressions of praise from owners, many of whom have attained high mileage under all conditions of travel.

In numerous instances, owners of the Type 61 report that their cars have required no servicing at all beyond normal lubrication and occasional adjustment.

They pay glowing compliments also to the increased power and quickened acceleration of the Type 61 Cadillac, as well as to its beauty, its comfort and its gliding smoothness.

But the one fact upon which all seize, and ardently emphasize, and recur to again and again, is the new Cadillac's amazing dependability, which they insist has never been equalled or approached before, even by the fine Cadillac forerunners.

In fact, owners of the car are unanimous in proclaiming Type 61 the greatest Cadillac ever produced.

What bears them out in this verdict, and establishes completely Type 61 preëminence, is the fact that all former production schedules have been exceeded and that numerous cities report the largest Cadillac sales in their history.

'at on 'count of readin' the papers so stiddy I has a sweet streak of luck comin' to me this ver' day. I'd lak to tell you 'bout it, Poindexter."

"Perceed," I says—"perceed."

"I'm goin' to," he says, "but s'posen fust we gits in off this yere street an' sets down somewhars whar we kin be comfor'ble an' not be interrupted. Trouble wid me is," he says, "I know so dad-blame many people round yere, bein' prominent in business the way I is, 'at ef I stands still more'n a minute somebody is shore to be comin' up an' slappin' me on the back. Does you feel lak a light snack, Poindexter?"

Well, it's getting to be close onto eleven o'clock now, and I has not et nothing since breakfast excepting fifteen cents' worth of peanut candy; so I tells him I is agreeable. We goes into a restaurant run by, for and with colored, and we sets down by ourselves off at a little table and he insists that he's doing the paying-for on account of my being a boy from his old home town, and he says for me to go the limit ordering. So I calls for a bone sirloin and some fried potatoes and coffee and a mess of hot biscuits and a piece of mushmelon and one thing and another. It seems like, though, he ain't got much appetite himself. He takes just a cup of coffee, and whilst I is eating all of that provender of his generous providing he tells me about this here streak of luck which has come his way.

First off, he begins by asking me has I heard tell about the colored Arabian prince which he is now staying in New York. I says no. He says then I will be hearing about him if I sojourns long, because the colored Arabian prince is the talk of one and all. He's stopping at the Palace Afro-American Hotel, and he's got more money than what he can spend, and he's going round the world studying how black folks lives in every clime, and he's got thousands and thousands of dollars' worth of jewelry which he wears constant. But the piece of jewelry which he prizes as the most precious of all, he lost it only yesterday; which it is a solid gold pin shaped like a four-leaf clover, with a genuine real Arabian ruby set in the middle of it. This here gold-tooth nigger he tells me this while I is sauntering through the steak, and I can tell from the way he says it that he's leading up to something.

He Begins by Asking Me Has I Heard Tell About the Colored Arabian Prince Which He Is Now Staying in New York

"Yas, suh," he says, "yistiddy is w'en he lose it. An' this mornin' he's got a advertisement notice inserted in the colored newspaper sayin' ez how he stan' ready an' willin' to pay fifty dollars fur its return to the hotel whar he is stoppin' at, an' no questions asted. An' yere 'bout half an hour befo' I runs into you I'm walkin' 'long de street right up yere a li'l' ways, an' I sees somethin' shiny layin' in the gutter, an' I stoops down an' picks it up an' ef it ain't de colored Arabian prince's four-leaf-clover pin, dog-gone me! An' yere it is, safe an' sound."

And with that he reach in his pocket and pull it out and let me look at it a brief second. And I says to him that I don't begrudge him his good luck none, only I wishes it might 'a' been me which has found it, because fifty dollars would come in mighty handy.

Then I says to him, I says, "I s'pose you is now on yore way to hand him back his belongin' an' claim the reward."

But he shakes his head kind of dubioussome.

"I tell you how 'tis, Poindexter," he says. "To begin wid, an' speakin' in confidences, ez one ole-time frien' to 'nother, I prob'ly is the onlyest pusson in this yere city of New York w'ich the colored Arabian prince might mek trouble fur me ef I wuz the one w'ich come bringin' him back his lost pin. Ever sence he's been yere he's been sendin' his clothes over to my 'stablishment, w'ich it is right round the corner frum the Palace Afro-American Hotel, to be pressed. An' ef I should turn up now wid this yere pin he'd most likely ez not claim 'at I found it stuck in one of his coat lapels an' taken it out an' kep' it. An' the chances is he'd not only refuse fur to pay over the reward but furthermo' might raise a rookus an' cast a shadder on my good name, w'ich it suttinly would hurt my perfessional reppitation fur a colored Arabian prince to be low-ratin' me 'at-a-way. He's lak so many wealthy pussons is—he's suspicious in his mind. So I don't keer to take no chances, much ez I craves to feel them fifty dollars warmin' in the pa'm of my hand. But ef a pusson w'ich wuz a puffec' stranger to him wuz to fetch the pin in an' say he wuz walkin' 'long an' seen it shinin' an' picked it up he'd jes' hand the reward right over widout a mumblin' word."

"Yas," I says, "tha's so, I reckin."

"'Tain't no manner of doubt but hit's so," he says. "Poindexter," he says brisker like, "I got an idee—it jest this yere second come to me: Whut's the reason w'y you can't be the ordained stranger w'ich teks the pin back to him? You does so an' I'll 'low you ten dollars out of the fifty fur yore time an' trouble. Whut say?"

I studies a minute, and then I says I is sociable to the notion. He says he'll go along with me and point out to me the hotel where the colored Arabian prince is stopping at, and then tarry outside until I gets back to him with the money. I says I'll go just as soon as I has et another piece of mushmelon, which the first piece certainly was very tasty.

So he waits until I has done so, and then he pays the check, which comes to one-eighty for me and ten cents for him, and we gets up to start.

But just as we gets to the door, going out, he takes a look at a clock on the wall and says, "I can't go 'long wid you. You'll have to go by yo'se'f."

I says, "Whyfore you can't go?"

He says, "I jes' this minute remembers 'at I got to ketch the 'leven forty-two fur Hartford, Connecticut, whar I is gittin' ready to open up a branch 'stablishment—tha's whyfore. I been enjoyin' talkin' wid somebody frum my own dear state so much 'at I lets the time slip by unbeknownst, an' now I jes' about kin git abo'd the train at the uptown station ef I hurries." He scratches his head. "Lemme see," he says. "Whut-all is we goin' do 'bout 'at now?" Then it seems like he scratches an idea loose. "I got it!" he says. "Mainly on 'count of my bein' in sech a rush, an' you bein' frum my home town, I'm goin' mek you a heap sweeter proposition 'en de one w'ich I already has made. I'm goin' halfen this yere reward wid you—at's whut I'm goin' do. Yere's the plan. You jes' hands me over twenty-five dollars now fur my sheer an' 'en you keeps the ontire fifty w'ich he'll pay you. See? I knows I is a fool to be doin' it, but gittin' to Hartford on time to-day'll mean a heap mo' to me it th... whut de diffunce in the money would. How ... boy?"

I says to him that it listens all right to me ... him the twenty-five in a minute, only I ain't ... me. When I says that his face falls so far ... mighty near grazes the ground, and then he says, "... how much is you got? Is you got twenty ... fifteen?"

I says I ain't got nothing on me in the way ... cash, only car fare. But I says I is got ... that's worth a heap more than twenty-five ...

And he says, "Whut is it?"

I says, "It's this yere solid gold watch," I ... I hauls it out and waves it before his eyes. "It's ... forty dollars," I says, "but I ain't needin' ... havin' a ... one in my ... wuz give to me ... mittee of the ... yeahs ago fur ... w'ite boy from ... off the upper ... You tek the ... me, say, ten ... I says, "an' I ... reward an' ... us'll be makin' ... says, "'cause you ... the watch anywheres ... lessen forty ... been offered 'at ... now."

He studies a ... then he says ... ain't doubting ... about the ... worth ... still, business ... and before he ... have to take ... store half a ... the street and ... ued.

I says to ... "Tha's suitable ... but," I says, "... wuz in a sweat ... train?"

"I'll tek the ... says. "I kin hurry ... it. Come to ... says, "'at train ... the uptown ... 'leven fifty-... forty-two is ... frum downtown."

"I'm glad to ... says, "'cause ... jewelry-store ... th'ough zamin... we kin ast him ... the pin, too, an' ... it's the genuine ... It mout possibly be," I says, "'at they ... yere clover-leaf pins floatin' round loose ... imitation. By havin' it zamined 'long wid ... both plays safe."

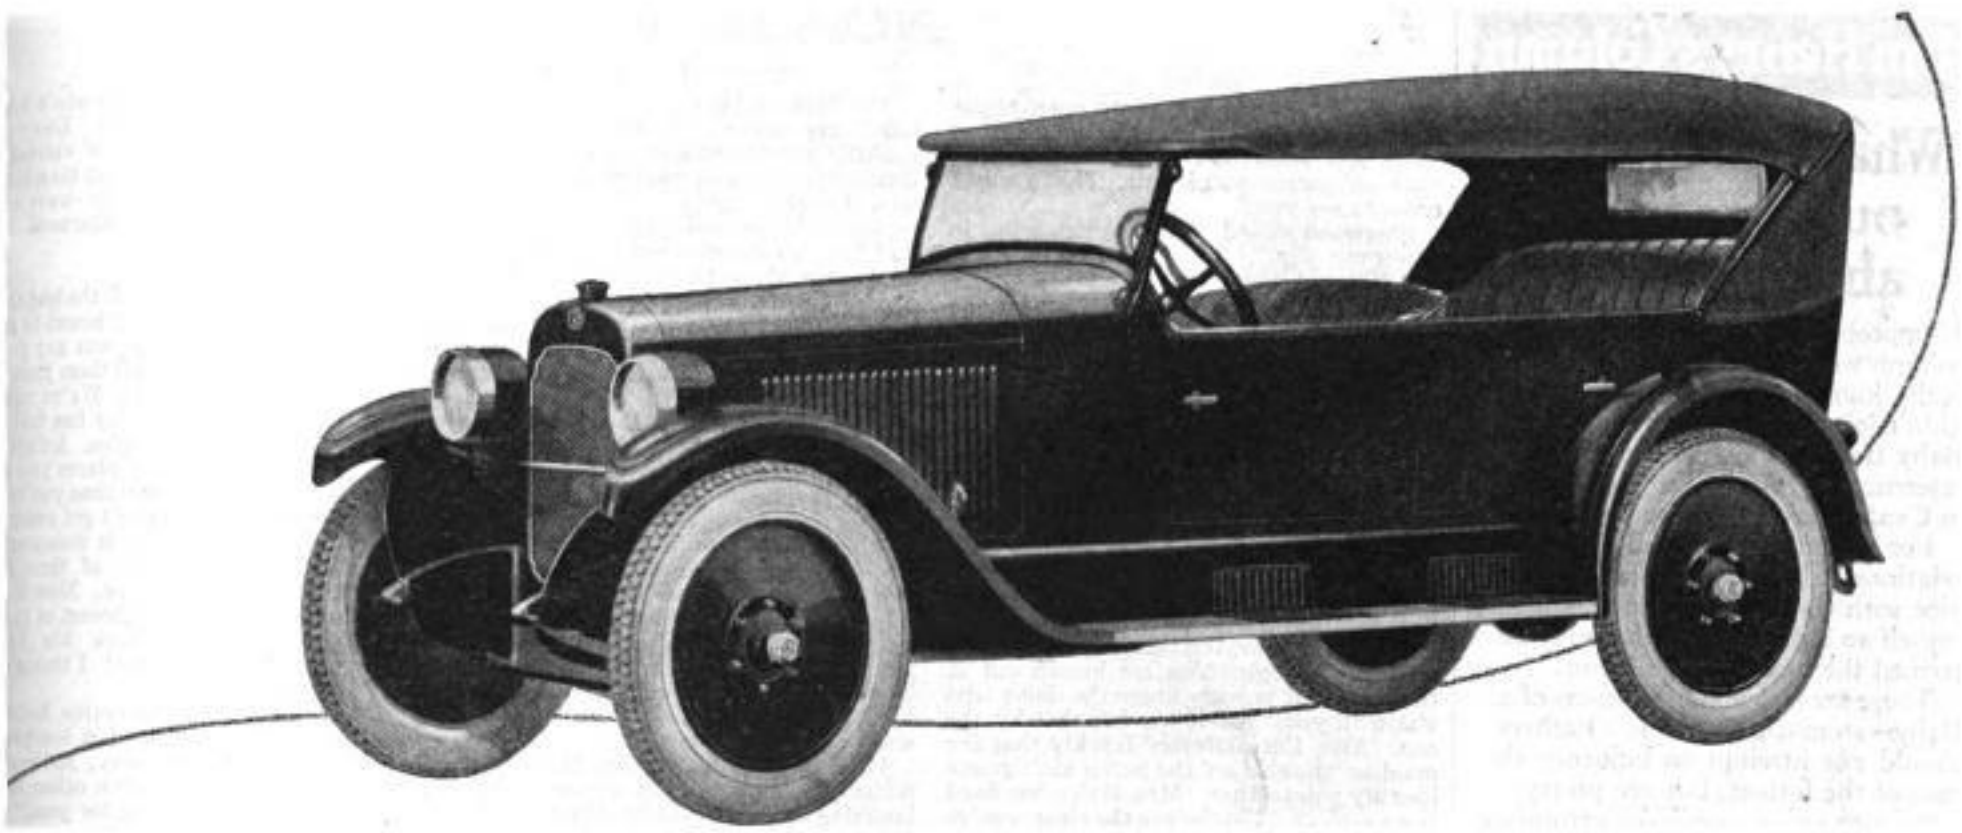
He stops right dead in his tracks.

"Look yere, Poindexter," he says, "what's ... 'is yere projectin' round an' wastin' of ... me," he says, "an' I trusts you—tha's fair. ... teks the pin an' collects the reward. I ... sells it fur whut I kin git fur it. Le's close ... I p'intedly is got to hurry frum yere."

"Hold on!" I says. "How 'bout my ten ...

"I'll mek it five," he says.

"Gimme the five," I says.



So he counts out five ones and yells ... about the Palace Afro-American Hotel ... down the street about half a mile, on ... and in another second he's gone from ... nearest corner.

But I does not go to look for no Afro-A... nor yet for no colored Arabian prince ... seems to warn me 'twould only be a ... instead of which, as I steps along, I ... I stands in the swap, and it comes to ... extent of five dollars in cash, also one ... cents' worth of nourishing vittles, and a ... which it must be worth all of seventy-five ... price of brass has took a big fall.

I is out to the extent of telling one ... little boy from drowning and also one ... watch case without any mechanical ... and furthermore, I can imagine the ... tooth nigger's face when he gets time to ...

f you seek cars comparable with
ıe Chalmers Six, your search will
ıevitably lead you to a much
gher-priced class.

ıits own price-range, the Chalmers
regarded as a car apart—a prod-
:t far above and beyond the
neral run.

other words, it is being awarded
distinct place of dominance in
: minds of buyers and the gen-
ıl motoring public as well.

ı the score of beauty-value alone,
s position is firm and sound.

r the Chalmers is an unusually
ıutiful car—in design and in
ish, with its disc wheels and
ıeral equipment.

engineering-value, it represents a remarkable degree of six-cylinder perfection, developing possibilities which have long lain dormant in the six as a type.

But it is in its wonderfully fine performance, that Chalmers value-superiority is clinched once and for all.

If you will recall the smoothest, most satisfying six-cylinder performance you have ever encountered, and then imagine the smoothness and satisfaction, the liveliness and flexibility, increased a good 50 per cent, you will have some measure of Chalmers Six performance.

One short ride in the Chalmers Six will reveal how much more it is, and how much more it gives, than is usually expected at its price.

All Models Equipped with Disc Steel Wheels and Cord Tires

Jim Henry's Column

What every Father ought to know about Babies

I suppose women who read my column will sniff at the idea, but I really know a lot about babies, and I didn't learn it all out of Aunt Belle's Baby Book, the excellent work of reference sold for 25 cents (35 cents in Canada) by my Company.

For a number of years I maintained relations of intimate personal service with several babies and consider myself an authority on what may be termed their external problems.

There are two major divisions of a Baby—stomach and skin. Fathers should not attempt to influence the care of the former, but are pretty certain to enjoy ample opportunities to exercise their judgments when it comes to keeping a Baby's skin in good condition.

I am trying to discuss this matter in a restrained and delicate way, but when I think of what a helpless little Baby is exposed to I am under a strong temptation to express myself in plain language without polite ambiguities.

What a Baby's skin needs is protection. Until Mennen produced wonderful Kora-Konia, the only matter which seemed to concern parents and nurses was to protect a Baby's immediate surroundings.

Kora-Konia protects the skin.

It places on inflamed little legs a velvety film of soothing, cooling, healing powder which sticks. Kora-Konia is practically waterproof and very adhesive. It is not easily rubbed off, thus giving lasting protection.

Kora-Konia is in no sense a talcum, but possesses definite curative virtue. It will seem almost miraculous to you, the way it clears up rashes and prickly heat and restores chafed skin to normal condition.

So any time you fathers crave sleep both for yourselves and for Baby, dust the little body with Kora-Konia.

And, by the way, Kora-Konia is equally efficient for adult skin irritations—chafing caused by colliding muscles or perspiry clothing—or sunburn.

If you would like to try it out, I will send a sample for 10 cents.

HOMESPUN SILK

(Continued from Page 21)

"Yeh." Hanvey was very open about it. "We've already paid the money, but we're interested now in gettin' the jools back an' puttin' you in stir. That's why I come to see you."

Sherwood smiled. "You're not going to arrest me, Jim."

"Why not?"

"Because you can't prove a thing."

Jim grinned. "Maybe not just yet. I've talked to Mrs. Haley. Bein' a social climber she ain't any too keen to let it be known publicly that she was imposed on by a faker. That'd make folks laugh at her. An' if, in addition to that, it was ever known that she was the woman who flattened the N'Yawlins cop at the end of a wild party it'd sort of queer her about as queer as could be. An' since she ain't sufferin' only a fifty-thousand-dollar loss anyway—she most certainly wouldn't identify you.

"Y'see, Arthur, it's thisaway: I spotted you easy enough. You are known out at the inn. But nobody knew the dame who was with you. An' it was her that hit the cop. Also, I'm confessin' frankly that the maid an' the chef an' the butler ain't gonna identify you neither. Mrs. Haley has fixed them a-plenty. So she's in the clear, you've got the jools, an' we're stung. That makes us plumb angry, Arthur; bein' rode for a hundred thousand thataway. It just naturally puts it up to me to get you an' the jools both."

"I hope you enjoy yourself trying, Jim."

"I been havin' a good enough time a'ready. But I ain't particularly keen about the job. You're too good a crook to be in jail. But, by gosh, Arthur, you never should of fooled with no woman!"

Sherwood was unimpressed. "You can't find the jewels, Jim."

"Reckon I can. Reckon I can land you too."

"How?"

"Because a crook can't get away with it if the tecs are really after him. You've slipped somewhere. It's just up to me to find out where."

"I'm surprised at you—thinking I've slipped."

"You ain't no different from other crooks, Arthur, except you've got more sense."

"Well"—Arthur rose ostentatiously—"I reckon you want to trot me down to headquarters."

"No. Certainly not. Ain't no use of my arresting you unless you're going to plead guilty."

"Sometimes you're a real humorist, Jim."

"Ain't I? I'm awful cute occasionally. What I really come up for, Arthur, was to tell you how much I know. I want you to see just where you stand. I figured you'd be willin' to help me all you could."

"Certainly, Jim, certainly. Just drop around any old time and talk things over. I'll do all in my power to hinder you."

"Thanks, Arthur. I counted on you for that."

They shook hands; slender, immaculate, polished man-about-town and the mammoth expressionless detective. The contrast was striking. Sherwood ushered Hanvey to the door and bade him a cordial farewell. Then alone, the criminal dropped into a chair and mopped his forehead with a silken handkerchief.

Hanvey had startled him—just as Hanvey had intended. With uncanny intuition Hanvey had pieced together a story so nearly approximating the facts that Sherwood was amazed. And he was now very much on guard. The one hundred and fifty thousand dollars' worth of jewelry nestled in a safety-deposit box at one of the Manhattan banks. It was a box Sherwood had possessed for several years, holding it against just such an opportunity as this. It was rented under an assumed name.

Immediately after the jewel robbery he had boarded a train for New York, but not before he carefully had unset the gems and pitched the elaborate platinum settings into the depths of Lake Pontchartrain. The jewels in their little chamois sack were safe.

From the outset Sherwood had realized that he would have difficulty in disposing of the gems. He was content. A stake of that size was worth waiting for—two years, three, five. But he had not anticipated that suspicion would so readily attach to himself. Now that Jim knew the story, he felt that he must redouble his precautions.

The Mrs. Haley end of the situation was safe. He smiled at recollection of the pitifully gullible wife of the railroad president; the blatant, rather vulgar woman who thought to get into the most exclusive social circles by a display of jewelry. She had been so eagerly responsive to his glib chattering about prominent New Yorkers, had so warmly welcomed his casual invitation to telephone when next she came to New York in order that his supposed parents should have the opportunity of entertaining her.

He had understood fully the value of social position to Mrs. Haley. For years she had struggled gamely, mounting with horrid slowness. She was jealous of her trifling successes. This story, made public in the newspapers and expanded in the dirt-slinging weeklies, would ruin her forever. Safety was possible to her in only one way—she must not identify the man who had been her guest on the private car. And Hanvey had reassured him on that point. That had been the single doubtful link in his safety chain; and he knew now that it was one of the strongest.

He'd have to watch Jim Hanvey for a while. It would be an interesting game, laughing in his sleeve as Hanvey banged his fat head against an endless succession of brick walls. Eventually Jim would tire of the search, and then he would dispose of the jewels one by one. Not in a group, of course—they were of such great value that the attention of the police would immediately be attracted through the kind efforts of stool pigeons—but singly, at distant points, and with utmost discretion. The more Sherwood contemplated the plan the more assured he became. He felt sorry for Jim Hanvey. "Nice fellow too. I hate to see him fall down on the case."

As for the detective, he apparently did not share Sherwood's fear for his nonsuccess. If he had a worry he concealed it exceedingly well behind the pudgy face. Too, he fell into the habit of calling casually on Sherwood at odd hours, and discussing the case.

"Hello, Jim. How's old Sherlock Holmes getting on?"

"So-so, Arthur; just so-so."

"Haven't gathered any definite information, have you?"

"You know durn well I haven't, Arthur."

"You'd better get them to shift you to something else. You'll never get the dope on me."

"Maybe not. An' maybe so. There ain't no tellin'."

Sherwood leaned forward and rested a friendly hand on Jim Hanvey's knee. "On the level, Jim, you're wasting your time. You know me; you know I'm not a fool."

"Sure, I know that."

"And you know that I've taken every possible precaution. I was careful enough before; I'm doubly careful now. With you on the case, Jim, I wouldn't take a chance for anything in the world."

"You're terrible complimentary."

"I know you, Jim. You ain't half the fool you look. You couldn't be. Now, frankly, I don't expect to cash in on this little deal for four or five years, and ——"

"You ain't ever going to cash in on it, Arthur."

The narrow, rather ascetic face of the criminal broke into a broad grin. "Trying to make me apprehensive?"

"No; just talkin' sense. You know the gang I'm working for. It ain't so much the hundred thou' insurance money they've shelled out as it is the principle of the thing. They're just butt-headed enough to be willin' to spend money an' time to get you."

"It's impossible."

"Nothin's impossible. No matter how clever you are, you've slipped somewhere."

"I haven't slipped."

"You think you haven't. An' as for you cashing in, you never will. You're playing a lone hand, Arthur, but I ain't. Real detectives never do. I've got the police of the country helpin' me on this thing, an' every stool pigeon we've got is watching for them jools. They're going to keep on watching. An'"—Jim Hanvey leaned forward earnestly—"you ain't gonna cash in on this deal, Arthur, because there ain't a livin' human bein' who'd buy them jools offen you. Not a single living soul."

Sherwood laughed shortly. He was impressed, and tried not to show it.

"We know every fence w[illegible] deal of that size, Arthur. Every [illegible] them. An' they're all bein' w[illegible] little jools don't matter, but th[illegible] of them big ones shows up—we [illegible] trail. An' then Mr. Sherwood [illegible] stretch—worse luck."

"I'll wait."

"So will we. Waitin' is the best [illegible] do. We're just naturally bound [illegible] I'd be doubtful if there was a[illegible] the world you could sell them [illegible] there ain't. Not a one. We've [illegible] of that. An' the comp'ny has t[illegible] sky's the limit. Besides, Ar[illegible] ain't so bloomin' many places [illegible] hid them jools. All the time you're w[illegible] we're workin'. You can't get away [illegible] The minute I was sure it was [illegible] it was just a question of time [illegible] landed you with the dope. Now [illegible] willin' to make a clean breast of [illegible]

Sherwood threw back his head [illegible] laughed. "Jim Hanvey! I thought [illegible] of you than that."

"A'right." The detective [illegible] self from the depths of a [illegible] "Have it your own way, Art[illegible] sure do wish it was some other [illegible] you. I'm awful strong for you."

"I know it, Jim." There was [illegible] feeling in the other's voice. "It's [illegible] little game; you're on one side [illegible] on the other. One of us has got to [illegible] and I'm plumb sorry it's you."

Alone again Sherwood walked [illegible] window, where he stood looking [illegible] Central Park. Dusk was merging [illegible] into night. The shadowy walks [illegible] trees were dislimning in the [illegible] ing gloom. There floated up to him [illegible] commanding screech of automobile [illegible] the clang of passing Eighth Avenue [illegible] voices of a group of children. The [illegible] the picture bulked the slouching figure [illegible] Jim Hanvey.

Sherwood watched the [illegible] interestedly. He saw Hanvey [illegible] park and pause to light a cigar. There [illegible] something almost pathetic about the [illegible] hulking man, a humbleness that was [illegible] ceptive to those who did not [illegible] intimately. Too, there was a [illegible] squareness which made him popular [illegible] the higher class of criminals. They [illegible] he was on the level. He took [illegible] advantage of them. He played [illegible] clean. "If I've got to be caught [illegible] Jim Hanvey made the pinch. That [illegible] the idea; they were proud of their [illegible] ship with Jim Hanvey. They [illegible] with him and he with them. He [illegible] for them after he arrested them. [illegible] were given a square deal; didn't [illegible] them when they were doing time. [illegible] man, Jim Hanvey; big and ugly [illegible] gainly—and eagerly friendly. His [illegible] friends stood high in the criminal [illegible] register. Outside the underworld [illegible] no intimates.

Sherwood saw him walk [illegible] lumbering gait of a man too [illegible] feet. And gradually the big figure [illegible] in the gloom. He was there [illegible] Sherwood turned away from the [illegible] "It's a dirty shame. He would [illegible] a wonderful crook."

He pondered over his recent [illegible] tion with the detective. Jim's [illegible] were worthy of serious reflection. [illegible] not given to trickery of speech. [illegible] he knew Sherwood too well to [illegible] understood that Sherwood would [illegible] waiting game.

Sherwood was willing, but [illegible] turbed. He hadn't anticipated [illegible] robbery traced to his door so [illegible] There had been no opportunity [illegible] of even a few of the gems. And [illegible] too well supplied with cash. [illegible] Jim watching every move, [illegible] impossible to pull another job. [illegible] to lay low and take things easy. Wait.

Jim was right of course. [illegible] there was no one to whom he could [illegible] jewels. No professional fence would [illegible] dle them, and if an amateur tried [illegible] jewels he, Sherwood, would be [illegible] ten thousand dollars. "And I'll [illegible] them go for that; not if I have to [illegible] years."

He visited Jim Hanvey a [illegible] later. "I've been thinking over [illegible] talk, Jim."

"That's good."

The group of fine craftsmen who are now building the Peerless, have immensely improved its manufacturing practice.

Working in unison, as they have done over a long period of years, they were able to take immediate advantage of the wonderful facilities they found in the Peerless plant.

Peerless manufacturing methods have always been high and fine; but they are higher and finer today, requirements of men and machines are more exacting, than they have ever been before.

These experts, knowing their work, and each other, so well, have now literally outdone themselves.

How far they have advanced the Peerless, how much they have accomplished, is revealed in the cars which they have been producing for months past.

There is a dash and a spirit about these cars, an effortless ease and certainty in all they do, that put the climax to motoring comfort.

To a superlative degree, they incorporate the power-abundance and power-obedience, and all the fine shades of behavior, which are created only by scrupulous manufacturing practices, based on sound manufacturing principles.

DUTCH BRAND PRODUCTS

Assure Full Service from Your Car

Nothing so successfully minimizes depreciation as stopping little troubles before they become big. DUTCH BRAND Products provide the "stitch in time that saves nine." From the repair of the tiny puncture in your tire to the refinishing of your auto top there is a DUTCH BRAND Product to do the work right, with saving of time, trouble and money.

Insist on getting the package with the orange label, checkered border and Dutch Girl's head.

To Quickly Stop a Radiator Leak

DUTCH BRAND LIQUID RADIATOR-SEAL (also made in powder form) stops the leak instantly, simply by pouring enough of contents of the can into the radiator. The repair is permanent and saves expense of costly shopwork. By eliminating rust this preparation adds to the life of the car. A can in the tool-box may avoid a disabled car on the road. Half-pint can, more than enough for any car, 50c.

To Prolong the Life of Tire Casings

DUTCH BRAND 2-IN-1 CUT-FILLER is a heavy liquid rubber for filling small cuts, bruises, and gashes in casings. When neglected, such cuts enlarge until sand and water pockets form, the fabric rots, and blow-outs result. No skill or experience necessary to apply it; adds hundreds of miles at almost no extra cost; dries rapidly, and produces a tough, resilient filling that becomes an integral part of the casing. 1 x 6-inch tube, enough for many cuts, 50c.

To Provide Many Emergency Repairs

DUTCH BRAND FRICTION TAPE should not be confused with the ordinary grades. It is made of heavy, closely woven fabric, thoroughly impregnated with live rubber, scientifically compounded; is extra adhesive and has high electrical resistance; it does not dry out. 2-oz. carton, 10c; 4-oz. 20c; 8 oz. 35c.

If your dealer is not supplied with Dutch Brand specialties, a trial assortment including all above products will be sent you postpaid on receipt of $1.50 and your dealer's name

Dealers: Send for complete catalog, and order from your jobber.

Manufacturers of Dutch Brand Products, including Auto and Cycle Specialties, Bicycle Tire Fluid, "Snow-White" Millinery Cement, Moving Picture Film Cement, "Triple-Tite" Shoe Cement, White Shoe Heel Enamel.

(Continued from Page 30)

"Suppose I handed the jewels to you, would you forget that you knew who took them?"

"Wish I could, Arthur, but it isn't possible. We want you."

Sherwood shrugged. "I'll just have to wait then."

"That's foolish. I'll get you sooner or later. You might as well come clean and start serving your time now. Every day you put it off is just that much time wasted."

"I've got plenty of time, Jim."

"Yeh, reckon so. I hardly thought you'd 'fess up."

"Not a chance."

"I'm real sorry for you, Arthur. All that trouble, all that risk—and you ain't gonna get nothin' out of it."

"I'll make out very well."

"Nope. You can't sell 'em, an' there ain't no other way of realizin' on your investment of time and effort."

Sherwood knew that he must hold on for a long, long while. It was awkward, but necessary. He was too clever a performer to worry about financial stringency. Jim was after him now as keenly as he was after the jewels, even more so. Of course he had never intended turning the jewels over to Hanvey; had quizzed him solely for the purpose of finding out whether it was the man or the jewels they were seeking. The fact that it was the former made greater caution imperative.

Jim was using the police too. That was further embarrassment. The police system bothers criminals, it is so extensive and comprehensive, a system of surveillance that eventually wears a man down. Playing lone hands, Sherwood knew that the advantage would always be with the criminal. But fighting against the individual brilliance of a detective and the inexorable patience and scope of the nation's police departments, a man had to watch his step pretty carefully.

Sherwood was willing—but it was deucedly uncomfortable.

Jim had impressed him. There was no one to whom he could sell the jewels; not for several years, at any rate, not a soul. Unless, perhaps —— Sherwood nodded slowly. "It's worth thinking over," he told himself.

Two days later Sherwood's telephone buzzed, and Jim Hanvey's monotonous droning voice came to him over the wire:

"That you, Arthur?"

"Yes."

"This is Jim Hanvey."

"Yes."

"Busy?"

"Not particularly."

"How 'bout droppin' over to my rooms a minute. I got somethin' to show you; somethin' real interestin'."

"Coming."

"Right away?"

"Pronto."

A taxi, a swift journey uptown to West 110th Street; Jim Hanvey's three-room apartment—a stuffy affair grotesquely furnished and vilely kept; three rooms which sagged under the heavy odor of Jim's cigars.

Sherwood swore fervently and threw up the windows in the tiny parlor.

"Jim, you shouldn't."

"What?"

"Smoke those cigars indoors."

"Oh! Them? Gosh! I like 'em."

"The other tenants don't kick?"

"Dunno. The janitor done time once in Joliet, an' him an' me is buddies. He was a awful rotten yegg, but he's a swell janitor. That just shows —— Anyway, you ain't interested in him; n'r me neither for that matter. I got something to show you."

"So you said."

"C'mere."

Sherwood trailed his host into the dining room. Jim motioned him to a chair. "Just got one thing to ask, Arthur; that is that you use your eyes—not your hands."

"Whatever you say, Jim."

"Good." From the capacious hip pocket of his voluminous trousers Hanvey extracted a little chamois sack. Sherwood's eyes narrowed slightly. Chamois sack! Jewelry! Hanvey, apparently unmindful of his visitor, droned on:

"Just you watch, Arthur—but remember, hands off."

With a quick deft motion he opened the sack and spilled its contents on the imitation-mahogany table. The fishlike eyes of the detective were focused vacantly upon Arthur Sherwood, who had started involuntarily from his seat. Then Sherwood caught himself, controlled his nerves with an effort and tried to smile.

"What's the idea, Jim?"

Hanvey's glassy eyes were turned to the table top, upon which glowed and flamed a handful of magnificent gems—matched pearls, diamonds of rare cut and brilliance, a huge blood ruby, twin emeralds of enormous size and clarity, deep Oriental sapphires. The eyes of the detective closed slowly, sleepily, then opened with maddening leisureliness.

"How you like 'em, Arthur?"

Sherwood appeared at ease, but his nerves were under a terrific tension. "Very much."

"Look familiar?"

Sherwood nodded frankly. "Yes."

They were familiar; stone for stone they were the jewels he had stolen from Mrs. Haley—stolen from her, stripped from their mountings, and which at that moment he could have sworn were safe in a box at one of the city's largest banks. There was no mistaking them—the ruby, the big diamond with the odd workmanship.

"What are they, Jim?"

Hanvey grinned genially.

"Paste."

"Paste?"

"Sure. Can't you tell?"

"Where did you get them?"

"Had 'em made from the descriptions the insurance company has. I think they look grand—for paste."

Sherwood stared at the glittering gems as though hypnotized. And while he gazed Hanvey's huge hand went out and swept them back into the chamois sack. "Awful good imitations, I think, Arthur."

Sherwood laughed weakly. "They are. Mighty clever."

The sack was returned to Hanvey's pocket. "I got to be trottin' along downtown, Arthur. That's all I wanted of you—just to show you them imitation jools."

Sherwood was nervous. He more than half expected to be arrested, and he drew a deep breath of relief as he stepped into the street. He walked swiftly toward the corner, turned sharply, and saw Hanvey emerge from the apartment house and follow him. A slight frown corrugated the criminal's forehead.

He was frankly worried. Hanvey was too insistent about the brummagem quality of the gems. Doubt assailed him. Perhaps they were the genuine stones. It was impossible—but if they were imitations they were wonderful. Suppose Hanvey had discovered the location of his safety-deposit box and the name in which it was held? Suppose he had actually secured the gems?

Sherwood hailed a passing taxi and entered. As he did so he saw another cab ease around the corner. Jim Hanvey overflowed the back seat, cigar between his pursy lips. Sherwood spoke swiftly to his driver. "See that cab yonder?"

"Yeh."

"Lose it and you get twenty dollars."

"Cinch."

At the same moment Hanvey was speaking with his own driver. "See that cab up ahead—the one the good-lookin' feller is just gettin' into?"

"Uh-huh."

"Foller it an' you get five dollars."

"Cinch."

The chase started. Both cabs swung into Riverside Drive at moderate speed, Sherwood's driver playing a careful game until such time as he might find an opportunity to elude pursuit in a traffic jam. Along Riverside they went, turning eastward to Broadway on Seventy-second Street, thence down that thoroughfare to Park Circle. It was there that luck played into Sherwood's hands. His cab crossed Park Circle just as the traffic policeman raised his hand. It took Hanvey fully a half minute to exhibit his credentials to the policeman, and by that time Sherwood had sped eastward on Fifty-eighth Street, turning downtown on Sixth Avenue and doubling back uptown via Fiftieth Street and Ninth Avenue.

Sherwood was confident that he had eluded Hanvey, but he was taking no chance. As a matter of fact, additional precaution was unnecessary. Hanvey's taxi reached Fifty-eighth, Jim glanced down the avenue through an endless line of cabs, touring cars and busses, and motioned his driver to a halt. "Needn't go no farther, son. They've got away. How much?"

"Dollar eighty."

Hanvey handed him a two-dollar bill. "Keep the change." Then, as he started across toward the Subway kiosk, he [illegible] at his watch. "Three-thirty—[illegible]

He entered the Subway and [illegible] town. When he alighted it was to walk [illegible] Central Park West and seat himself [illegible] steps of Sherwood's apartment house. [illegible] was smiling slightly and there appeared [illegible] be a faint sign of life in his dead [illegible]

Sherwood had proceeded with [illegible] lous care. He left his taxi on West [illegible] Fourth Street, took a surface car [illegible] Pennsylvania Hotel, entered the [illegible] via the lobby of that hostelry, rode [illegible] town and thence to his bank, where he [illegible] cured access to the safety-deposit [illegible] himself under the alias of Roger [illegible]

His examination took but a moment. The jewels were there, every last one of them. He sighed relievedly. [illegible] left the bank he found himself [illegible] He realized that Jim Hanvey had [illegible] deeply ulterior motive, that he had [illegible] gone to the trouble and expense of [illegible] the paste duplicates without [illegible] a part of an elaborate trap. Hanvey's very frankness had been disquieting. [illegible] said Hanvey, made from the [illegible] company descriptions. Well, Hanvey had told the truth. But why? Sherwood apprehensive. Here had entered the [illegible] element the criminal was unable to understand. Until this moment he had felt sorry for Jim Hanvey's heavy [illegible] his bovine indifference and his [illegible] But now ——

Still seeking a solution Sherwood [illegible] uptown on the Elevated and [illegible] to his apartment. As he turned [illegible] door the monster figure of Jim Hanvey hoisted itself from the marble steps.

"Hello, Arthur."

"Jim! You here?"

"Naw! I'm over in Brooklyn [illegible] for the other end of the bridge."

Sherwood took his friend by the arm. "Come upstairs a minute, Jim. I want to chat with you."

"Sure."

Hanvey selected the most comfortable chair and crashed into it. Sherwood walked to the window, put up the shade and turned toward the Gargantuan figure of his guest. Sherwood's face was in shadow while the detective in the full glare of daylight was as expressionful as putty.

"I've been trying to figure out your little play, Jim."

"Have you?"

"Yes. And I don't get the answer. About the only idea I can see [illegible] was that you showed me those stones to make me go down to the vault and have the real stones to reassure myself."

"You're hittin' on all six so far, Arthur."

"And that you'd trail me there and find out what box ——"

"Arthur Sherwood! I'm plumb disappointed in you—knockin' me that way. You don't honestly think I thought you'd trail you through the streets of New York, do you?"

"It didn't seem so, Jim—[illegible] were attaining your second objective I couldn't figure out any other reason and you did try to follow me."

Hanvey shook his head slowly. "In that taxi?"

"That wasn't my idea, Arthur." The detective's big spatulate fingers drummed lightly on the table. "All I was trying, Arthur, was to make sure that you weren't tryin' to shake me!"

"A-ah!" Sherwood's thin lips pressed. Hanvey waved genially. "Let it over."

Sherwood thought it over. Then: "If I was trying to shake you. What did that get you?"

"A heap of places, Arthur. You see, 'Cause the minute you tried to shake me I knew good an' well you was on the square because you was headed for the spot where you had the jools hid. (If the vault is a vault—no crook of your [illegible] would hide 'em anywheres else.) The minute you gave me the slip I knew you'd be back here an' waited for you."

"Ye-e-es." Sherwood was puzzled. "But why?"

"Because, Arthur, I laid a swell trap for you, an' you fell into it. You don't mind my callin' myself that, do you, Arthur? I really do think it was an awful good stunt I pulled."

"Just what was it, Jim?"

Hanvey glanced at his [illegible] "Just this: At some time between [illegible] 4:30 this afternoon you went to your box. You signed your [illegible]

THE GREATEST
Sandwich
IN THE WORLD

A *hit* at the lawn party! A *hit* at the beach, at the camp, at the picnic in the woods. Underwood's Deviled Ham Sandwiches are a *hit wherever served.*

No wonder. It's the famous Underwood Deviled Dressing added to finely chopped ham—sugared, salted, hickory-smoked hams boiled in covered kettles—that makes every one call them "*the greatest sandwiches in the world.*"

There's never a picnic planned so quickly that you haven't time to make these sandwiches. For all you have to do is open a can of Underwood Deviled Ham and spread it as you would butter on thin, crustless slices of fresh white bread. Economical too. Costs less per sandwich than sliced or chopped ham.

Get a can or two from your grocer today. Or send 25c in stamps for trial size if he cannot supply you—enough to make a dozen sandwiches.

WM. UNDERWOOD COMPANY
53 Fulton Street Boston, Mass.

Look for this seal of quality on Underwood's Sardines in Oil, Tomato Sauce, and Mustard Dressing; on Underwood's Clam Chowder, Clam Bouillon, and Clams in Bouillon.

"In business over 100 years."

alias, of course. An' tomorrow mornin' I start out inspectin' the vault cards of every bank in New York. I'll get help from headquarters, an' eventually we'll check up on every man, woman an' child who entered a bank box in that three-quarters of an hour."

The detective grinned in boyish approval of his own acumen. "'Tain't gonna be such an easy job, Arthur, but it ain't gonna be so hard neither—me not carin' particularly about time in this case. Of course I know the box is in a Manhattan bank, because you got back too quick to have gone to Brooklyn or even Jersey City. Jerry Naschbaum, chief of the headquarters identification force, will let me have a few good men to help. In one week, two weeks, mebbe three, we'll check up on everybody who entered a bank box between 3:45 and 4:30 today. An' when we've done that, Arthur, we'll have you. See?"

Arthur saw. "I wish someone else was on this case, Jim. You're too blamed painstaking."

"Better 'fess up now."

"No; I'll take my chances."

"Ain't gonna get you nowhere. You can't sell them jools; there ain't a soul in the world would buy 'em offen you."

"Maybe not." Sherwood opened the door invitingly. "Sorry you have to be going, Jim."

"I'm sorry myself, Arthur." He turned at the doorway. "I'm kinder cute yet, ain't I?"

"I hope not, Jim," was the answer.

It did not take Sherwood long to realize that he was nearing the end of his rope. He might have known that Jim Hanvey was going to trap him. That had been a clever trick of Jim's, and it promised definite and fairly immediate results. Hanvey was right; the task of checking up would be a slow and difficult undertaking, but Sherwood knew the police system sufficiently well to understand—and fear—its tirelessness. Eventually they'd complete their check-up, and when they did ——

Sherwood admitted to himself that he must dispose of the jewels. Thought of transferring them to another box was out of the question. They'd discover that eventually. The thing to do was to rid himself of the gems. But Jim Hanvey had insisted that he could not sell them because there was no market. Jim had spoken truly. No market. "Oh, confound Mrs. Haley and her jewelry!"

Sherwood caught his breath suddenly. Mrs. Haley! Puffy, ponderous Mrs. Haley! The poor, bewildered, self-sufficient Mrs. Haley, who had lost one hundred and fifty thousand dollars' worth of jewelry and been partially reimbursed with one hundred thousand dollars of the insurance company's money. Sherwood smashed his right fist into the palm of his left hand.

"There's my market! I'll sell the jewels back to Mrs. Haley!"

He paced the room, his brain running riot with the sardonic daring of his scheme. He knew Jim Hanvey was not infallible. Jim had been so confident that no one would buy the jewels—so confident that he had completely overlooked Mrs. Haley.

And Mrs. Haley would buy. He'd make her buy. No one would think of looking to her for the gems. She could have them set in new mountings and no one would ever be the wiser. He'd sell them to her for fifty thousand dollars, and she'd be fifty thousand dollars winner on the transaction. Then Jim Hanvey could search all he pleased.

He telephoned Mrs. Haley. She was decidedly disinclined to meet him. He assumed a threatening tone. She consented fearfully. They met at Port Chester, he going there by train and she by automobile. She refused frankly to have anything further to do with him.

"Very well, Mrs. Haley. When they arrest me I'll tell the whole story. What happened in New Orleans for one thing; then about your refusal to identify me—I know they've shown you my picture. It will be a choice morsel for the newspapers, and a wonderful story for the society weeklies. You'll be laughed out of the country."

"But if they find out that I've bought them back from you ——" The woman was on the verge of hysteria. She was horribly frightened.

"They won't. You're the last person on earth they'd think of in connection with those jewels. You buy them. They can search all they please and they can't get the goods on me. They won't even arrest me because there'll be no evidence to convict. And you will be fifty thousand dollars to the good."

"I can't."

"You can."

"Well, I won't."

A steely light crept into his eyes. "You will! You must!"

Eventually she consented. There was nothing else she could do. Petrified with terror, fearful of losing the tiny bit of social recognition for which she had so valiantly struggled, inordinately afraid of arrest in connection with the New Orleans escapade which had assumed Brobdingnagian proportions in her eyes—she agreed to meet him in the private dining room of a quiet hotel, bringing with her fifty thousand dollars in cash, which was to be exchanged for the jewels. And then, apprehensive and nervous, she left him.

Sherwood returned to the city, exultant. His plan had worked. It was safe, supremely safe. For, even should she be eventually discovered in possession of the jewels, she would never dare tell the true story.

But Jim Hanvey had not been idle. He made careful investigation and then spent the entire afternoon chatting with the presidents of the four New York banks where Mrs. Haley maintained personal checking accounts. "She'll cash a big check here in the next few days," explained the detective to each of them. "A thunderin' big check; an' she'll take the money in legal tend... Minute she does, telephone my apartm... Ask for a feller named Henry Jones. H... take the message an' get in touch w... him."

SQUIRE TRUMAN TURNS A PLANK

(Continued from Page 11)

dollars stole by Fabius Sprague, two young folks that hain't got nary a thing to do with the stealin' gets smashed flat. Seems to me if Gawd was strikin' a balance between two innocent lives and twelve thousand dollars he'd do diff'rent. That's why I lay the consequences to men."

"Mebby so. . . . Mebby so."

"If men was able to see what was done as clear as Gawd does, and to understand what was done, mebby they'd be able to handle it better. But they go bangin' ahead in their ignorance, and so long's somebody gits hurt they're satisfied."

This was too abstract for Ollo. What interested him in this world was fact. Speculations which were not ponderable had no power to arouse him.

"What's itchin' me," he said, "is what in tunket Jake Morrow shot that dawg fer."

"I aim to find out," said the squire. "Turnin' over facts is like turnin' over an old plank behind the barn. Never kin tell what sort of bugs'll come runnin' out."

"Jake hain't nobody's fool," said Ollo.

"Ollo," said the squire presently, "you know the river out here runs downhill, don't ye? Wa-al, supposin' the' was a flood and it made a backwater or suthin' so that in one spot it looked like the river was climbin' uphill. Would ye go round the rest of your life believin' the river did go uphill instid of down?"

"Calc'late not."

"U-m! You know it's light in the daytime, but s'posin' the' come a storm, and it got pitch black at noon. Would ye maintain all the rest of your life that daytime was dark?"

"What ye talkin' about?" demanded Ollo.

"I was thinkin'," said the squire, "that maybe folks don't place enough dependence on what they know. They know a thing is so, and then along comes somethin' that makes it look for a minute as if it wasn't so, and from then on they don't b'lieve the thing was so that they knew was so. . . . I'm gittin' more int'rested in that dawg, Ollo. I'm gittin' the idea that not knowin' a fact hard enough is the bug under that plank."

"Jake's not that way. If he knows a thing he keeps right on knowin' it's so, even when it's proved to him that it hain't."

"I'm takin' that into consideration," said the squire. "If I'd 'a' been Jake, I'd 'a' pizened that dawg. Shootin' it was a mistake."

The squire and his constable left the court room together and walked down the street side by side—a fox terrier and a St. Bernard. The squire carried his head well forward, so that his beard became a sort of prow; Ollo made even more of a prow of his whiskers.

The squire walked with short, choppy, impatient steps; Ollo, for all his bulk, duplicated the gait. The squire might have been walking beside his reflection in a magnifying mirror.

"Ollo," said the squire, "your wife's kind of timid nights, hain't she?"

"No," said Ollo, "nor daytimes nuther."

"She could be, couldn't she, Ollo? If it was necessary you could reason her into bein' timid, couldn't ye?"

"She hain't never listened to reason in thutty year. Dunno's she could start now. . . . What fer, squire?"

"You're goin' to spend a night away from home, and I don't feel jest right havin' you leave your wife alone," said the squire. "Say, did it ever strike you young Paul Sprague might 'a' knowed what his father done with Jahala's money? That mebbe that was why he was so tarnal anxious to git out of town?"

"Don't believe a word of it," said Ollo emphatically.

"I'm stoppin' into the bank," said the squire. "Git your summonses served and then hustle back to the court room."

The squire entered the bank, and by right of his position as a member of the finance committee passed behind the grating and up to the bookkeeper's desk, now vacant by reason of that functionary's absence at lunch. For half an hour he studied certain accounts on the ledger and made notes in his memorandum book. Then he went to the hotel where he had lived for twenty years and attended to the demands of his own hunger. After his meal he went to the post office and held conversation with Postmaster Upstrap.

"Jahala in to-day?" he asked.

"Cashed one of them money orders from Paul," said the postmaster.

"Lemme see it," said the squire. "U-m! Fifteen dollars. Come from Camden. . . . Much obleeged. Ever hear of any trouble betwixt Jake Morrow and John Chase before this here dawg-shootin' scrape?"

"Don't call nothin' to mind," said the postmaster.

"Recollect what Jake Morrow was doin' two year ago, say in September?"

"Bookkeepin' for Fabius Sprague," said the postmaster promptly.

His next stop was at Jahala Bond's door. He was just in time, for she was coming down the steps on her way back to school as he opened the gate.

"Howdy, Jahala," he said.

"Good afternoon, squire."

"Jest stopped in to say that if ye see anything in the paper about ye tomorrer, or hear any gossip, jest keep your mouth tight shet. Don't deny nothin'."

"But what ——"

"Be ye goin' to do as you're told?" he said sharply.

"I—why, yes; but I don't understand."

"No need you sh'u'd. . . . Friday night you're stayin' with Ollo Dawdy's wife—sleepin' there. She don't know it yit, but you be. Ollo hain't goin' to be home."

"What are you up to, squire?"

"I'm jest seein' what kind of a bug'll run out from under a plank when I turn it over," he said.

Whereupon he turned his back abruptly and walked away. He stopped a moment in the office of the Amity Clarion to give a bit of news to the editor for his personal column.

"Ollo Dawdy's goin' to be absent from home Friday night on court business," he said. "Jahala Bond's goin' to spend the night with his wife. . . . Oh, to be sure, and here's another: Jahala's got to feelin' kind of timid about sleepin' alone in that house, so what's she done but up and bought her a dawg. White bulldawg, she says. Comin' by express from the city. Expects it Sattidy. Now I calc'late the'll be all kinds of trouble in town, dawg fights and sich. Print 'em prominent, to the top of the column, will ye?"

"To be sure," promised the editor.

"Now," said the squire to himself as he walked back to the court room, "if somebody don't hear opportunity rappin' on his door, then I'm jest a plain, imaginin' ol' fool."

In consequence of these transactions of the squire, and as a sequel to them, a number of connected happenings took place on Friday night. Ollo Dawdy drove out of town toward the west, stopped at Hoover's farm, left his horse in the barn and walked back to Amity through the woods. Jahala Bond took supper with Ollo's wife and went to bed in Ollo's spare bedroom. Squire Truman, thankful for a dark night, approached Jahala's house by devious and shadowy paths, and stealthily effected an entry by means of the kitchen in the rear. In the hall he stepped on Ollo's foot and almost startled the constable into a fit.

"Everythin' quiet yit?" asked the squire.

"Hain't even heard a rat stirrin'."

They sat on the stairs and waited silently. From time to time it was necessary for the squire to admonish Ollo, for the constable was gnawed by a hungry curiosity.

"Listen!" said the squire finally.

Unmistakably someone was moving stealthily outside the dining-room window. They heard the sash lift slowly, cautiously, and a sound as of someone dragging his legs over the sill. Then came soft footsteps on the body-Brussels carpet, and the figure of a man passed between the squire and the parlor window. Enough of the silhouette was distinct to make it apparent the man was smoothly shaven. He made a circuit of the room, passing close to the portières behind which the squire and Ollo lurked, and they saw his face. It was Paul Sprague. Across a corner of the room stood a haircloth sofa. Young Sprague moved it out quietly, got behind it and pulled it back into place. Then he crouched down in hiding. Ollo quivered with excitement. The squire tugged on his beard.

Another twenty minutes passed. The squire and Ollo held their breath in the hallway; ignorant of their nearness, Paul Sprague crouched behind the haircloth sofa. They waited, motionless. Then without a warning sound a second figure appeared. It advanced into the [illegible], its stockinged feet falling noiselessly. The squire's hand tightened on [illegible]. It drew Ollo's hand toward him.

"Here's a warrant," he whispered. "Serve it."

Ollo hesitated a moment as the [illegible] corner lighted an electric torch and [illegible] it about the room. The shaft of [illegible] touched the stone fireplace and lingered. The squire shoved Ollo into the room. It was a situation made for Ollo, who was altogether deficient in the matter of cowardice, and who dearly loved the position as an officer of the court.

"I arrest ye," he bellowed, "in the name of the law!"

The flashlight dropped to the floor and the intruder leaped toward a window. Ollo's bulk was upon him, crushing him to the floor.

"Fetch the light," he panted, "so I kin see what I got!"

"No need," said the squire. "I [illegible] to know. Git up Jake. . . . Ketched in the act of breakin' and entering in the nighttime. . . . U-m—state prison offense, Jake. . . . Got a match, Ollo? Light up the lamp. Figger we'll hold court right here's well as anywhere. Don't let him git away."

Jake stood sullen and frightened as the kerosene lamp illuminated the room.

"Kind of figgered you couldn't resist such a chance," said the squire. "Knowed what I surmised was most likely surmise. . . . Fetch the prisoner a bar, constable."

"How about 'tother one?" Ollo asked. The squire turned.

"You kin come out, Paul," he said. "Mebby you'll be some help as things go along. . . . Now, Jake, remember anythin' you say kin be used against you by gum, if you dast hold anything back you'll have me to settle with! What did you come here fer?"

Jake stood mute, as the sayin' is.

"Calc'late I'll have to tell ye then," said the squire. "You come because you knowed a fact is allus a fact. You knowed that a thing is allus so if it's so, hain't it, Jake? You come 'cause you had confidence in your own jedgment—more'n some of the rest of us had."

Jake continued to remain mute.

"Paul," said the squire, "this ought to make you'n' me ashamed."

"I don't understand," said Paul.

"He knew a good man stays good. He knew a man that was honest to the bone don't turn thief. He knew that it can't be night even if a thunderstorm up to make it look so. Hain't that so, Jake?"

"I dunno what you're talkin' about," Jake said harshly.

"Where is it?" asked the squire.

"Where's what?"

"What you come fer?"

"I didn't come fer nothin'."

"To be sure—to be sure. Just come make a call. How do you know, Jake?"

"What's here?"

"Now you listen, Jake! I'm a reasonable man, and I kin overlook a mite of irritation. Wouldn't like to be in your myself. Where you went wrong was usin' a gun and a jack light on the job. If you'd 'a' pizened him secret like 'a' got to thinkin'."

"He tried to bite me," said Jake.

"U-m! Kind of stubborn, hain't you, Jake? Wa-al, I'll have to do your thinkin' fer ye. When I make a mistake I like to set me right. . . . Goes back two years to the time when Fabius Sprague was killed. Kind of shaky financially them was. We even had talk of the bank here goin' to the wall. Calc'late you remember cussin' that with Fabius? Now, don't mind the day he drawed that money out of the bank? That moves you to make a face, don't it? We knowed he did draw it, 'cause he had it along with him at the time. Must have had to do it up in a bundle and carry it. And a little while afterward—

The most popular man in America

Suppose you were the most popular man in America. Suppose you were endlessly besieged with invitations to do this and do that. Suppose, when you made a public appearance, hundreds of people clamored to shake your hand, to attract your notice and your favor.

How many of the people that you met under these conditions would impress their personalities upon you? How many would say something you would remember? How many faces would you recognize if you saw them again?

You would remember the man who was in some way different from the run of men—perhaps through some attribute of appearance, perhaps some quality of thought or manner. But the great majority would be—just "people." You might meet them repeatedly without knowing you had ever seen them before.

The consumer of merchandise is in the position of the most popular man in America. Every time he opens the pages of his newspaper or magazine, scores of manufacturers and merchants step out to take him by the hand, to attract his notice and his favor. They talk to him about his needs; they invite him into their factories and stores; they urge him to compare their product with any other; they ask him to say this or that name when he is buying this or that article.

The successful advertiser is the one who does not forget that he is dealing with the most popular man in America. He does not forget that there are others in line who are trying as hard as he is to "get acquainted." He realizes that to be commonplace is to be unnoticed—to be lost in the crowd. And so he goes for advertising counsel to an organization which has proved that it knows how to win the interest and the confidence of the most courted and the most sought after man in America.

STONE
Rim Parts
LUGS BOLTS NUTS

Dealers:
IMMEDIATE DELIVERY
Get this Display Cabinet FREE by ordering an assortment of Stone Rim Parts. Display Board Free with smaller assortment. Ask your jobber.

It's easy now to get Rim Parts for your car

The accessory store that displays the Stone Rim Parts Cabinet is an ever-ready service station for rim part replacements. Find the Stone dealer in your neighborhood. Stock up on spare lugs, bolts and nuts. They are just as important as spare tires. Here's a suggestion for safety:

Always carry 6 Stone Lugs, Bolts and Nuts—5c to 30c each

Don't wait until rim trouble comes. Be ready for emergencies. Stone Rim Service protects you. Stone Parts are perfect. You can't buy better quality. The line includes the just-right sizes and shapes for *your* car. Stone lugs are *oversize*—to bridge the wear space—fit snugly—prevent "squeaks." When you buy, be sure to get STONE Rim Parts. Stone Parts are GUARANTEED—accept no substitute.

Look for the green cabinet at accessory stores, garages and hardware stores. Dealers supplied through jobbers.

STONE
Interchangeable
RIMS

A standard rim—remarkably easy to operate. Fits perfectly. Interchanges with 20 different makes and types of rims used on popular cars. No loose parts. No hinged joints.

Dealers: Your jobber will supply you.

wa'n't he? And the money turned up missin', and we all believed day could be night—all exceptin' you, Jake—even his own son, who sh'u'd 'a' knowed better. We all thought he used it som'eres to bolster up his business, hopin', of course, to put it back ag'in. But you didn't, did ye, Jake?"

"Course I did, same's everybody else."

"You knowed he didn't, because you knowed he couldn't. You knowed, Jake, the' was nothin' in heaven or earth that could make a thief out of Fabius Sprague, and that's where you was some better'n the rest of us. What you knowed was that he never stole it, and then when he was killed and the money turned up missin' you reasoned it out, and says you to yourself, 'Fabius Sprague drawed out that money 'cause he was afraid of the bank bustin'. He put it away some'eres safe, and bein' killed sudden he never had no chancet to tell nobody where.' That's how you figgered, Jake. And you was right. Now where'd he hide it? You know, Jake."

"I don't know nothin'."

"Some'eres in this room, wa'n't it? You come here fust off."

"'Tain't nuther."

The squire turned to Paul.

"Got any idee where your father might 'a' hid away suthin' as important as Jahala's money?"

"I haven't. I never knew of a hiding place."

"Jake did. Somehow Jake knew the' was a place. He's waited for things to quiet down so's he could come and git it peaceful-like and 'thout any trouble. Um-m! Seems to me you was a mason wunst, Jake, years ago 'fore you got to keepin' books. And I recall Fabius put a lot of trust in ye. Never agreed with him, but he done so. . . . Jake, did ye ever help Fabius make a secret place where he could hide valuables? Afeared of fire, he was. It 'ud be a kind of a fireproof place."

"Never done nothin' of the kind," said Jake.

"All right, Jake." The squire took out his watch. "We kin pull the house down if nec'ary, but we don't aim to. I give ye two minutes. If ye tell I'll let ye go scot-free. If ye don't I'll see to it ye git the limit, and that's a number of years. When the court hears how you, knowin' the facts, let an innocent man suffer under this here cloud, and how you ruined his son's life, and Jahala's life—wa-al, I calc'late any court'll jedge that to be an aggravatin' circumstance. . . . One minute gone."

"You agree to lemme go?" Jake demanded.

"It's a bargain, and I never go back on bargains."

"Then, consarn ye, it's there!" Jake said, pointing to the fireplace.

"P'int out the spot, Jake."

Jake walked reluctantly to the stonework. Under the shelf he fumbled for a moment; then his hands came away bringing a sizable piece of granite. The squire held the lamp, and peering into the cavity saw the steel dial of a small wall safe embedded in the masonry behind.

"Um-m! Happen ye got the combination? If I know ye, ye never put that in 'thout findin' how it worked."

"The combination was wrote on a red tag hitched to the handle," said Jake.

"Open her up then," directed the squire.

Jake's unaccustomed hands fumbled with the dial. It would not respond to the first or the second attempt, but at the third the door swung open. The squire thrust in his hand and drew it out full of papers, insurance policies and the like. A second trip brought to light an oblong package wrapped securely in Manila paper and tied with tape.

"Calc'late we got suthin' this time," he said, and handed it to Paul. "Might see what this here is, young man."

Paul held it in his hand incredulously. He weighed it, felt it with his fingers.

"There—there's writing on it," he said.

"Let's have it," said the squire.

"'This package,' read Paul, 'contains money belonging to my ward, Jahala Bone. It was put here for safe keeping until she could reinvest it. September 14, '20.' It's dad's writing," said Paul in a hoarse whisper, "and his name's signed to it."

The squire turned to Jake.

"Evenin', Jake," he said. "When you go, don't quit travelin' till you're out of the state. Court's adjourned.

Nope, wouldn't open it, Paul. The money's there safe, but I figger Jahala'd like better to have it come to her jest like that, with his writin' and all. She's safe in bed, Paul, but I calc'late she'd be willin' to get up and dress. Take it along, boy. Take it along. She's up to Ollo's house. Holler under her window. If I hadn't figgered she'd want you right off as soon's she got this, I wouldn't 'a' sent for you. Git!"

The squire watched the young man depart. Then he turned to Ollo.

"Wa-al, that plank's turned over and we ketched the bug," he said. He paused. "If this here hadn't been discovered till it was too late," he said, "folks 'ud sure have laid it to Gawd's door, blamin' Him for keepin' it secret. . . . They wouldn't blame themselves a mite. 'S fer as I can see, Gawd's too busy runnin' the universe to have time to p'int out to folks what's obvious and plain to the naked eye."

"The Scriptures says He sees even the sparrer fall," said Ollo.

"Yes," agreed the squire, "but I hain't familiar with no verse relatin' how He reaches out to ketch it before it hits. That's a job He leaves to you 'n' me 'n the rest of the folks, dependin' on us to be His sparrer catchers."

"Huh!" grunted Ollo uneasily. "I think that young coot goes bellerin' under the winders my wife's apt to empty a bucket of water on him."

"He'd never feel it tonight, Ollo," said the squire.

WOMEN I'M NOT MARRIED TO

(Continued from Page 12)

funny that way, and if I took a cup now I wouldn't close an eye all night. Some can, and some can't. I like it, but it doesn't like me. Ha, ha! I wouldn't close an eye all night, and if I don't get my sleep—and a good eight hours at that—I'm not fit for a thing all the next day. It's a pretty important thing, sleep; and ——"

It was important to Maude, self-centered thing that she was. Here was I confiding to her something I never had told another soul, and she wasn't merely dozing; she was asleep. I rattled a knife against a plate, and she awoke.

It was a good thing I found out about her in time.

Anne

In winter, when the ground was white,
I thought that Anne would be all right;
In summer, quite the other way,
I knew she'd never be O. K.

SHE liked to go to the theater, but what she went for was to be amused, as there was enough sadness in real life without going to the theater for it. She told me that I was just a great big boy; that all men, in fact, were just little boys grown up. I took her to a movie show, and she read most of the captions to me, slowly; and when she read them to herself her lips moved. She never took a drink in days of old when booze was sold and barrooms held their sway—that is my line, not Anne's—but now she takes a cocktail when one is offered, saying, "This may be my last chance."

Women, she told me, didn't like her much, but she didn't care, as she was, she always said, a man's woman. Just the same, folks said, she told me, that she was wonderful in a sick room.

And so, what with the movies and one thing and another, the winter passed. She was glad I was a tennis player, and we'd have some exciting sets in the summer. No, she said games. I should have known then, but I was thinking of her hair and how cool it was to stroke.

Well, one May afternoon there we were on the tennis court. It belonged to a friend of hers, and it hadn't been rolled recently, nor marked, though you could tell that here a base line and there a service line once had been.

I asked her which court she wanted, and she said it didn't matter; she played equally rottenly on both sides. Nor was that, I found it, overstating things. She served, and called "Ready?" before each service. When she sent a ball far outside she called "Home run!" or "Just out!" And if I served a double fault she said either "Two bad" or "Thank you." When the score was deuce she called it "Juice!" And when I beat her 6-0—as you could have done, or you, or even you—she said she was off her game, that it was a lot closer than the score indicated, that she'd beat me before the summer was over, that didn't the net seem terribly low or something, and that I wasn't used to playing with women or I wouldn't hit the ball so hard all the time.

Little remains to be told. Anne is now the wife of a golfing banker. Wednesday night I met her at a party.

"Golf?" she echoed. "Oh, yes. That is, I don't play it; I play at it. Tennis is really my game, but I haven't had a racket in my hand in two years. We must have some of our games again. I nearly beat you last time, remember."

Belinda

I REMEMBER Belinda. She was arguing with another young woman about the car fare. "Let me pay," said Belinda; and she paid.

"There," I mused, "is a perfect woman, nobly planned."

I met her shortly after that, and she came through many a test. Once I saw her go up to an elevated railroad station, hand in a nickel, and not say "One, please." Once I asked her what day it was, and she said "Wednesday" without adding "all day." She spoke once of a cultivated taste without adding "like olives," and once said "That's another story" without adding "as Kipling says." And once—and that was the day I nearly begged her to be mine—when she said that something had been grossly exaggerated she failed to giggle "like the report of Mark Twain's death."

So you see Belinda had points. She had a dog that wasn't more intelligent than most human beings; she wasn't forever saying that there was no reason why a man and a woman shouldn't be just good pals; she didn't put me at ease, the way others did, by looking at me for three minutes and then saying that good looks didn't matter much to a man, after all; she didn't, when you gave her something to take it and say coyly, "For me!" as a woman should say, "You dear thoughtful thing, when you might have brought it for John D. Rockefeller." And she didn't say that she couldn't draw a straight line or that she had no card sense or that she couldn't write a decent letter.

She could write a decent letter. She wrote lots of them. To me too. She wrote the best letters I ever read. They were intelligent, humorous, and—why shouldn't I tell the truth?—ardent. Fervid is not too strong. Candescent is not far off. And that's why I lost her.

"P. S.," she wrote. "Burn this letter and all of them."

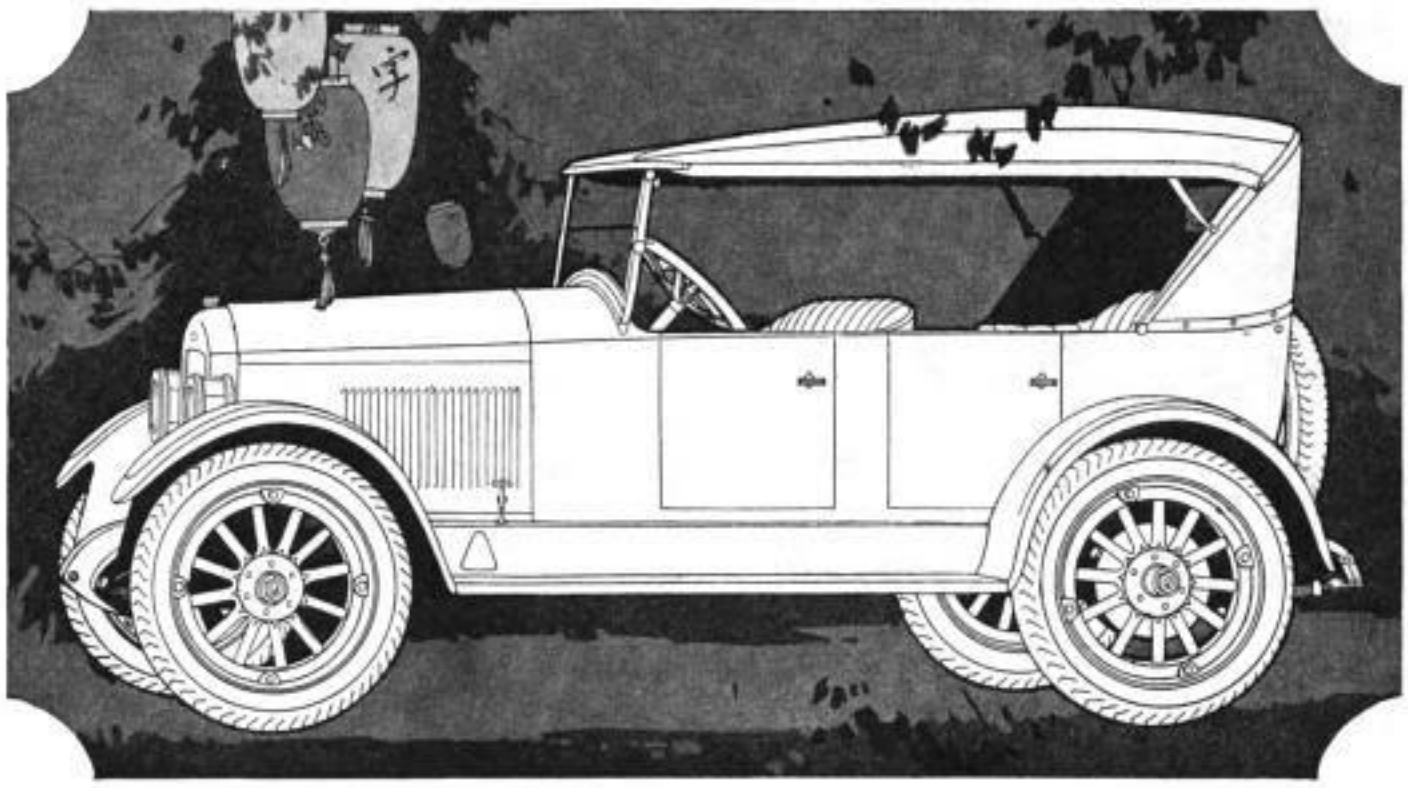
A few weeks later Belinda said, "At any rate I write you, my letters must fill a large drawer by this time."

"Why," I said, "I burn them. They're all burned."

"I never want to see you again as long as I live," she said. "Good-by."

And my good-by was the last communication between me and Belinda.

Marguerite



MARGUERITE was an agreeable stove, and not without some desire to please. She hated an argument, and was perhaps being—I found this out after that she couldn't put one forth on any subject. But I had theories, in the case of Marguerite, and I wanted to know whether she was in sympathy with them. One of my theories was that a lot of misery and infelicity could be avoided if a man didn't keep his business affairs to himself, if he made a confidante, a possible ally and ally, of his wife. I had contempt for women whose boast it was that they never brings business into the house.

So I used to talk to Marguerite about this theory. When we were married should it be better to discuss the affairs of the business day at home with her? Or not? Because simply talking about things, something, and maybe she could help

It Has Won a National Friendship

50 Horsepower—6 Cylinders—$1065

The big word in automobile circles these days is Jewett. No car has ever made a greater or more instantaneous appeal to the motoring public. And the reason can be summed up in another single word—Value.

In every section of the nation this car is breaking sales records, and not only winning friends but *holding* them. It is telling the story of economical six cylinder power and smoothness as it has never been told before. It is setting a distinctly new standard for comfortable, care-free, spirited motoring.

The fifty horsepower, Paige built, six cylinder motor is a revelation to the man who has handled more sluggish power plants. The oversize springs make every road a boulevard. Genuine leather upholstery and broad, restful cushions assure comfort for five full grown adults.

And underlying these elements is the chassis construction that you might expect of the Paige-Detroit Motor Car Company. There could be no stronger or more dependable units than the frame, clutch, transmission and rear axle. Such is the six that you can buy today for the price of a four—$1065 f. o. b. Detroit.

It is sold and serviced by Paige Dealers everywhere

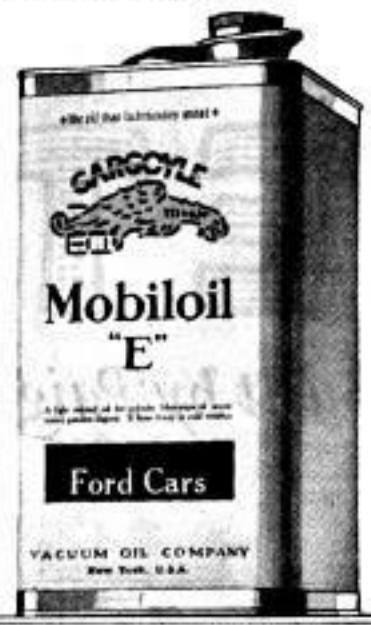
"Where has my economy gone?"

Some Ford owners cheat themselves —and don't know it

"BOUGHT for economy—run with extravagance," tells the story of at least a million Ford cars now in operation.

But every day more Ford owners wake up to the fact that a Ford *needn't* be repaired often, *needn't* be frequently cleaned of carbon, *needn't* be constantly "pumping oil" or fouling spark plugs.



A Ford owner in Greensburg, Indiana, bought his car in 1914. From the start he has used only Gargoyle Mobiloil "E." Today his mileage totals 50,000. He says that the engine "runs almost as smoothly as new."

In Kansas City a Ford owner added a quart of oil every day and cleaned spark plugs every hundred miles. Trouble with transmission bands was continuous. He changed to Gargoyle Mobiloil "E." Consumption dropped to a quart of "E" per week. The spark plugs went five months without cleaning. "Chattering" of transmission bands stopped immediately.

Many of those little engine troubles you put up with may be due entirely to inferior or incorrect lubricating oil. Wherever you find Ford cars you will find Ford owners whose first can of Gargoyle Mobiloil "E" showed them how efficient a Ford engine can be when scientifically lubricated.

How about *your* Ford?

In the differential of your Ford use Gargoyle Mobiloil "CC" or Mobilubricant as specified by the Chart of Recommendations.

IN BUYING *Gargoyle Mobiloil from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container.*

The Vacuum Oil Company's Chart specifies the grade of Gargoyle Mobiloil for every make and model of car. Gargoyle Mobiloil "E" is the correct grade for Fords. If you drive another make of car, send for our booklet, "Correct Lubrication."

DOMESTIC BRANCHES:

New York (Main Office)	Boston	Chicago

(Continued from Page 38)

help. Yes, that was what a wife was for. Why should a man keep his thoughts bottled up just because his wife wasn't in his office with him? No reason at all; I agree with you perfectly.

About politics: Wasn't this man Harding doing a good job, and weren't things looking pretty good, everything considered? He certainly is and they certainly are, was Marguerite's adroit summing up.

Well, I had theories about books and child labor and pictures and clam chowder and Harry Leon Wilson's stuff and music and the younger generation and cord tires and things like that, and she'd agree with everything I said.

Then one night, as in a vision, something came to me. I had a theory that it would be terrible to have somebody around all the time who agreed with you about everything. Marguerite agreed.

I had another theory. Don't you agree, I put it, that we shouldn't get along at all well? And never had she agreed more quickly. I thought she really put her heart into it.

And we never should have hit it off, either.

Flo

I HADN'T seen Flo since she was about fourteen, so when I got a letter asking me to call I said I'd go. She was pretty, but the older I get the fewer girls I see that aren't.

Of course I ought to have known. The letter was addressed with a "For" preceding my name, and instead of "City" or the name of the town, Flo had written "Local." Even a professional detective should have known then.

It was just her refined vocabulary that sent me reeling into the night. She wondered where I "resided" and how long I'd been "located" there; she had "purchased" something; she said "gowned" where she meant "dressed"; she had "gotten" tired, she said, of affectation. She said she had "retired" early the night before, and she spoke of a "bootlimber."

And as I was leaving she said, "Don't remain away so long this time. It—you know—hath no fury like a woman scorned.

Blanche

BLANCHE is a girl
I'd hate to wed,
Because of a lot
Of things she said.

"Excuse my French!"
When she says "Gee-whiz"
On the telephone:
"Guess who this is."

You ask her did
She like the show
Or book, she'll say,
"Well, yes and no."

For the "kiddie" she
Buys a "comfy" "nighty"
She says "My bestest,"
And "All rightie."

"If I had no humor,
I'd simply die,"
Says Blanche. . . . I know
That that's a lie.

She wouldn't marry;
"Oh, heaven forbid!
Men are such brutes!"
You said it, kid.

The Poets' Corner

Compensation

MY LIFE is not a large success,
Measured in terms of gold or fame.
The great world does not know my name,
I am not mentioned by the press;
But these things bring me no distress,
Nor make me fortune blame.

Remote from pomp and flaunting pride,
With friends of kindred joys and toil,
I'm rooted in my native soil,
In this green, gracious countryside.
No envy here my heart can spoil
And make dissatisfied.

I've no stone villa by the sea,
Nor flunkies, nor a fine steam yacht,
But lack of these things grieves me not,
For what I have suffices me.
I have my little garden spot
And my big shady tree.

I have old books to read again,
Old friends from whom I never part;
On whom, in any mood of heart,
I call, and never call in vain—
My good old gossip Froissart,
My wise old friend Montaigne.

I have not sailed across the seas,
To look on Egypt, Greece or Rome.
I know the pleasant paths of home,
And all the hills and brooks and trees,
And every naiad, nymph and gnome
That does inhabit these.

I know the wood birds, shy and wild,
And those that nest by haunts of men.
The catbird, robin and the wren
Today my rustic heart beguiled
With the same songs that thrilled me when
I was a little child.

I know the beech on whose bright bark,
Long since, I carved her name and mine,
And banks where oft we did recline
Till whippoorwills announced the dark;
And on each flower, tree and vine
Has memory left her mark.

On woodland paths I often chance,
Dim paths forsaken and undone,
With weed and brier overrun,
Where, when young love did me entrance,
I wandered hand in hand with one
Who is to me—romance.

The world is full of splendid things
And costly pleasures and delights,
But none of these my soul invites,
Nor tempts afar its loitering wings.
It talks of old familiar sights
And of contentment sings.

—Thomas Lowry

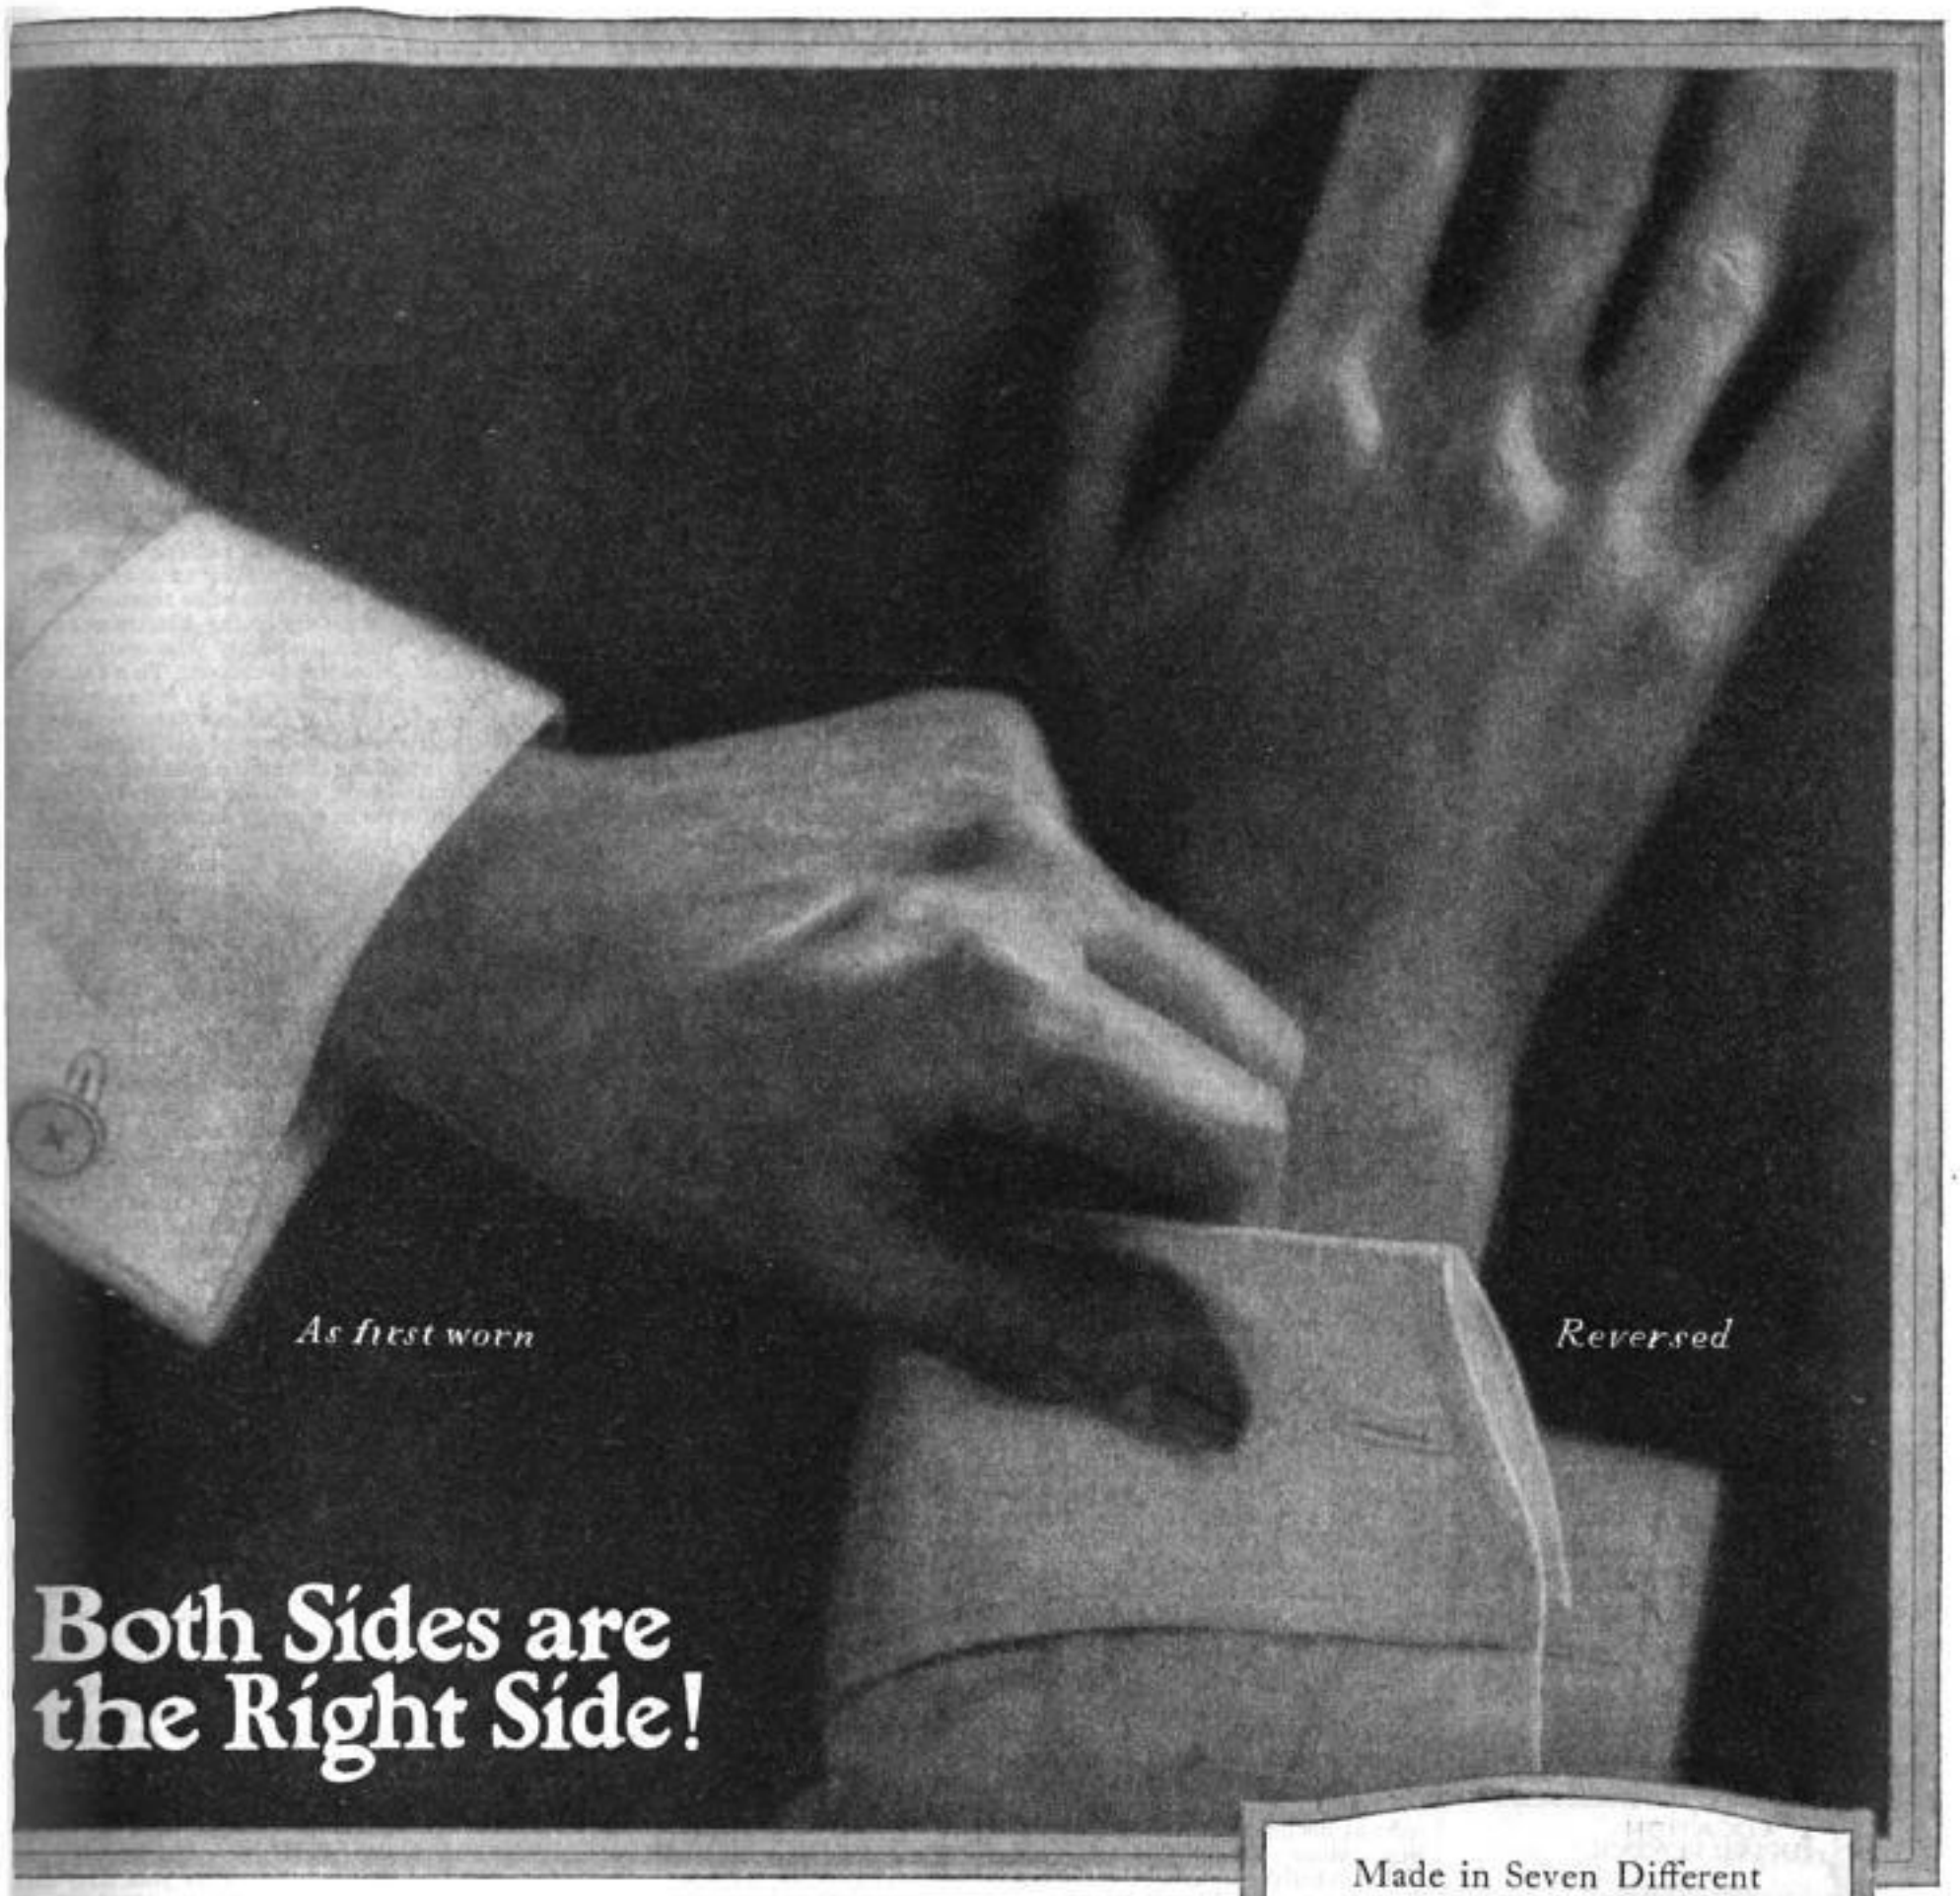
Haunted

ALL the forest is hushed and still
Save the rush and sweep of the
Winging home to the ruined mill
In the heart of the haunted hollow
The flutes are playing over the hill—
Heart o' mine, shall we follow?

Buds are as fair as in springs long
The ineffable scent of the rose
Trembles when all the dew is on
Where the bee in the bluebell dozes
And the prayers of the fays are
The gossamers in the closes.

The light of the dipping oar is
On the river's ripples is falling.
Into the west where a red star burns
And the amethyst tints are paling
The new moon skims like a bark of
A shallop of silver sailing.

But never the evening bell nor the
Nor the gleam of the red star
Nor the languorous lips of the
Nor the bee to the bluebell yearning
Nor the mocking bird with his
At the end of the long lane



And never the flax flowers blow
May draw your feet to the
And never a whispering wind
Your soul where the dusk
And never a word I may speak
Again in the time of roses.

But when spring is burgeoning
With a thousand buds
And the ghost of a slim young
Where the locust flowers are
Love, can you swear that the
With the voice in your heart

—Mary Louise

Ford and Chevrolet Owners

Know True Oil Level in Crank Case At a Glance

Save Money on Oil and Engine Wear

Absolutely accurate and dependable oil gauge for Ford and Chevrolet (490 and F. A.) cars. Operates under all conditions. Will outlast life of car. Saves its cost many times—prevents wasting oil and burning out bearings. Tells you when you need oil and how much.

Carter Oil Gauge

Extremely simple to install. Can be attached in 15 minutes. No adjustments; no corks, floats, plungers or moving parts to get out of order.

Easily readable nickel-plated gauge attaches to instrument board or dash; connecting *air* tube with special elbow is screwed in place of lower petcock. Gauge always indicates plainly the level of oil in crank case. *No oil passes through tube or gauge.*

Guaranteed satisfactory or money refunded. If your dealer can't supply, use coupon and give dealer's name. Send your order today.

Jobbers and Dealers

Write for Discounts and Sales Helps

The Carter Gasoline Gauge for Fords is now ready for delivery. It is just as accurate and simple in operation as our Oil Gauge. It is attached to instrument board same as Oil Gauge and tells you at a glance quantity of gasoline in tank. Send coupon for literature and prices.

☐Send folder describing your Gasoline Gauge that operates on same principle as your Oil Gauge.

From Saturday Evening Post

MEN I'M NOT MARRIED TO

(Continued from Page 13)

I don't believe anyone will ever know how much fun Freddie and his friends get out of Freddie's calling them up and making them guess who he is. When he really wants to extend himself he calls up in the middle of the night, and says that he is the wire tester. He uses that one only on special occasions, though. It is pretty elaborate for everyday use.

But day in and day out, you can depend upon it that he is putting over some uproarious trick with a dribble glass or a loaded cigar or a pencil with a rubber point; and you can feel completely sure that no matter where he is or how unexpectedly you may come upon him, Freddie will be right there with a funny line or a comparatively new story for you. That is what people marvel over when they are talking about him—how he is always just the same.

It is right there, really, that they put their finger on the big trouble with him.

Mortimer

MORTIMER had his photograph taken in his dress suit.

Raymond

SO LONG as you keep him well inland Raymond will never give any trouble. But when he gets down to the seashore he affects a bathing suit fitted with little sleeves. On wading into the sea ankle-deep he leans over and carefully applies handfuls of water to his wrists and forehead.

Charlie

IT'S curious, but no one seems to be able to recall what Charlie used to talk about before the country went what may be called, with screaming effect, dry. Of course there must have been a lot of unsatisfactory weather even then, and I don't doubt that he slipped in a word or two when the talk got around to the insanity of the then-current styles of women's dress. But though I have taken up the thing in a serious way, and have gone about among his friends making inquiries, I cannot seem to find that he could ever have got any farther than that in the line of conversation. In fact, he must have been one of those strong silent men in the old days.

Those who have not seen him for several years would be in a position to be knocked flat with a feather if they could see what a regular little chatterbox Charlie has become. Say what you will about prohibition—and who has a better right?—you would have to admit, if you knew Charlie, that it has been the making of him as a conversationalist.

He never requires his audience to do any feeding for him. It needs no careful leading around of the subject, no tactful questions, no well-timed allusions, to get him nicely loosened up. All you have to do is say good evening to him, ask him how everybody over at his house is getting along, and give him a chair—though this last is not essential—and silver-tongued Charlie is good for three hours straight on where he is getting it, how much he has to pay for it, and what the chances are of his getting hold of a couple of cases of genuine pinch-bottle, along around the middle of next week. I have known him to hold entire dinner parties spellbound, from cocktails to finger bowls, with his monologue.

Now I would be well down among the last when it came to wanting to give you the impression that Charlie has been picked for the All-American alcoholic team. Despite the wetness of his conversation he is just a nice, normal, conscientious drinker, willing to take it or let it alone, in the order named. I don't say he would not be able to get along without it, but neither do I say that he doesn't get along perfectly splendidly with it. I don't think I ever saw anyone who could get as much fun as Charlie can out of splitting the Eighteenth Amendment with a friend.

There is a glamour of vicarious romance about him. You gather from his conversation that he comes into daily contact with any number of picturesque people. He tells about a friend of his who owns three untouched bottles of the last absinth to come into the country; or a lawyer he knows, one of whose grateful clients sent him six cases of champagne in addition to his fee; or a man he met who had to move to the country in order to have room for his Scotch.

Charlie has no end of anecdotes about the interesting women he meets too. There is one girl he often dwells on, who, if you only give her time, can get you little bottles of chartreuse, each containing an individual drink. Another gifted young woman friend of his is the inventor of a cocktail in which you mix a spoonful of orange marmalade. Yet another is the justly proud owner of a pet marmoset which becomes the prince of good fellows as soon as you have fed him a couple of teaspoonfuls of gin.

It is the next best thing to knowing these people yourself to hear Charlie tell about them. He just makes them live.

It is wonderful how Charlie's circle of acquaintances has widened during the last two years; there is nothing so broadening as prohibition. Among his new friends he numbers a conductor on a train that runs down from Montreal, and a young man who owns his own truck, and a group of chaps who work in drug stores, and I don't know how many proprietors of homy little restaurants in the basements of brownstone houses.

Some of them have turned out to be but fair-weather friends, unfortunately. There was one young man, whom Charlie had looked upon practically as a brother, who went particularly bad on him. It seems he had taken a pretty solemn oath to supply Charlie, as a personal favor, with a case of real Gordon, which he said he was able to get through his high social connections on the other side. When what the young man called a nominal sum was paid, and the case was delivered, its bottles were found to contain a nameless liquor, though those of Charlie's friends who gave it a fair trial suggested Storm King as a good name for the brand. Charlie has never laid eyes on the young man from that day to this. He is still unable to talk about it without a break in his voice. As he says—and quite rightly too—it was the principle of the thing.

But for the most part his new friends are just the truest pals a man ever had. In more time than it takes to tell it, Charlie will keep you right abreast with them—sketch in for you how they are, and what they are doing, and what their last words to him were.

But Charlie can be the best of listeners too. Just tell him about any little formula you may have picked up for making it at home, and you will find him the most sympathetic of audiences, and one who will even go to the flattering length of taking notes on your discourse. Relate to him tales of unusual places where you have heard that you can get it or of grotesque sums that you have been told have been exchanged for it, and he will hang on your every word, leading you on, asking intelligent questions, encouraging you by references to like experiences of his own.

But don't let yourself get carried away with success and attempt to branch out into other topics. For you will [illegible] in a minute if you try it.

But that, now that I think of it, probably be the very idea you [illegible] in mind.

Lloyd

LLOYD wears washable [illegible].

Henry

YOU would really be surprised at [illegible] number of things that Henry [illegible] just a shade more about than [illegible] does. Naturally he can't help [illegible] about himself, but you mustn't [illegible] minute that he has let it spo[illegible] contrary, as the French so we[illegible] has no end of patience with o[illegible] is always willing to oversee w[illegible] doing, and to offer them counse[illegible] comes to giving his time and [illegible] there is nobody who could not [illegible] Henry is generous. To a fault, I [illegible] heard people go so far as to say.

If, for instance, Henry happens [illegible] in while four of his friends are [illegible] along through a game of bridge [illegible] cut in and take a hand, thereby st[illegible] their playing in comparison to [illegible] Henry draws up a chair and sit[illegible] with a kindly smile. Of course, [illegible] then he cannot restrain a look of pa[illegible] exclamation of surprise or even a [illegible] laughter as he listens to the bidding [illegible] never interferes. Frequently, after a [illegible] has been played, he will lean over and [illegible] good-humored way tell the player [illegible] should have done instead, and [illegible] might just as well throw his hand [illegible] and there, but he always refuses [illegible] any more active part in the game [illegible] sionally, when a uniquely poisonous [illegible] made, I have seen Henry thrust [illegible] aside and pace about in speechless [illegible] ment, but for the most part he is [illegible] bly self-controlled. He always leaves [illegible] a few cheery words to the players [illegible] them to keep at it and not let them [illegible] get discouraged.

And that is the way Henry [illegible] everything. He will stroll over to a [illegible] court, and stand on the side lines [illegible] I am sure must be great personal [illegible] ience, calling words of advice and [illegible] tion for sets at a stretch. I have [illegible] known him to follow his friends [illegible] way around a golf course, offering [illegible] structive criticism on their form as [illegible] I tell you, in this day and generation [illegible] don't find many people who will go [illegible] out of their way for their friends as [illegible] does. And I am far from being the [illegible] who says so too.

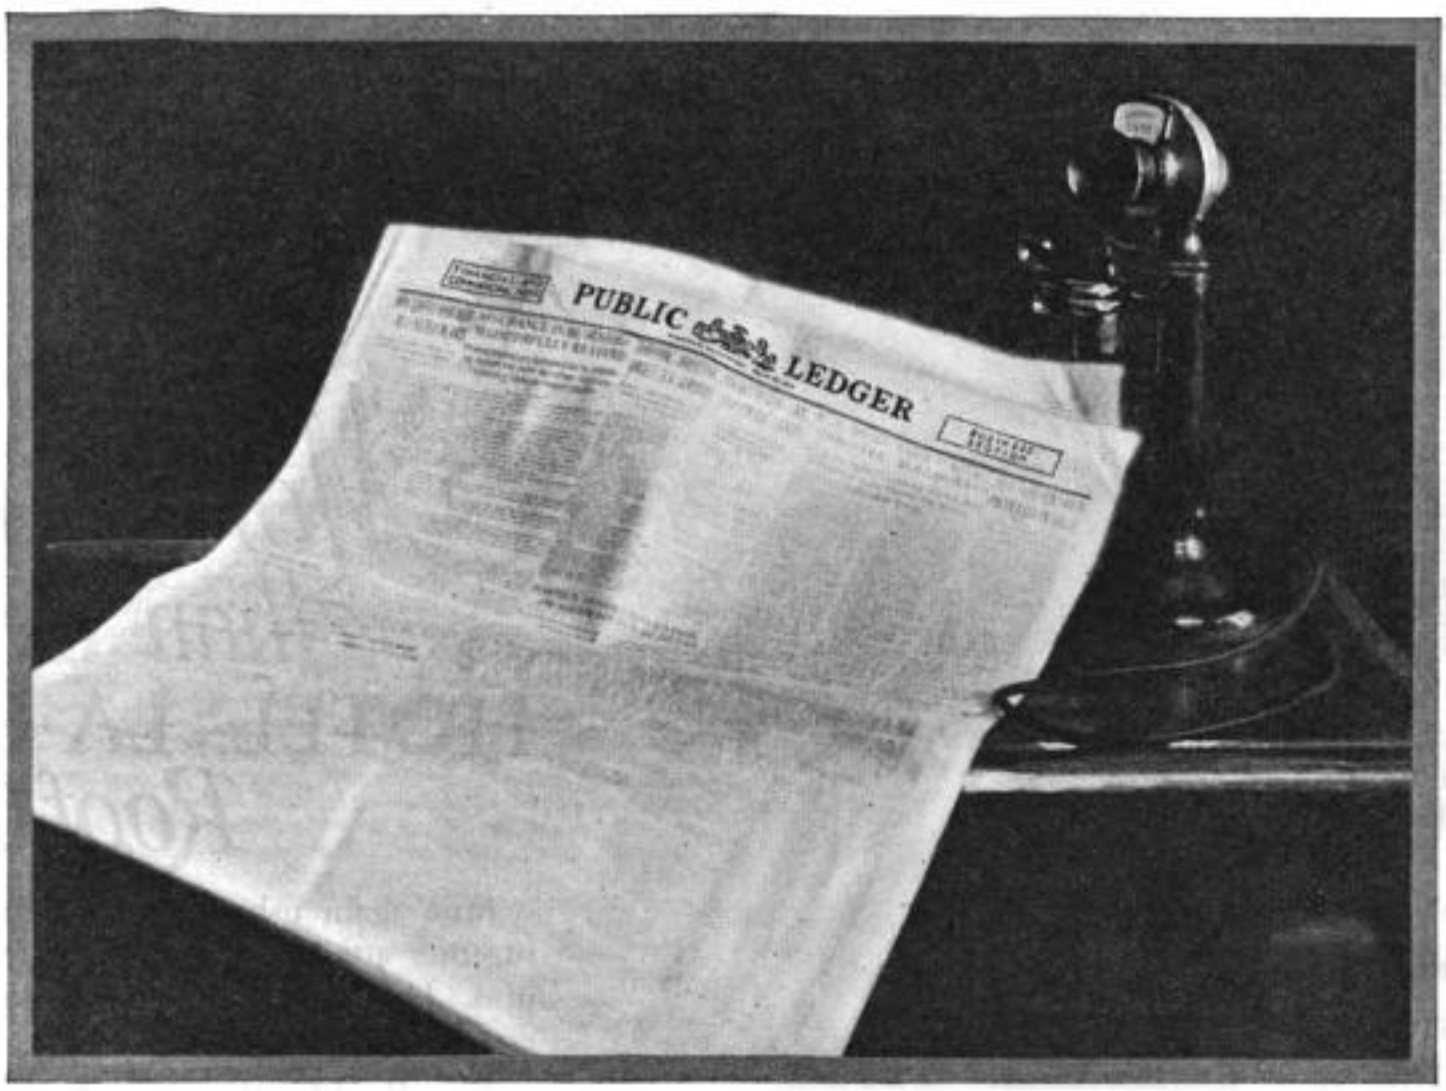
I have often thought that Henry [illegible] the boy who got up the idea of leaving [illegible] world a little better than he found it, [illegible] he never crashes in on his friends [illegible] Only after the thing is done does he [illegible] out to you how it could have been done [illegible] a dash better. After you have signed [illegible] lease for the new apartment Henry [illegible] you where you could have got one that [illegible] and sunnier; after you are all tied up [illegible] the new firm Henry explains to you [illegible] you made your big mistake in letting [illegible] old one.

It is never any news to me when [illegible] people telling Henry that he is wrong [illegible] about more things than anybody that [illegible] saw in their lives.

And I don't remember ever having [illegible] Henry give them any argument or [illegible]

Joe

AFTER Joe has had two [illegible] wants to go up and bat for [illegible] drummer. After he has had three [illegible] to get personal about the [illegible] shade of the necktie worn by the [illegible] man at the next table.



Oliver

OLIVER has a way of drawing [illegible] mouth to one side, by means of [illegible] serted forefinger, explaining to [illegible] while, in necessarily obscured [illegible] work which his dentist has just [illegible] plished on his generously display[illegible] teeth.

Albert

ALBERT sprinkles powdered [illegible] his sliced tomatoes.

EXPOSED TO BOLSHEVISM

(Continued from Page 4)

waved this question aside with a ut of the corner of his mouth, as *s to* say that the agricultural bloc in ited States Congress was the least ant among a number of things that *r all about*; so I realized the useless- trying to get on from that point ntented myself with saying: "You *e have* a very wholesome respect farmers. They happen to be, on the just about the most intelligent ele- hat *our* Government has to deal its governing processes, and it ave to be a pretty nervy govern- at *would* attempt to take any with them—or away from them! ow just as well as the rest of us do y constitute the only element in ilation that could put into prac- ct your soviet slogan of 'No work, ' They are not hankering after in the nature of a dictatorship, jolly well wouldn't tolerate dicta- any other 'factor in the social lon,' either; and I'm afraid they ove to be rather an effective bloc y of any foreign attempt to impose United States what you call a ip of the proletariat."

I had him away out where he swim, so I brought him back mental toes could play with the ebbles of his own experience—all w he had killed officers of the old irreconcilable priests in the revo- Ve had a long talk and afterward ne home in his dove-colored lim- hich had somebody else's mono- ts doors.

st one thing have the Russian sts been able to unite under their a considerable majority of the people, and that was to repel vasion of Russian soil. If the and British governments and the nt of the United States had ove all things to consolidate the the Communists they could not en a better way than they did. d have done no better than to s against them, as they did, and , as they did, the White forces h men as Kolchak, Yudenitch, id Wrangel.

Communists' Appeal

orces were not, in the main, -Czarist or antirevolutionist. anti-Red, anti-Communist, anti- alist, anti-chaos; and if any generals had stood alone, refus- gn support and coöperation, he ould have gone farther than any r did. He might not have suc- overthrowing the Communist , but at least his operations have served so greatly to it. He himself would have rength as he went along, and doubts this he should talk with fferent kinds of Russians as I e are literally millions of men to-day whose chief complaint use of foreign interference in airs they had either to support ny or remain neutral in what eir civil war. National con- nd pure patriotism are mani- a in no less a degree than they nited States or Japan, and dur- seven years of terrific national uble they have developed into ly amounts to a deep-seated

munists in Russia make their peal to this national feeling, portunity to impress upon the erated ideas of Russia's dan- ign aggression and the neces- ted stand against it; yet at the hey pompously call interna- sses of international wildmen tely proceed to lay out a ailed program for the over- American Government, among cularly the American Gov- some reason—and the inclu- country within a universal of the world proletariat, by ean, of course, a dictatorship unist International, which is ary in its methods than any ral staff ever got to be, and e in its relationships than any ver thought of being.

What is more, they go ahead and work at their scheme; work indefatigably and somewhat effectively, at the same time seeking association with us because they find they cannot get along even with the job of destroying us unless they have our material support. They ask our bourgeois-capitalistic Government, as they call it, to recognize the purely class government of proletarian committees they have succeeded in setting up in Russia while their paid agents continue to sow discontent among us and to debauch the minds of everybody who succumbs to their influence with class hatred and with propaganda that for deliberate falsity and downright crooked-mindedness exceeds anything the world has ever seen.

In which connection there is one thing to be said in their favor: They are engagingly frank. They admit that they need us and that therefore and because of certain inescapable economic considerations they are willing to make a limited retreat. But quite specifically they reserve the right to interpret according to their own conceptions any engagements they may happen to make with us and to break them if at any time they should prove to be an inconvenience or should encumber in any way the path of Internationalist progress.

Russia Still Communistic

All of which will serve to indicate what my preparation was for making a visit of inquiry in Russia. I shall be rightly accused of taking with me all my opinions and conclusions, but I must claim for myself that I was prepared to be convinced that all these opinions and conclusions were mistaken. And I must add that Russia for me was not a wholly new and unexplored region about which I knew nothing at all.

Before the war I knew the country fairly well from Vladivostok to St. Petersburg and from St. Petersburg to Odessa. Several years ago I survived a violent attack of intense interest in Russian history, literature and art, and many pictures of old Russia lingered vividly in my mind. And what a great and wonderful country it was—with all the blots upon the escutcheon of its rulers; with all its tremendous defects and deficiencies. It was not a country to be destroyed. It was a country to be built up and developed on a truly Russian broad-gauge basis. That was what one expected of Russia in the long run. And it may just be that the Communists will work it out. But not as Communists; that is one thing sure. They have the vast material plans magnificently made even now, and they have all the talk, except the sane talk of sound economics, that goes with them. But as Communists they have put into operation nothing but destructive forces. They have cleared the ground for the shining edifice they propose to build, but in doing so they have destroyed the better part of their building material.

I am quite aware of course that the leaders have acknowledged a good many of their errors of judgment; that the soviet government has repudiated the program of the Third International and effected a compromise with its own political conscience—or has claimed to have done so—on points of principle at issue between itself and the constitutional governments of the rest of the world. But in Russia the terrible experiment in proletarian dictatorship is still in progress; make no mistake about that. And though it may be dragging out to its inevitable conclusion, it is dragging out in the unimaginable suffering of its victims; its evil effects are the only effects to be observed, while the good it may have done is yet to be proved.

I can see phases of eventual good, but the good is not enough to justify the evil and, such as it is, it might have been accomplished in a better way. Moreover, the honestly convinced and fanatic supporters of this experiment, together with its handful of proletarian and merely Communist beneficiaries, are still true to it, and not even Mr. Lenine has the power to make a magic that will reverse their thinking processes. Not even Mr. Lenine has the power to stop the tremendous machinery of class-war propaganda which he himself has done so much to set in motion throughout the world. Though it may just be

Digestion in sound working order

This depends upon the daily meals you eat

DOCTORS today will tell you that they rely less and less upon drugs and more and more upon right eating for getting the results they desire. We now try to correct certain ailments by eating rather than by drugging.

Science has recently discovered, however, that many of our foods, though perfectly good in themselves, do not contain enough of certain food factors to meet the health needs of the body. Many of our everyday foods lose valuable properties in the processes of manufacture or home preparation.

Millions of men and women are protecting their health by eating Fleischmann's Yeast regularly. This yeast is a natural food which has not been subjected to any commercial process that lowers its value as a health food. It gives you in all the potency of their fresh form the factors your body tissues crave.

A fresh food rich in the elements your body needs

With a realization that Fleischmann's Yeast brings increased appetite, better digestion, and a system kept free from waste matter, many physicians and hospitals are recommending it to build up the body tissues, tone the system and correct the minor ailments of lowered vitality.

Fleischmann's Yeast is a wholesome food which stimulates the appetite, helps digestion and gradually does away with the need for laxatives.

Since Fleischmann's Yeast has been proved by scientific tests to be a valuable food for health, a number of so-called yeast-preparations have appeared. Many of these contain only one-tenth of a yeast cake and, of course, none of them has yeast in fresh form. Many of them are mixed with drugs and medicines.

Popular ways of eating Fleischmann's Yeast

Eat Fleischmann's Yeast plain, nibble it from the cake a little at a time. Or spread it on bread or crackers. Like cream cheese it combines well with jams to make a sandwich. It is refreshing in milk, fruit-juices or soda. Ever so many like it just in water.

You can easily eat it before leaving home in the morning—get it at noon during the lunch hour—or have it at bedtime. Two or three cakes regularly each day. And be sure it's Fleischmann's. You can get it only in the little tin foil package.

200,000 grocers carry Fleischmann's Yeast. If your grocer is not among them, write to the Fleischmann agency in your nearest city—they will see that you are supplied. If you prefer you may buy six cakes at a time. They will keep fresh for two or three days if kept in a cool dry place.

Send for interesting booklet telling what yeast can do for you. Address THE FLEISCHMANN COMPANY, Dept. 612, 701 Washington Street, New York, N. Y.

FLEISCHMANN'S YEAST is a food— not a medicine

that his partial apostasy, however reluctant and merely expedient it may have been, will react upon the situation somewhat after the manner of the justly celebrated monkey wrench in the works. Let us hope so.

It is a mistake to think of Lenine, Trotzky and their colleagues as being a company of historic rogues. They are not. Many of them, if not most of them, are honest men with minds and souls distorted by an unparalleled fanaticism. When they seized an empire and proceeded to remodel it on plans and specifications of their own they were undoubtedly inspired by a profound faith; they believed their work would hold together and prove to be the grandest achievement in the history of humankind. And they still believe they were right in principle and that their mistakes have been mistakes merely in calculation with regard to certain human tendencies and certain basic factors in economics. Their purpose was to wipe out all class distinctions in the social organization, and since there was no way to do this except to wipe out certain distinctive classes they proceeded to destroy—ruthlessly and with a thoroughness beyond all precedent in destruction.

If the result had been a general leveling up with the great mass of the people manifestly benefited I think most of us who belong to one or another of the classes proscribed—comprehensively designated as the aristocracy, the intelligentzia and the bourgeoisie—would be willing to acknowledge that our right to exist had been rightfully challenged. But the leveling has proved to be a leveling down, with the highest classes transformed into a class of hopeless and helpless beggars; with the middle classes become a class of social vultures; with the lower classes sunk in deeper degradation than they ever dreamed of, and with general morality at a lower ebb throughout all classes than it has ever been in the history of any nation.

In their views as to what should be done there is wide division in the ranks of the leaders, which is a fact well known to all Russians. Lenine alone seems to have the ability to recognize and the courage to acknowledge the impossibilities, and because of his unchallengeable power he is able to impose his decisions upon his associates. But among themselves they murmur dissenting opinions and continue to act in their several capacities very much as though no change of policy had been made.

If Lenine Dies

As I begin to write there is a persistent rumor circulating not only in Russia but in the world outside that Lenine is about to die, and this rumor strikes fear and foreboding into the hearts of all classes alike. Especially is he clung to by the classes he has persecuted. They have the intelligence to appreciate his ability and to realize that there is not a man in Russia who could take his place. Conservative men and women who have suffered most and who long for a turn in the terrible road that will lead the country back to sanity look into one another's eyes and say, "If Lenine dies, God help us!"

To call it all a queer situation is a little-minded thing to do, but our minds for the most part are comfortable little minds that hesitate to plunge out into the vastness of the incomprehensible. It is a queer situation, but in its innumerable ramifications and its possibilities of influence upon the future of the world it is the most important situation that has ever been created.

There are those who will not care to have a look at Russia with me. My eyes, they will say, are blurred with prejudice and blinded with bourgeoisosity. But my eyes are clear enough perhaps to see a stone wall before it becomes spangled with stars for me as a result of violent contact with my head. What one inevitably does in Russia is to imagine oneself groping around under similar circumstances in one's own country, and I tell you this is not a thing to think of without horror and fear. What has happened in Russia could not possibly happen in the United States perhaps. I believe it could not. The American people are intelligent, educated, proudly self-appraising and about as submissive as so many mules, whereas the Russians, on the whole, represent the utmost in ignorance and docility. But we don't want anything to happen in the United States that bears the remotest resemblance to what has happened in Russia, and it is therefore that we should hope that nothing [illegible] done to save the Russian experiment [illegible] the complete failure it is now [illegible] headed for.

There are several possibilities for Russia in the immediate future. One is the recognition and support of the government that her leaders propose to do away with and a consequent slow recovery under the pressure of imposed necessities; one is a militaristic invasion of Eastern Europe, a horde movement upon the fields and pastures of neighboring peoples—this being a popular idea among Trotzky's followers; another is the collapse of the soviet organization, and complete anarchy. But whatever occurs I venture to predict that fifty years hence the writers of history will be saying that if the United States of America had acted differently everything would have been different. So we can be sure that we do with a good conscience what seems best in our own interest, to do.

But I should not be in Russia just because first there is the getting there and this is rather interesting. It is not a cinch nor yet is it so very difficult if Mr. Hoover has generously lit your way with the light of his countenance, as he lit mine.

Red Suspicions

When Mr. Hoover established the American Relief Administration for the purpose of saving the infant generations of Russia from the necessity of paying in pangs of hunger and retarded development for the war which their elders were not able to avert, I am sure he had no thought of instituting so vast a medium of communication between his own people and the people of other countries. The American Relief Administration is unique as an institution and its great enterprise is worthy, for a very good people. I hesitate to say much less to express a belief that we are very good. In many of our characteristics we are anything but admirable, and it seems to me sometimes that those who admire us least are most accurate in their estimations of us. But, curiously, we have developed in ourselves a certain sense of good will toward other peoples and do genuinely wish to be helpful and kind to them, no matter what they may think of us. We have never given until it hurt, nor even until we felt it, but we have given generously enough, perhaps, and what we have given we have given freely and without conditions save that we be permitted to supervise its distribution. Thus, fortunately, we have had to do it only that we might be sure that our charity beneficiaries really benefited.

We have been feeding the children of most of the countries of Europe long enough for their peoples to have become convinced that our philanthropies are merely a cloak designed to cover sinister aims. They began by saying that we were seeking commercial advantage with a subtlety and art wholly above the world's experience or that we were a race of unprecedented idealists and simpletons. They were not quite so polite about that, but that expresses more or less what they meant to say. It was difficult for them to determine just what we were driving at, so severally they kept a watchful eye on us until they were compelled to admit that we are a nation of unprecedented idealists and imbeciles, but unselfish and, taken by and large, fairly efficient.

But in Russia the leaders, who bitterly regret the necessity for depending upon our benevolence, have not yet made up their minds with regard to us, and the other day Mr. Trotzky got up before an audience in Moscow and threw his teeth—some of us being present—in doubt as to the sincerity of our motives. He said he could not understand why we were in Russia devoting many millions and the services of many men to help Russia over her terrible crisis due to the great drought in the valley of the Volga! He was sure we were not doing it as an expression of our love for Russia because he knew for a fact that [illegible] men high up in the American Administration entertained toward the government sentiments of distinct animosity, and that, furthermore, the food was feeding the fighting enemies of Russia in Wrangel's army. This is the [illegible] untrue unless he includes in the army the destitute Russians in Constantinople and other places.

No Electricity

o Operate the Vacuette

And Rugs and Carpets Clean as New

Now, Madam, you can have a marvelous vacuum cleaner. You can have cuum cleaner which is light, simple, easy to operate and which *requires ctricity*—a vacuum cleaner that gives you the double advantage of a powerful air n and a revolving brush—all from its own self-contained mechanism.

he Vacuette is the remarkable invention which enables housewives to abandon old-ned, back-breaking ways of cleaning and sweeping rugs and carpets. It is the m cleaner without any complicated parts and without any attachments. This amaz-simple vacuum cleaner calls for practically no effort and does not cost a penny to e—*no electricity.*

ready with the Vacuette nearly 200,000 housewives are saving their strength, their time, saving money—just as you can save strength, time and money if you e Vacuette.

Vacuette

Non-Electric Vacuum Cleaner

As Efficient as an Electric—
As Easy to Operate as a Carpet Sweeper

see the Vacuette at work and you will at a perfectly efficient vacuum cleaner be heavy and hard to handle or have ttachments.

acuette is light but strong, it is simple; quires no cords, plugs, or other out-pment. It is easier to operate than cleaner.

nd carpets made clean and bright so d so quickly that you have leisure you have never had before to read, o sew, to get other things done.

This wonderful vacuum cleaner and sweeper which you have wanted, which you have needed for so long and which operates without electricity is ready for you now.

With all its wonderful efficiency and its unsurpassed strength of construction, the Vacuette costs only about half what you would expect to pay for a really efficient vacuum cleaner—and if you wish, you can buy it on easy terms.

FREE TRIAL
In Your Own Home

seeing the Vacuette actually at work can you realize work saver it is—and you should see it no at method of sweeping you are using results are simply amazing.

Vacuette representative ality. Ask him to r write to trial

Endorsed by ood Housekeeping Modern Priscilla.

Features You Will Find in the Vacuette

Handsome Polished Aluminum Body, Pistol Grip Handle, Rubber Wheels, Rubber Cushioned "Nose," Strong Vacuum Fan, Revolving Bristle Brush. Practically no Oiling Required. Rust-Proof Parts. Weight only 7½ pounds.

We Can Place a Few More Agents

We can place a few more representatives in choice territory to work with our district managers as demonstrators and salesmen. If you want to connect with a big, live, growing organization; if you see the opportunity offered by an article which actually sells itself as soon as the housewife sees its magical work on her own rugs and carpets—write before the openings are filled.

How Women Save Money With Mirro

You can benefit from the experience of several million women who have found the way to save money on their kitchen utensils.

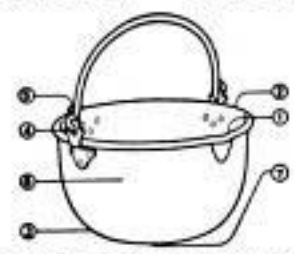
These women have learned through experience that Mirro Aluminum cooking utensils last far longer because they are made of thicker, harder, more durable, pure aluminum.

Mirro ware is built to withstand the abuse to which kitchen utensils are subjected, day after day. Mirro utensils keep their shape. The sides are rigid. The handles are strongly riveted and the no-burn cover knobs are securely and permanently fastened.

Not once only, but many times during its long life does a Mirro utensil, such as the Preserving Kettle shown above, save the replacement cost of a short-lived article. And Mirro prices are very moderate—every woman can afford Mirro.

You can readily see the difference between Mirro Aluminum utensils and others by inspecting them at your nearest dealer. Lift them, feel the difference in weight! Note the heavy, turned edges of Mirro ware, the many features of convenience such as those listed below.

In addition to these advantages, each Mirro utensil carries the guarantee of the world's foremost maker of aluminum ware, with a successful experience of nearly thirty years.



Get this Mirro Preserving Kettle today. It will demonstrate the economy of Mirro. You may buy Mirro ware at leading stores everywhere. Send for Mirro miniature catalog No. 14.

1 Well-formed, easy-pouring lip.

2 Solid, tightly rolled, sanitary bead, free from dirt-catching crevices.

3 Smooth, rounded edges—easily cleaned.

4 Handle ears permit handle to be moved to any one of three different positions without coming in contact with sides of utensil.

5 Tilting handle with eye for convenient hanging.

6 Beautiful Mirro finish. Rich, lustrous, silvery.

7 Famous Mirro trade-mark which is stamped into the bottom of every piece, and your guarantee of excellence throughout.

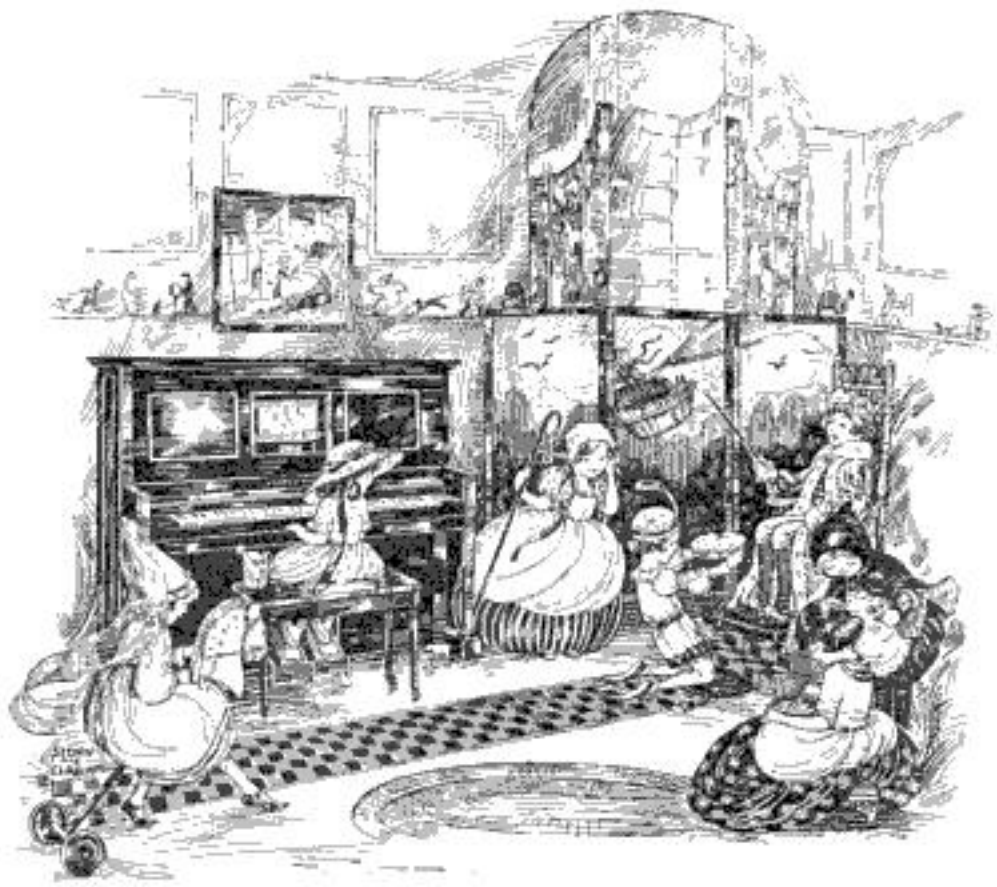
ans evidently determine to
ing just as difficult and un-
he Poles as lies within their
power, while the Poles on both their West and East Prussian borders have put in operation systems of retaliation that exhaust all the possibilities there are of malicious invention. The Prussians multiply obstructions and exasperations for the Lithuanians, while the Lithuanians do all they can to irritate the Prussians on one border and to give vent to a fine spite against the Latvians on the other. The Latvians, not to be outdone, work overtime thinking up new ways of annoying the Lithuanians on their west frontier and of getting even with the Russians on the east.

All of which tends to make traveling among them something that may rightly be described as an experience. The defenseless outsider, related to none of them, knowing none of their inexcusable language and sharing none of their grouches and prejudices, has a hard time of it, and at each frontier as he goes along he is likely to be told in one language or another that if he thinks he is being badly treated he better wait until he gets over among the brigands who inhabit the adjoining country. How they do love one another!

Needless Discomforts

On each side of every border the traveler must submit to a thorough examination not only of his baggage but, on the exit side, of his person as well; the idea being that he must not carry out of a country more than a specified sum of that country's money nor any article the export of which is forbidden, and that he must not enter a country without paying duty on everything dutiable he may happen to have in his possession. And it makes no difference that he is merely in transit—a through passenger. He must pay duty for the privilege simply of carrying dutiable articles through these countries.



And just by way of making everything as pleasant for him as possible they do not examine his hand baggage in his compartment on the train; they gather it all up and take it into the baggage room of the station, where they either dump it down in a heap with everybody else's baggage or scatter it about, a piece here and a piece there, all over the place. There is nothing for the unhappy owner to do but follow it and search for it until he has found it all and gathered it together in one place; then he must stand by and wait until an inspector comes along—exactly as though he had arrived at his destination.

After they have finished with him, having taken him finally into a little room, counted his money and pawed him all over to see that he is not trying to get by with some article of contraband concealed upon his person, they tote his effects back to his compartment, whereupon he has two or three porters to try to get rid of without having a row with them over the size of the tips he gives them. Which is one thing he cannot do, because no matter what they get they impudently and insistently demand more.

All of which, however, is about a traveler with a first-class ticket and a compartment in an international sleeping car; and there are not many such. Not enough to warrant the reinstitution—on this line, at any rate—of trains de luxe consisting of sleeping cars only with dining cars and other luxuries of travel. All trains are made up for the most part of second and third class cars, which are invariably packed and jammed with the kind of people who sew themselves into their clothes in early winter and make no change until they begin to suffer from the heat of early summer; who have the herd instinct and who travel with their belongings done up in innumerable baskets and bundles of every conceivable shape and size.

These people are native to the region, belonging to one small state or to another, and the examination of them at a frontier is an amazing thing to witness. Each person—man, woman and child—carries his or her own duffel off and onto the train, and each person seems to think that if he doesn't hurry up something unpleasant is likely to happen to him.

Some stagger distractedly along under mountainous and unsightly bundles; some are weighted down with baskets and bags and odds and ends of utensils and household articles; some drag old trunks or packing cases or big tin boxes noisily along the pavement, and some have nothing but a small package, an extra pair of boots, perhaps, carried by their strings, or a loaf of black bread tucked under their arms. They

Two facts no motorist can overlook

FIRST: the price of the latest and finest Marmon is now $3185, which is back to normal. Do you know of any comparable car at such a saving?

Second: Two months ago we announced "Standardized Service" —a nation-wide plan of maintenance economy.

This is a rare combination. It reduces *first* cost and *ultimate* cost to a minimum.

More money cannot buy a finer car. Nor can costly upkeep bring greater satisfaction.

Can you afford *not* to drive a Marmon?

MARMON

City_____ State_____

are all warmly clad and they all look perfectly well fed, but also they all look worried and tired and just a little bit quarrelsome. There is nearly always some kind of trouble over the inspection; a crowd gathers; everybody talks at once and the confusion is bewildering while the first-class passenger from the *wagon-lit* stands beside his orderly luggage waiting for his turn with an inspector, wondering what it is all about and pondering upon the state of affairs that has come to pass in this one-time most orderly of all worlds.

Just one such ordeal as this in the course of a journey would be enough, but when there are any number of them, coming one after another, one eventually comes that is at least one too many. After which there are more—each one consuming from one and a half to two slow-passing hours.

At the eastern border of Germany, or East Prussia, you come to the town of Eydtkunen. You have heard of Eydtkunen and been warned that there is where they are likely to take all your German money away from you if you have any—all but five thousand marks, which isn't any money at all. Also your extra shoes, your camera with its German lens; your German field glass if you have one; and any number of other things. So you are not sorry when at the end of about two hours you are through with Eydtkunen and on your way into Lithuania. What you have not been told is that the station of the Lithuanian frontier town of Virballen is only about ten minutes from the station of Eydtkunen; that the border, as a matter of fact, cuts through what is virtually just one fair-sized community, and that before you have thought of taking off your rubbers and mittens and settling down your train stops again and another crowd of porters—dirty, odoriferous, shoving and grunting—swarms into your wagon de luxe and begins to fight for possession of your belongings. You surrender them without a word, follow them once more into yet another baggage room, where the whole rigmarole has to be gone through with again. It is unbelievable!

Good-Natured Latvians

And if all this would only happen always in the daytime it might not be so bad; it might be thought of philosophically perhaps as being all in the day's work. But they have their trains scheduled so that as often as not it happens in the middle of the night, when the necessity for crawling out of a warm bed and faring forth into the bitterness of zero weather is added to all the other seemingly unnecessary necessities.

In my own experience this made a particularly unpleasant impression upon me, and was the cause of my arriving in Riga with a bad sore throat and in a frame of mind to be thinking principally about how fortunate it was that I had made all the necessary arrangements so that my heirs and assigns would have a minimum of trouble in straightening out my affairs.

I spent just one day in Riga, but in Riga one day is a long time. Which is not to say that it is not an attractive city. Indeed it is; and it is a very beautiful city. I wanted very much to explore it as a tourist would, see its historic treasures and learn about its quaint ancient buildings that make one think of medieval gulids and olden days when commerce was not so completely dissassociated from ideas of picturesqueness and beauty and the leisurely ornamentation of life. But I was reminded at once that my business was to see warehouses and docks and shipping records and feeding stations and great crowds of youngsters eating bean soup, corn grits with sugar and milk, and good white bread at the expense of their Uncle Sam.

You see, the Latvians permit us to use the port of Riga and their railroads for our operations in Russia, while in exchange for these courtesies and their coöperation—which, incidentally, is active, sincere and unfailing—we undertake to feed forty thousand of their needy children. This undertaking on our part is not altogether in the nature of a bargain, however, because to be consistent in our purpose to help all the destitute and undernourished children of Europe, regardless of their race or nationality, we would have to be feeding these little Latvians anyhow. But it is pleasing, nevertheless, to be working for once for people who are cheerfully assisting us in another job, by which they cannot hope to profit.

The day I arrived it was ten degrees below zero and the city lay under a deep blanket of snow. But I was to discover that, however I might feel about it, it was a very mild day. There was an old porter in a frayed uniform in the office of the little hotel to which I was taken at the bewitching hour of six A.M., when the train got in. He spoke perfect English and was probably quite as talkative in several other languages, and later in the morning when he was helping me across the icy sidewalk to the automobile that had been sent for me from the office of the A. R. A. he said, "It is fortunate that you arrived in such pleasant weather. If you had come a few days ago I'm afraid you would have found it very cold. It got down to thirty-five below, and I really felt it myself, though I don't mind the cold."

"And do you call this a warm day?" I asked.

"Well, no, not exactly warm, but very mild, very mild. The back of the winter is broken."

"Oh, it is, is it?" said I to myself as I drove away freezing in an open car. "Well, if anybody should ask me I should tell them it isn't even bent!" But my subsequent experience taught me that if I had been coming out of Russia instead of going in I probably should have suffered from the heat.

Accompanied by some members of the A. R. A. personnel I went down to see the place where the food cargoes came in and to have explained to me the processes of handling them. The port was frozen in—for the first time in twenty-seven years, I believe it was. Is it not extraordinary how many places one goes to with visions in one's mind of their normal conditions, only to find that these conditions are different for the first time in the memory of the oldest inhabitant? It was nothing in the nature of a hardship to me to find Riga frozen in, because it was rather wonderful to stand knee-deep—literally—in snow on the unused tremendous granite dock and look away out and out across an unbroken field of ice, then up a wide frozen river fringed on either side with steeples and towers and picturesque, uneven, snow-blanketed roof lines.

But the conversation was not about these things; it was all about how much our shipping operations would be retarded and how far ahead of immediate necessities the food-distributing stations in Russia were. Although the ships scheduled for Riga were unloading at Reval and the only serious delay was in railway transport, our relief workers were plainly worried, and speculated with great hopefulness on the rise in temperature to ten degrees below zero and the local prediction that there would be no more winter.

Hardships of Travel

In A. R. A. circles in Riga the person who comes along en route to Russia enjoys a temporary importance that is exceedingly interesting. At least I found it so. My idea was that the nearer I should get to Russia the less difficult the difficulties of getting there would become and the less dangerous the much-talked-of danger would appear to be. But not at all. You walk up to the cloud of mystery which hangs upon the frontier of that unhappy country expecting to see it lift and float away before your eyes, revealing to you a commonplaceness which will, as per your usual experience, turn your taste for adventure into dust and ashes in your mouth. Instead of which the cloud deepens and grows heavier and darker, and you begin, figuratively speaking, to breathe with shorter breaths when you get into the hushed atmosphere in which its immediate neighbors live.

In Riga they speak of going in and coming out as though Russia were some vast chamber of horrors containing strange fascinations along with things vague and unimaginable that men wish to investigate but hesitate to approach. You meet a stranger in Riga—an American, that is—and inevitably his first question will be, "Are you going in?"

"Yes," say you, and then you ask him, "Have you been in?"

If he has he is pretty sure to bate his breath for your benefit and make a noise like a survivor, while if he has not he will say, "No such luck!" and begin to tell you how he is stuck in Riga superintending the unloading of cargoes or keeping tabs on

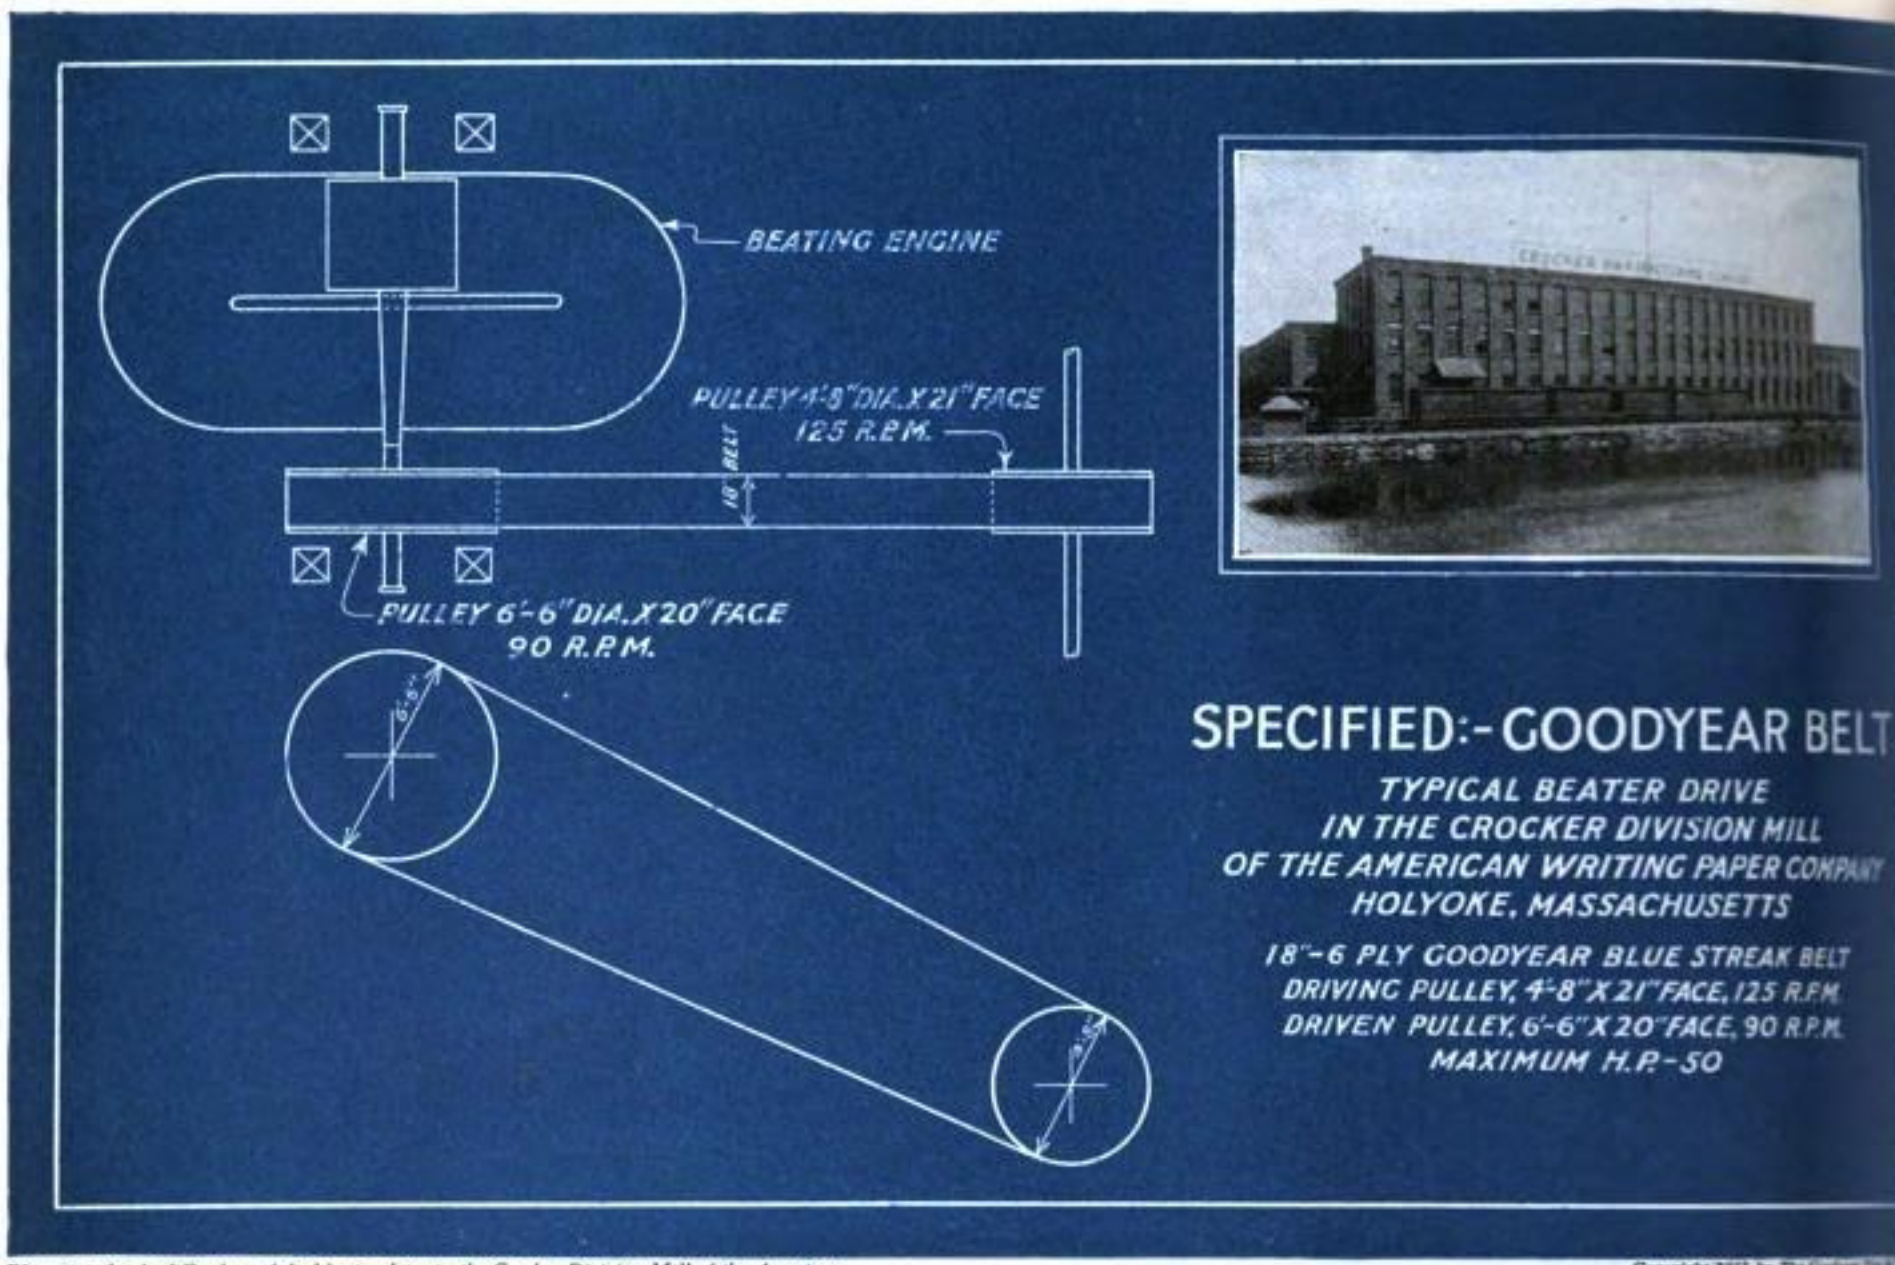
"Nothing like Congoleum Rugs for summer-time. They're so easy to keep clean and nothing seems to harm them."

On the porch or indoors—*Gold-Seal* Congoleum Art-Rugs are surely the ideal summer floor-covering. Their cool, cheery patterns add charm to the seashore cottage, bungalow and mountain camp, and besides they are low-priced and extremely practical. They hug the floor tightly without fastening of any kind, never ruffle or turn up at edges or corners.

Water doesn't hurt them. The sun doesn't fade them. No need to roll them up when rain threatens. And they are so easy to clean—it's done in a jiffy with a damp mop.



Truly for the summer home there is no floor-covering so satisfying and economical as *Gold-Seal* Congoleum Rugs.

6	x 9	feet	$ 8.10	The rug illustrated is made only in the five large sizes. The small rugs are made in other designs to harmonize with it.	1½	x 3	feet $ .50
7½	x 9	feet	10.10		3	x 3	feet 1.00
9	x 9	feet	12.15		3	x 4½	feet 1.50
9	x 10½	feet	14.15		3	x 6	feet 2.00
9	x 12	feet	16.20				

Owing to freight rates prices in the South, west of the Mississippi and in Canada are higher than those quoted.

Blueprint sketch of Goodyear-belted beater drive in the Crocker Division Mill of the American Writing Paper Company, Holyoke, Mass., and insert photograph of the Crocker Division Mill.

Copyright 1921, by The Goodyear Tire & Rubber Co.

Twenty-six Eagle-A Mills and the G. T.

The American Writing Paper Company, of Holyoke, Massachusetts, comprises 26 mills throughout the country, making the nationally celebrated Eagle-A Quality-Standards of printing papers. The belting equipment and requirements of their every plant, involving hundreds of drives, have been analyzed in the past two years by a G. T. M.—Goodyear Technical Man.

As a result of this vast survey, this Company, which is the largest fine paper-making institution in the world, today is in possession of a tabulated record of every belt in each of its mills, complete data on dimensions and grades of belts used on the various drives, and specific recommendations for the types of belts best suited to the varying duties. The report is used continually by the plant engineers and by the Purchasing Department in choosing different sizes and types of belts.

"This analysis of the belt equipment in each of our 26 plants is the most comprehensive and valuable work of its kind that has ever come to my attention," writes Mr. J. Moles, Chief Engineer of the American Writing Paper Company. "The actual G. T. M. work required months, and the final report, together with recommendations submitted by the Goodyear Company, comprises several volumes."

A great deal of the equipment installed on the basis of this expert analysis is Goodyear Blue Streak Belting. This is particularly true of the equipment of the great beater drives, which transmit the power from the main shaft to the great revolving cylinders where numerous knives beat rags into stock for the paper machines.

Two of these Goodyear Blue Streak Belts, 18-inch, 6-ply, were installed in the Crocker Division in Holyoke, in June, 1920. These two Goodyears have been in constant operation for two years now, and have never been touched. They never required taking-up or repairing. Mr. Moles says they are as good today as the day they were installed, though they have been working on this heavy drive for 24 hours a day, six days a week.

Hundreds of other Goodyear Belts in American Writing Paper plants are giving correspondingly faithful, trouble-free and long-wearing service. Their efficient and economical performance is a tribute to the quality built into them and to the correctness and exactness with which they are specified to their jobs.

This is a splendid example of the work of the G. T. M., the working of the Goodyear Plant Analysis Method, and the performance of Goodyear Belts. You can have a similar survey made of your transmission or conveying problem. There is a G. T. M. in your neighborhood, and you may rely on his recommendations and on the quality of Goodyear Belts. For further information about the Goodyear Analysis Plan, write to Goodyear, Akron, Ohio, or Los Angeles, California.

rty and bedraggled uniforms
features. They were a kind of dark, mustard-colored, coarse wool cloth and were red, of course, as to collar tabs and cuff bands. But what made this uniform unique, different from any uniform the world has ever seen, was the cap that went with it. The cap is an atrocity that was invented, I am told, by Trotzky, and is known as the Trotzky helmet. It is made of the uniform material and is a hood, really, with both helmet and cap characteristics—that is, it has a visor and also runs up at the top in a floppy sort of peak. It makes its wearer look both flat-headed and low-browed, and just above the visor on the flat spot there is either a red star or a crossed hammer and sickle, these being the emblems of the Communist state.

The boys, however, were nice enough, quite courteous, and not in any observable way different from other chesty youths exercising governmental authority. But I did have a feeling at once of being despised and a bit too clean and well-groomed for the occasion, which was a feeling I was destined to carry about with me all the time I was in Russia.

We had no sooner crossed into Russia than we began to see horrible sights. And this is the truth—I was not expecting it. I thought the horrors were confined to certain areas and that I should have to go and look for them. But there is no area in Russia today that is not horrible; at least there is no area in which horrors are not to be encountered. And though the soviet authorities spare no effort in trying to induce the world to believe that the famine is confined to the Volga Valley and that it is due solely to natural causes and causes over which they had no control, there is not a man, woman or child in the country, aside from a favored few within the government circle or who have money enough to pay the fantastic prices that are demanded for food, who is getting enough to eat. This also is the absolute truth, which nobody who knows the situation will seek to deny.

At every railway station there were seething mobs of the most awful people I had ever seen. They crowded up under the windows of our car and wailed a pitiful wail with their hands held out.

I asked our Latvian porter, who spoke both English and Russian, what they were saying, and laughing a brutal laugh he answered: "They are saying, 'For God's sake give us bread, give us bread!'" He was remembering the Bolshevik invasion of his own country and the ruthlessness of it. He had no sympathy for Russians.

Cold and Misery

Most of the people were trying to get on the train; they were going somewhere, anywhere, I suppose, away from where they were. There were Red soldiers stationed at each end of all the cars, and only those who had permits to travel were allowed to get aboard; but the others, in uncontrollable masses, struggled for a foothold anywhere. We had one continual fight to keep them out of our car, but we had to keep them out; our hearts might ache for them, but they had on them one thing we were afraid of—carriers of disease.

We locked our doors, but they kicked against them and beat upon the windows with their fists, making piteous appeals. They clung to the steps and the trucks and crowded together between the cars on the coupling pins. And it was cold, bitter cold. The country was just one vast interminable stretch of blinding white silence; the villages were buried up to their thick-thatched eaves in snow; the beards of the men and the mufflers of the women were hung with icicles; it was all a terrible picture of human suffering.

At one station I stood looking out of a window as the train began to move; it gathered speed; there was a surge forward in the crowd and a frantic shout; then I felt the car under me lift and twist itself with a sickening grind.

One of the young men I was traveling with came up to me quickly, turned me away from the window and said, "Don't look! We ran over a woman. She slipped on the icy step she was trying to hang on to and fell under the wheels!"

The porter, looking just a little bit shaken himself, said, "Yes, and she's better off! Kindest thing you can do to a lot of these people is to kill them. We don't often make this run without killing two or three, but it don't seem right that they should nearly always be women."

We killed three before we got to Moscow—all women.

I once knew Moscow as one of the most colorful cities in the world. Its chief pursuit was happiness and even its muzhiks were round and rollicking and blessed with unfailing good nature. It was not a city to approve of particularly; it lay under a weight of wasted years and its moral tone was unhealthy, but at least it was cheerful. Also it was well kept and had an air of great pride in itself.

Gray and Dismal Moscow

My impression when I arrived this time was that it had grown suddenly old and dismally gray; that, moreover, it had lost its grip in its sad decrepitude, permitting itself to get filthy and foul—a bedraggled drab of a city. The station, too dirty to be described, and with its atmosphere too thick with the hideous smell of human uncleanness to be breathed, was filled with people one shrank from in fear, while outside was a swarm of beggars and mere idlers through which to thrust one's way was a thing to dread.

The city lay under a thick mantle of dirty snow and ice, while overhead hung a heavy gray pall of somber cloud. They told us it had been two weeks since the sun had shone. In the streets there were a great many people ambling aimlessly along doing nothing and, as I afterward learned, with nothing to do. I looked into their faces and saw only weariness; not even resentment—only weariness and a kind of hopeless submission. On the journey in, my nerves had been shaken a bit and, as anyone would, I had suffered thrills of heartbreaking sympathy for the people I had seen. But now a sense of deep depression began to settle upon me. Nobody in Russia escapes this; depression is chronic; everybody feels it and everybody talks about it. It is a dreadful thing to live with day after day.

There were gangs of women; terrible women; women only, cleaning the ice out of the street-car tracks with picks and shovels and stiff twig brooms. I knew them to be gangs of conscripted labor, and I felt sweep over me in their behalf a wave of hot resentment. But it was too soon for me to begin to feel resentful; too soon for me even to say to myself as I did, "So this is what it's like!"

I was to go a long way yet and learn in the end that the women who clean the streets of the cities are fortunate because they are fed. I shall wait until another time to go farther and see more in the grand old city of Moscow.

Editor's Note—This is the first of a series of articles by Mrs. Egan. The next will appear in an early issue.

off a few prices from the
that he began to give me what he called the dope. A tip was out on Mex Pete; and there was a tip out on Studebaker too. A lot of talk, besides, he said, was going the rounds on Steel. If anyone went short on Steel they were dead sure to make a killing, he said.

"Short?" I said.

"Yeah; sell, you know," said Boker.

It was all Greek to me.

I was as green as any hick that ever stepped out of the Grand Central into Forty-second Street. How could I sell Steel when I didn't have any to sell? The look Boker gave me I can remember still. It must have been hard for him not to laugh.

Steel I sold, though; twenty shares of it. This meant of course that the trade was on a margin of five points a share only; and that in itself should have warned what kind of people I was dealing with. No reputable brokerage office, I know now, will carry a client on any margin like that. There you are, though; and my hand shook as I handed over the hundred dollars.

Boker hurried from the room. A moment later he was back again.

"Your order's filled," he said; "I filled it at 83."

I was astonished. I hadn't even seen him telephone. All he'd done was to take a walk around the room at the back. That

Elto

Light Twin Outboard Motor

Sportsmen Everywhere Are Talking About It

The Elto Light Twin is causing a big stir in the outdoor world. It is even a bigger sensation than Ole Evinrude's first outboard motor built 14 years ago.

Sportsmen everywhere are talking about the Elto. They had looked to the "Father of the Detachable Motor" for a highly developed motor of this type and they welcome this great advance in the industry with genuine enthusiasm. From all parts of America and foreign shores, letters are coming to Ole Evinrude's new organization highly commending the Elto Light Twin for its original and practical features.

Advanced Design

The Elto is a twin-cylinder and develops full 3 H. P., yet it weighs only 48 pounds. It is a rugged, long-life motor, built thruout with extreme precision.

Other notable Elto features are its quick, easy starting, vibrationless running, automatic tilting, folding rudder, comfortable steering from any part of boat, perfect trolling speed, quiet underwater exhaust, oil-tight gear housing. The Elto is the utmost in outboard motor beauty and utility. Its many distinctive features are quickly winning recognition for it as the outboard motor masterpiece.

Write Ole Evinrude's new organization for descriptive literature and name of the Elto dealer nearest you.

Why You Should Change Your Spark Plugs Now

Most engine troubles come from worn-out or incorrectly designed spark plugs.

If your car starts hard, don't run the battery down; if it splutters and runs jerkily, if it misses on the hills and at high speed, don't blame it on the carburetor or piston rings.

Probably all you need is a new set of AC Spark Plugs.

Go to any good dealer and tell him you want a set of AC Plugs specially designed for your car.

Then see the difference in performance!

Most manufacturers of costly cars, trucks and tractors equip their engines with AC Spark Plugs because they know there is nothing like the old reliable AC to make a motor run smoothly.

Race drivers, aviators, speed-boat pilots also insist that their engines be AC-equipped.

You can't go wrong if you follow these experts.

Ask for and see that you get the genuine AC Spark Plugs specially designed for your car.

The Standard Spark Plug of the World

Ford Owners:—The AC 1075 for Ford engines is the plug you should use. It has our patented wire clip for the Ford terminal, our new design electrode which prevents oil from lodging in the spark gap and the famous AC Carbon Proof porcelain. If your Ford dealer will not supply you any other good dealer can meet your needs.

AC Spark Plug Company, FLINT, *Michigan*

U. S. Pat. No. 1,135,727, April 13, 1915. U. S. Pat. No. 1,216,139, Feb. 13, 1917. Other Patents Pending

wasn't all, though. The price he told me, 83, was a good three-quarters under the figures on the board; and he'd gyped me out of that. I was about as green as they make 'em, I guess.

It was half past eleven when I left Boker's; and I'd hardly opened the door when I had a shock. As I reached the stairs and was starting down who should I see coming up but old man Potter!

I dodged out of sight pretty quick, I'll say. He hadn't seen me, however; and I hung around to see where he'd go. After that I took my time about getting back to the office. I knew now why he'd been figuring over that newspaper he kept hidden in his desk. It was the same as I'd been figuring—the financial page. One o'clock, though, was striking before I finished eating my lunch; and after that I lit a cigar. Twenty minutes later I lounged back to the insurance office.

Potter was waiting for me. He began to bristle as I walked in.

"Can it!" I said to him. "I know where you were this A.M."

"What's that?" he said. "What's that?"

"You were down at Boker's," I told him.

You should have seen his face. It grew as white and moist as the belly of a fish. I felt sorry for the old boy. He'd seen, too, what he was up against; and to try to get out of it he'd risked everything, his job included.

He sat there all crumpled up. "If you tell ——" he whispered.

I wasn't going to tell. I knew they'd sack him offhand. I went back to my desk.

Anyone who knows can tell you what happens to a bird who gets dealing in the market. I was no exception. All I could think of that afternoon was the money I'd put up at Boker's. If the market went down I'd win. If it went up I'd lose. I had the chills and fever all right. In fact, I was half beside myself till I heard the newsboys yelling the early editions in the street below. Potter watched me as I got up and dusted out of the room; but a lot I cared now for Potter. I got a paper from a kid; and the moment I saw it I let out a yip.

Steel was down a point and over. As it figured out, I'd cleaned up twenty-five bucks on the day!

I'd like to speak of that. It was winning like this, the first time of all, that put me really to the bad. If I'd lost I might have stopped to think. I'd won, though; and that fixed me—I had the fever in my blood. When I went upstairs to the office I lounged over to old Potter's desk.

"The market's off," I said, swaggering. It was the same swagger I'd seen Bert Gerken give. I was in on Wall Street stocks, you know—dealing in the market.

"Sh-h-h! For God's sake!" said old Potter, turning white.

That afternoon, when I went home to the flat, the world was mine.

IV

IT WAS along toward six o'clock when I got off the Subway at the corner and headed down the side street. Under my arm I had all the latest Wall Street editions; and one of these I'd been reading as I hung to a strap in the train. I felt pretty chesty and big, in fact, as I studied the financial page, letting on to myself I was a regular Wall Street man. I was figuring, too, how the folks who saw me must think what a swell I was. The Wall Street paper wasn't all of it, either. On the way from the office to the Subway I'd stopped in at a couple of places and got myself some other reading matter.

One piece of it was a list of winter tours—trips down South to the big resorts. The other piece was an automobile-road map. I hadn't a car, of course; but that day before I left the office I'd been doing a bit of figuring.

Twenty-five bucks a day, if you count six days in the week, is a hundred and fifty bones; six hundred, in all, for the month. It's no wonder, in fact, that seeing myself with that amount a month I thought the world was mine. The trouble, though, is that I didn't stop with that. If I used my profits, that six hundred plunks a month, to buy more stock, in a month I'd be making six or seven times what I was making now. I got crazy with the heat after that. Before long I saw myself—on paper—rolling in anywheres from five hundred to a thousand every week. At this point, though, I called a halt. To be on the safe side I set down what I'd make at two hundred and fifty a week or thereabouts—call it a flat three hundred. That made twelve hundred d[ollars] a month, I said; and with that [in] in my jeans, all of New York I'd [fig]ured.

I almost thought I owned it already. [The] car for Josie was the first thing I'[d get] and it wouldn't be any tin [Lizzie, ei]ther. The car, before I got through figuring it, was one of those nickel and brass imported cars; and by that time I had a choffer in livery at the wheel. That was all, though, I laid in for Josie that evening on my way uptown in the Subway. The Gerkens had a colored girl to wait on them; but I wouldn't let Josie do anything like that. I wasn't going to have her stick on, either, in that measly four-by-four flat we were living in. I figured out that we'd have a flat on Riverside Drive, and a cook, a chambermaid and maybe a man. The flat, too, would have eight rooms and a couple of baths. I could see in my mind's eye the layout when we asked them in for the evening. Josie would be in a new silk dress, to knock your eye out; and she would have on, too, all her swell new jewelry. She was a good-looking kid; and I could see her with all her swell rings and the diamond dangles in her ears. Then, after we'd eaten, we'd take the Gerkens to ride in that new car I'd bought, and what I would have on the fur coat I'd get for her. It wouldn't be the fur coat, either, we had been talking about a long while, but a piece of rabbit fur she'd seen on Amsterdam Avenue. It was the best goods—sable or something; and I pictured Sadie Gerken turning green when she got her eye on it.

There were a lot of things I pictured, a whole heap of them. They were still humming in my mind when I romped up the stair to the flat, and put my key in the door.

"Hey, Josie!" I whooped.

Then I stood there, gaping.

The flat was empty and dark. It was cold, too, as if Josie hadn't been in there all morning. All around, the place was in the order just as I'd left it hours ago.

The papers I dropped on a chair without taking off my hat and coat. I walked on down the hall. "Josie!" I called again. It was the first time, in fact, I'd ever been home like that and found no one waiting for me. I felt queer, I know, as I looked in Josie's door and looked inside.

The room, like the rest of the flat, was in disorder. The bedclothes lay flung over the footboard; and all the drawers in the bureau were open. I got a shock as I looked in them. A gasp came out of me; and then, as I went to the closet I looked inside. I don't guess, maybe, what I was thinking to find in bag, though, was there; and when I didn't find it I caught my breath. I backed out. I thought, of course, that she'd gone and done something like that; but just the same I was relieved.

After that I began to get hot and cold all over. The scare I'd had thrown into me by finding the bag was I, all primed and bubbling with excitement I'd pulled off that day, and Josie not being at home, ready to hear me tell her about it.

I got hotter and hotter as I went back into the parlor and lit the light. I still remember, and tried to read the paper I had, though I had it open at the financial page I didn't read it long. After a while I got another scare. Why had she gone out? Why had she left the flat like it was? Why, too, was she staying away so long? I dropped the paper and humped back to her room again.

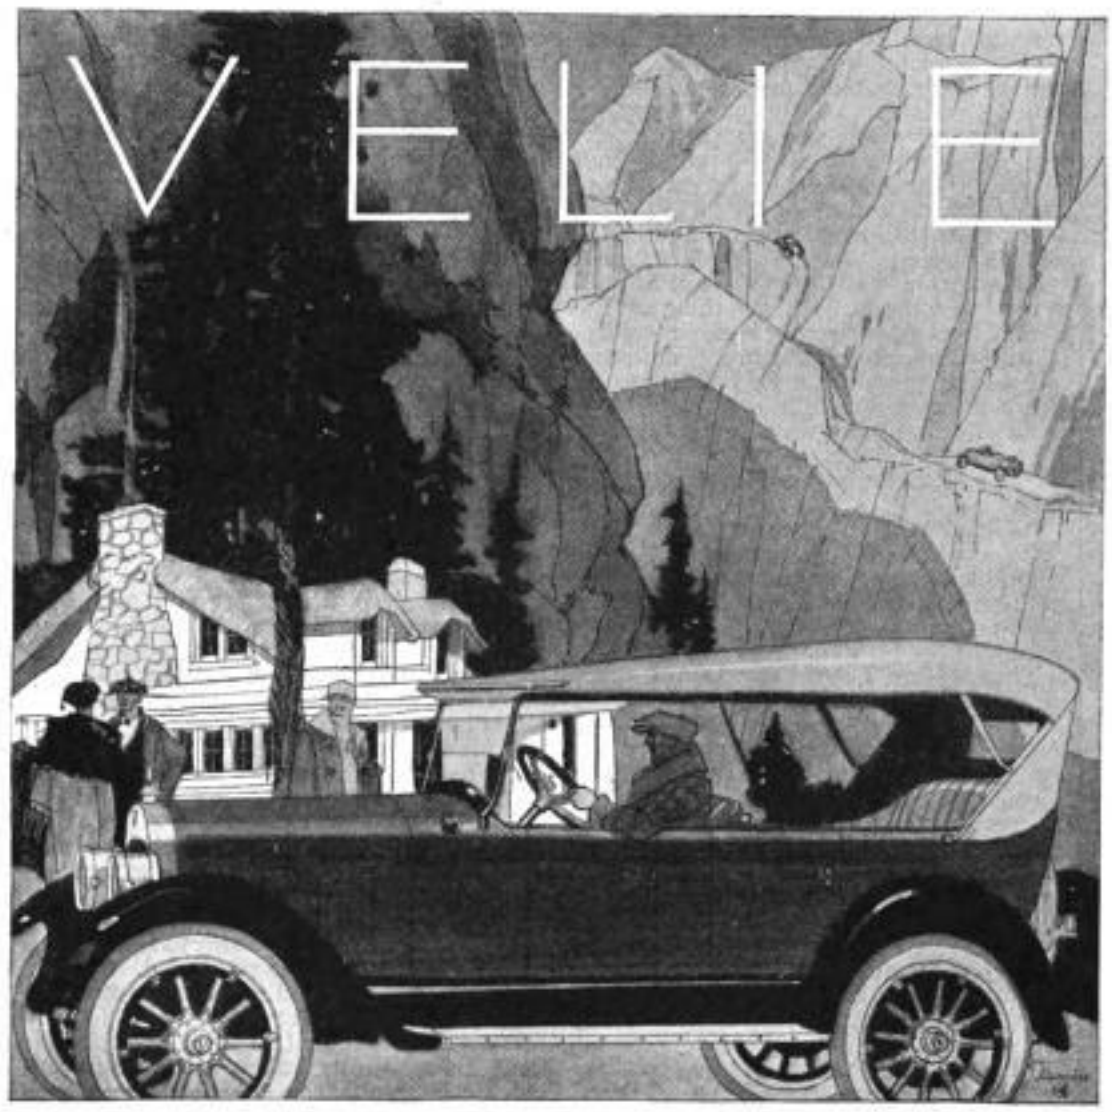
There was her bag, though, and the bureau and the closet, too, were in order. Then, as I stood there, I heard the front door open.

"Say!" I said. "Where have you been anyway?"

She looked at me a moment. Her face was pale, and she was all fagged out and limp.

"I've been downtown," she said.

I knew she had. She had a package in her hand; and I figured she'd left the flat in a mess so she could get an early start at the shops all day. I was wrong on that, as it turned out.



"That's the dinner," she said, putting down the parcel; "I got it just now at the delicatessen."

Well, that was piling it on. I felt sure that the town I'd seen a lot of these women would hang out in the shops and movies and wait till the last minute to beat it home and get a slice of meat and a paper of potato salad for their husband's dinner; and I told her so, too, what I thought. She waited till I had finished.

VELIE-BUILT MOTOR WINS AGAIN

The remarkable new Velie 6

ANOTHER link in the long chain of Velie Victories was added when a stock car equipped with the Velie-built motor climbed Mount Wilson in 27 minutes, 51 $\frac{46}{100}$ seconds, breaking the record that had stood four years *by over* 11 *minutes,* and winning the Los Angeles Express trophy.

This unparalleled performance was made possible by the Velie overhead valve construction—Velie automatic lubrication—Velie motor solidity—Velie cooling—Velie dirt-proof construction—and a score of other features built into this matchless power plant.

In 9½ miles the car driven by Walter Lord made 144 turns in the tortuous ascent of 6000 feet. The motometer showed the water at only average summer temperature when the car reached the top.*

Every purchaser of a Model 58 Velie car gets an exact duplicate of this motor in a beautiful car of long soft flowing lines and curves. Richly finished and completely equipped. Four new body styles, open and closed. See your nearest Velie dealer.

**The official account of the mountain climb will be sent on request*

(Continued from Page 54)

"I wasn't shopping," she said; "I wasn't at a movie, either. I went downtown and got back that old job of mine."

You could have knocked me down with a feather.

"You did what?"

"Just what I say," she said.

It was the fact, what's more. Before we'd married, Josie was a stenographer in a Broadway jobbing house. The place paid twenty-five a week; and to think she'd gone back to it now—well, I just turned hot and cold. If she'd hit me I couldn't have taken it worse.

It was my pride, you see. Anyways, I had the same pride a clerk would have about a thing like that; and what laid me out was, first of all, what they'd say at the office when they heard my wife had had to go back to work. In my mind's eye I could see them grin. "His wife, she had to go to work," they'd say. With one thing and another I was pretty nearly beside myself.

Josie didn't make it any the easier for me.

I wouldn't stand for it, I told her. A wife's place was to take care of her husband's home, I said; and she looked at me for a moment.

"Yes—if he's able to keep a wife," she said.

"What's that?" I shot back at her.

"You heard me," she answered. "A wife who just trots round the house and does nothing is a luxury, Jim. That's why I went and got back my job. I figured you couldn't afford a wife."

Then, before I could say anything, she gave her shoulders a hunch.

"I'm sick of all this, anyways. I've sat round this flat, dusting and sweeping and cooking the meals for you; and what have I got out of it, I'd ask. I don't go anywheres; you never take me to a show or anything; I just drudge and slave. I wouldn't do it for any man. I made up my mind since you couldn't give me anything—or wouldn't—I'd go out and get it for myself."

She had spunk, I'll say. She was only a kid, at that, too; but she had the grit; and as for me, I began to come down from my high horse.

"Listen, Josie," I said.

"I don't wish to listen," she answered. "I'm through, I'm finished!"

I told her then. In a word or two I let on to her what I'd pulled off that day down at Boker's. You should have seen her!

"Jim!" she said.

After that it was as if the sunshine had burst all at once through the walls of that two-by-four flat we were living in.

"Jim!"

I just took her in my arms; and she hung to me, shaking and catching at her breath.

V

IT WAS one grand night, that night, I'll mention. It was as if the twenty-five bucks, the piece of change I'd raked down that day at Boker's, was as many thousands instead. Outside of the pay envelope I'd lugged home every Saturday it was the first money I'd turned up in the six years we'd been married. To Josie it looked even bigger than it did to me.

She thought I was made, that's all.

The dinner we rattled through with as if it had been a quick-lunch order downtown. The janitor downstairs had a phone; and while Josie was putting away the plates I beat it down to the basement.

"That you, Bert?" I called, when I got the Gerkens' flat. I was feeling pretty chesty and important, too, I'll say; though I didn't let him see it. "Josie and I, we're dropping round to a show," I said; "and we thought maybe you and Sadie would like to go." Then, before he could say anything I added, offhand like, "The tickets and the eats afterwards, Bert, are on me."

Bert said they'd be ready when I got around; and I dusted back upstairs.

"Put on your dress, Josie," I told her.

"Why, Jim!" said Josie.

Her face was all lit up when she skipped back into her room to get ready.

We took a cab at the corner. A street car or the Subway would have done us ordinarily; and I remember the squeak Josie gave as I beckoned to the taxi. The last one I'd paid for was on the day I'd driven her away from the church where we were married; though never mind. She snuggled up against me tonight as we sat inside; and I could feel her quiver. I guess she'd been waiting a long while for that taxi ride.

Bert and Sadie were at the door when we got there.

"Anniversary?" grinned Bert as he saw the cab.

It made me sore to hear him. I'd let him see, I figured, that he wasn't the only one who could spend money; but it took Bert a while to get on to that.

"What're we takin' in?" he asked. "A picture?"

"Cut it out!" I growled.

It was to a theater—a real show—we were going; and the seats I got weren't upstairs in the gallery, either. Including the tax, the four pasteboards set me back eleven dollars; but after the first shock of it, and the curtain went up and the show began, I forgot all that. I just sat back with my chest stuck out, feeling grand and lordly. You should have seen Josie too. She was like a kid out of school for the holidays, her face all shining and gay; and it wasn't just being at a show, either, that had bucked her up like that. Every now and then I'd catch her looking at Bert, and then she take a peep at me. When she did it I could see the light, pride, jump into her eyes and shine.

It was past midnight when she and I got back to the flat.

"Jim!" she said. "Oh, Jim!"

In the hall she flung her arms around me and held me tight.

The evening had set me back a heap. After the show the supper had cost me another good ten dollars; and we'd come home after it in a cab. That and the cigars Bert and I were smoking had cost me four dollars more. All this was nothing, though. Josie had her arms around me.

"Isn't it wonderful, Jim?" she said.

"That so?" I grinned at her.

"Yes; we're getting on at last!" she said.

That night, I'll say, she and I didn't mention again that job of hers she'd gone and taken back. The next morning we didn't mention it, either. She came to the door with me when I had on my hat and coat.

"I'm so proud!" she whispered.

I was kind of proud myself. I'd turned the trick, anyways—or so I thought; found the way, I told myself, of getting out of the hole I was in. And that, as I've said, is what must make it so easy for the sharks, the Wall Street bucket shops and all, to trim fellows like me out of their savings. It isn't just greed, I'll say again, that gets us into their clutches. If a man has, like me, a wife, he wants her to think he's a somebody, doesn't he? I know I did.

I was walking the mountain tops that morning when I got down to my job in Pine Street.

VI

NOW listen: In all of this I'm not trying to knock any clerk just because he's a clerk; I'm not trying, either, to make any fellow sore on the job he's holding down. All I'm trying to show is what gets so many of my sort into the hands of the bucket shops. Along with that I'd like to make clear what happens when they get there. There was nothing wrong with my job. The trouble, instead, was with me. All these years I'd just sat at my desk, letting my feet take root and standing still. What's more, plenty of fellows, clerks like myself, had made good while I was sitting there. I could name a dozen.

Ferd Backus was one. Ferd had the desk next to mine. In the office a lot of us used to laugh at Ferd. Sometimes, too, we'd get sore. Ferd, anyways, was a bear for work; and that's what got us. If work in the office was slack, instead of loafing the way we did, Ferd would hunt himself something to do. "Afraid for his job!" was what we said; but Ferd would only grin. "That's what you say," he said. Then one day he quit; and we learned what he'd been up to. Instead of being afraid he'd lose the job, he'd been learning everything he could about it; and now he was setting up for himself. What I'm getting to, however, is that when he quit Ferd asked me to go in partners with him.

It was an agency Ferd was starting. The office, though, was in a town upstate—Harrisville, we'll call it—and though I had a bit saved up myself, what made me back out wasn't the risk of losing the money; it was—well, Harrisville. I'd come to the city from a dump, a Podunk like that, you see; and little ol' New York I wouldn't leave. The city, I told Ferd, was the place for a business man.

You should have seen the look he gave me.

"Yes," said Ferd; "all the clerks say that."

"What d'you mean, clerks?" I
back at him, getting huffy.

"I mean," said Ferd, "that little
York, as you call it, is just what keep
of clerks what they are."

I didn't get him at all. It was
Greek to me.

"All right," said Ferd; "you

By degrees comes light; and man's control over the conditions of his life grows greater and greater

Out of Ages of Experiment

MYSTERY, darkness and helplessness held man through dreary ages. Then it dawned on a human mind that experiment was the key to human betterment. With the vision of a prophet Roger Bacon declared that experiment would lead to engines of navigation, engines of tremendous speed on land, machines that would traverse the air.

For this unholy idea Bacon was imprisoned through long years. In his cell he experimented with glass and discovered a basic principle of eyeglasses. That was 650 years ago.

Three hundred years later a group of open-minded men in London formed the first society to encourage experiments. To the Royal Society of London we owe the multitude of scientists of the greatest genius who have opened crevices of light and brought near that day when we shall all have "complete power over the conditions of our lives." One notable group includes those who have devoted themselves to releasing man from the many defects of his eyes—defects which check the energy and clearness of the mind.

The improvement of your vision, as Roger Bacon first discovered, is produced principally by the surfaces of lenses —their curvatures—not by any magic in the glass alone.

When your eyes call for help and you go to your Optical Specialist, he works with all the means of precision he possesses. But up to the present time he has been unable to tell accurately if the curves on many kinds of lenses have been ground by his workmen as prescribed for you.

Now, out of years of experimenting, comes the invention which meets this great need—The Wellsworth Lensometer. It measures these precious curvatures with the utmost precision.

This remarkable instrument is a product of long scientific experiment. It again verifies the wisdom of George W. Wells when he established laboratories at his great optical works at Southbridge, Mass., and brought scientists there to study. During his last years he charged his sons and fellow workers to spare no effort—to leave no experiment untried—to make Wellsworth Laboratories the center of optical research for the betterment of human vision.

Your eyes can have the benefits of the work of the Wellsworth Scientific Staff through the services of Optical Specialists in your community. Consult one of them now; make sure that the most precious of your senses is profiting by the ages of experiment done in its behalf.

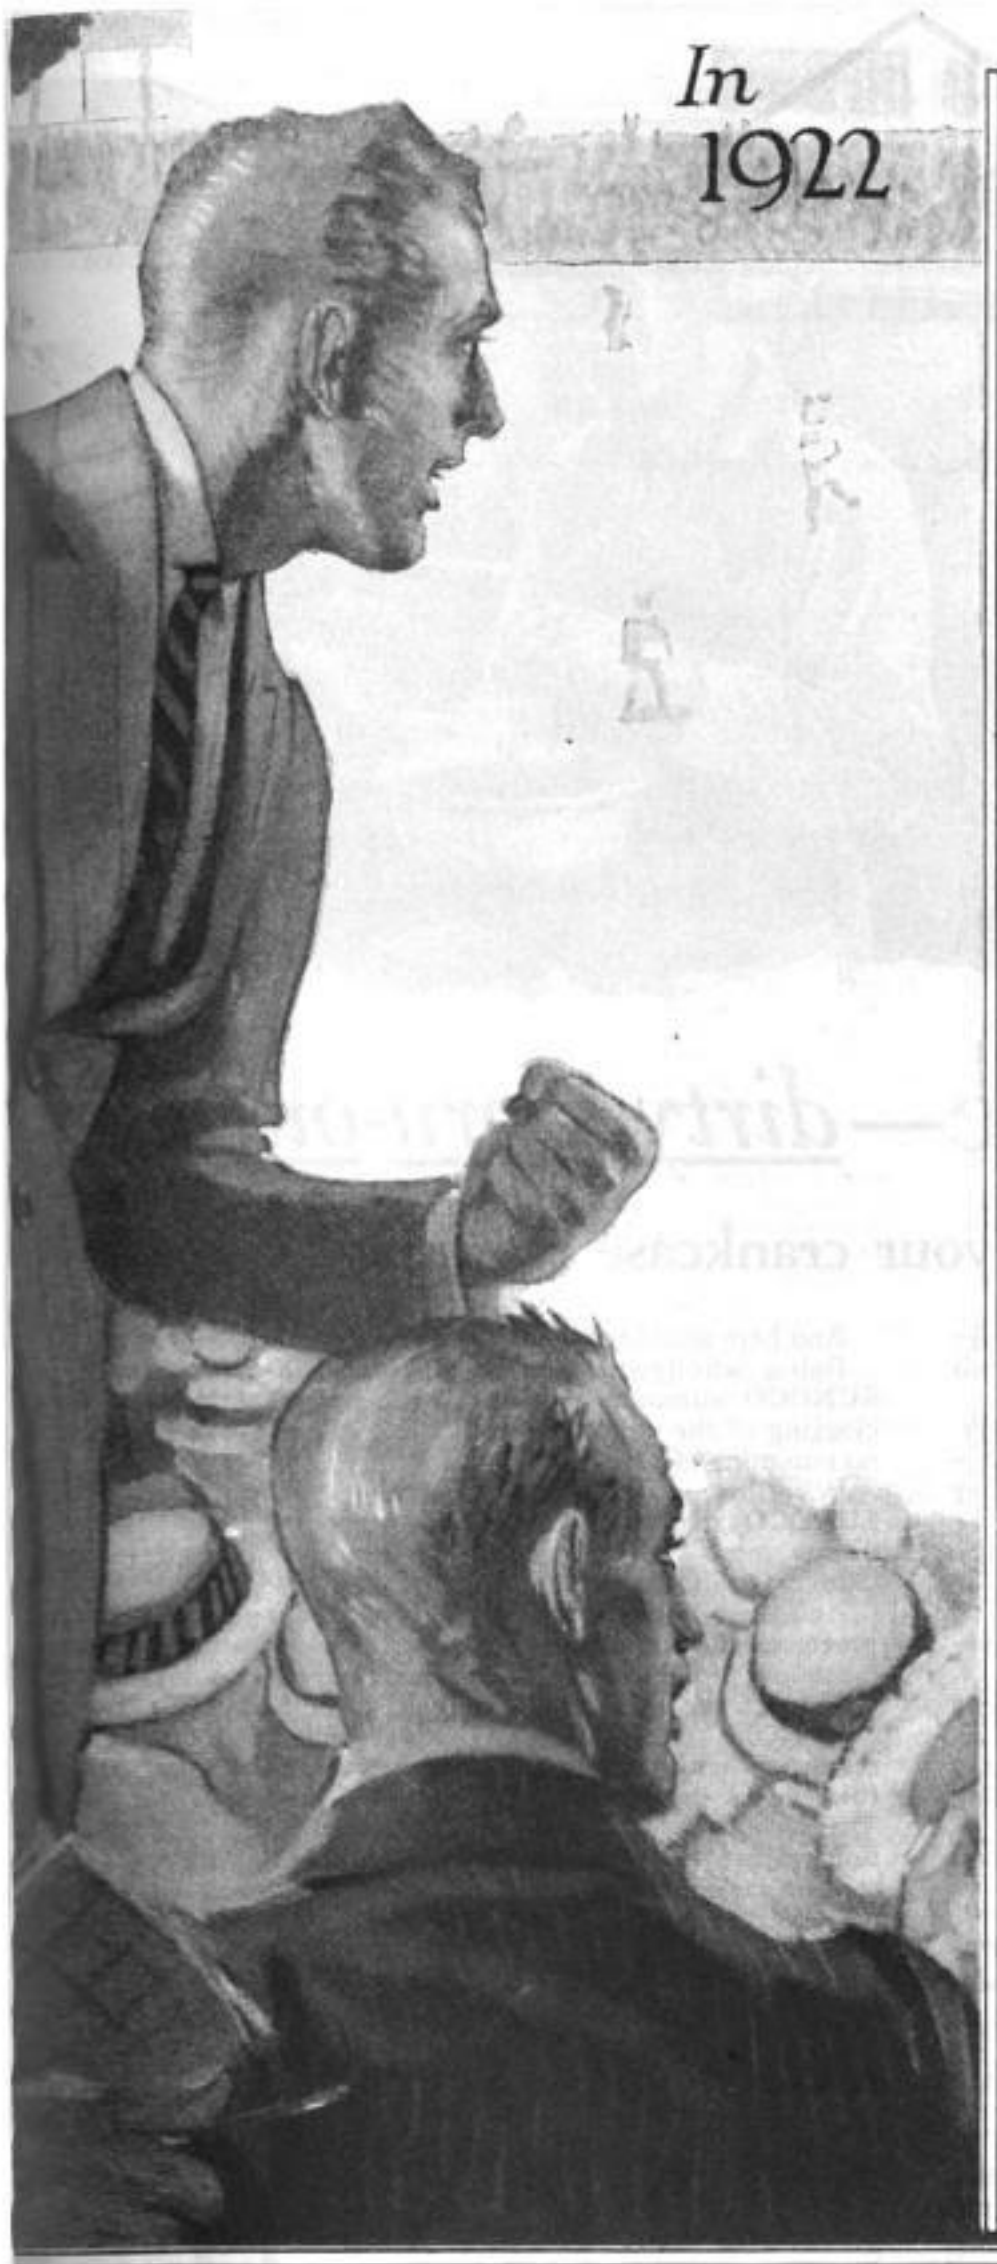
The Man in the Palm Beach Suit



A dozen years ago he was conspicuous, except in the South. Other men, hot in their woolen suits, looked at him and thought he was funny.

He wasn't funny. He was cool. Like Jonas Hanway, the first man in England to carry an umbrella, the first citizen of any town to wear a Palm Beach Suit was a pioneer. He was unusual, but he was cool.

PALM BE

Digitized by Google

The Men in the Palm Beach Suits

Today you can see thousands of men wearing Palm Beach Suits. The Palm Beach idea has become popular because it means coolness. You can't "pick out" the man in the Palm Beach Suit, for two reasons: First, the wearers are so numerous; and second, because Palm Beach Cloth is made in such a variety of shades and patterns—browns, blues, greys, stripes and plaids. There are as many varieties in Palm Beach Suits as there are in woolen suits.

Not all summer clothes are made of Palm Beach Cloth. It is well to know this. All suits made of Palm Beach Cloth are identified by the Palm Beach label.

When you see the label, you can be sure of the genuine Palm Beach Cloth. The style and fit of the suit depend on how well it is tailored. Some makers take extra pains in the tailoring of Palm Beach Cloth, and naturally this means better style and better fit.

Golf Knickers made of Palm Beach are cool and good-looking—practical and durable.

"Here's the cause—*dirty, worn-out oil!*

You failed to drain your crankcase regularly"

You can't keep on using the same oil—day after day—and escape damage to your engine. 800 miles of service is practically the limit of safety.

Poor quality oils—never safe—become actually dangerous after a few miles driving. Broken down by heat—thinned-out by gasoline—what little lubricating value they ever had is quickly destroyed.

Safety and economy demand that you follow these two rules for the lubrication of your engine—

First—buy lubrication by selecting a high quality oil of the right type (body) for your particular engine—*then stick to it.*

Second—drain your crankcase and refill with fresh clean oil every 500 to 800 miles.

Asking for just "a quart of oil"—accepting anything that's offered—isn't buying lubrication. But demanding SUNOCO Motor Oil *IS.*

SUNOCO is a *scientific engine lubricant*—totally and fundamentally different from ordinary motor oils.

And here are the reasons for SUNOCO'S superiority:

Being wholly-distilled—*not a compounded oil*—SUNOCO eliminates carbon troubles. That means no clogging of the cylinders—no fouling of the spark plugs—no gumming of the valves.

Being heavier in body—type for type—than other oils, SUNOCO maintains compression-tight cylinders. That means more power—greater gas and oil mileages—less crankcase dilution.

And there have been created in SUNOCO—by patented processes of super-refining—certain other exclusive features for motor protection not found in ordinary oils.

Prove these extraordinary qualities of SUNOCO by a trial NOW. Any SUNOCO dealer will clean out your crankcase and refill with the proper SUNOCO type for summer use in your car.

Ask your dealer for a copy of our new booklet "Lubrication or Just 'Oil'," or write to us. Ten minutes' interesting reading may mean an enormous saving to you.

tip of his—having a tip, you ced me. I figured if he had a know. The same afternoon went up another two points d that wasn't all of it either. what Boker had talked me nd the oil stock went down efore the close.

t wasn't so gay when we and ent out on Broadway.

's wrong, Jim?" asked Josie.

I didn't tell her, of course. I wasn't going to let on, you know, that part of my profits I'd lost. Bert Gerken, too, didn't seem as lively that night as usual. We all went home early for a change; and that next day things began to happen to me down in Pine Street.

The first was when the boss, the head of the firm, called me up on the carpet. Old Potter hadn't peached on me, though. It was the time clock I'd been punching later and later each morning that gave me away.

"You get here early, d'you hear!" the boss warned.

I knew what the warning meant. I'd never been fired; and it scared me so I was good. I was good for a couple of hours, in fact. Then I began to wriggle and get uneasy again. Before the lunch hour I got up and dusted down to Boker's.

Mex Pete was off another point and a half. Added to that, Steel that morning had crossed 90.

The bucket shop was filled up with the usual crowd of has-beens and seedy wisenheimers that hang in places like this. Some of them were real chatty and gay, talking big about stocks and all; but some of the others looked sort of moochy and out of pep. These must have been the ones like myself that Boker had in right—right for Boker, you know. As soon as I showed myself at the door Boker bounced up to me, his face in a grin.

"How's the boy?" he piped, slapping me on the back. "Feelin' pretty good, ain't you?"

The boy wasn't feeling good at all. The way Mex Pete was falling out from under me was beginning to get my sand. I spoke to Boker about it, and Boker gave a laugh. Mex Pete was all right. A pool was working in the stock, and the insiders were just trying to shake out the tinhorns, after which it was going to zip.

"You'd better take on another block," said Boker.

I fell for it. Another hundred I drew out of the savings that day. The same afternoon Mex Pete sold off two points more; and that night when I got home the little flat never looked so small, so dingy and mean. I sat there hating it.

We didn't go out that night. The Gerkens had said they guessed they wouldn't. Something, in fact, seemed to be the matter with Bert; but what it was I couldn't guess. If I had known, it was just what was happening to me.

For a while Josie tried to talk. She was chipper and gay, still working on that dress for the auto; but as for me, I didn't care much to talk.

"Say," I said, "I'm trying to read the paper." It was at the financial page, of course, I had it open; but I wasn't getting much of what it said. After a while I fell to biting my fingers. When again Josie tried to talk I lit out at her. "Can't you see I'm thinking?" I told her.

It was no bunk. I was thinking, all right; and the next night and the next it was the same. By the end of the week—Saturday—I wasn't fit to live with.

"Jim," said Josie, "what's wrong with you?"

"Wrong? What're you talking about?" I snapped back.

She looked at me, astonished. Then I saw a scare come into her eyes. She gave a gasp.

"Jim! You haven't lost it?" she said. "Lost your money?"

I told her not to be a ninny.

After that, though, she put up the auto dress she was making, and sat there quiet. She was thinking hard, too, I could see; and getting more and more scared the meanwhile. It made me sore.

"Aw, for the land's sake!" I growled.

The fact is, Mex Pete was still going down and Boker was calling me for more money. Half of the two hundred I'd put with him was gone; all my profits, too, of course. He was threatening if I didn't come across to close out the account.

Then, the Monday coming, Mex Pete began to go up again. At the market's close it was up three points; and that night when I rattled up the stairs to the flat I was whistling.

"Hey, Josie!" I called. "Come on, we're going out."

She stood and looked at me a moment.

"I'm not going, Jim," she said.

I couldn't believe her. Here she was, a girl who'd been digging away at me to take her out every evening, and now she wouldn't go! Could you beat it? I asked myself.

Then she began to cry.

"I'm scared, Jim—scared," she said. I was so taken aback I could just stand and gape.

"Say!" I said.

It was Wall Street that scared her. She hadn't guessed the risk I was taking; and for that matter, neither had I. It wasn't just the risk to our savings, though. The way I'd been going on—biting my thumbs and lying awake all night—had got on her nerves, it seems. There was the way, too, I'd snapped out at her every time she spoke.

"I'd rather be poor," she wept.

We didn't go out Monday night. We didn't go the next night either. It was on that same day, it happens, that I got the jolt, the slam that was coming to me. It was the same slam that landed so many other simps.

VII

THE day was Tuesday.

The time clock I'd punched late again once more; and I was upstairs at my desk, making a bluff to get to work, when the office boy told me a fellow wanted to see me outside. That, too, was against the rules—having a caller, you know, in business hours; but a little thing like that wouldn't stop me now. In the hall Bert Gerken was waiting.

He gave a grin when he saw me, but the grin wasn't what you'd say was merry.

"Say, Jim," said Bert, "could you lend me a ten-spot for a couple of days?"

I was so flabbergasted I could only gape. The way Bert had been throwing ten-spots around on Broadway, I'd thought he must have his clothes lined with them. This morning, though, Bert had come to the end of his bluff.

"I'm bust, Jim," he said. "The market's cleaned me out, and I've lost every red I had. That ain't all of it either," he went on; "I owe everyone in sight—the rent, the tradesmen and all; and this week the office fired me."

I stood and shook. If it was I it'd happened to I couldn't have been more scared.

"How did it happen, Bert?" I asked him.

He told me as well as he could, for he was pretty nearly crying. All along he'd been making money, buying stocks as the market kept going up; but finally Boker had got him to go short—to sell, you know. Every trade after that had gone against him; and finally, when he hadn't any more to put up, Boker had closed him out.

"Your car, too, is it gone?" I asked him.

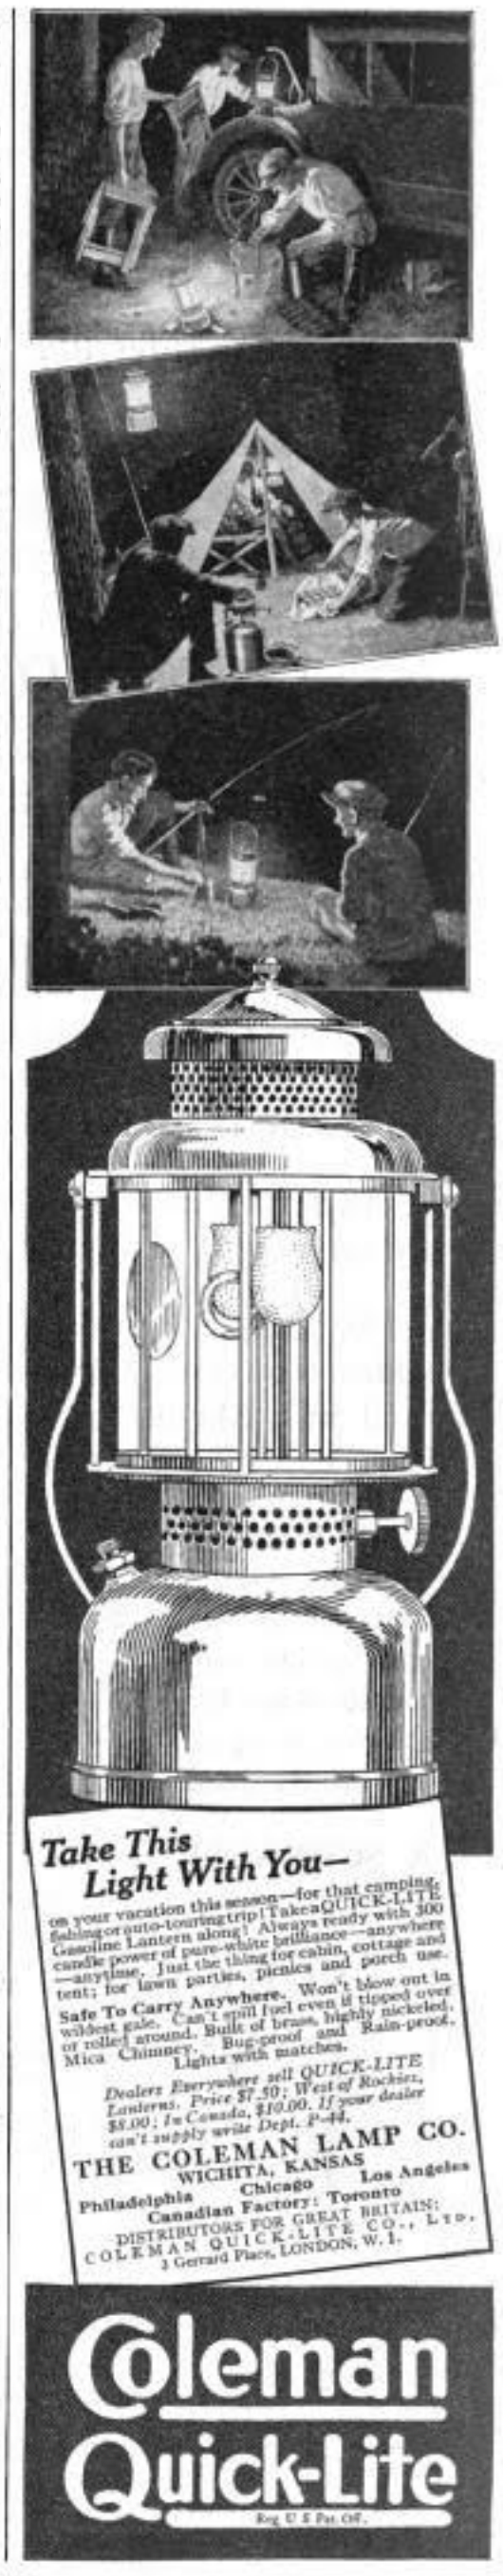
He gave a laugh, only you could hardly tell it from a sob. The car they had taken away from him the day before. The furniture people, too, from whom he'd bought a lot of swell furniture on time, had come and taken that off.

"Say, you'll lend me that ten, won't you?" asked Bert. Then he said, "All Sadie and I had for breakfast this morning was some coffee."

I gave him the ten. I hadn't been cleaned out; and with Mex Pete still going up I had money coming to me again from Boker. What's more, I'd fixed it the night before that Boker couldn't close me out for want of margins. Just the same, when I went back to my desk I was so limp I could hardly walk.

It wasn't ten minutes after that when the office boy called me out again.

"Telephone," he said.



It was Boker on the phone; and I stood there, the receiver to my ear, sweat on my face, and my knees going out from under me. The minute I spoke to him Boker sailed into me with all he had. I never heard a man swear and threaten like him. "Bilk," "short-card," "cheap skate" and "swindler" were just a few of the things he called me. I felt for a minute or so that he'd gone batty; and then I understood.

It was the bank order, a draft on the savings, I'd given him the day before. The guff he'd been handing me—all that talk about a killing—I had fallen for at last; and though Josie had cried and begged me not to, I'd handed Boker an order for all our savings, the nine hundred dollars left in the bank. Why Boker was calling me a bilk and a skate I found out now.

"The order's phony!" he swore at me. "You haven't any funds in the bank!"

I wondered now if I was crazy. I'd given Boker the bank book along with the order; and there was nine hundred in the bank or else I'd lost my mind.

"Nine hundred, nothing!" sneered Boker. "The book shows all you have is a measly dollar bill!"

Too much air!

and your car rides like a truck with solid tires

Not enough air!

and you weaken the side walls of your tires and lose mileage

When you are not sure of the amount of air in your tires, the chances are you have too little.

It doesn't take very long for "not enough air" to do a lot of damage to the carcass of a tire—weakening the fabric or cord construction.

Own a tire gauge and know how much air you are carrying in your road tires and your spare.

Don't depend on borrowing a tire gauge. You seldom borrow a gauge until you are afraid you need air. Maybe you have needed air *for days*. If so, you have been injuring your tires for days.

The Schrader Tire Pressure Gauge costs $1.25 and with proper care lasts for years. It is compact, accurate, and easily read.

Own a Schrader Gauge, use it, and you will save its price many times in mileage. Sold by garages and auto supply dealers.

A. SCHRADER'S SON, Inc., Brooklyn, New York
Chicago Toronto London

SCHRADER VALVE CAPS

5¢ literally seal in the air. A dome-shaped rubber washer reinforced by an arched metal plate fits tightly over the valve. The valve pin cannot be depressed. This Valve Cap is simple and effective equipment for keeping air sealed in tires.

Five caps in a metal box, 25c.

SCHRADER

TIRE-PRESSURE-GAUGE

He began to cuss me again, and I hung up on him. The next minute I had my hat and coat on, and was dusting it over to the Subway. I had a hunch at what had happened—something besides Boker and what went on at the bucket shop; and the minute I got to the flat, our place, and opened the door, I knew I'd guessed it right.

Josie wasn't there. Her bag, too, this time was gone; and on the table was a note she'd written. It was short and direct, I'll say.

"Dear Jim," it said; "I write this to tell you I couldn't stand it. There's some cold meat and things in the ice box, and I've fixed it with the janitor's wife to cook your breakfasts and make up your bed. I've gone away for a while, and I'll let you hear from me. I'm awful sorry, Jim."

That was all. "Your loving Josie," she'd signed it, but I didn't get much from that. After a while I went down to the janitor's basement, but they couldn't tell me anything. She'd gone away early, they said; and she hadn't mentioned when she'd be back. She hadn't even said she would; and I went downtown in the Subway. It was half past twelve, I remember, when I got back to the insurance office.

I was raging. By turns I'd turn hot and cold; but just the same I knew what I'd do. She could look out for herself, I made up my mind; and if she could treat me like that I was through. On an envelope I'd done a little figuring in the Subway. There was about three hundred and fifty dollars coming to me from Boker's; and in a week or so, the way stocks were going up, I'd double it, I figured. That is, I figured I would, you know; and with that money, when I got it, I'd figured also what else I'd do. I'd chuck my job at the office, now that I didn't have to worry over Josie; then I'd settle down to playing Wall Street regular. She'd be sorry, I told myself, when she saw I'd rolled up a fortune.

The other clerks were out to lunch when I came in. The only one in the office was old Potter, that seedy has-been. He sat hunched down in his seat, his jaw open and his face the color of cheese. "Oh, my God! Oh, my God!" he was saying to himself; and for a moment my own troubles I forgot.

"Here, what's eatin' you?" I said to him.

The old boy put up both hands to his face and looked at me as if I was a ghost. Then he began to shake and cry.

"It's all gone, all gone," he said—"all we had, my wife and me." Then he choked up all over, and laid down his head on the desk. "All gone, all gone," he went on.

"What's all gone?" I asked. I knew already, though.

"My money, my savings," he drooled; then I got the slam, the wallop that was coming to me.

"Boker's failed," he said; "he's lit out, with all the money; and the police have pinched the place."

VIII

THREE minutes later, the moment I turned the corner into Broad Street, I got wind of the happening. It sounded like a riot. A big mob of people was out in front of the place—men and some women too; and the most of them were struggling to get inside and up the stairs. Around the edges of the crowd stood a lot of others—clerks, bank runners and office boys; and a lot of these were laughing and talking, all having a lot of fun and excitement. The people that were mobbing the bucket shop didn't seem, though, to be getting much fun from it; and the minute I bust my way in among them the first person I saw and recognized was the hall man from our building, the elevator starter who'd given me the tip on Steel. With him was a woman, an old lady in a bonnet and a worn weather-stained dress and shawl.

It was the scrubwoman that helped clean up our place in Pine Street. She was being shoved to and fro by the crowd; and every now and then the elevator man would put an arm round her shoulders to keep her from being knocked off her feet.

She wasn't crying. She just looked crushed and dazed, as if she was in a trance. I guess maybe she was thinking of all the nights she'd flopped round on her knees in the suds, laying up the dollars Boker had trimmed her out of.

"There ain't a cent left," said the elevator man to me. "Boker's lit out, they say, taking the books with him; and all they've found in the safe was a pair of overshoes and eleven cents. Boker must have overlooked 'em," said the elevator man.

I tried to get in, only it wasn't any The stairs were jammed with people, the police had locked the office door man told us the district attorney was side going over the trash of papers where Boker was no one knew. It was posed he'd lit out the night before course I knew different, but I didn't I could just stand and gape like a wondering how Boker had sailed at that very morning, trying to get out that nine hundred dollars.

I heard a lot about Boker. Some men he'd trimmed had seen him uptown; and they told what a spen was. He had a wife, a big blonde—he called her; and with all the money Boker had been raking in, th of them had been rolling it high on way. They all do, those flashes lik She had a car and was all covered ov jewelry he'd bought her; and that's the scrubwoman's savings had go Boker's wife got joy out of it she w come, I'd say; only I wasn't think that. I was all in. I was dazed.

I didn't go back to the office th I hung around with the others. The all the time grew bigger and big Boker, it seemed, had been work over the town. It was folks li though, he'd gone after mostly—cle small tradesmen; and along with shopgirls, seamstresses, here and cooks and servant girls too; and t then someone like a broken-do minister or a doctor. If Boker got anyone with a little piece of money he'd ring them up on the phone or s of his fellows up to see them. T they handed them was the sam handed me: "You don't want to be all your life, do you?"

It was along past five when another face I knew. The fellow clerk from our Pine Street office, came over and spoke to me.

"They're looking for you up office," he said.

I didn't care. I didn't care for a now. All I could think of now w back to the flat, the two-by-four called home. It sounded like a jol just now. Home!

"Say," said that fellow, grinn Boker sting you too?"

The grin was what got me, a moment I set to swing at him. It a flash, though. I slunk away crowd, leaving him grinning afte hadn't gone far, though, when the stir from the crowd; and I heard call out my name.

"Hey, Jim!" it shouted. "Y Jim!"

I didn't know if it was I who w called. Then I heard another voice The voice I knew all right.

"Jim!" it sang out. "Jim!"

There was Josie. With her, too, fellow I've told you of—Ferd Ba one from Harrisville. I just gape

I'll be short with this. There a bit to tell. To me, though, I wonder, it's the biggest of all t pened. I'd say so, anyways, look at it now. There was Josie; s come back to me.

"It's all right, Jim!" she wa "It's all right, don't you hear!"

"Yes; buck up there, Jim," I saying too.

They had me round the corne sight from the crowd; and in a there Josie was hanging to me, and crying together.

"It's all right, all right," she telling me; "I've got the mon nine hundred's here in my waist."

It was no news to me; I'd g from the first.

"Yes," said Josie, "I knew y you meant to give it to Boker; so out myself."

I wasn't thinking of the mon My head was all in a whirl.

"Where have you been?" I as "Where did you go, Josie, when me?" She was laughing and cry

"I didn't leave you, Jim," swered; "I just took a train up to

Then she gave a gasp, a little c "Why, don't you understand?" As I didn't—as I still couldn't ma of anything—Josie came out with

"Ferd's come down to get yo said; "you're going into business Ferd together."

Well, that's all, I guess.

Save this New Way

Make the money you work for, work for you. And make it earn more interest. Investigate the new savings system offered by the U. S. Treasury Department.

THIS tells how $20 soon becomes $25, how $80 soon becomes $100, how $800 soon becomes 0. It shows you how to earn 25 per cent in five . And all with the greatest safety.

United States Government, through the Treasury Post Office Departments, has developed a new ıgs System, which has received a spontaneous wel- from men and women throughout the Nation.

System is simple. It consists of new United States Treasury Savings Certificates, yielding at present issue prices 4½ per cent interest, compounded semi-annually, if held to maturity. They mature in five years, earning 25 per cent for that period.

But they can be redeemed at any time before maturity, at redemption prices which increase from month to month, yielding about 3½ per cent compounded semi-annually, so that your savings are constantly earning, and yet are available in emergency.

Begin Now

dvantages of this system are many—too ous to list here. But everything is ex- l in a descriptive circular obtainable your Postmaster or by sending direct to ited States Government Savings System, essed below.

ome of the outstanding advantages: Any ual can buy up to $5000 maturity value asury Savings Certificates of any one nd if desired can have them made pay- another person in case of death. The ates are exempt from normal Federal Tax and from state and local taxation estate and inheritance taxes).

ll the advantages now offered by this ings System. See how to accumulate aster. And with complete safety. Once w this simpler, more profitable way, surely adopt it, as thousands of others g throughout the land.

ow Dollars Grow

are shown the results of investment sury Savings Certificates—how your grows when interest is compounded nually. It shows how to make the you work for, work for you. And all e with absolute safety. Observe how u will earn 25 per cent at present rices — in only 5 years your $20 s $25, your $80 becomes $100, your comes $1000.

e after year	Value after two years	Value after three years	Value after four years	Maturity
0.70	$21.45	$22.20	$23.00	$25
2.80	85.80	88.80	92.00	100
8.00	858.00	888.00	920.00	1000

4½% on Savings

Treasury Savings Certificates present an ideal form of investment, fully protected, and with a liberal rate of interest. Each dollar saved earns 25 per cent in 5 years, at present prices, which is at the rate of 4½ per cent a year, compounded semi-annually. If withdrawn before maturity you receive interest at the rate of 3½ per cent, compounded semi-annually.

Safety

These Certificates are a direct obligation of your government, the soundest investment conceivable—backed by the strength of the Nation. Your principal and interest are absolutely safe. Risk is eliminated. Certificates are registered in your name at time of purchase, protecting you against loss or theft.

Certain Value

The Certificates are not subject to market fluctuations and cannot depreciate in value. They are always worth what you paid for them plus the interest.

Payment on Demand

You can withdraw your money at any time, without waiting until maturity of the Certificates. This provides for any emergency. The Government, however, cannot call them for redemption before maturity.

UNITED STATES GOVERNMENT SAVINGS SYSTEM

TREASURY DEPARTMENT

WASHINGTON, D. C.

Invest to the Limit

U. S. Treasury Savings Certificates are issued in denominations within the reach of all. You can now buy a $25 Certificate for $20, a $100 Certificate for $80 and a $1000 Certificate for $800.

If you save less than $20 per month, you can accumulate Postal Savings Stamps at 10c each, or Treasury Savings Stamps at $1 each, both non-interest bearing. Or you can open an interest-bearing Postal Savings Account. Then you can convert such savings into a Treasury Savings Certificate when you accumulate $20.

U. S. Treasury Savings Certificates may be purchased at Post Offices, Federal Reserve Banks, banks and trust companies, or direct from the U. S. Government Savings System. There is no red tape, no formality.

Do not delay in becoming acquainted with this simpler, more profitable system of making your dollars grow. Make the money you work for, work for you. See how quickly it earns 25 per cent.

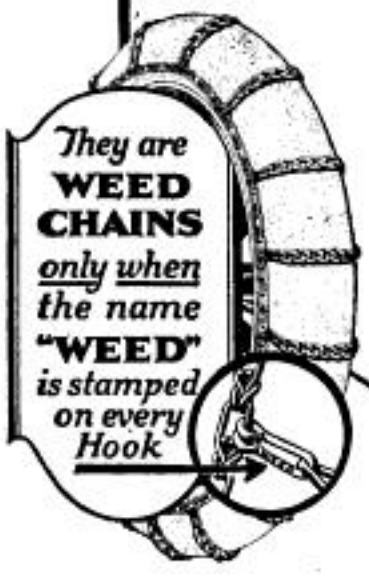
Fully Controlled—and Safeguarded

against the helpless, unprotected car

Weed Chains *plus* Weed Bumpers give you control of your car and protect you from the onslaught of the slipping, sliding car in the rear, helpless without Weed Chains.

The Deep-Chested Weed Spring-Bar Bumpers are especially needed on skiddy days when careless drivers neglect to use Weed Chains. A sudden stop in the traffic line and chainless cars slide into you. Weed Bumpers furnish the best front and rear protection to be had.

Strength is in every line of these deep-chested protectors of life and property, which absorb the terrific traffic blows without injury to themselves, the car or its occupants.



The Weed Spring-Bar Bumper protects your car from other bumpers; not one can go over or under its exceptionally wide buffing area. Front and rear the Weed Bumper not only gives real security but it is decorative—adds distinction to any car.

Weed Spring-Bar Bumpers are protection recognized by insurance companies for which they will substantially discount their collision insurance charges. In many instances the saving on the first year's premium thus involved pays for the bumper.

When you buy bumpers, say "WEED"—a word that stands for *protection* the world over. With Weed Tire Chains underneath and Weed Spring-Bar Bumpers fore and aft you'll come through fine.

The Twinbar Spring Bumper, also made by the American Chain Company, is manufactured for those who want the maximum protection possible at minimum cost.

e Christmas. A second mort-
because of a first mortgage, had

gone on the Perkins cottage, and Mrs. Perkins said she was sure that Blanche wouldn't buy herself any nice clothes because every cent from vocal lessons was grudged, so she herself determinedly kept fifteen dollars of the mortgage money and bought the white fox for her talented daughter's personal adornment.

There came tidings of success in Paris; of a successful concert tour in Italy; of a première in London; of a long London engagement; of a New York engagement.

Back in her native land Blanche did not come as far as Edgewater. She sent her father and mother tickets to come to New York to hear her sing. Mrs. Perkins bustled and trembled and murmured the word "Metropolitan" as though it were golden.

Afterward Mr. and Mrs. Thaneus Perkins returned home as important, excited and garrulous as two parents well could be. Thaneus wore new clothes from the skin out; his overcoat, in which he moved consciously, was a velvet-collared marvel of real chinchilla cloth. Mrs. Perkins, pink-faced, tried not to play too ostentatiously with the jet fringe of her one-piece black charmeuse dress as she stopped in a Devon Avenue meat shop to order a porterhouse steak for her and Thaneus' first meal back home.

Rance Whitely that month was very busy turning double salesrooms into four larger rooms with an addition for stock surplus. Besides, Blanche had not written to him for nearly a year.

Thaneus met him on the street and told him friendlily that Blanche sent her regards and would see him sometime when she had a chance to get out home between engagements. The message was acknowledged with quiet thanks.

The remaining small equity in a mortgage-ridden cottage was sold that year, and Thaneus Perkins bought a larger, brighter house three blocks east; suitable for a successful daughter's visiting in the future.

"Could have moved a year or so back," acknowledged Thaneus to friends, "but we waited till we saw Blanche in person. We was afraid she was skimpin' herself when she began to send us so much money."

There was no need longer to fear that. Blanche Perkins' voice was well and widely admitted. Her pictures in newspapers and magazines came in multiple. Chicago—surrounding Edgewater—boasted in type black and large, that it had borne her.

With a renewal of interest which had been a little pressed aside of late years by different matters, Edgewater regarded Rance Whitely with inquisitive eyes. How was he taking it? And what was he taking? The interest presently became so insistent that a clerk in the post office had to inform several persons that he was strictly forbidden by Federal Government to give out information concerning private pink envelopes, or any other color. Blanche was then using very fine satin twill for her epistles to her parents.

By that time the salesrooms of the Whitely plumbing-supplies establishment were mammoth; all glittering white with bathtubs de luxe on a raised white dais. De luxe enough to guarantee annual profits of some twenty-three thousand dollars to their owner. Rance Whitely belonged, too, to five clubs: Edgewater Golf, North Shore Country, Business Men's Improvement, Better Chicago Politics and Chicago Athletic. His forehead was no longer a boyish one.

The first time Berry Stay saw him she said to another girl that he looked as if he didn't get enough to eat at his home or club or wherever he lived. His eyes were too serious for a well-fed man.

Berry was a modern young person—postwar, that is. Pretty enough. A wispy knot of red hair, lovely blue eyes, a small unsculptural nose and a very red and curved mouth composed her. She was five feet four. She weighed one hundred and ten pounds in her bathing suit—and in that one-piece blue silken-knitted garment was no extraneous material.

As has been said, she lived in one of the latest stone houses on the road. Before moving into that she and her parents had lived on the West Side, which is farther from Edgewater in a way than Nebraska is from Iowa.

Henry Wilson Stay was a poor man of poor judgment who before the war had his cellar overstuffed with oils, paints and other stock of similar nature which customers of his small West Side shop above had refused for years to buy.

When the war got heady, like a monstrous keg of home-brew which has fermented more than its makers ever expected, he realized four hundred per cent on jars of stuff like hydrofluoric acid and up to eight thousand per cent on certain colors of paints.

Excited out of all judgment, he put his unexpected profits into war babies—Steel Uncommon, or something which sounded the same—and saw his bank book bloat enormously beyond his station in life. But his only child Berry, being born in 1904, became affluent before she had become used to being poor for life, and she was able to take command of any different station. She belonged, better than did her two flustered parents, to the class best able to understand and participate in these times—which are the times of the Young Girl.

She picked out their new stone house. She learned to run her first car so well that her father and mother wished that they were poor again and needn't sleep nights with one ear open for the ambulance bringing Berry home. But they were very proud of her clothes, especially her large collection of sport silk sweaters, and they bought her the one or two odd shades which she had overlooked in State Street shops.

Her vivid blue silken or pink or golden-striped shoulders became familiar to all North Shore links, garages, tennis courts, tea rooms and soda fountains. And presently—presently the Stay stone house became to Berry the place where she stayed when she was not seeing or expecting to see Rance Whitely—who did not go at all out of his daily way to see her.

She forgot who first told her about Blanche; because several other people also told her. She opened her blue eyes wide and distastefully, and did not at all like what she heard. She was depressed for several days. Later, having played golf two mornings in one week while Rance, although busy with three men of his own age, was quite within her horizon, she took some private pleasure in looking over views of prima donnas in a book of phonograph records. She said to herself that they were mostly, using the kindest word, a pretty plump lot.

Still later, she saw a Sunday supplement and became quite cheerful. She said to an intimate—herself—that it was extremely unlikely any honest-to-goodness opera singer who had her picture in pearls and an ermine-and-moleskin wrap in all the Sunday papers would ever return to look up an old beau in Edgewater. She repeated this—the second time a little doubtfully. Berry in her heart's bottom could not help conceding it likely that this one quiet-eyed man might cause even a prima donna in ermine and moleskin to run untrue to form. She went back to the many plump portraits for comfort, and glanced down at her own slim limbs with youth's own egotism of satisfaction.

She had her mother ask him to dinner as often as she dared, and she kept her dance card in very plain sight whenever he happened to be at a clubhouse evenings. This latter happened often enough. Rance Whitely for several years had not cared to spend his evenings in the lonesome quiet of his comfortable rooms.

But in time he came to regard Berry with a small pucker between his older eyebrows. She was a nice little girl, a pretty girl of course. No normal man could actually have disliked her. Her lovely eyes and red mouth and clean young skin forbade. He thought of her a good deal as she continued to put her pretty, insouciant self in his way; his thoughts were half amused, half tolerant. He may have regretted that he had not known someone like her years back—when it would have been worth while to him and to her.

However, being older than Berry, he pleaded engagements to some of her dinner invitations, and he managed to keep a friendship static. Berry angrily employed the word. She had it from high school and physics.

It remained static for four months, six months, twelve. Past thirty, the years step along swiftly. Under twenty, years can crawl like slow and black beetles. Berry Stay with curiously sober blue eyes tapped a gold-mounted pencil on a gift calendar one Christmas and hoped that the next year would not—would not be so beetlish.

An evening in March her foolish young heart beat high, like a moth's wing at a white candle. She was sitting in an Edgewater drug store, consuming a hot peach drink in lieu of better employment for a wet cold hour. Because spring was belated she still wore the gray satin-lined squirrel dolman which two complacent parents had given her at Christmas. Its great sleek enveloping collar made her face seem rather small and wistful, in spite of a diamond bar pin visible where her throat was V-exposed. Perhaps because of her earlier years Berry could at times, in spite of most luxurious attire, seem a forlorn young person.

Rance Whitely entered the drug store in search of something to break a chilly feeling. He was not ill, but he suspected that influenza's forepaws were reaching out stealthily to infold him. He asked a clerk for quinine in five-grain capsules as repellent ammunition for an undesired pawing.

Upon Berry's instant recommendation he tried smilingly the same sirupy hot drink which she had ordered.

He rode home with her, in a mood to admire the deftness with which in her car she took Edgewater's March puddles and corners. He was far enough from being a well man to welcome sympathy and even coddling. At the big Stay house, somewhat too big for its family of three, Berry's mother had gone to bed and her small thin gray-haired father was in the library. Berry took Rance into the dining room and made him a toddy and then ensconced him in the most comfortable chair in the living room.

It happened that three or four hours earlier in the evening Rance had read a small paragraph on a late triumph of Blanche Perkins. New York newspapers had passed on to Chicago sheets the item secured from the Madrid Heraldo.

In a very short bright blue silk dress Berry at hand was a young and charming and not triumphant person. A young, charming and attentive girl with eyes bluer than her short smart dress can be a most desirable companion to a discerning depressed or an undiscerning depressed man. He called her "Berry" twice and "my dear" once. And he—he half proposed.

Just half, however. Berry waited anxiously for him to finish a sentence. Poor Berry. It was at that moment that Henry Wilson Stay, ordinarily the mildest and most tactful and unintrusive of parents, began to play his phonograph in the adjoining room.

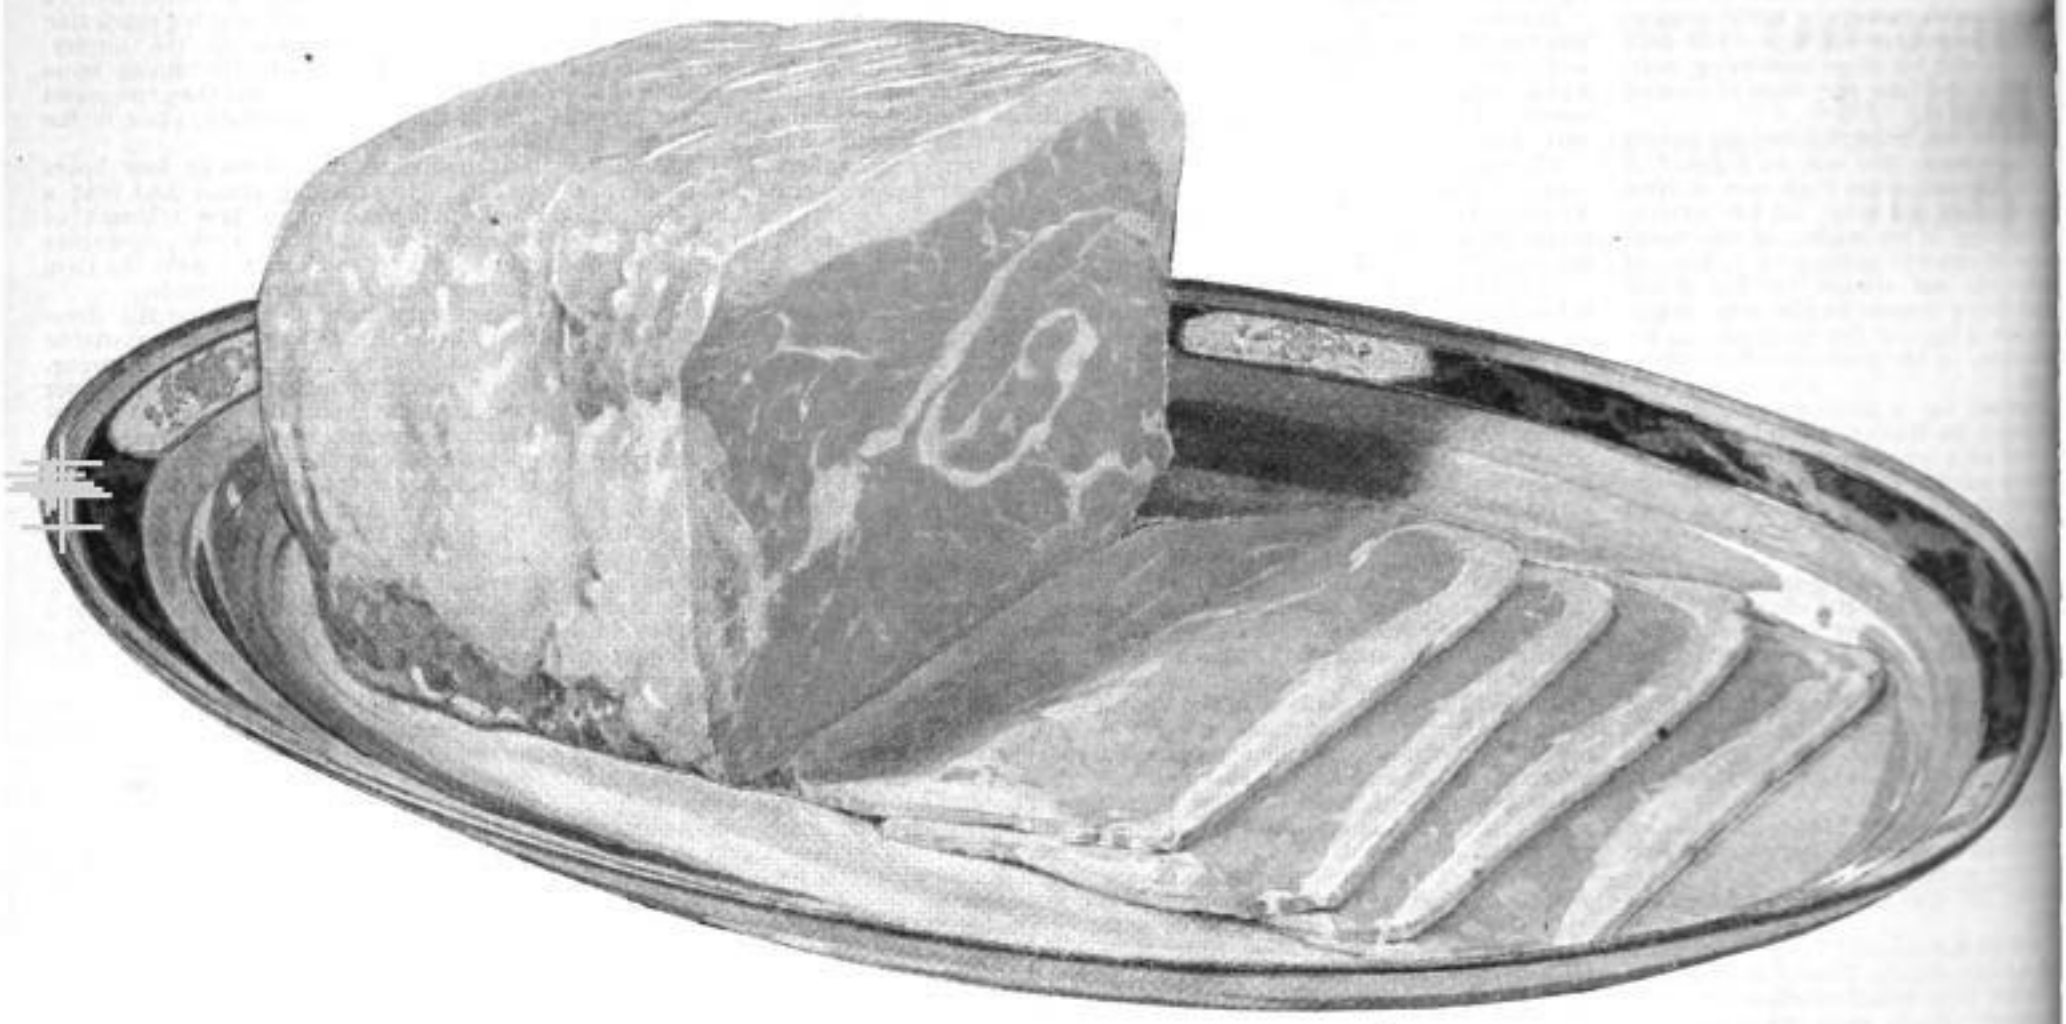
Since he had come to late middle age without having had much pleasure, Henry Stay's capacity for wild pleasure was limited. It fell far short of its opportunity with Henry's acquired dollars. His favorite and worst dissipation, outside of watching Berry buy silk sweaters, was playing an ornate phonograph in a brand-new library with many expensive soft-toned rugs. He liked old songs best. Most men of his age and habits like them.

He marveled weekly at the appealing voices one could buy for a phonograph. He hardly ever remembered the names of the singers, but he had an obliging young woman clerk pick out the best records of his favorite songs and send them out, charge, monthly. Now he contentedly put on My Ain True Love, sung by—but he didn't know that—Blanche Perkins.

With the first sweep of the accompanying strings Berry recognized what was coming. She had played the record herself—once.

Whether or not Rance recognized it so soon cannot be known. What records he was in the habit of playing on his own phonograph in his own sitting room was not a matter of his daily conversation.

Years back, Blanche's younger voice with its birdlike note had suggested to hearers Shelley's skylark, dew on pink tulips, moonlight and such things. Now, matured, lovely as song itself, it reminded hearers of the same things. Its notes came clear and thrilling, love yearned in them, passion poignantly fell from them.



My Ain True Love was followed by In the Gloaming, sung by Clarence Whitehill; The Kerry Dance, by Mme. Schumann-Heink; Annie Laurie, by Nellie Melba;

Kathleen Mavourneen, by John McCormack; My Old Kentucky Home, by Alma Gluck.

After a silent interval Rance Whitely said he must be on his way home. There was no music in Berry's half inaudible "Good night, Mr. Whitely."

When the front door had closed her father came into the room, peering apologetically over his new gold-rimmed glasses, his thin graying hair somewhat untidy.

"I didn't know you had company, honey. I didn't disturb you with my playing?"

Because she was that kind of daughter and saw no reason for hurting an inoffensive and indulgent parent's feelings, Berry lied bravely and courteously.

"N-no. Of course not."

And that same week Blanche Perkins came home for a visit.

Berry Stay read the printed cable. Five Chicago newspapers displayed it. She read it outside a newspaper. Meeting her on the street, Rance Whitely was faintly but decisively less intimate an acquaintance than he had once been. His manner was unmistakable, for all its hint of great kindness to a pretty, foolish girl.

It was a late day in March when Blanche arrived. Edgewater was slushy and cold, along with other parts of Middle Western America; it was quarreling with plumbers and writing letters to Vox Populi over the condition of its street cars, streets, arc lamps and aldermanic elections.

But it forgot that the world held slush or Vox Populi as soon as it glimpsed Blanche, her lovely smiling face half out a taxicab window as she stretched eagerly to see her old neighborhood, old friends, old landmarks.

When Berry Stay saw that face her own grayed a little and her hand unsteadily relaxed on its wheel, so that if a truck driver hadn't likewise been staring back at Blanche—with whom he had once gone to public school—he would have been thunderstruck over danger of a bad collision.

Blanche wore a great fox-trimmed wrap, which many persons had already seen in a magazine picture of her. Her low fuchsia velvet toque did not quite hide a lovely white forehead or her great glowing black eyes. She carried a shred of a terrier, and a sheaf of flowers which admirers had sent to meet her train.

Old acquaintances would have known her anywhere. She was older, plumper, more richly garbed, that was all. There were photographers and reporters in her wake, great pearls in her ears, a certain polished satisfaction—not unbecoming—in her bearing, but essentially she was unchanged. There was perhaps reason for Rance Whitely, also on the street that morning, to stop abruptly and be compelled to swallow a little gasp at sight of her.

The pearl earrings had been well Sunday-supplemented. The long white line of throat was familiar to him, too, through magazine half tones; so familiar that perhaps his eyes were justified in their aching at actual physical sight.

The taxicab with her and her two raptly proud parents whirled on. He telephoned her an hour later, somewhat uncertainly. Her voice came in reply, graciously and friendlily enough. She asked him to call—not that first evening, but the next.

She was gracious and friendly, face to face. A crowd was present. The Perkins living room was filled. Blanche's parents wore that ecstatic look of perfect happiness which is so seldom seen in this humdrum world. They listened quiveringly while Blanche told Rance and others present of her experiences; her endeavor, her disappointments in general, her success.

She proved not to be one of the great ones of earth who wrap themselves and their accomplishments in reserve and hauteur. She talked cordially and freely to all who had known her formerly. She might have been the little pink-cheeked, black-haired girl who sang every Sunday at an Edgewater church.

She promised now to sing at church one Sunday while she was at home; asking those whom she promised to be reasonably reticent, or the church might be mobbed with Chicagoans. She promised, should she lengthen her visit beyond original plan, to sing at a benefit given by a women's club to which her mother belonged.

After a while her eyes went rather directly to the corner of the room where Rance Whitely sat. A few minutes later, somehow she made room for him beside herself on the divan. At her beckoning smile he came quickly. Later, other callers, as if understanding a hint, departed and left him in possession.

And somehow in half an hour she swept away years and her own negligence in letter writing. Before the one evening ended Rance Whitely was familiar with all of Blanche's life since she left home.

"I suppose I've got used to success," she said in an amused interval when her father had gone downstairs to attend to the furnace and her mother was in the kitchen sternly giving a maid orders for a famous daughter's breakfast. "To tell the truth, it's rather a bore at times." Then she surveyed Rance with a scrutiny which caused him to redden a little even while he laughed.

The Dress Which at the Time Was Her Best, a Brown Crêpe, She Turned and Pressed and Sponged and Cleaned and Retrimmed

"I must have forgotten how nice you are, Rance! Now that I see you again and realize how interested you are in listening to all that's happened to me ——"

He interrupted with some awkwardness: "It'd be queer if I were not interested. Go on—please."

She was no niggard of details. Some of them were known to him from the inexpensive pink envelopes of long back. The high price of her chocolate and rolls in those early New York days; her first narrow, uncomfortable hall bedroom; her frequent colds; the vocal teacher who tried to make love to her; the vocal teacher who always was on his guard lest his young women pupils make love to him; her first early promises of real success; of acquaintances who encouraged and acquaintances who discouraged; of two teachers whose methods were all wrong, as she learned.

"I cried so often one month that I ruined my throat," she admitted with a low musical laugh. Rance marked the tightening of her red lips; older lips had essentially changed since their owner was young.

When he rose to go an engagement was made for luncheon the next day. It was town. She wanted to see the changes in Chicago.

The next morning Rance Whitely came. Berry Stay and did not see the latter. She winked with both blue eyes at the day was arrested for speeding on North Shore.

At luncheon in a well-known restaurant Blanche Perkins took up the social where she had left off the evening before. She told about her ocean voyage across the Atlantic, second class. She made a sensational entrance. But she sang several times and several first-class passengers heard of her voice and asked to hear her. Three elderly women told her that they were glad that they had taken passage on the same ship as she was worth their passage money.

As they lunched, she told him willingly enough, of the men who had wanted to marry her—and did. A fellow boarder on Sixth Avenue, a teacher and a tenor about the same time; a commercial traveler and a steward on that first second-class voyage; in Paris, two art students, a wine dealer, a restaurant owner, a vicomte in Brussels, a young lawyer in Dublin, an impresario in Milan and a stout count in Luxembourg.

The list of conquests was unbelievably long. Rance Whitely's glance, which may or may not have been a jealous glance, was on the lovely white line of throat and the black eyes, to the coil of hair just visible under the fuchsia velvet toque brim.

"Some list," he said in envy. "And none ——"

"I was never able to bother with any of 'em," she said lightly. Her voice had a ring of pride in the truth. She devoted to the last time it had been necessary for her to learn her first unexpected new opera.

"In less time than any other singer in his experience, said the director," she told with a pardonable air of boasting.

In the restaurant, although the hour was fashionable and the tables crowded, and Rance escaped recognition. Mr. Whitely did not give the matter a thought. He himself was not used to being stared at in a downtown restaurant, even in one in Edgewater. But they laughed a little as they left.

"This has been rather pleasant. I'm afraid I'd be mobbed as usual."

She lunched downtown the next day with her mother and some club women. Rance was not so fortunate—so she told him when he came in the evening. She had worn her ermine-and-moleskin coat. Of course people recognized her in it. The many newspaper and magazine pictures. Reporters had surged. A young girl from an adjoining table had rushed over and begged for her autograph. She was hardly able to eat enough for a starving man.

Rance Whitely must have considered the compliment that she saved a seat for evening for him alone and asked her not to tell anyone else that she was to sing.

The Perkins living room, even in a Chicago house, was an ordinary enough Middle Western room. But Blanche herself had not perhaps obliterated is the better word. Her successful personality, her fair skin and black hair, her expensive simple gown were enough to make many people forget place and time.

Like its predecessor, this evening called out years and unfolded lavishly the story of biography. Blanche admitted to only one ointment. She had not a colorful soprano voice. And contraltos are the rarest ones favored by Providence or the Metropolitan Opera scores and audiences give more importance to the first kind of voice.

"I don't admit your complaint as evidence," smiled Rance. He studied her

America's most famous box of candy

Whitman's

Sampler invites you—

—to an altogether unusual experience in sweets

—to a candy package which reflects the quaint, odd beauty of the cross-stitch work of long ago

—to an assortment of chocolates and confections quite unlike any other, because it offers in one package the favorite sweets from ten leading Whitman packages

—to a delicious quality in sweets which has been famous ever since 1842 among people who appreciate candies of the better kind

—to that "different" kind of candy package which has a special value, as a gift or when you entertain or when you wish, yourself, to enjoy sweets as good as they can be made

The Sampler, Pleasure Island, Salmagundi and other Whitman packages may be had at that selected store near you which displays the sign Whitman's

Wadsworth Cases

MAKE WATCHES BEAUTIFUL

Precious as an heirloom—but does it meet the standards of today?

FROM the shadow clock of the Egyptians to King Alfred's graduated candle, and on down through the succeeding centuries, time-telling has progressed rapidly in accuracy and facility. Ever have the old means been discarded for the new.

The watch your grandfather carried, bulky and cumbersome though it was, was a product of the finest watchmaking of its time.

But watchmaking progress did not cease with your grandfather's watch.

Just as the hour glass supplanted the sun dial, so has the modern thin watch, with its greater beauty and accuracy, replaced its heavy and ornate ancestor of three generations ago.

Precious it is as an heirloom

Precious though the old watch be as an heirloom, it does not meet today's standards of convenience and correct dress.

You would not appear today in the tile hat and frock coat of your grandfather's time. What, then, of this watch, an echo of styles long passed — a timepiece out of keeping with your present business and social activities?

Treasure the old watch for the memories that surround it. Place it among those other precious relics of the past. But know the convenience, the satisfaction of possessing a modern watch—a good movement dressed in a sturdy, beautiful Wadsworth case—a watch as modern as the clothes you wear.

For thirty years Wadsworth cases have dressed and protected the watch movements of leading manufacturers and importers. Many of the most beautiful, most popular designs with which you are acquainted are Wadsworth creations.

Among the Wadsworth creations there is a case for every taste and means. The name Wadsworth in a watch case is your assurance not only of correct design but of the finest material and workmanship.

To give your watch a longer life

Wind it fully every morning. Have it examined and oiled at least once a year—before the last particle of oil has disappeared from the bearings.

Have it taken apart occasionally and cleaned—for every watch accumulates dust particles which in time impede its performance.

before he could retract any

of his worker's proper spirit. She told him sharply that well-kept lawns were not a hobby with her and she would throw anything she pleased into any handy yard whenever she chose.

She dully resumed her seat in a corner by a stone pillar. At that moment Rance Whitely was skirting the woody adjacences of Maywood, and Blanche Perkins was amusedly discussing her parents.

"I think they're disappointed because I haven't married a count. I nearly married one—but he had two children and he seemed to fancy I'd be as devoted to them as to my career."

To any man it must have seemed half incredible—her return and ready renewal of an old relation. Rance Whitely drove unseeingly through neat Austin, diverging mechanically to the woody adjacences of Maywood, in attentive silence whirling back toward the Loop ping-ponged with its sabbatically quiet skyscrapers and sabbatically crowded great green busses. He proceeded more slowly through quiet gray-stoned Hyde Park. Blanche was telling him mirthfully of the jealousy of various and numerous women whose paths in life she had crossed.

At times she had been somewhat hampered, although she tried not to be annoyed, by this recurring jealousy. There had been a Mme. Arconi, in Dresden, who sat in a box whenever Blanche sang, and hissed. There had been a little blond countess in Italy who tried to bribe a maestro not to engage the American.

"Positively two of the most voiceless women!" She flung out her two black-gloved hands in a graceful little foreign gesture—at least it was of a gracefulness foreign to the public school which Blanche had attended in Edgewater.

She went on to tell him of several operatic feuds in which she had a major rôle forced upon her. "But"—again the small gesture—"one has to expect enmities to form about one. Such are part of the price which must be paid."

"I suppose so," he agreed.

He studied her face. No magazine page had flattered it. From any photographer it needed only the merest justice. The spring wind whipped a rose color into its lovely pallor; the contour was as charming as the beautiful roll of a gray-blue wave far out in the lake.

They had been asked to have Sunday supper with the Ordways. Minnie Ordway, self-conscious with three children and her stoutening thirties and a brand-new gray taffeta dress, was unwitting foil to Blanche's perfect poise and graciousness. Well—perhaps not at all unwitting.

Minnie afterward mused coldly for Fred's benefit: "That one jade bracelet cost more than my overstuffed davenport. But a lot a woman's arms are fit for bracelets when she has a furnace of a two-flat building to look after daytimes, and a laundress that skips every other week where there's three children and four tablecloths a week."

But while Minnie thus was reminding Fred Ordway, as wives take bitter solace in reminding a husband, of all she sacrificed by living with him and bearing him children for him to support, Rance Whitely and the wearer of the jade bracelet, having forgotten entirely the Sunday-night meat cakes on which Minnie had spent an entire Sunday morning, were conversing intimately in the Perkins living room.

Blanche's parents were not in the room. Rance did not miss them. He was listening engrossedly to Blanche, watching the play of pink lamplight on her white profile, noting that the lovely black knot of hair was similar to the knot worn when she was sixteen years old. Years change, but not artistry or beauty.

An hour slipped into two; two went into three. Afterward Rance could repeat to himself an intimate conversation which lasted three lamplighted hours. Well, to be exact, two hours and fifty-six minutes.

Not word for word, perhaps. It would be quite a feat of memory to repeat a conversation of such length word for word. But in the main he went over it with accuracy—as many a man has gone carefully and recollectively over a long conversation between himself and a beautiful woman.

He had begun, when they were at the Perkins home after breaking away from the effusive Ordways, by trying to tell Blanche a little about his own life in the years past.

"You see, the plumbing-supplies business ——"

"Rance, I know! The word 'plumbing' describes the years. I pity you. Did I tell

The House You Will Call Home

SEND FOR THIS BOOKLET
It contains instructive information on pipe costs and the best installation methods. Also literature on Reading Cut Nails, which hold, and prevent squeaking floors.

EVERY element in it from cellar to roof must live long in order to serve economically. Take the piping system, for example—how important it is that the best pipe should be used. How important it is that Reading Genuine Wrought Iron Pipe should be installed throughout.

Reading Wrought Iron Pipe, having the ability to resist corrosion, lives on an average two to three times longer than the best steel pipe. The use of Reading eliminates that frequent tear-up-the-house variety of replacements which are costly and extremely disturbing.

Many huge structures, including the Sears Roebuck Building in Philadelphia, are installed throughout with Reading Wrought Iron Pipe. Materials used in such buildings are bought with extreme care and almost exact knowledge as to the ultimate cost. The same practice should hold true when building your home.

Whatever your building operations may be, Reading Wrought Iron Pipe will best suit your needs. A talk with your architect will convince you of its low ultimate cost.

Write for the booklet, "The Ultimate Cost." It covers many interesting points on pipe installations and costs.

STEEL IRON

The above are actual unretouched photographs of vent pipes on Wanamaker's Store, Philadelphia. Both these pipes were installed in 1907. Under like conditions Reading Genuine Wrought Iron Pipe far outlived the steel pipe. Note condition of both pipes.

KELLY-SPRINGFIELD

Now there's no extra cost for Caterpillars

On all these well-known makes of trucks Kelly Caterpillar Tires are now either standard equipment or will be furnished by the manufacturers at no additional cost unless some size larger than the standard for that make of truck is specified.

Thousands of truck-users during the past five years have willingly paid an extra charge in order to have their trucks equipped with Caterpillars. Now the man who buys any of the trucks shown on this page can have Caterpillars as a part of the regular equipment.

Aside from their other great advantages, the fact that the pronounced cushion effect of Caterpillars adds to the life of the truck and cuts down repair bills is alone enough to justify every truck-owner in insisting upon them.

Now, except where he wants a special size, they cost him nothing extra.

Towels that soothe the skin as they dry

ScotTissue Towels do more than instantly and thoroughly dry the skin—they also soothe and refresh it—making it both preferable and pleasant to have clean hands in business.

Thirsty Fibres, millions upon millions of them, go to make up a ScotTissue Towel. It is their amazing capacity for absorbing moisture that makes ScotTissue Towels so different and so famous.

If you want to be certain that the towels in your washroom are absolutely sanitary, agreeably soft, thoroughly absorbent, make sure to order ScotTissue Towels. 150 fresh towels in a carton. Only 50 cents (except in foreign countries). Less by the case.

(Continued from Page 73)

lakwise better pay a heap of 'tention to the fust assistant deputy sub-boss w'ich I'm," I says, "him."

Saying thus, I gives him a savigrous look backward over my shoulder and walks away, stepping kind of light on my feet like a cat fixing for to pounce. He ain't saying a word; he's just standing there reserving some more breath.

Of course I ain't really aiming to start no race war. Always it has been my constant aim to keep out of rough jams with one and all; but, even so, I figures that it's just as well to get the jump on that there Japanee human siphon and render him tame and docile from the beginning.

Next thing is that Mr. Dallas begins faulting the clothes he's brought along with him from home. He says to me they appeared all right when he was having 'em made to order for him by M. Marcus & Son, corner of Third and Kentucky Avenue, which that is our leading merchant tailor; but he can see now that they ain't got the real New York snap to 'em. And the ensuing word is that one of them swell Fifth Avenue shops is making him a full new outfit. Well, I must admit that suits me from the ground up; it's a sign to me I'm about to inherit.

And the next thing is that he invests in several cases of fancy drinkings which a bootlegging white man fetches it up to us under cover of the darkness. I sees Mr. Dallas counting out the money for to pay him, and it certainly amounts to an important sum. I ain't questioning the wisdom of this step, neither, seeing that the stock we fetched along with us from the South is vanishing very brisk and the new supply ought to last me and him for no telling how long if we both is careful.

The trouble with Mr. Dallas, though, is he ain't careful. Scarcely a day passes without some of his new-made Northern friends dropping in on him and sopping up highballs and cocktails and this and that. That there Mr. Bellows is one of our most earnest customers. He'll set down empty alongside a full bottle and stay right there till the emptiness and the fullness has done changed places. Also, when it comes to liberal consuming of somebody else's liquor, Mr. H. C. Raynor has got merits. And when Mr. Dallas gives a party, which he does frequent and often, the wines and such just flows like manna from the rod of Aaron. Still, that ain't pestering me much. When white folks lives high in the front parlor niggers gets fat back in the kitchen.

Then on top of all this he buys himself an automobile and hires a white chauffeur for to run her. She's one of these here low-cut, high-powerful cars which when you wants to go somewheres in a hurry you just steps on her, and b-z-z-z! You is done arrived! But she's plenty costive to run. Every time she takes a deep breath there's another half gallon of gasoline gone. If the truth must be known, Mr. Dallas has not only bought one car; he's bought two. But we don't see the second one, which is a dark-blue runabout, only when Miss Bill-Lee comes round, because it seems Mr. Dallas has loaned it out to her for her own use, him paying the garage bills. Betwixt themselves they speaks of it as a loan, but I thinks to myself that this probably is predestinated to be one of the most permanent loans in the history of the entire loaning business.

So it goes. Every day, pretty near it, delivery boys comes knocking at the service door bringing this and that for Mr. Dallas. If it ain't half a dozen fresh pairs of shoes it's a sackful of these here golf utensils or some new silk pajamas; and if it ain't another motoring coat or an elaborous smoking jacket it's a set of silver-topped brushes and combs and bottles and things for his toilet table with his initials cut on 'em. It seems like he must stop in somewheres every morning on his way downtown to business and buy himself something. So I judges the money must be coming in mighty brisk at the bunghole, because it certainly is pouring out mighty steady from the spigots.

It also must be a powerful handy and convenient business to be in, for not only does it appear to pay so well but it practically almost runs itself. Often Mr. Dallas ain't starting downtown till the morning is 'most gone and sometimes he gets back home as early as four o'clock in the evening. Come Saturday, he don't go near the headquarters at all. That astonishes me deeply, because down home on a Saturday the stores all stays open till late at night on account of the country people coming [illegible] town and the hands at the tobacco [illegible] houses and the factories and all being [illegible] off, and the niggers being out doing [illegible] trading—especially the niggers. Yes, [illegible] the average one of 'em and if he can't [illegible] all he's got on Saturday night it practically spoils his Sunday for him. He ain't [illegible] to waste none of his money saving it. [illegible] with us Saturday is the busiest day in the week. But seemingly not so in this [illegible]

In fact, so far as I observes to date, folks up here has got a special [illegible] system of their own for doing pretty [illegible] everything. More times than one [illegible] this past month I has said to myself, there certainly is a big difference [illegible] West Kentucky and New York City. I don't notice it so much in West Kentucky, but, lawsy, how it does prove itself when you gets to New York!

VII

FOR instances, now, take this here Saturday last past: Down home Dallas would 'a' been down to the oil office of his bright and early, hands, I suppose, with the paying [illegible] ers and helping boss the [illegible] they drawed off the oil and all. But [illegible] ing like that don't happen here with [illegible] no, sir, not none whatsomever. He [illegible] in bed until it's going on pretty near [illegible] o'clock, and then he gets up and [illegible] him, and along about dinnertime, what they calls it lunch time round this town, puts out in the car to the country [illegible] week-end; only for the amount of [illegible] we totes with us you'd 'a' thought it [illegible] going to be a month-end. I'm to [illegible] to look after his clothes and to do [illegible] valeting for him.

We rides Mr. Raynor and Mr. [illegible] and the permanent-wavy lady, Mrs. [illegible] lord, along with us. Miss DeWitt and [illegible] O'Brien is also headed for the same [illegible] we is, but they comes in the blue [illegible] traveling close behind us. By now I done learned not to expect Mrs. Gaylord to bring a husband with her. It seems [illegible] she can get 'em but she can't seem [illegible] She's been married three times in all, from what I can hear, her first [illegible] hauled off and died on her and the [illegible] one kind of strayed off and never [illegible] back. I ain't heard 'em say what [illegible] to the present incumbent, but [illegible] ain't never been produced. I [illegible] must've got mislaid some way, so she's [illegible] practically all out of husbands again, [illegible] she seems to be bearing up very well [illegible] all times. If she misses 'em she [illegible] let on.

Well, we loads up the car with [illegible] folks and with valises and golf [illegible] one thing and another and starts [illegible] country. But I must say for it [illegible] totally unsimilar to any country I [illegible] has been used to heretofore. The [illegible] yards which we passes all looks [illegible] owners must take 'em in at night [illegible] the mornings brush 'em off good [illegible] 'em back outdoors again; and most [illegible] residences is a suitable size to make [illegible] high-school buildings or else [illegible] institutes, and even the woods [illegible] slicked-up appearance like as if they [illegible] come back that same day from the [illegible] cleaner's. In more'n an hour's [illegible] travel I don't see a single rail fence, [illegible] regulation weed patch nor a lye [illegible] an ash hopper nor a corncrib nor a [illegible] box nor a hound dog nor a smokehouse, [illegible] scarcely anything which would [illegible] be sure-enough country. I thinks to [illegible] self that if a cottontail rabbit was to [illegible] camp out here he'd naturally be [illegible] pack his bedding along with him.

When we arrives where we is going, I is still further surprised, because [illegible] hand, Mr. Dallas tells me we is [illegible] stop at a country place, but it looks [illegible] more like a city hall which has [illegible] strayed far off from its functions and [illegible] root in a big clump of trees along the Hudson River. Why, it's got more [illegible] in it than our new county infirmary [illegible] and grounds around it all beautiful [illegible] cemetery! It belongs to a very nice [illegible] lady named Mrs. Banister, which is a [illegible] friend of Mrs. Gaylord's. There's Mr. Banister, too, but as far as I can tell the lady is the sole proprietor, and Mr. [illegible] just being Mrs. Banister's husband [illegible] helping with the drinks when she is [illegible] busy doing something else. I hears her [illegible] saying out in the kitchen that she [illegible] mix a very tasty salad dressing. What [illegible] what he looks like to me—just a [illegible] born salad-dressing mixer.

lay Sunday is just like Satur- was—only, if anything, more Sunday night the party busts rs and we starts back to town. e elects for to ride back in the ith Miss Bill-Lee, so that O'Brien, the one which they short, into the big car with the rowd. Starting off, she quar- art with Mrs. Gaylord. I they was partners at the e part of the time and they can't get reconciled with one another over the way each one of 'em handled her cards. The more they scandalizes about it the more onreconciled they gets too. It seems like each one thinks the other don't scarcely know how to deal, let alone play the hands after she gets 'em. Setting there listening to 'em carrying on, I thinks to myself these here Northern white folks must hate to lose even a little bit of money. I knows these two ladies couldn't 'a' lost much neither. I heard Mr. Raynor saying beforehand they was going to play five cents a point. But to overhear 'em debating now you'd 'a' thought it had been a real stiff game, like dollar-limit poker say, or setback at six bits a corner.

After a while Miss Pat she quits argufying and drops off to sleep, and Mr. Bellows he likewise drifts off into a doze, and that leaves Mrs. Gaylord and Mr. Raynor talking together in the back seat kind of confidential. But the hood of the car being over 'em it seems like it throws their voices forward, and setting up with the chauffeur I can't keep from eavesdropping on part of what they is confabbing about. Presently I hears Mr. Raynor saying:

"Well, you never can guess in advance what a sap will like, can you? You would have thought he'd fall for a kiddo with a good, strong, up-to-date tomboy line, like little Patsy here. But no, not at all! He takes one look into those languishing eyes of our other friend and goes down and out for the count. Funny—eh, what? Well, it only goes to show that while the vamp stuff is getting a trifle old-fashioned, it still pays dividends—if only you pick the right customer."

Then I hears Mrs. Gaylord saying, "Her system may be a bit *passé*, but you can't say she doesn't work fast, once she gets under way. Clever, I call it."

"Clever?" he says. "You bet! She works fast and she works clean, tidying up as she goes along and burying her own dead. I always did say for her that when it came to being a gold hunter she had the original forty-niners looking like inmates of the Bide-a-Wee Home. Fast? I'll say so!"

"She has need to be fast, working opposition to you, Herby dear," says Mrs. Gaylord. "Speaking of expert bloodsuckers, I shouldn't exactly call you a vegetarian."

"Hush, honey," he says. "Let's not talk shop out of business hours. And anyhow," he says, "I don't mind a little healthy competition on the side. It stimulates trade under the main tent—if done in moderation."

"You should know, Herby," she says, sort of laughing; "with your experience you should know if anybody does."

Then he laughs too, a kind of a low and meaning chuckle, and they goes to talking about something else.

But I has done heard enough to set me to studying mighty earnest. Neither one of 'em ain't specifying who they means by "he" and "she," but I can guess.

Once more I says to myself, I says, "Uh-huh, uh-huh!"

VIII

SOME folks might think it was my bounden duty to go straightaway to Mr. Dallas and promulgate to him these here remarks which I hears pass betwixt them two on that Sunday night coming back from the country. But I does not by no means see my way clear to doing so. In the first place, I ain't never been what you might call a professional promulgator. In the second place, I figures the time ain't ripe to start in telling what I believes and what I suspicions. In the third place, I don't know yet if it ever will be ripe.

Some white folks, seems like, is just naturally beset with a craving to bust into colored folkses' business and try for to run their personal affairs for 'em. Mr. Dallas he is not gaited that way in no particular whatsoever, him having been born and raised South, and naturally knowing better, anyhow; but some I might mention is. Still, and even so, most white folks don't care deeply for anybody at all, much less it's somebody which is colored, to be telling 'em onpleasant and onwelcome tidings. And he is white and I is black—and there you is!

Another way I looks at it is this way: There's a whole heap of white folks, mainly Northerners, which thinks that because us black folks talks loud and laughs aplenty in public that we ain't got no secret feelings of our own; they thinks we is ready and willing at all times to just blab all we knows

(Continued on Page 80)

The Road to Prosperity

Business is on the road to prosperity. It is a long, uphill road, but business has climbed it many times before and will do so again.

A period of recovery always means hard work and close economy.

Reserves must be reëstablished, dollar by dollar; unemployment abated, man by man; new markets won, customer by customer.

Sound business policy will not seek easy avenues to success but will organize and develop resources of money, equipment and selling power for a long, hard pull.

Above all, there must be frugality—in individual business and national expenditures. The world is poor and self-denial is prerequisite to its recovery.

The National Bank of Commerce in New York believes progress toward better times depends upon industry which creates more than it consumes, upon business which thrives because it serves. The reëstablishment of prosperity demands general acceptance of the principle that what is best for the country is best for business.

The Stars and Directors of America's Finest PARAMOUNT

STARS who have armies of admirers!

Directors whose reputations are built on scores of successes!

These are the famed bearers of Paramount's great banner, each a great artist, each dedicated to better pictures!

Some have played in Paramount Pictures, or directed Paramount Pictures, throughout their brilliant careers.

Some have been attracted to Paramount by the lure of a *world-wide* audience.

The greatest screen artists naturally seek the greatest field for their genius—the plots of the most famous authors, the unique equipment of the biggest organization.

Like a precious stone their genius requires setting.

Paramount sets it. In fifteen thousand theatres daily it shines. It scintillates to the whole civilized world.

See it at your own theatre.

Tell your theatre manager you want Paramount Pictures. He is booking next season's programs now.

A BETTER IRON

TONCAN

New Era for Alloys

Railroad engineers are using *alloy steels* to lighten the reciprocating parts of steam locomotives. Automotive engineers are building better motor vehicles out of highest grade alloy steels.

And now, metallurgists are producing stainless iron by the liberal addition of alloys!—which demonstrates that the use of alloys to make Toncan the ideal rust-resisting metal within commercial costs, is abreast of the times.

Toncan, while not rustless, *is unequaled for durability in its price class.* Ask for Toncan—the better iron.

into the first white ear that passes by. Which I reckon that is one of the most monstrous mistakes in natural history that ever was. You take a black boy which he is working for a white family. Being on close relations thataway with 'em, he's bound to know everything they does—what they is thinking about, what-all they hopes and what-all they fears. But does they, for their part, know anything about how he acts amongst his own race? I'll say contrary! They maybe might think they knows; but you take it from J. Poindexter, they positively does not do nothing of the kind. All what they gleans about him—his real inside emotions, I means—is exactly what he's willing for 'em to glean; that and no more. And usually that ain't so much.

Yes, sir, the run of colored folks is much more secretious than what the run of white folks gives 'em credit for. I reckon they has been made so. In times past they has met up with so many white folks which taken the view that everything black men and black women done in their lodges or their churches or amongst their own color was something to joke about and poke fun at. I is perfectly willing to laugh with the white folks, and I can laugh to order for 'em if the occasion appears suitable; but I is not filled up with no deep yearning to have 'em laughing at me and my private doings, specially if it's strange white folks.

Moreover, speaking in particular of our own case, what right has I got to be intimating to Mr. Dallas my private belief about the personal characters of this brisk crowd which he has gone and got thick with since we arrived here on the scene? Right from the first I has had my own personal convictions about the [illegible] he's in with. I has made up my mind they ain't the genuine real quality; they is just a slicked-up, highly polished imitation of the real quality; that [illegible] ain't doing things so much as they is [illegible] doing 'em. The way I looks at it, [illegible] bears the same relation to regulation [illegible] tony folks which a tin minnow does to [illegible] enough live bait. You maybe might [illegible] fish with it, but you couldn't fool the [illegible] at large for so very long. And as for [illegible] ain't been fooled at all, not at no time. I naturally can't go stating my private [illegible] ments to Mr. Dallas without he the [illegible] as practically invites me first to do so; can I? But if he finds it out for himself [illegible] approaches me, that's a roan [illegible] another color.

So I patiently waits on, letting [illegible] take its coarseness, and sure enough in about a month and a half Old Man [illegible] Luck she starts in shooting at him with scatter gun of trouble, both barrels at [illegible] And then it is he turns to nobody [illegible] cepting it's me.

Which I will go into the full [illegible] about all that mess the next time I [illegible] my pen in hand.

(TO BE CONTINUED)

THE COMING EMPIRES OF BUSINESS

(Continued from Page 23)

race domination and religious antagonism which were the chief objects of politics before the war; while international politics—high diplomacy, colonialism, marinism and militarism—has been killed by the saving magic of defeat. Through defeat Germany became the natural laboratory for the experiment of rule by business men, elected narrowly on a business basis, for the management of business alone.

Parliaments of business are not easy to create. Germany's came into existence only after an acute controversy in which democratic dread of class rule and conservative dread of socialism played equal though contrary rôles. The Reichswirtschaftsrat plan was vehemently condemned on the ground that it contained the beginnings of state socialism, and equally vehemently condemned on the ground that it meant the return of privilege, and therewith the loss of the political gains of the revolution. It was socialistic, said conservatives, because it proclaimed the sordid empire of business, and embodied the Marxian "materialistic conception of history," the doctrine that the elemental struggle for food, housing, clothing and comfort has always dominated and ought to dominate the world's development. It was reactionary, said those in the opposite camp, because it meant repudiation of the sacred democratic principle of the equal and universal vote. An economical parliament, with bankers, farmers, manufacturers and traders all organized and marshaled in their separate groups, would be merely a modernization of the medieval estates-of-the-realm system with its colleges of nobles, clergy, burghers and peasants, each concerned only to vindicate its interests or privileges as a class. To one class of Germans, therefore, a parliament of business was a reckless gamble in radicalism; to the other class it was a return to the Middle Ages.

The founders of the Reichswirtschaftsrat did not take these objections very seriously. They had arguments of their own. It was an anomaly and a monstrosity, they declared, that the most essential fact in the life of every citizen—his trade or occupation—should be ignored in state constitutions, while accidental facts—his place of residence, his nominal membership of a party, and his religion—should shape the whole system of representation. Politicians might fairly claim to regulate politics; and the religions, in or outside of the political parties, ought to regulate religious affairs. But there was no reason why a Bavarian because he was a Catholic should be required to vote solidly with other Catholics on the question of the forced loan, or why a Hannoverian because he wants back the Guelph kings should vote in the [illegible] other Hannoverian Monarchists [illegible] question of the eight-hour day. [illegible] inefficiency and nine-tenths of the [illegible] tion of modern democratic assemblies [illegible] of the cabinets which they maintain [illegible] ceed from the prevailing confusion [illegible] ties and business. Differentiation [illegible] specialization are the elements of [illegible] Religion and politics were long ago [illegible] rated in the more advanced countries [illegible] today this separation is taken as a [illegible] of course. "Fifty years hence," said [illegible] Stinnes to the Federal Coal Commission [illegible] August, 1920, "politicians will [illegible] draft tariffs than manufacturers will [illegible] tate the curricula of universities."

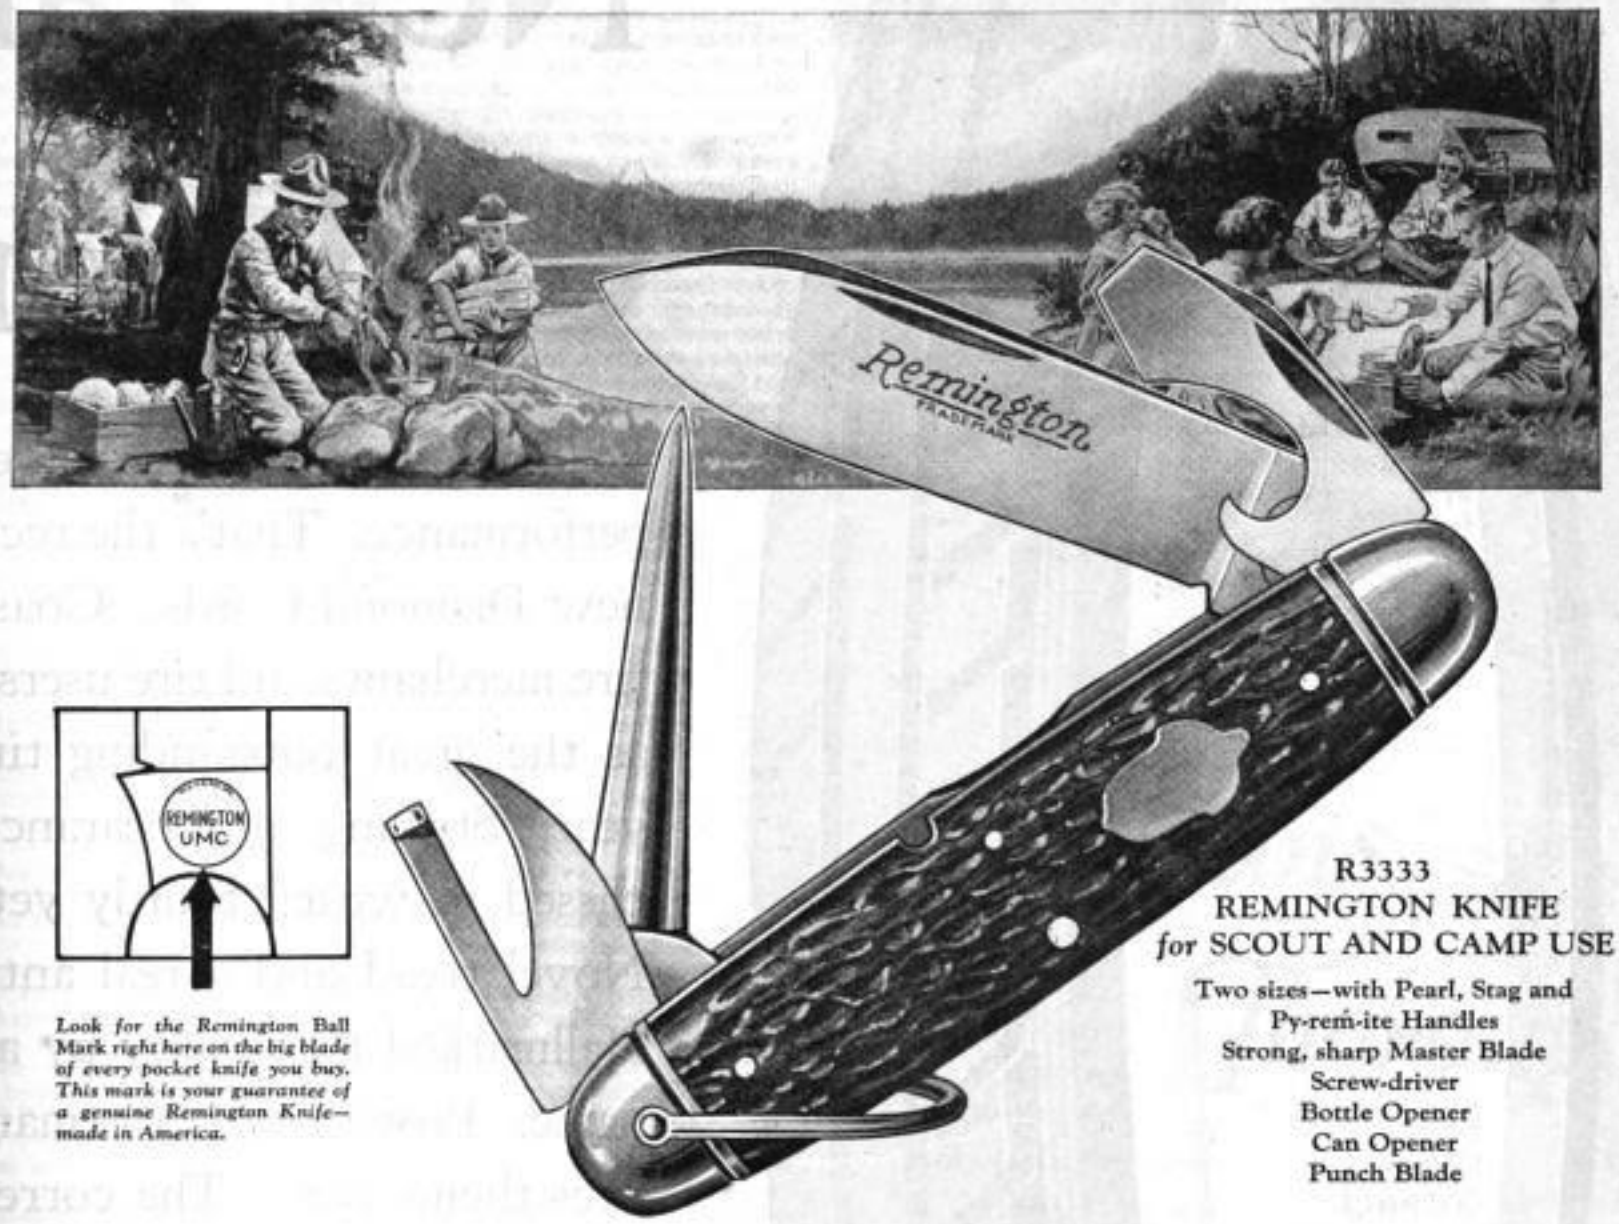
The advantages claimed from the [illegible] tion of a parliament of business [illegible] from this differentiation:

Politics and business will no longer [illegible] mutually checked, hampered and [illegible] founded;

Economic conflicts, which are [illegible] and rightly conflicts of self-interest, [illegible] decided by the preponderant judgment [illegible] all the national economic interest [illegible] every great business interest will [illegible] minority as against the other [illegible] settlements contrary to the whole [illegible] interest will be avoided;

Political issues will be decided [illegible] tional representatives, elected with [illegible] mandate to settle these issues on [illegible] lines only;

Corruption will be abolished or [illegible] ished. Under present constitutions [illegible] bands of industrial magnates and [illegible] times not less powerful bands of [illegible] employes influence politicians [illegible] dishonestly in favor of particular [illegible] claims. In a parliament of business [illegible] capital and labor, both producers and [illegible] sumers, would be openly represented [illegible] the proper defense of their pocketbooks [illegible] and suspicion of a corrupt [illegible] politics with big business or big labor [illegible] hardly arise.



On these principles the Federal Council of Economy was created. It is [illegible] avowedly and exclusively a representative assembly of business; its membership [illegible] in a comprehensive sense business [illegible] and it has a sharply defined business [illegible] of work. Its 326 members are [illegible] dustrial producers, merchants, [illegible] and consumers; but they are also [illegible] sional men, and even practicing [illegible] so far as the professions and arts [illegible] material interests. Lawyers represent [illegible] represent only law so far as law is a [illegible] of fees and salaries; medicine's representatives similarly represent only the [illegible] cian's interest in gaining a livelihood

Each of its ten groups con-
ed, unchangeable number of
d this number is neither arbi-
culated upon the number of
oyed in the interest, but is
estimate come to by the
R. W. R.'s founders of the interest's national importance. The whole R. W. R. consists of:

GROUP	MEMBERS IN GROUP
1. Agriculture and Forestry	68
2. Gardening and Fishing	6
3. Industry	68
4. Trade, Banking and Insurance	44
5. Communications and Public Undertakings	34
6. Hand Work	36
7. The Consumers	30
8. Officialdom and the Professions	16
9. Nominated by the Reichsrat	12
10. Nominated by the Government	12
	326

All these members are elected, except twenty-four who are nominated from among eminent economists and experts. The Reichsrat is a representative assembly of the separate states, roughly corresponding to the American Senate; and its right to nominate twelve members is based on the fact that though territory is in general ignored, certain state areas are associated with particular economic needs. In every group, including the two nominated, half of the members represent employers and half the employed. Election is indirect. The corporate interest, not the individual interested citizen, decides the membership. Most members are elected by already existing bodies—by chambers of commerce, employers' unions, the special associations of great industries, and, for employes' representatives, by labor unions. Farmers' associations, among them the all-powerful Bund der Landwirte, which largely ran Germany before the war, and the Farm Laborers' Union, choose the sixty-eight members of the agriculture group. The election system of the industrial group of sixty-eight almost entirely ignores the opposition of capital and labor, in that most members are elected by the Central Community of Industrial Employers and Employes, an institution founded in 1918 in the cause of good relations between capital and labor; but some industrial-group members are chosen by the Industry and Trades Congress, and by the Federal Coal and Potash Councils, which are also joint capital-and-labor bodies. The consumers' group is elected by the Inter-Municipalities Congress, by associations of consumers, coöperatives and housewives, and into it is sandwiched representation for domestic servants. Over a hundred associations, including all the representative organs of business in the whole of Germany, take part in the elections; and there is therefore no occupation or distinct economic interest that is left without a voice.

Almost a Parliament

The R. W. R. is almost in full sense a parliament. Its members draw salaries and traveling allowances; they enjoy parliamentary immunity and cannot be called to account for their speeches; their votes are free; they cannot be bound by mandates from the electing organizations; they sit publicly, but by vote of a two-thirds majority they can sit in secret; they can summon experts to help in their committee work. They vote singly, but the collective vote of each group is separately recorded, so that the decision of every group on a particular question is publicly known. To them must be submitted every new bill concerning business before it is presented to the Reichstag; they must be consulted by ministers before any important step concerning business is taken; and they can require ministers to give them explanations. In one matter only they do not constitute a full parliament. Though they can advise, initiate, amend bills, counsel the passing or rejection of bills, and approve of or condemn a minister's acts, they cannot absolutely veto a bill and so prevent its submission to the Reichstag, and they cannot force the Reichstag to sanction one of their own bills. They are a parliament of business, but a parliament to which for the present is conceded only the prerogative of advice and suggestion.

This limitation of the R. W. R.'s powers has provided Germany with a critical and controversial question; and if Germany's example is generally followed the same critical question must everywhere arise. Without a complete constitutional revolution, a political parliament and a business parliament, each equipped with absolute power to sanction and veto, could not exist side by side. European parliamentarism requires that cabinets stand or fall with the success or failure of their projects. Had

McCRAY *Refrigerators*

for Hotels, Clubs and Hospitals

WHEN you dine out, at the hotel, the club or restaurant, your enjoyment depends quite as much upon the freshness and wholesomeness of the food itself as upon the skill of the chef who prepares it. The refrigeration equipment, therefore, is of first importance.

This makes it especially significant that in America's finest hotels, in clubs and restaurants *the McCray refrigerator is regarded as standard equipment.* And this fact is doubly significant because in all such institutions, where perishable food is handled in large quantities, it is a vital problem to prevent great loss from spoilage.

The McCray patented cooling system stops such loss and keeps food appetizingly fresh by providing a constant circulation of pure, cold air through every storage compartment. Superior insulation keeps cold air in and warm air out, and the best of materials throughout insure efficient, economical, enduring service.

There is a McCray for every purpose—for residences, stores and markets as well as hotels, clubs, hospitals and institutions. The McCray is adaptable for mechanical refrigeration, if desired.

Send for Your Free Book. Below you will find listed books which discuss every type of refrigeration need, illustrating and describing the complete McCray line. Get the book which interests you; no obligation, merely send the coupon.

a political parliament and a business parliament both absolute power in their respective domains, the question to which the executive should be responsible would immediately arise. If business legislation is more important than political in modern states, the business parliament could fairly claim to be maker and unmaker of cabinets; and with that the political parliament's importance would dwindle to nothing. Democratic sentiment would not tolerate this, if, as in Germany, the business parliament was elected on a nondemocratic-interest basis; and if the business parliament was elected by direct, equal and universal votes it would be a mere pale image of the political parliament, and would cease to be an expert assembly specially qualified for control of business. Faced with this dilemma Germany decided for a nondemocratic but expert business parliament; and as counterbalance decided that the democratic Reichstag should have the ultimate vote.

In theory this limitation of the Reichswirtschaftsrat's powers is today in force. But the theoretical monopolization of ultimate power by the Reichstag has not prevented the new business representation from becoming a serious rival. The Reichstag, having power, is able to do without reputation. The Reichswirtschaftsrat, having in theory no power, is obliged to depend upon prestige. So far as it has gained a national reputation for impartiality, expertness and devotion to the whole nation's interests it can influence and even coerce the Reichstag. This reputation has been gained; and the nonexpert, nonbusiness Reichstag thinks twice before rejecting the R. W. R.'s advice.

The source of the business parliament's strength, as the source of the Reichstag's weakness, is the personal composition. The three hundred and twenty-six business men include the very pick of Germany's leaders in practical and theoretical economics. Its most prominent members are Stinnes; Walter Rathenau—at present, as Foreign Minister, not taking part; the electricity king, Wernher von Siemens; the coal-and-iron expert, Vögler; the head of the Hamburg-American Line, Cuno; the former Finance Minister and Berlin Bürgermeister, Wermuth; the ex-Ministers Schorlemer and Von Braun, for Agriculture; the ex-Minister of Industry, Wissell, to whom the R. W. R.'s existence is largely due; the Labor leaders, Hue, Imbusch and Legien; the socialist theoreticians, Lederer and Karl Kautsky. With these sit scores of expert financiers, municipal and social workers, transportation experts, workshop organizers, and innovators in applied science. Most are men of practical achievements; and most had fruitfully kept outside of mere politics, for the good reason that politics in European countries is largely an unproductive waste of time.

A Conciliatory Spirit

The Reichswirtschaftsrat's defect is not too little reputation, but too much. For that reason it is the subject of angry and jealous criticism, in part from the dwindling ranks of the stalwarts of majority democracy, in part from the extremer socialists and communists. Discontented laborites proclaim that labor has been weakened. This is a paradox, because labor is better represented in the R. W. R. than in Europe's most democratic legislatures. In a Reichstag elected directly by the whole adult population of men and women, not one member out of five is a manual worker; but half the business parliament's members are and must be manual workers or employes or their delegates. Extremists hoped that this equal division would create a violent capital-labor opposition. The result was the opposite. Capital and labor both proved unaggressive and conciliatory. Capital does not domineer; labor is not obstructive or incendiary. This lies in the nature of the R. W. R.'s powers. In a legislature which has no final deciding voice, the political system of overwhelming by majority vote has no sense. Except through abstention from voting of some members, a solid capital or labor majority could not be attained; and such a majority would have so little show of reason that ministers and the Reichstag could properly ignore it. Work is therefore carried on on the nonpolitical principle of open bargains; and so far not a single decision has been come to by clear-cut vote of capital against labor, or the contrary. The employers' representatives' ranks contain many men of pronouncedly progressive views: Stinnes himself directs his greatest single concern, the Rhenish-Westphalian Electricity Company, in collaboration with municipal socialists; and labor has elected to many moderates, very few extremists, and a majority of mere experts. Some of its representatives are not workmen, still less agitators. They are experts who by virtue of experience and sympathies were considered fitted to champion labor causes more effectively than labor could champion them itself.

The group system of representation fosters this conciliatory spirit. The R. W. R. law declares that members primarily represent the interests of Germany as a whole. So far as the eight elected groups represent particular business interests, they are not expected to differ on the capital-labor issue. The agriculture group represents the farming interest as a whole; and, independent of the domestic opposition between farmer and hired farm worker, the farming interest is a solid unit. The same is true of the interests of trade, of banking.

Scooping the Reichstag

That this emphasis on the interests such must mitigate capital-labor antagonism, Germany discovered from an experiment made simultaneously with the R. W. R. The steel, coal and potash industries are all controlled by joint industrial labor councils, in which representatives of employers and employed sit side by side. These councils tend to delegate particular industries, and to leave most labor quarrels to be settled by conciliatory means. When capital's representatives in the councils declare that prices must be raised labor's representatives usually support their support. Higher prices, remember, mean higher wages. In a single industry this praiseworthy harmony may easily lead to exploitation of the consumer; and in fact the steel council has been severely attacked on that score. In the R. W. R. exploitation is prevented by the full representation of consumers. On paper the consumer has only thirty members, but nearly all the producing and distributing groups are consumers in regard to every other group; and the one hundred and thirty-six labor and employe representatives regard themselves as consumers first of all. The R. W. R. has therefore given enemies cause to impugn its impartiality. In some quarters this has injured it. An unlettered Athenian voted for ostracism of Aristides merely because he was tired of hearing the warrior statesman called "the Just." It is those Germans who distrust the whole parliament-of-labor innovation as a blow at majority-democracy who resent its reputation for impartiality most.

After the Reichswirtschaftsrat had existed for only a few weeks this jealousy went so far that members were publicly accused of conspiring to oust the Reichstag entirely. The Reichstag—international, the majority-democrats, united—said the R. W. R.'s backers—were permanently kept in the shade. The press talked only of the business parliament and the Reichstag, realizing with glee that politicians who are ignored are soon flouted and superseded, had good reason to take offense. The necessary and legitimate procedure of a legislature equipped with only advisory powers was ridiculed as this. An advisory legislature must submit measures before they are submitted to the deciding legislature. Important bills, with divulgence to parliament in other countries is a great news event, are in Germany dealt with by the representatives of business. Before the Reichstag gets the measure has been fully ventilated, exhausted; and thereby the Reichstag shorn of its quality as theater for sensations and revelations, and kept effective in the mind of the public mind.

In the summer of 1920 German representatives returned from the Spa conference; the representatives before the R. W. R., rendered a full of happenings and conclusions, provoked a three days' debate which followed with interest. When the matter later came before the Reichstag statements and the debate were largely ignored. The Reichstag could not get it back in popular esteem; anything that came from jealous members whose views had not been reported; and the Reichstag parliament was represented as trying to supplant popular government. The R. W. R. was attacked as an accomplice. Members replied that the R. W. R. by its

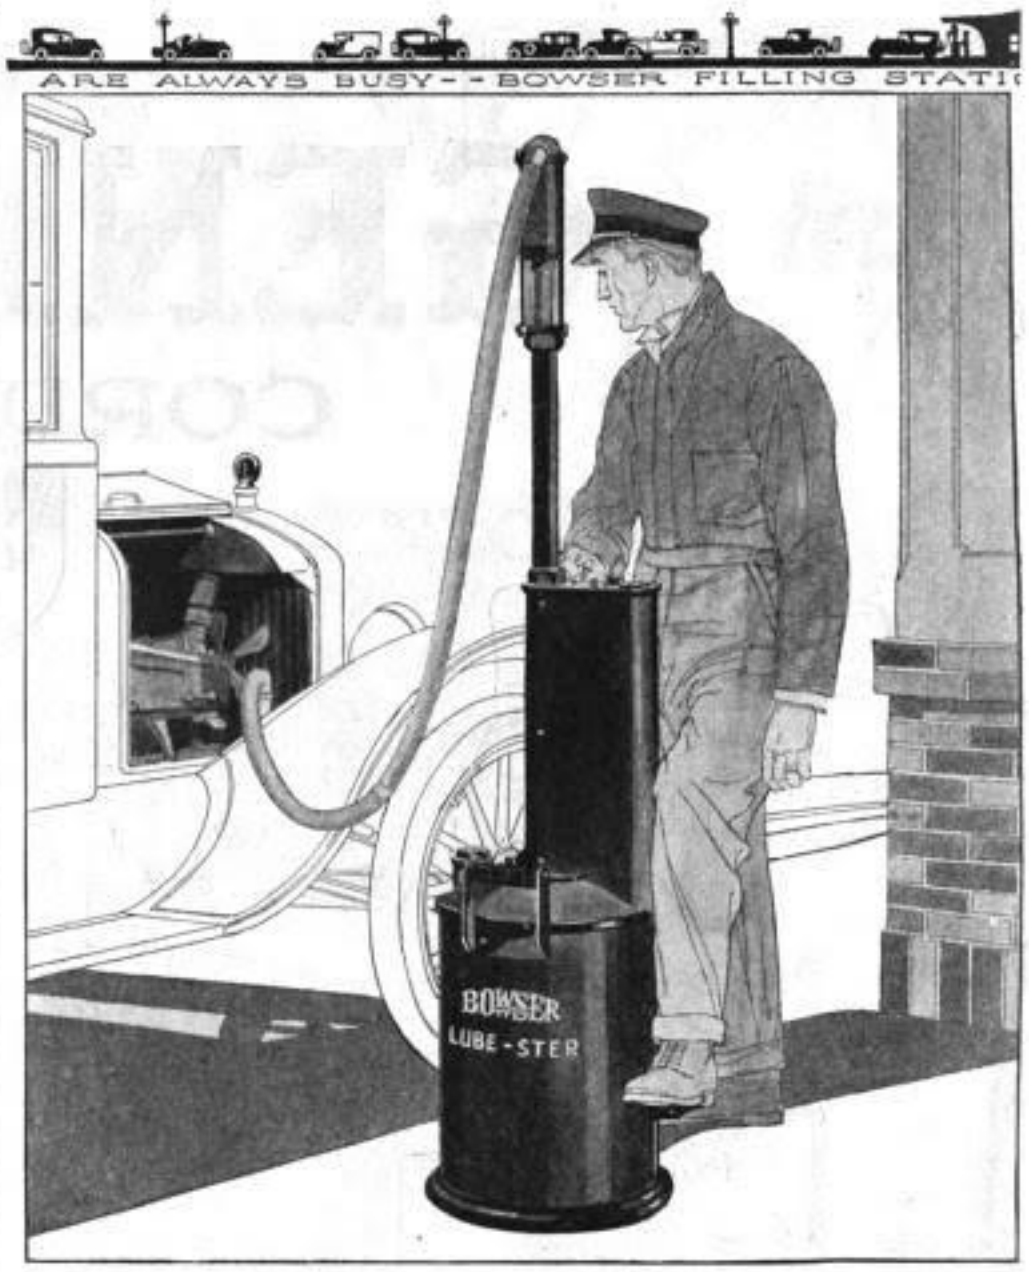
In Russia, Bismarck's scheme was formally taken up by the great reformer Witte in 1902. Witte's proposed Soviet Promuishlennosti, or Council of Industry, was designed to forestall the demand for a Duma, which—only three years before he was compelled to convoke a Duma—Nicholas II declared he would never grant. To-day, Bolshevik Russia actually has a business parliament, marred, like all Russian communist initiatives, by class despotism, corruption and incapacity. The Vuishi Soviet Narodnavo Khozaistva, or Supreme Council of National Economy—barbarously mutilated to "Sovnarkhoz"—was the first constitutional creation of Lenine and Trotzky in December, 1917. Of its forty-seven members, ten are chosen by the sham political parliament known as All-Russian Central Executive Committee, seven by Bolshevik ministries, and the remainder by the local economical councils and labor unions. With an entirely communist composition and with the complete exclusion not only of capital and expert knowledge but also of genuine labor, the Sovnarkhoz is only a parody of the schemes of Bismarck and Witte.



But even Bolshevism learns; and it lately showed its learning by publishing a plan to admit the hated capital, while still excluding the even more hated genuine labor element. Bolshevism is not a model to any civilized state; but it is no chance that the three most populous countries of Europe—Russia, Germany and Austria-Hungary—respectively attempted, considered and actually realized the separation in some measure of business from politics, and the transfer of the immediate management of economic affairs to persons directly elected therefor.

Western Europe has so far done nothing. In England the growing party of Guild Socialists, declaring that a citizen cannot be represented, and that only his interests can, stand for the creation of a parliament of occupations. France has too many other preoccupations to harbor such schemes. Yet France is the original source and origin of the business-parliament idea. The French Revolution's leaders stood emphatically for a parliament of work.

To Mirabeau and the Abbé Sieyès this presented itself as a modernized estates system. Mirabeau, by declaring that representative power should be based on the importance of interests, and not on numbers, foreshadowed the system today in force in Germany. The dreamer Saint-Simon planned an economic parliament; Proudhon in 1848 made the same demand; and fifty years later the Frenchman, Charles Benoist, published a complete scheme for a central legislature composed of eight occupation groups.

Thus in the business-parliament movement meet such heterogeneous elements as French idealism, Bismarckian conservatism, czarist opportunism, Bolshevist anarchy and modern German constructive statesmanship. Nations with nothing in common, and parties which by tradition and program are irreconcilably antagonistic, have agreed in principle on the same remedy for the specific ailments of parliamentary democracy. Unless this coincidence is an accident, the separation of business from politics is likely to be the next great task of constitutional reformers all over the world.

In 10 Seconds

WHAT? For a quart of oil? Incredible, isn't it? It would be, by old-fashioned methods which take two minutes or more, but the Bowser "Lube-ster" has revolutionized oil service.

The "Lube-ster" accurately measures and delivers a full quart of oil in ten seconds without measure or funnel. The oil is completely protected from dust during delivery from oil tank to motor crank case. *You see the oil* as it is served.

The "Lube-ster" operates by foot-power—the operator can't drop oil on your fenders, and has clean hands to give you your change. The "Lube-ster" is the "little outfit" that gives perfect oil service. Look for it.

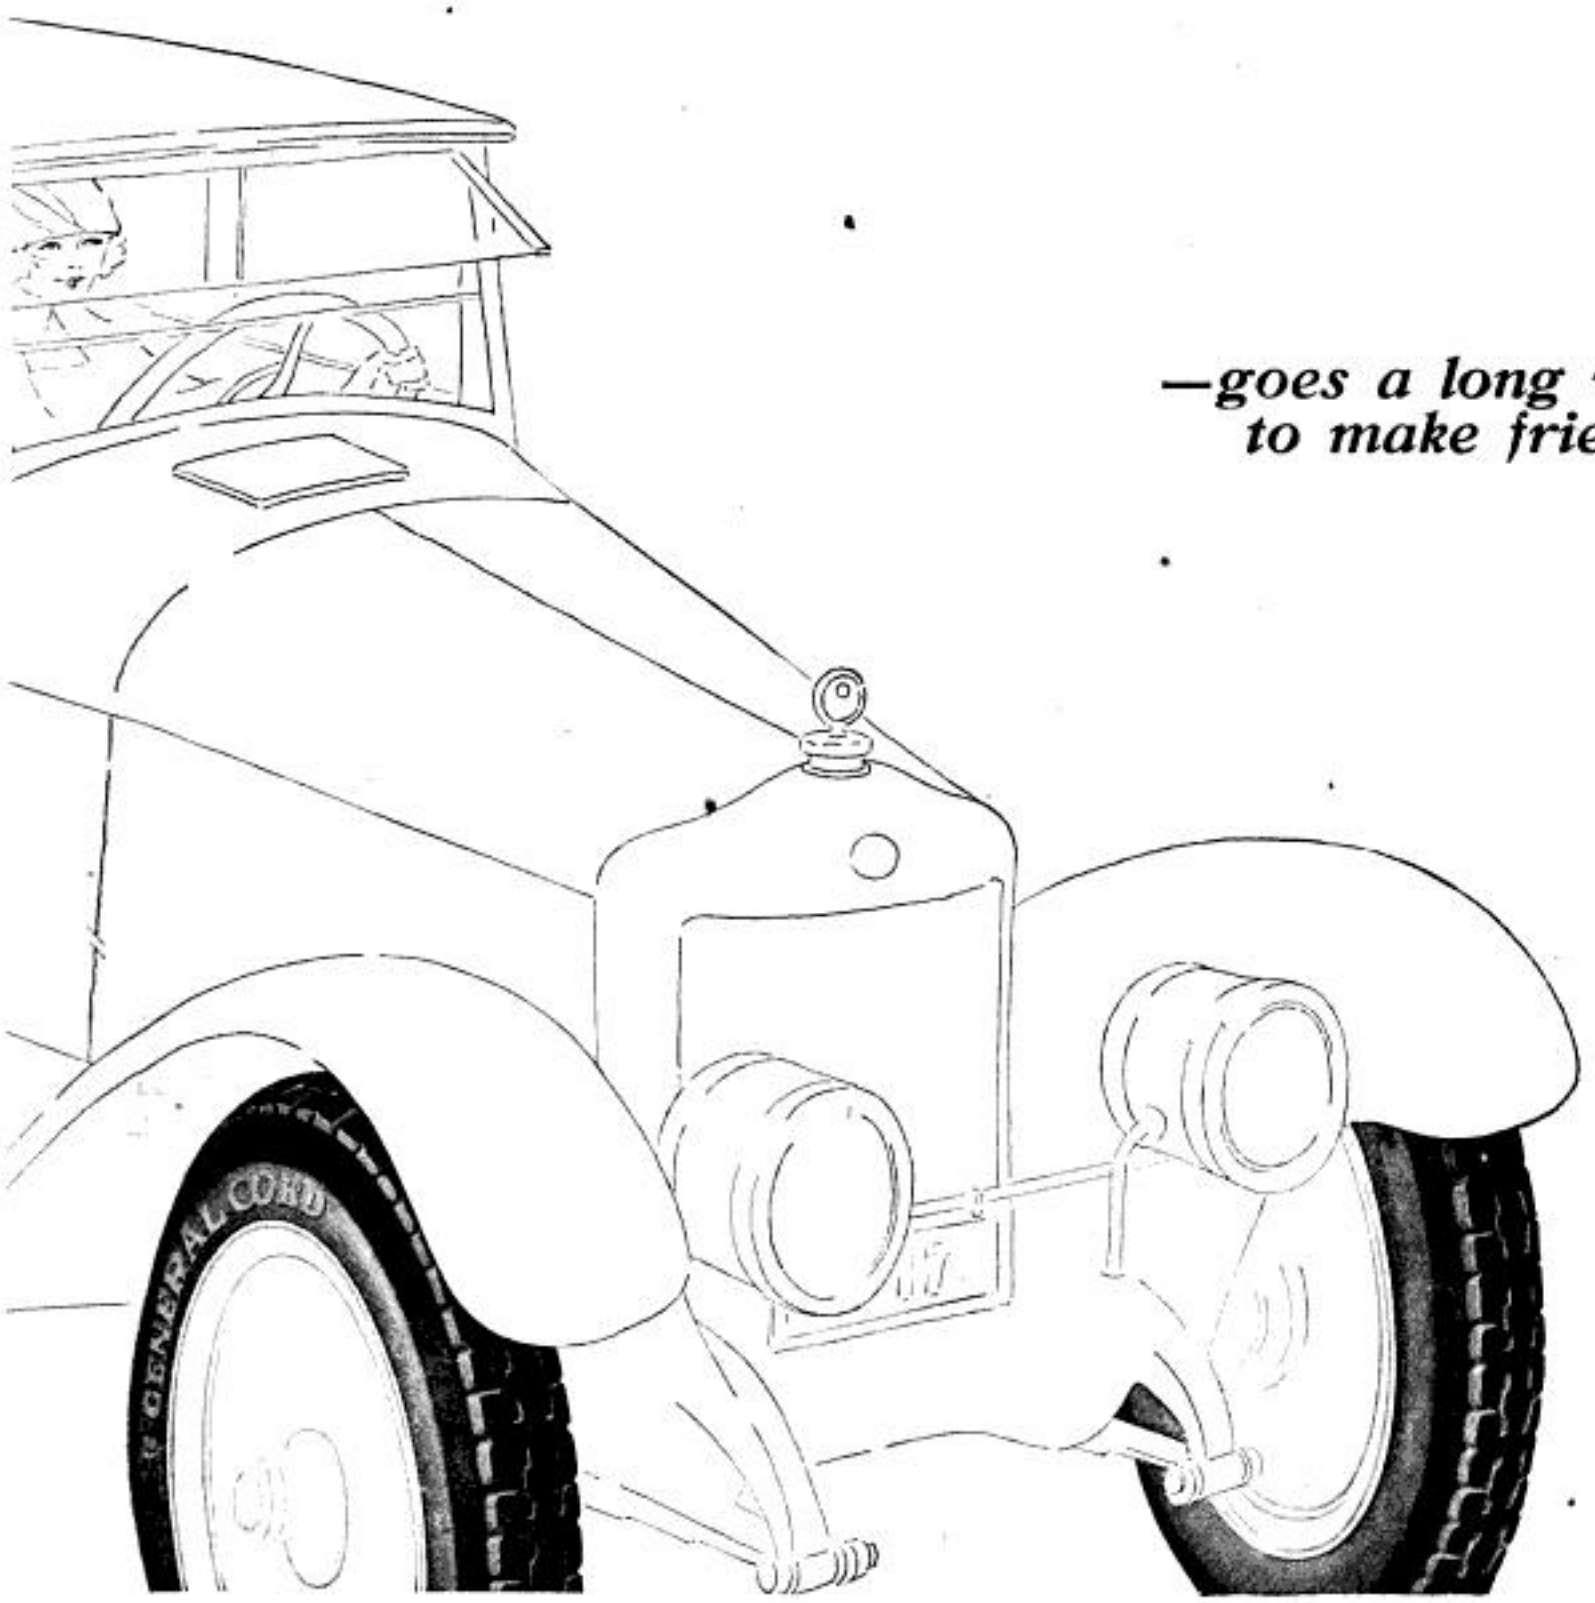
Already 70% more users this year than last

Surprising as it was to have the demand for General Tires in 1921 exceed that of 1920 by 45%, the demand this year is even more surprising—full 70% ahead thus far this year over last.



What better proof to show a tire is right?

And what makes us so proud of this steady increase in the demand for General Tires is that they are sold *exclusively to users*. We do not solicit the business of automobile manufacturers, who buy tires to put on new cars as "original equipment." General Tires are sold only through dealers. Thus, each purchase of a General represents the seasoned judgment of an experienced tire user.

The General factory—with facilities greatly increased over those of last year—is today operating at full 100% capacity.

If you wish to get benefit from the judgment of experienced tire users—and to profit by their experience—look up the General dealer nearest you. He has a tire exactly suited to your needs. Put one on your car—and let your speedometer tell your pocketbook a story of real tire mileage.

$1000.00 in prizes

What is she saying?

THERE is no fixed answer to guess! Your idea of what this woman is saying may be the prize winner! What is she saying to the clerk that is making him turn to Sealpax?

Study the picture—study the facts about Sealpax below. Then, write your answer in not more than twenty words and send it to the Prize Department, The Sealpax Company, Baltimore, Md. Competent neutral judges will award prizes. Contest closes July 29th, 1922. And winners will be announced in The Saturday Evening Post, October 28th, 1922.

Best answer	**$500**
Second Prize	$200
Third Prize	$100
Fourth Prize	$50
Next Best Five	$15
Next Best Five	$10
Next Best Five	$5
Next Fifty (each)—one suit of Sealpax	

(In the event of ties for any prize offered, the full amount of such prize will be awarded to each tying contestant.)

Sealpax
Athletic Underwear

THERE are men all through the country who do not have to read about Sealpax to know what the customer in the contest picture is saying about it. They *wear* it! They *know* that wonderful free-and-easy Sealpax comfort—that light-and-breezy Sealpax coolness!

Why don't you slip into Sealpax and treat yourself to a new summer comfort? The snug athletic cut—the cool fabric—webbed shoulders and wide roomy legs—are a revelation in underwear comfort.

You begin to appreciate Sealpax when you buy it—because it comes to you packed in a sealed sanitary envelope, crisp and clean as driven snow.

Women and children may also enjoy the cool comfort of Sealpax. "Lady Sealpax" for women is "Just as Comfortable as Brother's" athletic underwear—just as dainty as a woman could wish it to be. "Little Brother" and "Little Sister" Sealpax bring "Dad's Comfort to Dad's Kids"—cool, comfortable athletic underwear for children, reinforced to wear long and well.

Sealpax for all the family—sold everywhere!

"Lady Sealpax" $1.00 up

THE EAGLE AND THE WREN

(Continued from Page 7)

provided lively experiences. That he ever came out of it with a whole skin was little short of a miracle, for he knocked about Central Europe from the beginning to the end. He had an extraordinary faculty for remembering names and faces and the association of place and event in which he came into contact with their owners. He contrived to make a mental dossier of every one he met. Their looks and actions, fame or ill fame, record past and present—he had it all complete and isolated in his brain, and ready for production at any moment.

IV

GEORGE WEDDERTON'S official appearance upon the scene took place nearly a month after his actual appearance. During the preceding thirty days he had occupied a post at a hand drill in Number 16 Workshop. In this capacity he went by the name of John Slave, although he had privately confessed to an agitated political circle which gathered nightly in one of the lowest pubs in the town that his real name was Johann Slavenski and that he was a Pole. He took no part in the rebellious conversations of his fellows, but it had been remarked by several keen observers that Johann's hands twisted and his eyes blazed at the mere mention of the word "soviet." For the rest, he behaved with his customary calm, nodding gravely at the world's injustice to the worker, taking his glass with the rest, and earning the respect that usually falls to silent men. Thus he came to be spoken of as a dark horse that might be worth watching, and once or twice overtures were made inviting him to attend workmen's councils privately held in secret corners of the town.

But always he shook his head or answered "I am a quiet man, brother. I do not wish to excite myself—yet."

There were men of every nationality and persuasion at Diplock's; it could not very well have been otherwise with a pay roll of fifty thousand. In the course of his sojourn there George Wedderton recognized many faces which he had come across in other associations, and he added a variety of new ones to his collection.

Prominent among those to whom he gave special attention was a weedy little Italian named Paolo Mossi. Mossi was an exquisite craftsman, engaged in precision work in one of the smaller machine shops. His ability with a lathe was astounding and so highly valued that little or nothing was said when he absented himself from work sometimes for days on end. His face was remarkable for the possession of thick, bushy eyebrows which, unlike the usual kind, turned downward and almost entirely screened his eyes. Also, he wore a thin, straggly beard.

An inner sense assured George that he and this man had met on some previous occasion, but it took him three days to reconstruct the incident. The man's face defeated him; it was the little stool upon which he sat that brought the affair to mind. It was a kind of milking stool, fashioned of common wood, but the legs were astonishingly well turned and as perfect in outline as an Etruscan vase.

"Got it!" said Wedderton. "Got you!"

The dossier of Paolo Mossi was before his eyes. The Trentino in 1917, a village called Fugi—a little *salone* shadowed by a cyprus. At the door, seated upon a stool with beautifully turned legs, a small, clean-shaven man with very bushy eyebrows turning fiercely upward. The name of the man was Basso. He had three children—two girls and a boy who squinted. His wife was enormously fat and talked too much. He smoked a pipe with a silver cap. He never talked. The place was used as a billet for officers. The generalissimo was murdered in his bed and movement orders affecting the entire front were stolen. Subsequently they were discovered in the possession of the Signora Basso, but not until their contents had been messaged to the enemy.

Basso was present when the papers were taken from the lining of his wife's skirt, and to prove the depth of his patriotism he shot her through the heart before the search party, and incidentally George himself. But somehow suspicion was not entirely arrested by this extraordinary display of justice. Wherefore Basso blithely disappeared, carrying with him an exact knowledge of the strength and disposition of every regiment in the district.

In short, a lively and ingen[ious] whose presence at the firm of [Mathews & Brandling] was not [unpro]ductive of confidence.

George Wedderton did not be[lieve] cepting his own impressions [of] firmative evidence, and here was [a] where confirmation was easy [to] Very unobtrusively he visited [the] man's private room, and noted [with] faction that he possessed a pair [of] tongs. Identity being thus [es]tablished, George departed, smiling to himself.

The means by which he won the confidence of the amiable Mossi are [known] to himself. It is probable his [apparent] ity to keep counsel was the chief [factor]; thereafter he and the little Italian [spent] many evening hours in each other's [society]. George staring at the ceiling [with an] pression appropriate to the character of [the] outraged and exiled Pole, and Mossi [watch]ing him through the tangle of his [black] turned eyebrows as a cat watches a [bird].

They conversed but little during [these] sessions, the few words they uttered [being] spoken in a patois familiar to both. [It] was evident that they were taking [stock] ings of each other with that prodigious [memory] known only to persons who have a [price] upon their heads.

"The war was fought for nothing," [said] Mossi one night, and George nodded.

"The people's war ——" he began, [but] checked himself.

"It will come," said Mossi, "when [the] weapon is ready."

George Wedderton took a deep [breath] plunge.

"Is it not being forged even now?" [asked] he tilted his head toward the black [chim]neys of Diplock's, belching forth [their] flames into the night.

Mossi laid a finger to his lips, and [they] were silent for a long while. Presently [George] asked, "How did you serve?"

"Variously."

"Behind the guns?"

"Behind the guns," George replied [with] a significant inflection.

"H'm!" Another silence. "I think [we] have met before, but I cannot be sure."

The rider to the sentence was a [question]. George, although he hardly expected [a] man, in the excitement of that day in the Trentino, would associate him with [the] heavily mustached Italian staff officer [in] which character he was appearing.

"I should have remembered," [said] George.

"Perhaps not in the flesh. There [is a] gallery of photographs—likenesses [of] we should do well to know as [much] fellow workers. At one time I had to [make] study that gallery very closely. You [do] not know, of course."

Not for nothing had George Wedderton knocked about Central Europe during the war. He fixed the Italian boldly and said, "It is finished now."

"Finished?"

"Broken up."

"I do not understand."

George leaned forward and lowered his voice.

"Hauptmann Strasse, Number [12]."

The little Italian did not say a word, but his eyes narrowed almost to nothing.

"Late," said George, and rose to his feet.

Mossi came with him as far as the door, where they stood for a moment watching the flames licking upward into the night.

"So you knew the weapon was being forged?"

"I knew."

"For whom do you know these things?"

"For myself."

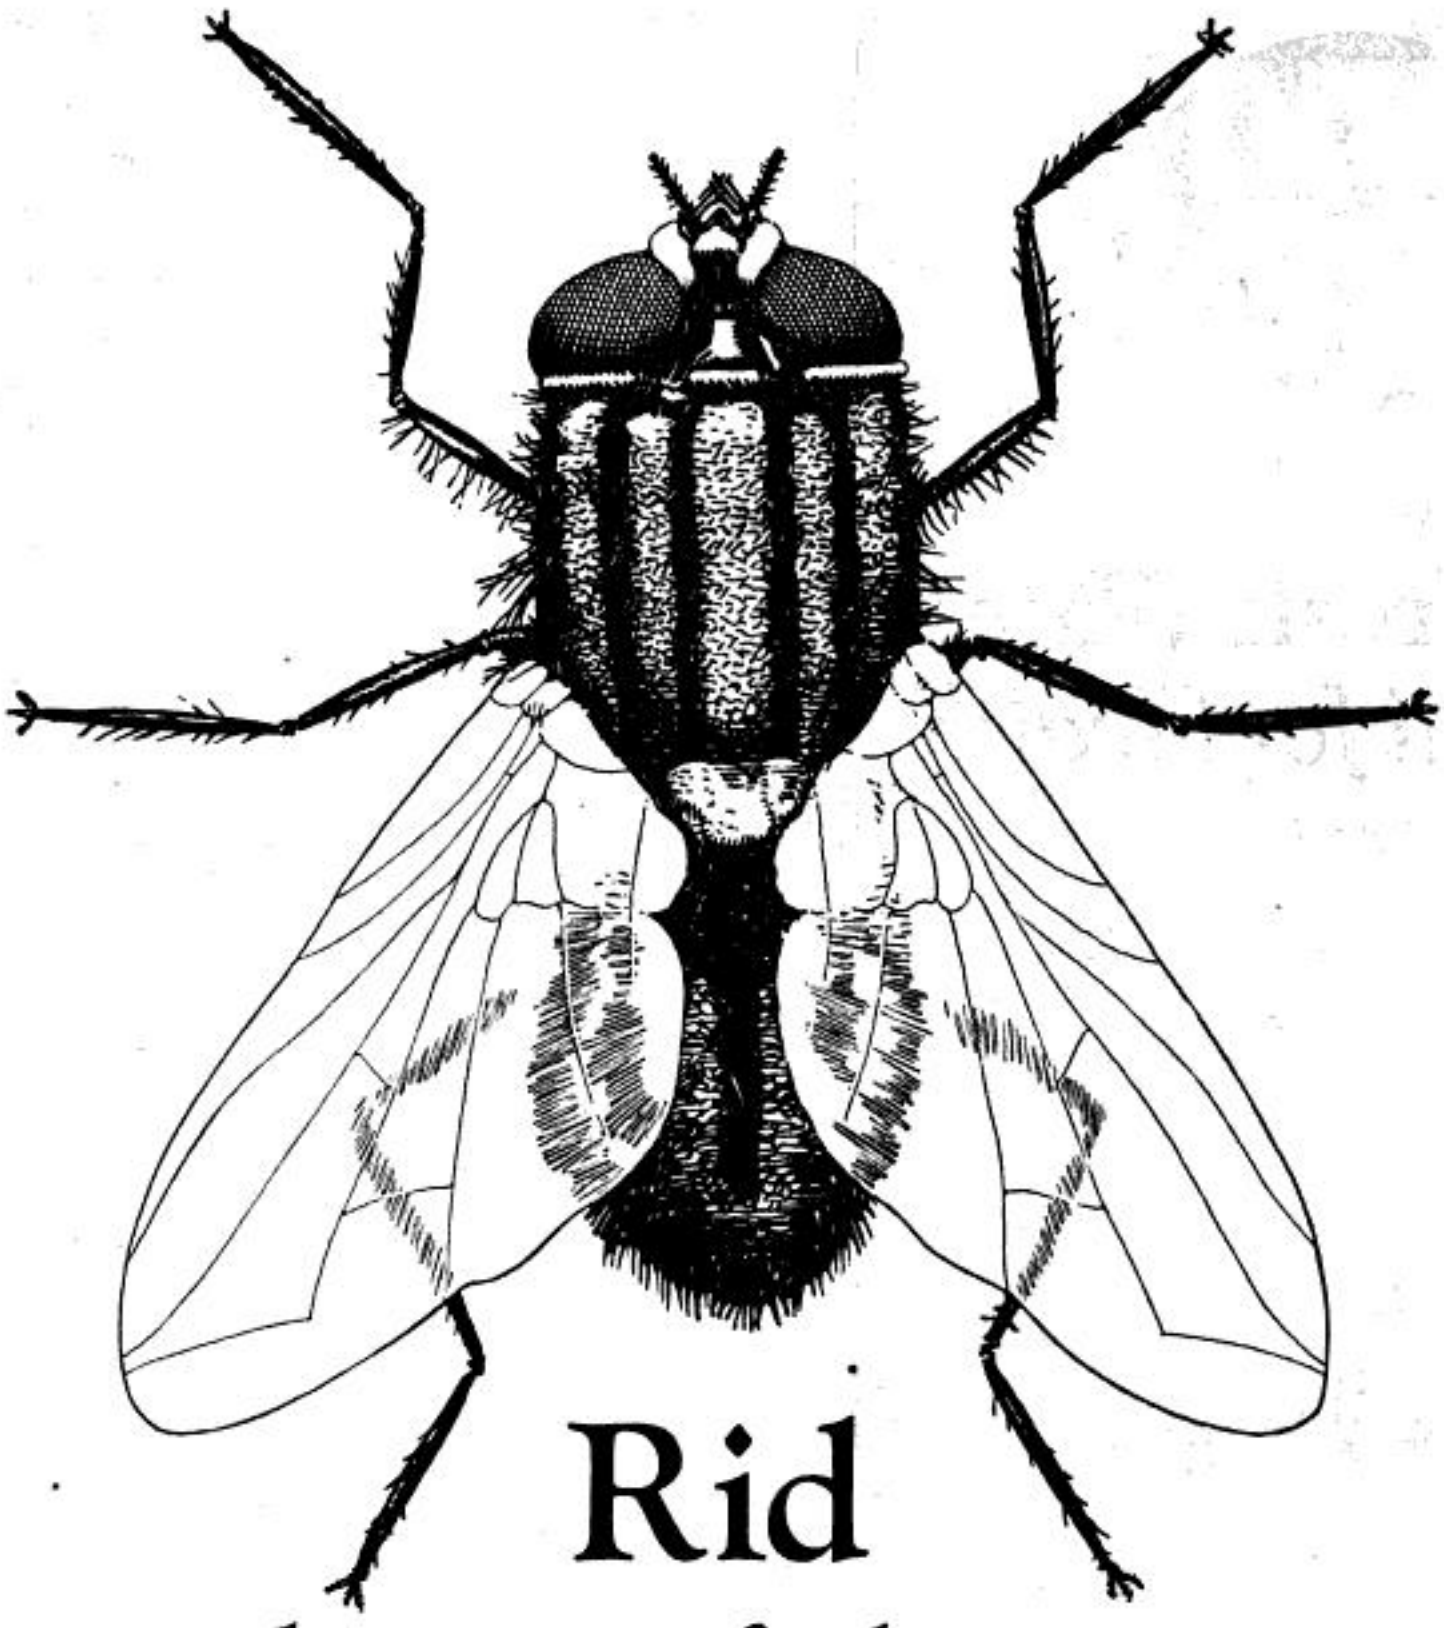
"But you are a patriot of the Red Fraternity?"

George grunted.

"Also," said he, "it pleases me to have money to jingle in my pocket."

It was a sure thrust. He felt the sympathetic pressure of the Italian's hand upon his arm.

"Ah! we must talk again. I am also a patriots, but money is the proof of success."



George Wedderton put his hands in his pockets and rolled down the street.

Rid your home of this menace

FLYOSAN is a new chemical discovery. It acts against flies and all other insect pests in a most dramatic and effective manner.

Fill an ordinary garden sprayer with Flyosan. Spray into the air of a room towards the ceiling. The flies struggle to the window. Inside of 5 minutes every fly is dead. You have only to sweep them up.

Most important:

Flyosan is absolutely non-poisonous. With perfect safety you can leave the baby or the cat in the room while using it.

Flyosan does its work quickly and safely, and then disappears. No unpleasant odor. No stain. No muss to clean up.

In all parts of the country Flyosan is ridding hospitals, public institutions and homes of mosquitoes, moths, roaches, ants and bedbugs as well as flies.

If your drug, department or hardware store does not have Flyosan, send us $1.00 for an Introductory Package—a pint of Flyosan and a sprayer.

To Dealers:

Flyosan is sweeping the country. Our Laboratories are operating day and night. Your trade is on the lookout for Flyosan. Stock it. Price list mailed on request.

More Fresh Water *is needed for Health*

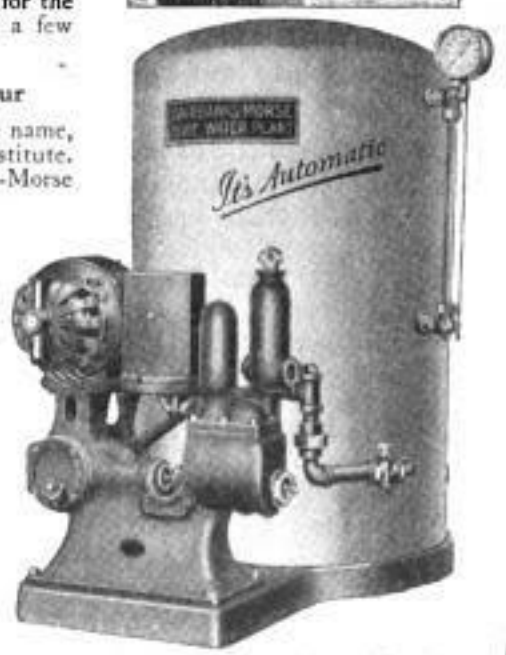
HEALTH demands plenty of fresh, running water in the home. Any physician will tell you that.

Have you running water in the kitchen? Have you a bathtub—a wash bowl—a toilet of modern comfort and convenience? Running water brings these health necessities.

Do you carry water on wash day? Running water brings sanitary tubs in the cellar. You just turn a faucet.

Running water means plenty of water, for every need, UNDER PRESSURE. Water to sprinkle the lawn and garden. Water to wash the car. Water for fire protection.

Why put up with pump and pail or other old-time methods, when at little cost you can have this famous home water plant?



It's Automatic

FAIRBANKS-MORSE HOME WATER PLANT

It is a private pumping station. Operates from any electric light socket or home lighting plant circuit. Pumps water from cistern, shallow well, spring, stream or lake, *under pressure*. Practically noiseless. Pressure automatically maintained. No switch to turn. No adjusting. Has special galvanized tank. Highly perfected, extra efficient Fairbanks-Morse Pump, a vital feature. Water for the whole family and for every need at a few cents a week.

Capacity, 200 gallons per hour

Quality of plant guaranteed by the name, Fairbanks-Morse. Don't accept a substitute. If you do not know the local Fairbanks-Morse representative, write for his name. See this plant. Literature sent free upon request. Write us at once.

(Continued from Page 88)

Types were securely fastened in the first, his period of work was over, his collar bone restored to excellence, and in a week's time he and Leslie would be courting by the Mediterranean shores. His conduct during the preceding months had been exemplary; Leslie's letters were beyond price. His spirits were high and the world was unfolding before him like a blossoming rose. Very cordially he slapped the detective on the back and slapped his hat upon his head. With overcoat slung across his shoulder, despite a fall of snow, he turned toward Mr. Diplock's office, singing as he went.

Throwing open the door he smiled expansively.

"Finis," said he.

And Mr. Diplock repeated the word, gravely adding, "And now I suppose you'll take a spell of holiday?"

"A few days with old Charlie Pearson knocking down pheasants, then presto for the Riviera."

"You're an extraordinary young man. Aren't you going to wait for the R. A. F. Board? The Air Minister is to be present, and there'll be some pretty speeches about you."

"I am not," replied Martyn devoutly. "The drawing speaks for itself. I hate pretty speeches, and I'd rather suck an orange on Margate Pier than be slapped on the back by the entire cabinet."

"I repeat," said Mr. Diplock, "you are a very queer young man, but I suppose you are the best judge of your own tastes."

"You can bet your life I am."

"My life," said Mr. Diplock, "is a small stake, but if you'll accept the advice of an older man you will take care of your own."

"Lord love you! Who'd hurt me? I'm fed to the teeth at being wet-nursed by a whole regiment of 'tecs, and the thought of escaping from 'em makes me want to sing."

"In that case, Saville," Mr. Diplock smiled, "let me implore you not to do it here. Get away and enjoy yourself."

"I will so, and bless your heart!" said Martyn.

He was struck of a heap to find George Wedderton smoking a pipe at his rooms when he got back.

"Where in blazes did you spring from?"

"My dear lad," said George, "I've been blooming in this hedgerow for the past three weeks, only you didn't notice me."

"By way of business?"

"Um-um. Your business."

"Not another of 'em!" Martyn implored. "Oh, I suppose you represent official England."

"Something like it. You're through, ain't you?"

"Thank the Lord, I'm through!"

"Good! I shan't bother you much. Just a couple of questions. Here's my authority."

He threw over a paper bearing half a dozen signatures, among them Mr. Diplock's.

"Fire away."

"Drawings in big safe?"

"Um! Both types."

"Pretty alike, ain't they?"

"To an amateur."

"Any distinguishing feature?"

Martyn reeled off some technical differences.

"Right you are."

"Keys in Number Two safe?"

"Yep."

"Opens to 'finis'?"

"That was quick," said Martyn. "How did you do it?"

"Diplock rang me. Code, no mystery. Well, that's all I want, old fellow, except a whisky-and-soda. If you like I'll sit on the bed and watch you pack."

Armed with a drink he disposed himself luxuriously, while Martyn heaved clothes into a capacious Gladstone bag.

"Pleased with yourself?" he asked.

"Yes, rather! Charlie Pearson says the birds are plentiful and I've just bought these. Their come-up is simply beautiful. Try 'em."

And he pushed over a new gun case for his friend's inspection.

"Extraordinary chap," said George soberly. "You think no more of throwing up this new machine than a baby of being sick. Ever going to grow up?"

"Hope not. Here, give us a hand with this gear. I've a train to catch."

As they bumped the luggage downstairs Martyn asked, "Does old Butterwick know you're in this?"

"If he don't already he'll know to-night," Martyn grinned.

"He will be pleased," said he. "Can't I see you as far as the station?"

"No, thanks. I'm not wearing these clothes in public at the moment."

"Then how did you get here?"

"Oh, I live on the floor above when I'm not otherwise engaged," was the amiable reply.

VI

CHARLIE PEARSON'S shooting party was a real winner, being made up of stout lads, true sportsmen all, and a complement of girls so excellent in virtue that they hesitated neither to thrust their way through mire and bramble nor to dance gayly until umpteen o'clock in the morning.

The foregoing paragraph is practically a transcript from a letter Martyn wrote to Leslie, the delicacy of style being exclusively his own.

Fearing greatly that he might be lionized for his remarkable engineering attainments, Martyn lost no time in trying to create a stir in other directions. Wherefore at the close of the first night's entertainment beneath this hospitable roof he was proclaimed acclaimed by excellent authority to be the finest dancer that ever happened, nor were words of praise lacking as to his ability to beguile the tedium of sitting out. In this capacity his light-hearted prattle, not touched with evidences of a sentimental disposition, was unrivaled. Many marriageable maidens, some of them proudly adorned with half hoops of diamonds on the fingers of their left hands, were beset by misgivings as to the discretion of their choice in the matter of marriage, until two ladies who had already knelt at his steps gazed across the room and realized the composition of their husbands, wishes hitherto unremarked.

The truth was this, Martyn Saville yearning for the long-denied embrace his sweetheart; and when this mood descends upon an ardent young man addresses to young ladies are apt to honeyed. He accepted the society as him as a proxy for Leslie, and sweetness disposition and mode of speech in the ratio to the likeness they bore to his love. Once or twice, it is true, a slight indiscretion entered into his conduct; for example, when he brushed with the cheek of little Miss Phyllis. But little Miss Phyllis was sad about something or other, and Martyn, who was a man, knew no other means of banishing melancholy. Furthermore, the band playing Avalon at the time, which, as one knows, is sufficient excuse for many indulgences.

The righteous may, perhaps, wag a finger at him for his behavior with Mrs. Clayton, but here again he was not entirely to blame. A married woman who is not happy with her husband has no right to look into her eyes an expression of tragic misunderstanding, and should a sympathetic observer boldly ask "What is the trouble, my dear?" she has no one to thank but herself.

Considering the long period given exclusively to work, a period of confidence and companionship, Martyn had behaved uncommonly well, for after all the reader must have gathered, his sense of discretion was considerably blunted, and everyone expected him to make the fur fly and would have been disappointed if he hadn't.

Whatever shades of resentment may have been born in the bosoms of the present were speedily dissipated by his performance at the next day's shoot. His judgment and timing were perfect, and his bag at the end of the afternoon was larger than anyone else's. He seemed to specialize in difficult shots, bringing the most forlorn hopes with clockwork regularity. Nor was any man less grateful than he, and even the cry of "Wonderful!" which has been the undoing of so many gentle instincts, left him modestly aware of the direction of the chance before the trigger.

Several of his birds he attributed to the prowess of his neighbor on the right, a short-sighted man whose power to kill amounted to a certainty.

And this gentleman, for very shame at his want of skill, gracefully accepted Martyn's cheery "Not a bit of it. You had fair. My shot was wasted, and all I poached."

So convincingly were the words spoken that before the end of this partic-

Miss Phyllis sucked in her breath ecstatically.

"I think you're simply gorgeous!" she said.

And Martyn laughed.

It was silly of no one else to have thought of it. They had concentrated on how the burglar could have ascended from the ground. It did not occur to them that he might have walked across on a plank from the flat roof of the opposite wing. It was in such matters Martyn scored, realizing the obvious at a glance. There would be no trouble in getting on the roof from the front of the house. Any man of average agility could shin up the ivy in a dozen different places. He did not even bother about a plank, being morally certain he would find one waiting for him hidden behind the crenelations somewhere near the spot at which the burglar must have crossed.

But what Martyn did not expect to find when, at four o'clock the next morning he sneaked along the leads, was the burglar himself concealed behind a chimney stack in a very advanced state of nerves. Walking across the plank overnight had so reduced his stock of courage that he had simply stayed where he was, trusting that the natural fortitude needed for making the descent would return to him before starvation claimed another victim. The fruits of his raid, glittering pathetically, were laid upon a loose brick at his side, and when Martyn came upon him he appeared to be weighing up the relative virtues of material possession and physical hazard. He showed no fight and almost seemed glad of company.

Since Charlie Pearson had not informed the police of the affair and Martyn himself was reluctant to spoil a pleasant holiday by acts of righteous judgment, he lowered the timorous marauder over the parapet to where Miss Phyllis waited beneath.

"Give this old ass a glass of beer and some bread and cheese," said he. "Then turn him loose. I'm just going to put those trinkets back on your aunt's dressing table. Tremendous lark, what?"

Leaving Miss Phyllis with her eyes full of kisses, Martyn, who had removed his shoes that his presence might not be betrayed, shot the plank across the separating gulf and achieved a nimble Blondin act which delivered him safely on the bedroom floor. And Charlie Pearson, who had lain awake puzzling how the burglary could have been committed, produced a neat automatic from beneath his pillow, took a careful sight at the shadowy form and fired.

Martyn Saville said "Hell!" very distinctly and sat down heavily on the floor, for the bullet had cut a nice clean groove in the fleshy part of his upper arm.

Somewhere below, Miss Phyllis screamed, lights were turned on, guests and servants thronged the corridors, and simultaneously a large motor car drew up on the gravel outside the house, delivering a gentleman of small stature, who cried out that his name was Butterwick and that he demanded to see Mr. Martyn Saville on a matter of tremendous national importance.

VII

SHORTLY after Martyn Saville's departure for the country George Wedderton, appearing in his own personality of the engaging middle-aged Englishman, called at the office of Mr. Butterwick. To the man on duty he gave no name, a circumstance in itself sufficient to insure a speedy interview.

After a minute the man returned and invited him to enter.

Mr. Butterwick was standing with his back to the grate, thoughtfully peeling the quarter of a walnut. As George came in he flashed a single glance at him and immediately lowered his eyes to their usual level. They were strangers to each other and it was characteristic that neither of them was anxious to speak first. However, when it came to a competition in silence George was certain to be the winner, a fact Butterwick realized by instinct.

"Yes, yes," he said. "Wait a minute; I'm trying to place you." And once again the twinkling little eyes flashed over George's features. "Ah, to be sure! You work on a hand drill in Number 16 Workshop. Arrived early last month. I hadn't placed you satisfactorily. Let's see then. Yes, yes; a member of the official service, I suppose."

"Well done, Mr. Butterwick," said George. "My real name is Wedderton—George Wedderton. You penetrated my disguise in record time. Curious, for I never saw you in the shops."

"I am not very often seen," came the reply, with a touch of self-satisfaction.

"Still, we have met before."

"I think not."

"I'll refresh your memory. Kimberley, 1892. Used to occupy a kind of sentry box near the entrance. I. D. B., wasn't it? Before that you were employed as handwriting expert for Floyd's Bank at Manchester. Lost your wife in '89, no children. Hobby, bowls—won an open event at Blackpool. And I see you're still fond of walnuts."

Mr. Butterwick raised his head and looked at his visitor with open admiration.

"You made some inquiries?"

"Of my memory."

"H'm—yes—very smart, very. Well, what is it?"

"Need I say?"

"This Saville business?"

"Um-um!"

"Well?"

"There's going to be trouble."

"On the contrary, I have the case in hand."

"We have the case in hand," George amended.

Mr. Butterwick clicked his tongue antagonistically.

"I have been making some inquiries," George proceeded.

"We have been making some inquiries"—from Butterwick.

"Which point to the fact that the new design is likely to be stolen at any moment."

"It won't be stolen."

"The man to be feared is a genius."

"Whatever else Karl von Klune may be he is certainly not a genius."

"Karl von —— My dear Butterwick, you're on the wrong scent."

"Mr. Wedderton!"

"You're making the old mistake of concentrating on the agents of Central Europe. Germany is neither ready nor willing to undertake offensive warfare."

"I do not care for politics."

"The Germans are farsighted people. Our new enemy is shortsighted."

"May I remind you that I control a force of three hundred and seventy-nine skilled and trusted detectives?"

"My dear sir, it is utterly impossible in this corrupt universe to trust three hundred and seventy-nine persons. By the way, that fellow who admitted me—who was he?"

"His name is John Brevies."

"On the contrary his name is Ohlsson. He was employed during the war circulating anti-British propaganda throughout Scandinavia."

Mr. Butterwick cracked a nut fiercely.

"This is mere ——"

"Fact," George interrupted; "and I am also acquainted with at least three of your permanent staff who attend communist gatherings in the town."

"Possibly. But in my interests."

"I venture to doubt it."

Mr. Butterwick scribbled a few names on a scrap of paper, then took from a drawer the nominal roll of his staff.

"Which men?" said he.

George ticked off the ones he referred to with his forefinger. Whereupon Butterwick jerked the scrap of paper toward him. The names he had written were identical with the ones at which George had pointed.

"This may convince you that I know what I am about," he said, smiling none too pleasantly.

"I have never doubted it," said George, "but it is impossible for one man to carry all the correct information in his own head."

"I am surprised you should think so."

The tone was distinctly hostile.

"We will not quarrel," said George. "I have given this matter a great deal of thought and I am morally certain that somehow or another that drawing will either be traced or stolen."

"As long as it remains in my care I have no such misgiving," said Butterwick.

"It remains for us therefore to outwit these folk rather than blockade the port of their ambition. In a word, it would be better to allow them to imagine they have succeeded. Do you follow my reasoning?"

"I do not," said Mr. Butterwick, "and I cannot disguise the fact that I consider your presence in this affair is exceedingly tiresome. My orders are defined. The plans for this weapon are to be protected. I am going to protect them in my own way."

George Wedderton shrugged his shoulders.

"My orders also are defined," he replied, "and are issued by the government

This patch driven eight months by Shurte Transfer Company, Hamilton, Ohio Still in use

42 x 9 inch truck tube patched with

Las-Stik TUBE PATCH

Any big blowout or small puncture in a passenger car, truck, motorcycle or bicycle tube can be patched in the same way, without vulcanizing, without use of gasoline or any tools.

The Las-Stik material consists of a layer of white (pure) Para rubber that has been carefully cured so that it is elastic and stretches with the tube. This cured layer is faced with an uncured sticky layer that will keep fresh for three years because protected with air-tight, glazed linen (Holland) of extra quality.

Las-Stik adheres instantly, becomes vulcanized by tire pressure and cannot then be pulled off without tearing the tube itself. Trade-mark stamped on every inch of this guaranteed patch. If your dealer does not have Las-Stik, send 50 cents or $1.00 direct. $1.50 for ample sheet for large truck tube blowouts.

DEALERS: Write on your letterhead for sample can and send your jobber's name. Put the below pictured display on your counter and tie up with, and cash in on, this advertising.

JOBBERS: Las-Stik being pure rubber does not deteriorate in three years. Consequently makes good for consumer, dealer and you. Our sales policy protects you. Write.

of this country, which takes precedence over private enterprise. If you prefer to work alone I have nothing to say, except that I must ask you for an authority which will insure my freedom from obstruction by any of your staff."

Mr. Butterwick took a small silver badge from his pocket and threw it on the table.

"I regret," said he, "that I am in no position to refuse you. Take it. Between the two of us I have little doubt we shall have a fine muddle. Good night."

"Good night, Mr. Butterwick. I understand your feelings and sympathize with 'em. Dare say we shan't meet for some time, for there's a devil of a lot to do."

At the door he turned and took an envelope from his pocket.

"I'm leaving you this," said he; "it contains some interesting finger prints. Keep 'em handy; you may find they come in useful. Good night."

He left the little man pacing up and down his office, chin on breast. The smile that usually played round the corners of his mouth had departed.

That night George Wedderton, the Italian, Mossi, and two other men conversed together in low tones until the dawn.

VIII

AT TEN o'clock the following morning George Wedderton presented himself at Saville's office. Mr. Butterwick's silver badge admitted him and also served to dismiss the man who was on guard within.

Since the dawn he had grown a handsome beard and had also increased very considerably in the matter of girth. He wore a fine coat with a Persian-lamb collar and had the general seeming of the director of a prosperous business. He carried a stout cane and wore gloves, which he did not remove.

His first care was to lock the door and lower the window blind. This done he turned his attention to the smaller safe, which still opened to the word "Finis." Taking out the keys he unlocked the larger and producing the two drawings laid them side by side upon the table. At the first glance there was little enough to distinguish one from the other, and his brow corded as he puzzled over them. Martyn had explained minutely enough where the differences lay, but George, although a very fair mechanic, was sorely put to it to decide for himself. He shook his head perplexedly, then picking up one of the drawings reversed it. Scrawled in pencil across a corner in Martyn's handwriting were the words Type A. He picked up the second and in the same place was written Type B.

George smiled.

"Silly ass," said he. "Why didn't he say so, instead of making me sweat like this?"

Taking a piece of India rubber from a pen tray he carefully erased the letter A on the first drawing and substituted B, and having done so replaced it in the safe.

The second drawing—the real Type B, the machine destined to revolutionize the world—he put in an envelope, then looking around thoughtfully crossed to a bookcase and slipped it behind.

"That's that," he murmured. "Now we'll just close the safes, and there we are."

But before leaving he did one other rather curious and apparently meaningless thing. Projecting from the wall near the mantelpiece was an old gas jet, long since out of use, having been superseded by electric light. He unscrewed the burner, dropped it in his pocket and turned on the tap. The supply had been cut off years before and there was no hiss of gas. Then he unlocked the door and passed out into the thin December sunlight, the three detectives giving him good morning as he went.

Twenty yards away a laborer was making a clearing in a big heap of scrap iron and packing cases. Standing beside him was a man in the official uniform of the local gas light and coke company. In his hand was a chart cross-patched with dotted and ruled lines in various colors.

"Just about here," the man remarked as George came by.

Whereat the laborer fell to with pick and shovel and began to dig a hole.

The heavy beard he was wearing conveniently hid the smile that played round George's mouth as he marched past the industrious duet.

An hour later, in the character of John Slave, he was working the hand drill in Number 16 Workshop.

When the siren sounded for [illegible] and the Italian, Mossi, sat and [illegible] on some balks of timber in the [illegible] construction yard. It was a [illegible] almost deserted at this hour of [illegible]

"So you succeeded? I passed [illegible] this morning."

The Italian nodded.

"It was as I expected. The [illegible] old gas mains were at the [illegible] house. I have a friend there [illegible] easy. The workman carried the [illegible] a bag with his tools. And you?"

George humped his shoulders.

"Not so easy," he replied, [illegible] managed. I cannot say how [illegible] tioning names. The burner is [illegible] the tap turned on."

"Good. Then it only remains [illegible] of the two at the door."

"Which is arranged, yes?"

"At two A.M. all should be [illegible] it fails then—whiss!" And he [illegible] hand suggestively across his [illegible]

George shook his head.

"We must avoid that," said he. "It is against my principles to [illegible]

"Ten minutes past two, then."

"Tonight." He hesitated a [illegible] "And the payment for this?" [illegible]

"Depends upon success."

"The risk is great either way," [illegible] grumbled.

"There will be a solatium."

"But the principal sum?"

"Will be paid tomorrow."

"But how—from where?"

The little Italian's eyes [illegible]

"You do not know every[illegible] friend."

"For instance?"

"There is a cashier in this [illegible]

George simulated intense [illegible]

"So!"

"One word merely will be [illegible] by return they will reply—Pay."

"And we divide?"

"There will be two thousand [illegible]

A horribly greedy expression [illegible] George's eyes.

"That will be good," said he.

IX

MR. BUTTERWICK spent [illegible] day, his anxiety being [illegible] an abnormal consumption of [illegible] constant cracking of their [illegible] nized with the snapping of his [illegible]

What right had this [illegible] Wedderton, to come upon the [illegible] upset his confidence? A [illegible] decided to reconstruct the [illegible] positions—to demand that Mr [illegible] should have the drawings [illegible] deposit, to disavow all future [illegible] in the matter, to double the [illegible] permanent guard—in short, to [illegible] whole business on its head. The [illegible] sisted the impulse to do any [illegible] things was due to a very considera[illegible] opinion. He had decided in his [illegible] what were the proper precau[illegible] had taken them. There was [illegible] est occasion for misgiving or [illegible] theless he hated the day. He [illegible] business—and he privately [illegible] government and all her servants [illegible] tion. To satisfy a desire for [illegible] caused to be rounded up a [illegible] picious characters, whom he [illegible] under escort to various remote [illegible] British Isles with polite advice [illegible] back in a hurry.

All this was very bad tech[illegible] knew it.

At three o'clock in the after[illegible] sonally visited Martyn Savil[illegible] satisfy himself that all was [illegible] man on duty within annoyed him [illegible] by a constant repetition of the [illegible] "Everything's O. K., chief."

In his mood of irritation the [illegible] term O. K. in conversation struck [illegible] impertinence.

"Nothing unusual happened," [illegible] manded.

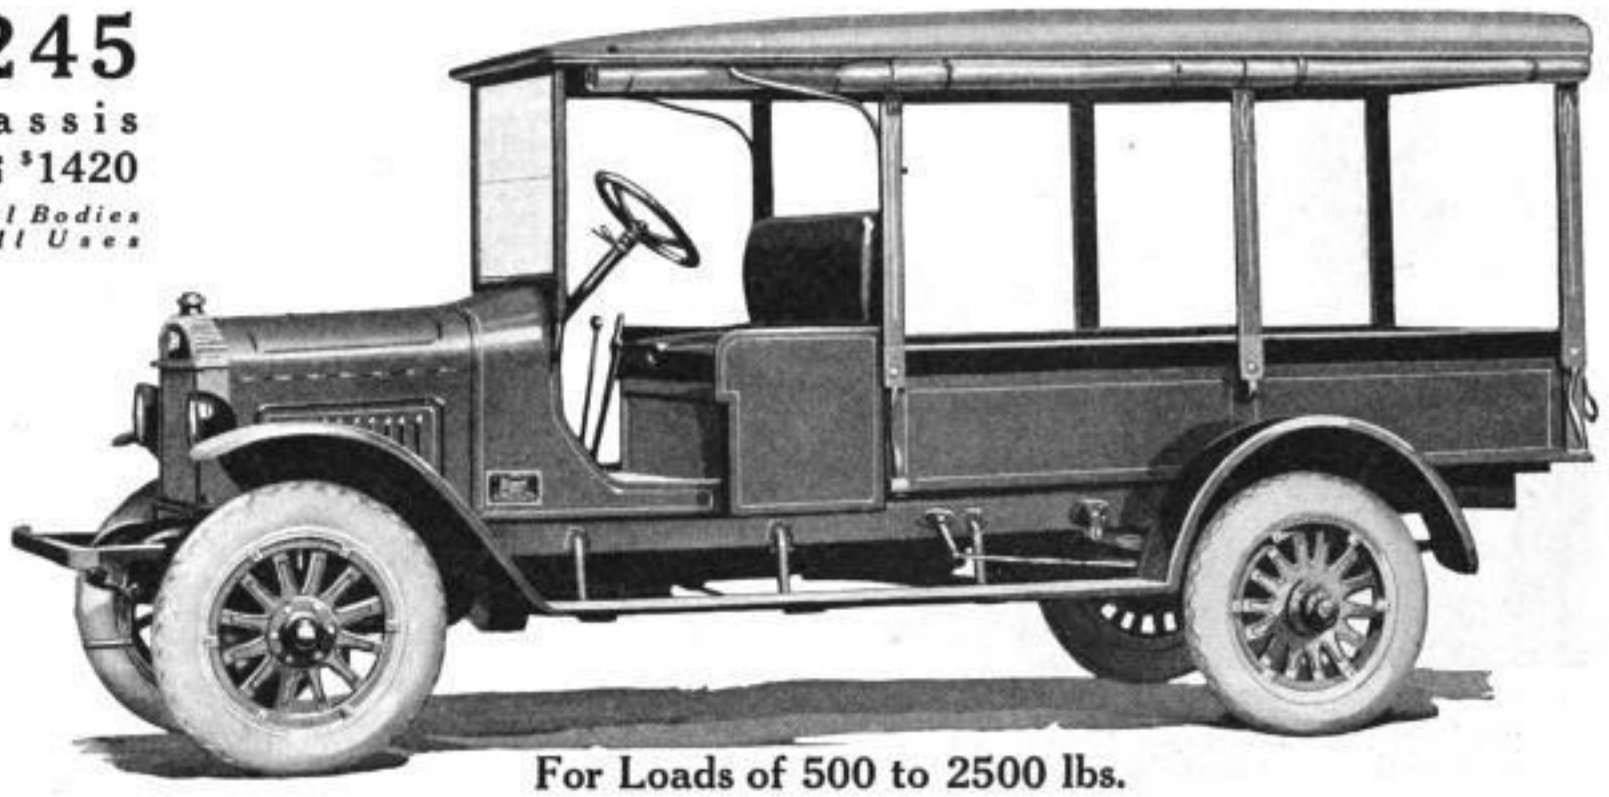
"Nothing, chief. Everything [illegible]

"You came on duty at —"

"Ten A.M., chief. Night watch [illegible] O. K."

"No one been here?"

"Only the gentleman you [illegible] I examined his pass and [illegible] O. K. ——"



"Be damned!" exploded Mr. [illegible] wick. "Why not say X. Y. Z. for a [illegible] Who was this gentleman?"

The man described George's [illegible] minutely, as it were relishing [illegible] actness. (Continued on Page [illegible]

Stewart "Utility Wagon"

$1245
Chassis
Complete as Illustrated **$1420**
Special Bodies For All Uses

For Loads of 500 to 2500 lbs.

Differs from All Others

Has Speed With Economy and Reliability

The "Utility Wagon" is something new among speed trucks. How and why it differs is of dollar interest to every buyer.

It is built *entirely of truck parts*. Take particular note of that. No parts designed for lighter duty are utilized.

That is Why It Lasts for Years

That is why it is free from most common causes of trouble. It accounts for the great regularity of the "Utility Wagon" in fast delivery service.

Every part is designed and built for rapid delivery service on big loads. Ten years of successful truck building experience is back of it. It is a truck you can keep busy. Ready to go at all times. Stands up in hardest usage. Asks little attention. As dependable as train service, and everlastingly reliable.

Note its modern motor. It is a truck-type, with three-bearing crankshaft and force feed oiling system. It gives unusual fuel and oil mileage. Other points you will note in comparisons are the sturdy axles, wheels, and heavy, rigid frame.

Drivers like the "Utility Wagon." The seat is broad, springing the finest. Steers easily. Has electric starter, electric lights, Alemite lubrication, 34" x 4½" cord tires, bumper, heavy duck storm curtains, 128" wheel base, 8 ft. loading space.

Be sure to see the "Utility Wagon." It is bound to affect your choice.

The knock that spells R-U-I-N

LONG before you hear the knock that spells "ruin"—or at best, costly repairs—the BOYCE MOTO-METER will have warned you of an overheated motor. The bright red column of fluid will *jump* to the danger mark fully ten minutes *before* the damage is done—signalling to stop and investigate.

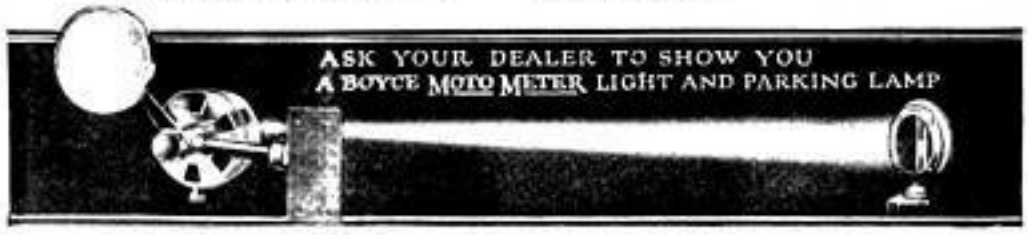
That is why more than 3,000,000 car owners consider the BOYCE MOTO-METER the most necessary instrument on the car.

It not only saves millions of dollars in repair bills each year, but reduces motor depreciation to a minimum—lowers the cost of maintenance.

Your car deserves one *to-day*—to-morrow may be too late.

BOYCE MOTO METER

"Your Car Deserves One"



The instrument shown on the left is the Standard Model. Recommended for use on all high grade cars.

Your garage or dealer carries the BOYCE MOTO-METER in stock, or can quickly obtain one for you.

Seven Models $2.50 to $15.

Trade with the dealer who offers service. Look for the BOYCE MOTO-METER Service Sign.

(Continued from Page 94)

"Wore a beard—what sort of beard?"

"Gray, chief."

"Yes, yes, yes. But was it real?"

The man hesitated.

"It looked real, chief."

"Tut, God bless me! I didn't ask if it looked real—but if it was real!"

"Seemed so, chief."

"What was the number of his badge?"

"Q. stroke, three nine eight."

"Ass!" said Mr. Butterwick. "It was a false beard and it deceived you. When on earth will you fellows learn to look for joins instead of effects—when on earth will you look beneath the surface instead of on the surface? If you can't smell spirit gum in the daylight, what can you smell? And what did this precious mountebank do?"

"He was in the office about eight minutes, chief."

"Alone?"

"Alone, chief."

"Then understand this: If he or any more like him come messing around these quarters I am to be rung up before they're admitted—even if it's Mr. Diplock himself."

"Very good, chief."

Mr. Butterwick flashed up and down the little office, his eyes everywhere. At the writing table he stooped and picked up a piece of India rubber.

"Who's been using this?"

"Not I, chief."

"No, and I don't suppose you noticed it had been used?"

"'Fraid I didn't."

"When the relief comes you may report for a change of duty."

The detective looked very glum and chastened.

"Very good, chief."

At the door Mr. Butterwick turned, and once more the smile was playing at the corners of his mouth.

"I'm in a bad mood, Parsons," he said. "A very bad mood. Upset, I am. You're not a bad fellow. Yes, yes, yes. Don't worry."

On the step outside he halted, cast his eyes round the landscape and pointed with a bony finger.

"Who's been messing about with that junk heap?" he demanded. "That scrap has been turned over."

"There were two men from the gas works here this morning," replied one of the two sentries, amazed at the quickness of his chief's perception.

"How do you know where they came from?"

"I asked 'em what they were up to, and saw their authority."

"And what were they up to?"

"Tracing a leak, chief."

"Oh, yes, yes, yes."

He walked to the spot and stood a moment examining the litter of boxes and rusty iron oddments which had recently been disturbed. An indescribable sense of warning whispered in his ear that the key to a possible mystery lay hidden beneath his feet—that it would be wise to procure workmen and examine the scrap heap very thoroughly. But all day long these whispers had been disturbing him, and Mr. Butterwick was not a man who allowed himself to be ruled by instinctive warnings. To yield to such would be a betrayal of his own ideal—the ideal of cold, relentless reason which was the lodestar of his being.

With a shrug of the shoulders he marched away into the humid mist which was settling like a coverlet upon the land.

"I want a tonic," said he.

And bowls being out of season he repaired to a little skittle alley some small distance away, where with no other society than his own he devoted the rest of the day and a part of the night relentlessly knocking down ninepins as though they were the bitterest enemies of man.

x

HERE are a few notes made by George Wedderton upon the three detectives who composed the night guard at Martyn Saville's office, between the hours of twelve midnight and six A.M.:

THOMAS TAUDRIDGE: 42, of 8 Beal Buildings, married, no children. Teetotaler. Ex Indian police, served as instructor of physical culture during the war. Powerful, reliable, unapproachable. Point—inside the office.

CHARLES AMES: 39, of 22 Beal Buildings, unmarried. Fond of company. Moderate drinker. Takes a pint of beer before coming on duty, obtains same at side door of Flying Scud in Marine Street. Late sergeant in Royal Fusiliers, reliable but overcommunicative. Prior to present employment worked at "Private Investigations Ltd." Post office.

ALBERT FLAVER: 28, of 3 Wharf[illegible], unmarried, moderate drinker. Fond of society, overanxious to achieve reputation of gallantry. Never refuses the [illegible] bright eyes. Trustworthy in all other respects. Suspicious and active brained. Good on duty. Served with the Heavy Artillery. Demobilized into present employment. Point—outside office.

This was the information placed by George in the hands of Mossi, and having done so he left the matter of the [illegible] disposal exclusively to the little Italian genius, with the sole proviso that [illegible] methods should be adopted.

It was Mossi who worked out the details of the campaign with his customary skill and ingenuity.

"The difficulty is to attack three men simultaneously," said he, "but [illegible] by no means impossible to overcome. [illegible] precisely ten minutes after two we enter [illegible] sure they are all unconscious. Then we get to work."

The disposal of Taudridge, who was posted inside the office, was already provided for. It was the two others who required skillful handling—and got it.

The communicative Ames had a complaint to register against the part served him by the landlord of the Flying Scud on this particular night. The big striped mug from which he always drank hung on a nail just inside the bar door and was known as "Mr. Ames' special." During the daytime the door stood open, and no one was suspicious of the tramp who had presented himself during the afternoon and volunteered to chop wood. Certainly no one saw him drop a tiny [illegible] into the blue china mug, the while he presented himself as a willing son of toil. The crystal was flavorless but potent. It dissolved readily enough in beer, but it took a matter of two hours before it [illegible] in the human system. No sooner had it done so, however, than its effect was immediate, consciousness being wiped out and vanishing with the rapidity of a conjurer's coin. Mr. Ames collapsed in his [illegible] try box as the clocks were striking [illegible]

Nor was the case of Albert Flaver the less parlous. To him the drug had been administered otherwise, in the form of a hypodermic injection. Indeed, when consciousness descended upon him he was pleasantly engaged in reflecting upon the rosy cheek of an unknown damsel who a few hours earlier had fallen a victim to his charms. She had bestowed her [illegible] on his with a pretty and modest grace [illegible] as a connoisseur was quick to appreciate. So enjoyment had proved so much to his taste that he barely noticed the inevitable pinch at her waist that scored his hand. It was not often so pretty a bird fluttered into his net, and Albert Flaver was a man who paid tribute to the gods for the gifts they bestowed upon him.

Wherefore was the door of Martyn Saville's office protected by two sleeping men while within the third fought for life in a very mysterious fashion indeed.

Paolo Mossi did not open the valve of the gas cylinder until he had seen, through a crack in the packing case that concealed him, the sudden collapse of the [illegible] system. Here was a piece of ingenuity for which George was responsible. It was obviously better to have a door opened on you from within than to knock it down from without, and it seemed reasonable to suppose that the first thought of any man experiencing the sensation of suffocation would be to get into the fresh air.

Nor was the surmise wrong. Thomas Taudridge was sitting between the two safes when a choking in the throat and a smarting of the eyes advised him of something unusual toward. The gas made no sound as it passed through the air holes and poisoned the air.

A horrible dizziness came over the detective as he sprang to his feet. To shout to his companions outside he filled his lungs, taking in a great draft that seemed to paralyze his voice and action. With a prodigious effort of will did he succeed in struggling across the room and [illegible] back the bolts. He seized the handle and flung open the door. A delicious cool night air enveloped him. He reeled for a moment on his heels, spun half round and pitched head foremost down the steps.

It was George Wedderton, in the mechanic's clothes of John Smith, who leaped out of the shadows to catch him as he fell, and saved a skull from being cracked.

"Good," said Mossi. "I shall leave the rest to you. When you have done come to the appointed place. You have a rag and the alcohol?"

George nodded.

"Clean the door of the safe and the surface of this table; also wipe off that chair back and the traces on the picture glass. There must be no finger prints. You understand?"

"I understand very well," said George.

"They should not wake for another quarter of an hour.

Slipping his camera and other apparatus into the black bag, the little Italian passed out and vanished into the night.

But George did not carry out the orders he had received; indeed, he neglected them disgracefully. In removing the drawing from the picture glass he carelessly left one of the pills of chewing gum sticking to the surface, and evidences of the others were easy to detect. Curiously enough the adhesive left no marks on the back of the drawing itself, a circumstance which he noted with satisfaction.

Then seating himself at the table he rapidly erased the letter B which he had penciled in earlier in the day and replaced it with the letter A. This done he crossed to the bookcase and from behind it rescued the drawing he had hidden and conveyed both it and its fellow to the larger safe, replacing them in the exact position originally occupied. He closed the door with his elbow, locked it with a rubber-gloved hand and put the keys in the second safe, which he fastened with the appropriate word "Finis."

But this was not the end of his labors. Armed with a pocket torch he made a careful examination of the chair back and the surface of the table, and had little difficulty in finding a few fresh finger prints. But these he made no effort to remove, and instead collected some fine dust from above the door and puffed it lightly over the incriminating impressions, a performance which greatly increased their tangible evidence.

"A very satisfactory evening," he remarked to himself, and passed out of the office, pausing a space to examine the two guards, who were beginning to move uneasily in their sleep.

Somewhere in the distance he caught the sound of approaching footsteps. It was the workshop's patrol on their nightly round. He listened for a second to assure himself of their direction, then pulling his cap over his eyes he turned abruptly and broke into a silent run, keeping well in the shadows and avoiding the open spaces, white-lit by the arc standards that made a mock of night.

The big point in choosing a battery

1,800 Westinghouse Battery Service Stations stand ready to fulfill any provision of the factory-backed WESTINGHOUSE GUARANTEE. They also offer motorists WESTINGHOUSE ATTENTION—a superior service for *all* makes of batteries.

WESTINGHOUSE RADIO BATTERIES "A" and "B" carry Westinghouse quality, too.

THE one thing, above all others, you require in an automobile battery is *dependability*. You get it with unmistakable certainty when you buy a Westinghouse.

Westinghouse Batteries embody the most advanced engineering and the finest materials and workmanship a battery can have. Not only that. They are built "oversize"—as much as 25 per cent in common sizes. Their extra plate area means larger current capacity, more reserve power for emergencies, longer life. Westinghouse Batteries have the job of upholding the fame of a great name. And they do it! Reasonably priced.

One quality battery—the best Westinghouse can build.

THE REMINISCENCES OF A STOCK OPERATOR

(Continued from Page 17)

for the next quotation that comes out on the tape. He writes that price and the time on your ticket, O. K.'s it and gives it back to you, and then you go to the cashier and get whatever cash it calls for. Of course, when the market goes against you and the price goes beyond the limit set by your margin, your trade automatically closes itself and your ticket becomes one more scrap of paper.

"In the humbler bucket shops, where people were allowed to trade in as little as five shares, the tickets were little slips—different colors for buying and selling—and at times, as for instance in boiling bull markets, the shops would be hard hit because all the customers were bulls and happened to be right. Then the bucket shop would deduct both buying and selling commissions and if you bought a stock at 20 the ticket would read 20¼. You thus had only ¾ of a point's run for your money.

"But the Cosmopolitan was the finest in New England. It had thousands of patrons and I really think I was the only man they were afraid of. Neither the killing premium nor the three-point margin they made me put up reduced my trading much. I kept on buying and selling as much as they'd let me."

"How big a line did they let you carry?"

"Ever?" he asked.

"Yes."

"Oh, five thousand shares," said Livingston.

"In a bucket shop, on a three-point margin, which was supposed to be unnecessarily big?"

He nodded and went on:

"Well, on the day the thing happened that I am going to tell you, I was short thirty-five hundred shares of Sugar. I had seven big pink tickets for five hundred shares each. The Cosmopolitan used big slips with a blank space on them where they could write down additional margin. Of course, the bucket shops never ask for more margin. The thinner the shoestring the better for them, for their profit lies in your being wiped. In the smaller shops if you wanted to margin your trade still further they'd make out a new ticket, so they could charge you the buying commission and only give you a run of ¾ of a point on each point's decline, for they figured the selling commission also."

A Ticklish Situation

"Well, this day I remember I had up over $10,000 in margins; not so bad for a kid who looked several years younger than he was."

"How old were you then?"

"About twenty-one."

"And you had made over ten thousand dollars by then?" I asked.

"Oh, I was only twenty when I first accumulated ten thousand dollars in cash. And you ought to have heard my mother! You'd have thought that ten thousand dollars in cash was more than anybody carried around except old John D., and she used to tell me to be satisfied and go into some regular business. I had a hard time convincing her that I was not gambling, but making money by figuring. But all she could see was that ten thousand dollars was a lot of money, and all I could see was more margin.

"I had put out my 3500 shares of Sugar at 105¼. There was another fellow in the room, Henry Williams, who was short 2500 shares. I used to sit by the ticker and call out the quotations for the board boy. The price behaved as I thought it would. It promptly went down a couple of points and paused a little to get its breath before taking another dip. The general market was pretty soft and everything looked promising. Then all of a sudden I didn't like the way Sugar was doing its hesitating. I began to feel uncomfortable. I thought I ought to get out of the market. Then it sold at 103—that was low for the day—but instead of feeling more confident I felt more uncertain. I knew something was wrong somewhere, but I couldn't spot it exactly. But if something was coming and I didn't know where from, I couldn't be on my guard against it. That being the case I'd better be out of the market.

"You know, I don't do th[illegible] I don't like to. I never did. Ev[illegible] I had to know why I sh[illegible] things. But this time I had [illegible] reason to give to myself, and yet I wa[illegible] uncomfortable that I could[illegible] I called to a fellow I knew, Dave W[illegible] and said to him: 'Dave, you t[illegible] place here. I want you to do s[illegible] for me. Wait a little before y[illegible] the next price of Sugar. Ca[illegible] you?'

"He said he would, and I g[illegible] gave him my place by the ticker [illegible] could call out the prices for the b[illegible] took my seven Sugar tickets out [illegible] pocket and walked over to the [illegible] where the clerk was who marked the ti[illegible] when you closed your trades. But I [illegible] really know why I should get out [illegible] market, so I just stood there, l[illegible] against the counter, my tickets in [illegible] so that the clerk couldn't see them. [illegible] soon I heard the clicking of a [illegible] instrument and I saw Tom Burnham, [illegible] clerk, turn his head quickly and l[illegible] Then I felt that something crooked [illegible] hatching, and I decided not to wa[illegible] longer. Just then Dave Wyman by [illegible] ticker began: 'Su——' and [illegible] flash I slapped my tickets on the [illegible] in front of the clerk and yelled 'S[illegible] Sugar!' before Dave had finished [illegible] the price. So, of course, the house [illegible] close my Sugar at the last quotation. [illegible] Dave called turned out to be 103 [illegible]

How They Worked It

"According to my dope Sugar [illegible] have broken 103 by now. The [illegible] wasn't hitting right. I had the fe[illegible] there was a trap in the neighborhood [illegible] all events, the telegraph instrument [illegible] now going like mad and I noticed that [illegible] Burnham, the clerk, had left my [illegible] unmarked where I laid them, and [illegible] listening to the clicking as if he were [illegible] ing for something. So I yelled at [illegible] 'Hey, Tom, what in hell are you w[illegible] for? Mark the price on these tickets [illegible] Get a gait on!'

"Everybody in the room heard [illegible] began to look toward us and ask wh[illegible] the trouble, for you see, while the C[illegible] politan had never laid down, they [illegible] telling, and a run on a bucket sho[illegible] start like a run on a bank. If one [illegible] gets suspicious the others follow suit. [illegible] Tom looked sulky but came [illegible] marked my tickets 'Closed at [illegible] shoved the seven of them over to me. [illegible] He sure had a sour face.

"Say, the distance from Tom [illegible] the cashier's cage wasn't over eight [illegible] But I hadn't got to the cashier's [illegible] money when Dave Wyman by [illegible] yelled excitedly: 'Gosh! Sugar [illegible] But it was too late; so I just [illegible] called over to Tom, 'It didn't work [illegible] time, did it, old boy?'"

Livingston paused to look at [illegible] saw him—in the bucket shop [illegible] before, a sandy-haired kid with [illegible] eyes, laughing at the discomfiture [illegible] eteers. There was nothing in [illegible] voice to show that he ever had [illegible] great indignation or resentment [illegible] the Cosmopolitan gang. The game [illegible] game he had chosen to play was [illegible] both a square deal and sharp [illegible] alike, being conditions on which [illegible] reckon. He went on:

"Of course, it was a put-up [illegible] Williams and I together were [illegible] thousand shares of Sugar. The [illegible] shop had my margin and H[illegible] there may have been a lot of [illegible] shorts in the office; possibly eight [illegible] thousand shares in all. Suppose [illegible] $20,000 in Sugar margins. That [illegible] enough to pay them to throw [illegible] market on the New York Stock Ex[illegible] and wipe us out. In the old days when [illegible] a bucket shop found itself loaded [illegible] many bulls on a certain stock it was [illegible] mon practice to get some orders [illegible] down the price of that stock far enough [illegible] wipe out all the customers that [illegible] of it. This seldom cost the house [illegible] than a couple of points on a [illegible] shares, and they made thousands [illegible]

always win," said Livingston. was it your system sometimes etimes lost?"

n't it. My plan of trading ough and won much oftener If I had stuck to it I'd have haps as often as seven out of fact, I always made money sure I was right before I t beat me was not having to stick to my own game— the market only when I was precedents favored my play. e for all things, but I didn't that is precisely what beats in Wall Street who are very g in the main sucker class. lain fool, who does the wrong mes everywhere, but there is the Wall Street fool, who thinks he must trade all the time. No man can always have adequate reasons for buying or selling stocks daily—or sufficient knowledge to make his play an intelligent play.

"I proved it. Whenever I read the tape by the light of experience I made money, but when I made a plain sucker play I had to lose. I was no exception, was I?"

He asked it almost indignantly.

"No," I gratefully assured him, thinking of what I had written about the unbeatable game. "You would not bide your time."

Livingston said almost apologetically: "There was the huge quotation board staring me in the face, and the ticker going on, and people trading and watching their tickets turn to cash or to waste paper. Of course I let the craving for excitement get the better of my judgment. In a bucket shop where your margin is a shoestring you don't play for long pulls. You are wiped too easily and quickly. The desire for constant action irrespective of underlying conditions is responsible for many losses in Wall Street even among the professionals, who feel that they must take home some money every day, as though they were working for regular wages. I was only a kid, remember. I did not know then what I learned later, what made me, fifteen years later, wait two long weeks and see a stock on which I was very bullish go up thirty points before I felt that it was safe to buy it. I was broke and was trying to get back, and I couldn't afford to play recklessly. I had to be right, and so I waited."

"When was that?"

"In 1915. It's a long story. Do you want to hear it?" he asked.

The Boy Trader Goes Broke

"Sure, later. Now let's go on from where you left off. You, with your unusual mathematical mind and your remarkable memory, with your exceptional aptitude for the game and your years of practice at it, you the Boy Terror of the Bucket Shops, making a living out of it, you let them take away most of your winnings?" I asked.

Livingston nodded.

"Right! And with my eyes wide open, to boot! And it wasn't the only period of my life when I did it, either. A stock operator has to fight a lot of expensive enemies within himself. Anyhow, I came to New York with twenty-five hundred dollars. There were no bucket shops here that a fellow could trust. The Stock Exchange and the police between them had succeeded in closing them up pretty tight. Besides, I wanted to find a place where the only limit to my trading would be the size of my stake. I didn't have much of one, but I didn't expect it to stay little forever. The main thing at the start was to find a place where I wouldn't have to worry about getting a square deal. So I went to a New York Stock Exchange house that had a branch at home where I knew some of the clerks. They have long since gone out of business. I wasn't there long, didn't like one of the partners, and then I went to A. R. Fullerton & Co. Somebody must have told them about my early experiences, because it was not long before they all got to calling me the Boy Trader. I've always looked young. It was a handicap in some ways, but it compelled me to fight for my own because so many tried to take advantage of my youth. The chaps at the bucket shops seeing what a kid I was, always thought I was a fool for luck and that that was the only reason why I beat them so often.

"Well, it wasn't six months before I was broke. I was a pretty active trader and had a sort of reputation as a winner. I guess my commissions amounted to something. I ran up my account quite a little, but, of course, in the end I lost. I played carefully; but I had to lose. I'll tell you the reason: It was my remarkable success in the bucket shops!

"I could beat the game my way only in a bucket shop, where I was betting on fluctuations. My tape reading had to do with that exclusively. When I bought, the price was there on the quotation board, right in front of me. Even before I bought I knew exactly the price I'd have to pay for my stock. And I always could sell on the instant. I could scalp successfully, because I could move like lightning. I could follow up my luck or cut my loss in a second. Sometimes, for instance, I was certain a stock would move at least a point. Well, I didn't have to hog it, I could put up a point margin and double my money

SONNEBORN PRODUCTS

As Destructive *to* Roofs *as a* Thunderbolt!

Rain and Snow, Heat and Cold are constantly breaking down your roofs of composition, tin, paper, felt, etc. Result—leaks and damage.

Your roofs need *permanent protection* and a thin film of short lived paint will not give it.

Go to your hardware dealer or roofer and buy the National Roof Protector

Stormtight

FOR USE ON ANY ROOF IN ANY WEATHER

You can brush it on or your dealer will have it applied.

It will make your roofs leakproof for many years. It will save you constant labor and material expense of repainting, and *preserve* your roof as well.

Don't tear up old roofs. Brush Stormtight over them at *a quarter the cost of a new roof* and they will be as good as new.

For ten years we have sold Stormtight to the largest factories and institutions. Now you can get Stormtight from your dealer, for houses, barns, garages, outbuildings, etc., in large or small quantities.

Write for free booklet, "Leakproof Roofs," testimonials covering years of use and name of nearest dealer.

in a jiffy; or I'd take half a point. On one or two hundred shares a day, that wouldn't be bad at the end of the month, what?

"The practical trouble with that arrangement, of course, was that even if the bucket shop had the resources to stand a big steady loss, they wouldn't do it. They wouldn't have a customer around the place who had the bad taste to win all the time.

"At all events, what was a perfect system for trading in bucket shops didn't work in Fullerton's office. There I was actually buying and selling stocks. The price of Sugar on the tape might be 105 and I could see a three-point drop coming. As a matter of fact, at the very moment the ticker was printing 105 on the tape the real price on the floor of the Exchange might be 104 or 103. By the time my order to sell a thousand shares got to Fullerton's floor man to execute, the price might be still lower. I couldn't tell at what price I had put out my thousand shares until I got a report from the clerk. When I surely would have made three thousand on the same transaction in a bucket shop I might not make a cent in a Stock Exchange house. Of course, I have taken an extreme case, but the fact remains that in A. R. Fullerton's office the tape always talked ancient history to me, as far as my system of trading went, and I didn't realize it.

"And then, too, if my order was fairly big my own sale would tend further to depress the price. In the bucket shop I didn't have to figure on the effect of my own trading. I lost in New York because the game was altogether different. It was not that I now was playing it legitimately that made me lose, but that I was playing it ignorantly. You told me you thought I was the best reader of the tape you ever saw who was not a member of the New York Stock Exchange."

Livingston looked at me. I nodded and said, "You are."

"Well," he went on, "reading the tape like an expert did not save me. I might have made out a great deal better if I had been on the floor myself, a room trader. In a particular crowd perhaps I might have adapted my system to the conditions immediately before me. But, of course, if I had got to operating on such a scale as I do now, for instance, the system would have equally failed me, on account of the effect of my own trading on prices.

"In short, I did not know the game of stock speculation. I knew a part of it, a rather important part, which has been very valuable to me at all times. But if with all I had I still lost, what chance does the green sucker have of cashing in?"

A Change of Base

"It didn't take me long to realize that there was something wrong with my play, but I couldn't spot the exact trouble. There were times when my system worked beautifully, and then, all of a sudden, nothing but one swat after another. I was only twenty-two, remember; not that I was so stuck on myself that I didn't want to know just where I was at fault, but that at that age nobody knows much of anything.

"The people in the office were very nice to me. I couldn't plunge as I wanted to because of my margin requirements, but old A. R. Fullerton and the rest of the firm were so kind to me that after six months of active trading I not only lost all I had brought and all that I had made there but I even owed the firm a few hundreds.

"There I was, a mere kid, who had never before been away from home, strapped. Of course there was only one thing to do and that was to get back to trading. I studied my failure to make good in Fullerton's office. I was flat broke, but what was the use of getting hot with anybody? I knew there wasn't anything wrong with me; only with my play. I don't know whether I make myself plain, but I never lose my temper over the stock market. I never argue with the tape. Getting sore at the market doesn't get you anywhere.

"I was so anxious to resume trading that I went to old man Fullerton and said to him, 'Say, A. R., lend me five hundred dollars.'

"'What for?' says he.

"'I've got to have some money.'

"'What for?' he says again.

"'For margin, of course,' I said.

"'Five hundred dollars?' he said, and frowned. 'You know they'd expect you to keep up a 10 per cent margin, and that means one thousand dollars on one hundred shares. Much better to give you a credit ——'

"'No,' I said, 'I don't want a [illegible] here. I already owe the firm [illegible] What I want is for you to lend me five hundred dollars so I can go out and get a [illegible] and come back.'

"'How are you going to do it?' asked A. R.

"'I'll go and trade in a bucket shop,' I told him.

"'Trade here,' he said.

"'No,' I said. 'I'm not sure yet, but I beat the game in this office, but I am not sure I can take money out of the bucket shops. I know that game. I have a notion that I know just where I went wrong here. What I need now is that five hundred dollars.'

"He let me have it, and I went [illegible] that office where the Boy Trader [illegible] Bucket Shops, as you called him, [illegible] his pile. I knew I couldn't go there because not one of the shops there would take my business. New York was not the question; there weren't any [illegible] business at that time. They told me that the 90's Broad Street and New Street were full of them. But there weren't any where I needed them in my business. So after some thinking I decided to go to St. Louis. I had heard of two concerns there that did an enormous business all through the Middle West. Their profits must have been huge. They had branch offices in many towns. In fact I had been told that there were no concerns in the East to compare with them for volume of business. They ran openly and the best people traded there without any qualms. A friend of mine told me that the owner of one of the concerns was a vice president of the Chamber of Commerce, but that couldn't save him in St. Louis. At any rate, that is where I went with my five hundred dollars to get back a stake to use as margin in the office of A. R. Fullerton & Co., members of the New York Stock Exchange."

Adventures in St. Louis

"When I got to St. Louis I went to a hotel, washed up and went out to find the bucket shops. One was the J. G. Company, and the other was H. S. & Co. I knew I could beat them. I was going to play dead safe—carefully and conservatively. My one fear was that somebody might recognize me and give me away, because the bucket shops all had heard of the Boy Trader. They like gambling houses and get all the cards of the profesh.

"Dolan was nearer than Teller, so I went there first. I was hoping I might be allowed to do business a few days before they told me to take my trade somewhere else. I walked in. It was a whopping big place and there must have been a couple of hundred people there looking at the quotations. I was glad, because in such a crowd I stood a better chance of being unnoticed. I stood and watched the board and looked them over carefully before I picked out the stock for my initial deal.

"I looked around and saw the cashier at the window where you put down your money and get your ticket. He was looking at me so I walked up to him and said, 'Is this where you trade in corn or wheat?'

"'Yes, sonny,' says he.

"'Can I buy stocks too?'

"'You can if you have the cash.'

"'Oh, I got that all right, all right,' I said, like a boasting boy.

"'You have, have you?' he says with a smile.

"'How much stock can I buy for a hundred dollars?' I asked, perfectly [illegible]

"'One hundred; if you got the [illegible]

"'I got the hundred. Yes: and a hundred too!' I told him.

"'Oh, my!' he said.

"'Just you buy me two hundred [illegible] I said sharply.

"'Two hundred what?' he asked, [illegible] now. It was business.

"I looked at the board again and guess wisely and told him, 'Two hundred Omaha.'

"'All right!' he said. He took my money, counted it and wrote out the ticket.

"'What's your name?' he asked me. I answered 'Horace Kent.'

"He gave me the ticket and I went and sat down among the crowd to wait for the roll to grow. I got quick action. I traded several times that day and the next day too. In two days I made about eight hundred dollars, and I was [illegible]

BOYS ~ Here's the gun for the 4th of July

Absolutely Harmless

SHOOTS 5000 times without reloading

No Caps *No Powder*
No Cartridges *No Danger*

THE Ronson Repeater brings you all the sport of a real automatic, with absolutely no danger. You not only hear it shoot, but you *see* it shoot, and see the smoke. It flashes—big, red flashes—every time you pull the trigger.

These flashes make the Ronson Repeater look just like a real gun in action. But this gun is absolutely harmless. Shoot it anywhere and at anything in perfect safety.

We know every boy will want to know what makes the flash. But that is a secret, and we can't tell. Just keep pulling the trigger. You don't have to cock this gun—it's a real repeater. Reloaded in a jiffy with Ronson Redskin Reloads, each of which shoots 5000 times.

The shape, grip and genuine gun-metal finish are just like a real automatic. The Ronson Repeater is made of pressed steel—it's strong and long lasting.

Don't wait for your Ronson Repeater—get it now. Ronson Repeaters are going to sell fast for the Fourth. Buy yours before your dealer is sold out. Better get one today and then you'll have it sure. If you cannot buy one anywhere in your town, use the attached coupon.

This wonderful gun costs only

25¢

Also made in polished nickel plate at 50c.

Both are higher in the West and Canada

Ronson Redskin Reloads

The reloads that you slip into the Ronson Repeater are absolutely harmless. Every one is good for 5000 shots! Buy several extras when you get your Ronson Repeater. You'll want 'em. Price 5c each, higher in the West and Canada.

We cordially invite jobbers and dealers to write us immediately.

$985 Columbia Light Six

Dependable Transportation

The value that is built into a motor car may be judged and measured in many ways, but there is one outstanding, unfailing test.

It is the test of *dependability*.

This was the foremost thought in the minds of Columbia's executives when today's Light Six was first discussed.

It was foremost in the minds of Columbia's engineers during the long period when the Light Six was being created.

True, we have fashioned a car of graceful appearance, of generous proportions, of complete convenience.

But first and last, we have designed and *built* dependability into this car.

We have built into the Columbia Light Six a 50 H. P. Continental Motor, known for many years for its reliability, economy and long life—the first time this famous power plant has ever been available in a car selling at less than a thousand dollars.

And beneath the sturdy frame, marking the 115-inch wheel base, are Timken axles, known equally with Continental as a prized factor of dependability.

Spicer universal joints, Stromberg carburetor, Durston transmission, Auto-Lite ignition, and other equally important units, tested for a generation of motor cars and risen to superiority because of uniformly reliable performance, further certify to the dependability of the Columbia Light Six.

It is an achievement to be remembered that Columbia has brought together the combined engineering staffs and financial resources of these world-wide institutions in creating and producing this dependable car.

And this achievement becomes even more notable when we add that never before have such well known and long tried component parts been combined in a car of such low price.

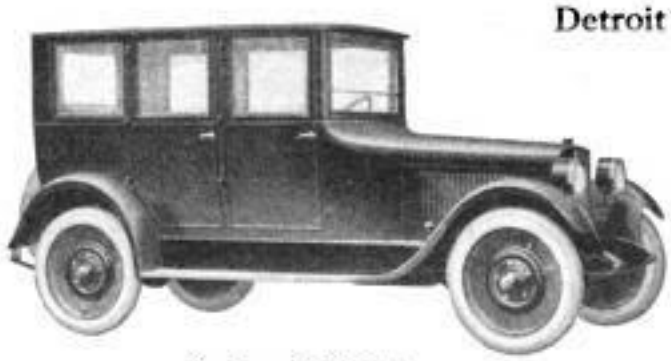
The weight of the Columbia Light Six is only 2450 pounds. Steel or wood wheels are optional. The tires are 6 ply Fisk cords. Throughout the entire car you will find a refinement of detail far in excess of your expectations.

The Columbia dealer in your city will gladly furnish you with every facility for thoroughly examining and analyzing the Columbia Light Six.

Certified by Continental—the largest exclusive manufacturers of motors in the world.

Certified by Borg & Beck—long recognized as the largest builders of dependable clutches.

Certified by Auto-Lite—whose lighting and ignition system is rendering faithful service to hundreds of thousands of motorists.



Certified by Timken—whose name assures that Columbia has the best in front and rear axles and bearings.

Certified by Spicer—acknowledged as a leading producer of universal joints of the most durable type.

Certified by Stromberg—builder of a highly developed carburetor insuring gasoline mileage seldom equalled in a car of this size and power.

l patented Key-Kase

(Continued from Page 102)

they'd let me finish the week out. At the rate I was going, that wouldn't be so bad. Then I'd tackle the other shop, and if I had similar luck there I'd go back to New York with a wad I could do something with.

"On the morning of the third day, when I went to the window, bashful-like, to buy five hundred B. R. T. the clerk said to me, 'Say, Mr. Kent, the boss wants to see you.'

"I knew the game was up. But I asked him, 'What does he want to see me about?'

"'I don't know.'

"'Where is he?'

"'In his private office. Go in that way.' And he pointed to a door.

"I went in. Dolan was sitting at his desk. He swung around and said, 'Sit down, Livingston.'

"He pointed to a chair. My last hope vanished. I don't know how he discovered who I was; perhaps from the hotel register.

"'What do you want to see me about?' I asked him.

"'Listen, kid. I ain't got nothin' agin yeh, see? Nothin' at all. See?'

"'No, I don't see,' I said.

"He got up from his swivel chair. He was a whopping big guy. He said to me, 'Just come over here, Livingston, will yeh?' And he walked to the door. He opened it and then he pointed to the customers in the big room.

"'D'yeh see them?' he asked.

"'See what?'

"'Them guys. Take a look at 'em, kid. There's three hundred of 'em! Three hundred suckers! They feed me and my family. See? Three hundred suckers! Then yeh come in, and in two days yeh cop more than I get out of the three hundred in two weeks. That ain't business, kid—not for me! I ain't got nothin' agin yeh. Yer welcome to what ye've got. But yeh don't get any more. There ain't any here for yeh!'

"'Why, I ——'

"'That's all. I seen yeh come in day before yesterday, and I didn't like yer looks. On the level, I didn't. I spotted yeh for a ringer. I called in that jackass there'—he pointed to the guilty clerk—'and asked what you'd done; and when he told me I said to him: "I don't like that guy's looks. He's a ringer!" And that piece of cheese says: "Ringer my eye, boss! His name is Horace Kent, and he's a rah-rah boy playing at being used to long pants. He's all right!" Well, I let him have his way. That blankety-blank cost me twenty-eight hundred dollars. I don't grudge it yeh, my boy. But the safe is locked for yeh.'

"'Look here ——' I began.

"'You look here, Livingston,' he said. 'I've heard all about yeh. I make my money coppering suckers' bets, and yeh don't belong here. I aim to be a sport and yer welcome to what yeh pried off'n us. But more of that would make me a sucker, now that I know who yeh are. So toddle along, sonny!'"

What Happened at Teller's

"I left Dolan's place with my twenty-eight hundred dollars' profit. Teller's place was in the same block. I had found out that Teller was a very rich man who also ran up a lot of pool rooms. I decided to go to his bucket shop. I wondered whether it would be wise to start moderately and work up to a thousand shares or to begin with a plunge, on the theory that I might not be able to trade more than one day. They get wise mighty quick when they're losing and I did want to buy one thousand B. R. T. I was sure I could take four or five points out of it. But if they got suspicious or if too many customers were long of that stock they might not let me trade at all. I thought perhaps I'd better scatter my trades at first and begin small.

"It wasn't as big a place as Dolan's, but the fixtures were nicer and evidently the crowd was of a better class. This suited me down to the ground and I decided to buy my one thousand B. R. T. So I stepped up to the proper window and said to the clerk, 'I'd like to buy some B. R. T. What's the limit?'

"'There's no limit,' said the clerk. 'You can buy all you please—if you've got the money.'

"'Buy fifteen hundred shares,' I says, and took my roll from my pocket while the clerk starts to write the ticket.

"Then I saw a red-headed man just shove that clerk away from the counter. He leaned across and said to me, 'Say, Livingston, you go back to Dolan's. We don't want your business.'

"'Wait until I get my ticket,' I said. 'I just bought a little B. R. T.'

"'You get no ticket here,' he said. By this time other clerks had got behind him and were looking at me. 'Don't ever come here to trade. We don't take your business. Understand?'

"There was no sense in getting mad or trying to argue, so I went back to the hotel, paid my bill and took the first train back to New York. It was tough. I wanted to take back some real money, and that Teller wouldn't let me make even one trade."

Livingston paused, possibly for sympathy. But I said, "Well, you could scarcely blame him."

"Why not?"

"He had to live," I said.

"Well, I had to live too," said Livingston, aggrievedly. It was his first show of feeling.

"And then what did you do?" I said.

"I got back to New York, paid back Fullerton's five hundred, and started trading again with the St. Louis money. I had good and bad spells, but I was doing better than breaking even. After all, I didn't have much to unlearn; only to grasp the one fact that there was more to the game of stock speculation than I had considered before I went to Fullerton's office to trade. I was like one of those puzzle fans, doing the crossword puzzles in the Sunday supplement. He isn't satisfied until he gets it. Well, I knew there must be a solution to my puzzle."

"Not necessarily," I interjected controversially.

Old McDevitt's Tip

Livingston stared and then he said: "If there is a reason why prices go up or down, then there is a solution to the problem of making money out of anticipating advances or declines. It may not be an easy solution to find. At all events, I was done with trading in bucket shops."

"And you never operated in a bucket shop after that?" I asked.

"Oh, yes," Livingston laughed.

"Broke again?"

"No. That wasn't why. About a couple of months after I got back to New York an old jigger came into Fullerton's office. He knew A. R. Somebody said they'd once owned a string of race horses together. It was plain he'd seen better days. I was introduced to old McDevitt. He was telling the crowd about a bunch of Western race-track crooks who had just pulled off some skin game out in St. Louis. The head devil, he said, was a pool-room owner by the name of Teller.

"'What Teller?' I asked him.

"'Hi Teller; H. S. Teller.'

"'I know that bird,' I said.

"'He's no good,' said McDevitt.

"'He's worse than that,' I said, 'and I have a little matter to settle with him.'

"'Meaning how?'

"'The only way I can hit any of these short sports is through their pocketbook. I can't touch him in St. Louis just now, but some day I will.' And I told McDevitt my grievance.

"'Well,' says old Mac, 'he tried to connect here in New York and couldn't make it, so he's opened a place in Hoboken. The word's gone out that there is no limit to the play and that the house roll has got the Rock of Gibraltar faded to the shadow of a bantam flea.'

"'What sort of a place?' I thought he meant pool room.

"'Bucket shop,' said McDevitt.

"'Are you sure it's open?'

"'Yes; I've seen several fellows who've told me about it.'

"'That's only hearsay,' I said. 'Can you find out positively if it's running, and also how heavy they'll really let a man trade?'

"'Sure, sonny,' said McDevitt. 'I'll go myself to-morrow morning, and come back here and tell you.'

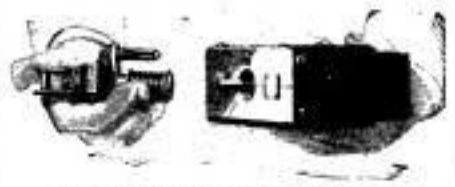
"He did. It seems Teller was already doing a big business and would take all he could get. This was on a Friday. The market had been going up all that week—this was twenty years ago, remember—and it was a cinch the bank statement on Saturday would show a big decrease in the surplus reserve. That would give the conventional excuse to the big room traders to jump on the market and try to shake out some of the weak commission-house accounts. There would be the usual reactions in the last half hour of the trading, particularly in stocks

If you Have
Ignition Trouble

—equip your single cylinder engine with a

WICO

HIGH TENSION MAGNETO



It sounds too good to be true, but we will prove to you

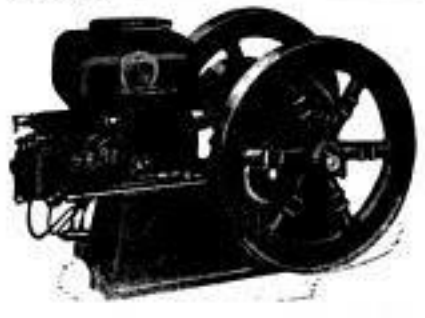
—that the unique Wico design eliminates ninety per cent of all trouble making possibilities in conventional magneto or battery ignition systems.

—that Wico will give a strong, high voltage spark for starting, independent of engine speed.

—that Wico will give more hours of continuous service than you have thought possible, and under the hardest conditions of rain, cold, vapor and dirt that an outdoor engine can be subjected to.

—that you can understand and care for a Wico Magneto as easily as any other part of your engine.

All Wico moving parts withdrawn



"You want Wico"

for All One Cylinder Engines

Write your engine builder, see your dealer, specify Wico. Most engine builders now use and recommend Wico Magnetos.

Mail this coupon today. We will help you to get Wico and send you a most interesting booklet.

in which the public had been the most active. Those, of course, also would be the very stocks that Teller's customers would be most heavily long, and the shop might be glad to see some short selling in them. There is nothing so nice as catching the suckers both ways; and nothing so easy—with one-point margins.

"That Saturday morning I chased over to Hoboken to the Teller place. They had fitted up a big customers' room with a dandy quotation board and a full force of clerks and a special policeman in gray. There were about twenty-five customers.

"I got talking to the manager. He asked me what he could do for me and I said nothing; that a fellow could make much more money at the track on account of the odds and the freedom to bet your whole roll and stand to win thousands in minutes instead of piking for chicken feed in stocks and having to wait days, perhaps. He began to tell me how much safer the stock-market game was, and how much some of their customers made—you'd have sworn it was a regular broker who actually bought and sold your stocks on the exchange—and how if a man only traded heavy he could make enough to satisfy anybody. He must have thought I was headed for some pool room and he wanted a whack at my roll before the ponies nibbled it away, for he said I ought to hurry up as the market closed at twelve o'clock on Saturdays. That would leave me free to devote the entire afternoon to other pursuits. I might have a bigger stake to carry to the track with me—if I picked the right stocks.

"I looked as if I didn't believe him, and he kept on buzzing me. I was watching the clock. At 11:15 I said, 'All right,' and I began to give him selling orders in various stocks. I put up two thousand dollars in cash, and he was very glad to get it. He told me he thought I'd make a lot of money and hoped I'd come in often.

"It happened just as I figured. The traders hammered the stocks in which they figured they would uncover the most stops, and, sure enough, prices slid off. I closed out my trades just before the rally of the last five minutes on the usual traders' covering.

"There was fifty-one hundred dollars coming to me. I went to cash in.

"'I am glad I dropped in,' I said to the manager, and gave him my tickets.

"'Say,' he says to me, 'I can't give you all of it. I wasn't looking for such a run. I'll have it here for you, Monday morning, sure as blazes.'

"'All right. But first I'll take all you have in the house,' I said.

"'You've got to let me pay off the little fellows,' he said. 'I'll give you back what you put up, and anything that's left. Wait till I cash the other tickets.' So I waited while he paid off the other winners. Oh, I knew my money was safe. Teller wouldn't welsh with the office doing such a good business. And if he did, what else could I do better than to take all he had then and there? I got my own two thousand dollars and about eight hundred dollars besides, which was all he had in the office. I told him I'd be there Monday morning. He swore the money would be waiting for me."

Settling an Old Score

"I got to Hoboken a little before twelve on Monday. I saw a fellow talking to the manager that I had seen in the St. Louis office the day Teller told me to go back to Dolan.

"'I came for the balance of my money,' I said to the manager.

"'Is this the man?' asked the St. Louis chap.

"'Yes,' said the manager, and took a bunch of yellow backs from his pocket.

"'Hold on!' said the St. Louis fellow to him and then turns to me. 'Say, Livingston, didn't we tell you we didn't want your business?'

"'Give me my money first,' I said to the manager, and he forked over two thousands, four five-hundreds and three hundreds.

"'What did you say?' I said to St. Louis.

"'We told you we didn't want you to trade in our place.'

"'Yes,' I said; 'that's why I came.'

"'Well, don't come any more. Keep away!' he snarled at me. The private policeman in gray came over, casual-like. St. Louis shook his fist at the manager and yelled: 'You ought to've known better, you poor boob, than to let this guy get into you. He's Livingston. You had your orders.'

"'Listen, you,' I said to the [illegible] man. 'This isn't St. Louis. [illegible] off any trick here, like your [illegible] Belfast Boy.'

"'You keep away from this office [illegible] can't trade here!' he yells.

"'If I can't trade here nobody [illegible] going to,' I told him. 'You can't get [illegible] with that sort of stuff here.'

"Well, St. Louis changed his [illegible] once."

"'Look here, old boy,' he said, [illegible] up, 'do us a favor. Be reasonable! [illegible] know we can't stand this every day. [illegible] old man's going to hit the ceiling when [illegible] hears who it was. Have a heart. Lay off!'

"'I'll go easy,' I promised.

"'Listen to reason, won't you?' For [illegible] love of Pete, keep away! Give us a [illegible] to get a good start. Will you?'

"'I don't want any of this big [illegible] mighty business the next time I [illegible] said, and left him talking to the man [illegible] at the rate of a million a minute. [illegible] some money out of them for the way [illegible] treated me in St. Louis. There was [illegible] sense in my getting hot or trying [illegible] them up. I went back to Fullerton's [illegible] and told McDevitt what had [illegible] Then I told him that if it was agreeable [illegible] him I'd like to have him go to [illegible] place and begin trading in twenty- [illegible] share lots, to get them used to him [illegible] the moment I saw a good chance [illegible] up big, I'd telephone him."

Teller Trimmed Again

"I gave McDevitt a thousand [illegible] and he went to Hoboken and [illegible] him. He got to be one of the [illegible] Then one day when I thought I [illegible] break impending I slipped Mac the [illegible] and he sold all they'd let him. I [illegible] twenty-eight hundred dollars that [illegible] after giving Mac his rake-off and [illegible] expenses, and I suspect Mac put [illegible] little bet of his own besides. Less [illegible] month after that, Teller closed his [illegible] branch. The police got busy. And [illegible] it didn't pay, though I only traded [illegible] twice. We ran into a crazy bull [illegible] when stocks didn't react enough [illegible] out even the one-point margins. [illegible] course, all the customers were [illegible] winning and pyramiding. No end of [illegible] shops busted all over the country.

"That was the last time I traded [illegible] regular bucket shop. I don't suppose [illegible] is one shop in operation anywhere [illegible] not the old-fashioned kind."

"Their game has changed," [illegible] Livingston. "Trading in the old-[illegible] bucket shop had some decided advantages [illegible] over speculating in a reputable [illegible] office. For one thing, the automatic [illegible] out of your trade when the margin [illegible] the exhaustion point was the best [illegible] stop-loss order. You couldn't get [illegible] for more than you had put up, and [illegible] was no danger of rotten executions [illegible] ders, and so on. Here in New York [illegible] shops never were as liberal with [illegible] trons as I've heard they were [illegible] Here they used to limit the possible [illegible] on certain stocks of the fractional [illegible] two points. Sugar and Tennessee [illegible] Iron were among these. No matter [illegible] moved ten points in ten minutes, [illegible] only make two on one ticket. The [illegible] that otherwise the customer was [illegible] too big odds; he stood to lose [illegible] and to make ten. And there [illegible] times when all the shops, [illegible] biggest, refused to take orders [illegible] stocks. In 1900, on the day before [illegible] Day, when it was a foregone [illegible] that McKinley would win, not a [illegible] land let his customers buy stocks [illegible] election odds were 3 to 1 on M[illegible] By buying stocks on Monday you [illegible] make from three to six points [illegible] man could bet on Bryan and [illegible] and make sure money. The [illegible] refused orders that day."

"They refused mine all the [illegible] Livingston. "If it hadn't been [illegible] never would have stopped trading. [illegible] And then I never would have known [illegible] there was much more to the game [illegible] speculation than to play for [illegible] of a few points."

"They did you a good turn," I said.

But Livingston merely shrugged [illegible] shoulders, as I looked about the [illegible] room.

Editor's Note—This is the second [illegible] articles by Mr. Lefèvre. The next [illegible] early issue.

CHANGE YOUR WAY!

The Address-Press

It required this girl's entire time every day to hand-address 800 envelopes in which her employer mailed an important daily report.

But last week, *with her regular typewriter*, she stencilled the 800 addresses into Elliott Address Cards. Did it in less than six hours.

She filed these 800 Address Cards in alphabetical order in this special cabinet—filed them just like index cards.

And now each day she puts the address cards into the hopper of the Elliott Address-Press, and as fast as she can turn the hand crank—

—each address is transferred onto an envelope at a speed of 800 addresses in thirty minutes—800 live letters ready to do business.

SECRET MOVEMENTS

(Continued from Page 9)

with the Russian. He must look sad and innocent himself, and hold them there until their train went out—encouraging this Twohey's talking. And then when once those two pulled out he could have the Russian there to himself—and smash him alone and peaceful! "What will they," he says, "be founded on?"

"What are the big secret radical leaders striving to do now," he says back—"in the first place?"

"You tell me," says Mike, still making talk. "What are they?"

"They're bringing in and starting up the new wise and universal labor ideas that they've worked out in Europe here."

"I seen so," says Mike.

"And would you know," he says, leaning forward and engaging still more earnest Mike's eye with his own—"would you know what the new leaders of this all must do to bring this advanced, united and well-considered labor movement in Europe here into this barbarous, backward and degraded situation here?"

"I would," says Mike.

"They'll move, you might say, Europe here!"

"Move Europe here—with what?" says Mike.

"It's here to-day, ain't it?" he says. "All over—in the minds of the European worker that's everywhere in this country today. That's doing all the work—the real actual hard work and producing of this country."

"The poor scissor-bills!" says Mike.

"Call them what you will," he says. "In scorn or carelessness or contempt! But they are the real downright actual producers—that create by their labor all we have. The real bed-rock protelariat."

"The protelariat?" says Mike after him.

"As they call the real worker—those wise theoretic boys that have it all figured out over there," says Twohey, going on. "And you can say what you want, it's them and their labor that everything is built up on. And they're just the boys that are wise to that fact to-day—coming over like they do, from Italy and Russia and the new Polak kingdom, with their grand new modern education on such things that they are getting all over now in Europe—how we workers have got to be all bound up together in one grand central mass of the toilers.

"And so, as I was telling you," he says, "that's the guy that these great, still, wise leaders are starting in with here as elsewhere—founding the new labor movement on the great knowledge and hopes and understandings of the grand, noble, humble, strong European worker that's come over here. It's the foreign European toiler that we all ——" he says, and stopped.

For all at oncet there was this strange and unusual noise—a sound between a grunt and a groan—that stopped in a kind of a cough. And they both had to look around.

"My foot slipped," said the Wobbly, his face red and fiery—and kind of mad looking. "My foot slipped when I was crossing my legs, and I guess I must have kicked him. But I guess there wasn't no great harm done, was there, Hunkie?"

"No," says the Hunk. "No hurt me!" And he turned and looked outside again—only flattened up against the window now, more out of his reach.

"Oh, that was all, huh?" says this Twohey, starting up and going on again. But Slattery seen him give a dark and warning glance at the Wobbly. And then he went on to talk some more in that fine, polite, pleasing way he had—and Mike helping on, even more polite than him.

"And now," he says to Slattery, "would you know the real, honest-to-goodness dope on the new secret way these wise new leaders of labor are framing up underneath in this country everywhere—in all these labor troubles you see about in the papers now to take charge of this old dying rotten carcass of the old federation, and the rest of the dying old crafts unions here—and put it onto the new modern organization of labor by industries and countries and the world—where the toiler, instead of always getting it in the neck, has all the say-so?"

"I would," says Mike.

"You've heard of them radical clothing workers of New York and Rochester and Chicago and elsewhere?"

"I dunno but I have," says Mike.

"All Russian Jews and Italians—full of them grand new Russian and Italian plans for the workers. With the wisest and most farseeing leaders in the country, winning strikes when all the others lose them. And all organized, and hooked in like brothers, way down underneath, with the leaders of the great new ruling protelariat in Russia. And all organized and constructed in the way they've worked out there—by industries and countries—so that when the day comes to take all over for the workers they'll be there in sections—all ready to be hitched together like a train of cars, to one grand and universal world movement of the toilers, by a few known and simple commands."

"So them's the ones?" says Mike, pushing him on, and still watching back behind him when he could.

"That's the chief, strong, practical starting point," he says, and Slattery thought he seen with the corner of his eye the Wobbly look back quick and ugly when he said it. "That's the place where all them educating, driving movements are coming out from, secret—the East Side of New York.

"And from this place just lately the bright enduring flame of revolt is spreading in the new radical textile workers' movement that's bursting forth now in all them old baronies and tyrannies and hell holes for the foreign European workers in them New England factory towns."

"Are they all Hunks and Dagos there, as well?" says Mike.

"They are," he says, "and they're in touch all the time with them clothing workers in New York, who were, in fact, the ones that organized them first."

"Then it all goes back there into New York?"

"Yes. The real practical place—where they've got the real money and the backing, and the connection back in with Russia, and the push and enterprise to go ahead. And it's from there that this new boring-in thing of this Foster you was asking about first, is starting really—this educating and boring-in plan in the federation and brotherhoods, which is all working on the European toiler."

"Its headquarters," says Mike, "they claim, is Chicago."

"Yes, but it's started and backed up elsewhere. You know who it was that backed this man Foster up most in organizing the European workers in the great steel strike?"

"Who was it?" says Mike. "The other unions in the federation?"

"It was not," he says. "They never come across one-half so much and so hearty as these radical clothing workers back there in New York. Why should they, when the bunch at the head—Sammy Gompers and the rest—knew they were done for if it once got going; that it was only the same plan of boring in underneath with the low-paid European worker that's going on now, and that the Soviet of Russia leaders were all the time planning for.

"And naturally on the other side—working for the idea, just as they are to-day—were the farseeing workers for the new industrial unionism, working with the trained, educated, understanding toiler from Europe. For, as I was telling you," he says, "it's all founded on the grand, noble, patient, understanding European toiler, that we're learning every day now to know and appreciate and look up to more. The grand, noble, patient protelariat," he says—and stopped again.

For at that both him and Mike gave a quick sudden jump, for there was another strange unearthly sound out of the Russian—not loud, neither, but kind of deep and terrible, as if it was knocked out of something, like when you hear them killing cattle with an ax.

"It's my foot slipping again," says the Wobbly, right away without waiting. "It must be something on the soles."

"You should have gone to dancing school more when you was young," says the other brakeman, sarcastic, giving him a short and evil look, "and got trained so you'd be safer with your feet."

"You'd think so if I handed you one of them!" says the Wobbly, giving back as ugly a look as he got.

And Slattery saw it with great joy, for it was clear to him now that they were on the

edge of a break-up between them—if the patient Russian would hang on still. And he thought he would, for he stood there still at the window, with that sad, puzzled, suspicious look these Hunkies have on their foreheads, and his little eyes staring far away—as if he never heard nor understood nor thought about a thing that was being said.

"Yes," says Mike, keeping them on talking, not wanting them to come to any real actual mix-up there before their train pulled out. "Yes," he says. "But what show have they got with all these schemes you're mentioning?"

"They've got all the show there is, ain't they?" he says, turning his eyes back and starting in all over again with his explaining and his blandandering with Mike.

"Is that your opinion?" says Mike.

"It is," he says. "And for many reasons. For in the first place you see now how still and quiet it's all going through today, hid beneath the general contempt and carelessness of the enemies of labor. For the fat bourjaws at the head of capital in America, and their paid, pampered and prostitute press are all passing up the movement in ignorant and foolish and studied silence, while underneath the still, sure, secret forces of the revolution are eating on at the federation and the brotherhoods and all like that till their foundations are all hollowed out underneath them."

"You don't tell me," says Mike, more wishful than ever to keep him going.

"I do," he says. "Although any fool who's studied as much history as you'll find in the almanac knows that radical movements start all over after wars—for ten years, anyhow, like they did in this here country after the Civil War, all through the '70's, romping and raging among all the workers."

"So I seen once in a paper," says Mike, urging him on and on, taking up the time.

"Yes," he says. "Only now it will be far different from the '70's. For the world has moved on since that time, and capitalism has grown rottener and rottener and riper for its doom; and we are today not a nation of ignorant bourjaws and poor pioneer peasants, but of educated, dissatisfied, class-conscious workers, growing more and more so under the leadership of men who have got their strings out now, and well and deeply laid among all the toiling millions—the 98.3 per cent that produce everything in America today and have it taken away from them by the 1.7 per cent."

And while he was saying this Mike shot another look behind him and seen them still there—the poor patient Russian standing staring off, and the other one sitting back, as if he was cursing under his breath, ready to give up the whole thing disgusted—and just smash him and go!

"Millions," this Twohey was going on, with his deep-down explaining. "More and more millions—all getting more together and united every day."

"Do you mean it?" says Slattery.

"I do," he says. "And you can count them. Starting, where you should start, with the foreign European radical, outside the old-time labor unions entirely. Taking the clothing trade and the textile workers and all like that—the real European industrial type union! And there's one million, without a doubt."

"So much as that?" says Mike.

"Or will be soon," he says, going on. "And from there you come into the federation, through the mine workers, by far the biggest union there—practically all foreign radicals, and organized already the right way, as an industry—and not split up into crafts. And bound, just as soon as they can get loose from the wiles and tricks of them central politicians, to run free and wild and radical. And that's another half a million. Yes—and more!"

"It is?" says Slattery.

"Yes. And with them the railroad unions and the federation—who are tuned up in just about the same way. And that's a half a million and over, more."

"Is it?" says Mike.

"It is. And with the machinists, and the federation clothing workers and the others that are radical and modern in thought, they're easy a majority of the American Federation of Labor, which they'll make short work of controlling, as soon as this Foster and his borers-in shows and educates them how to handle them political tricksters in control there now with their own tricks."

"I believe you," says Mike.

"So there's the federation," he says. "And that's four million more, they claim. Or put it three and a half—for sake of being conservative."

"Sure," says Mike.

"And then next, when that's done," he says, "them railroad brotherhoods will fall into line—all smooth and easy. And there's two million or so more."

"Making seven, about, in all," says Slattery.

"Yes," he says, now growing warmer and more enthusiastic as his millions came rolling in. "And from there we will go on into all those great unorganized millions that have never come in, and never will—like it was in England—till we give up the old out-of-date idea, and give them a modern union organization that's worthy of the name."

"So there's ten or twelve million more," says Mike, helping him out.

"Twenty at the least," he says, "if we go by England. And if you go by Germany, twenty-five. Twenty-five millions—or more," he says—"all bound up and united," he says, and stopped again a third time. For there was another sudden thump and a groan, followed by a kind of clank. And looking over, Mike seen what had happened. The Wobbly had taken his old hickory brake club, that he'd had lying by his chair, and thrown it at the Russian, ugly and disgusted, taking him fair in the back.

"Say—what is this?" says the other shack, ugly and insulting.

"Oh, nothing much," says the Wobbly in a kind of reckless, careless voice. "I was just trying to see if it was alive. Some are and some ain't!"

And Slattery seen it was what he thought. He hadn't made no impression on the Hunk; he'd tried till he got tired out and disgusted. And he'd finally heaved his stick at him, and let it go at that.

But not a word out of the patient Russian toiler yet. He stood there, deaf and dumb. You couldn't get a sound out of him, probably, if you run him through a meat chopper, starting all the most sensitive parts first. He'd still stand there patient and humble and silent to the end.

"Twenty-five millions!" says Mike, starting keeping them moving on. "As much as that?"

"Twenty-five or more," says Twohey, talking on now at random like and kind of hoarse and downhearted—and giving one last warning look at the Wobbly to try once again. "Twenty-five million," he went rambling on, like a man who had got sick and worn out with talking, and was just shooting off from memory words he'd shot off many times before. "Twenty-five millions. All marshaled in and marching on under the grand old T. U. E. L."

"The T. U. E. L.?" says Mike. "What's that?"

"If you want to know," says the Wobbly, breaking in now, harsh and sneering, "it's a poor piffling piece of punk, like all the rest he was feeding you—about the sewer rats and the crawlers and the borers-in and the communists ever uniting up the workers of this country into one big union."

And Mike saw now finally it had come—what he had been waiting for from the first!

"Is that right?" says the borer-in, staring back at him, resolute and hard and bloodshot.

"It is," says the Wobbly. "As you'd know and admit if you ever read or thought anything half so sensible as a horse."

"I suppose you think," he came back, "it will be the I. W. W. that will be building it up."

"It will," he says, fierce and personal. "And long before Foster and his T. U. E. L. gets more members than can be counted by an idiot child of three."

"They're off!" says Mike to himself.

And now he slipped over to the top of the stairway—to head off the Russian from taking a sneak while all this was going on. For he seen he had them going now for good—starting in one of them old-time radical arguments over their letters and initials.

"What about the dying membership of the I. W. W. today?" says the borer-in.

"It's got twenty times what'll ever come in under this T. U. E. L. campaign," says the Wobbly, Smear.

"Hold! Wait!" says Mike. "What is this T. U. E. L.?"

"That's the poor fake and camouflage that this Foster and his Kikes and Wops are

An Extra $10 SAVING If You Act *Quickly*

OLIVER

Warning:
This is the last appearance of this offer. It is your only opportunity.

This Offer Expires July 1st

To all who have been planning to buy a typewriter, we make this special announcement—up to July 1st you can save $45 on the famous $100 Oliver, the price being $55. After July 1st, the price will be $65. Prompt action saves you the extra $10.

Total Saving, $45

This offer is made by the Oliver Typewriter Company itself. You get a brand new Standard Oliver, Model Nine, direct from the factory, not second-hand, not rebuilt. It is the identical Oliver, long priced at $100. Over 950,000 have been sold to satisfied users the world over.

SEND NO MONEY

Just mail the coupon and we send you an Oliver for Five Days' Free Trial. If you want to buy it, pay $3 after trial, then $4 per month. If you don't want it, ship it back at our expense. By dealing direct with the factory, you save the usual selling cost. Sending the coupon does not obligate you to buy. We leave the decision to you, after the Oliver arrives.

Mail the Coupon NOW

Note that the coupon is valid only until midnight, June 30th. After that the price will be $65. So act quickly. Mail the coupon now and get the Free Trial Oliver. You do not assume the slightest risk. The Oliver must sell itself.

Illustrated Catalogue upon request

White Trucks

PURCHASERS pay nothing for the "White" name—yet it is one of the most *substantial values* obtainable in the whole field of motor haulage.

It assures them permanent owner service.

It protects their truck investment.

It advertises their own delivery service.

It gives them the satisfaction of knowing beforehand that their truck *can do* the most work for the least money.

It assures them a good resale price.

Why pay as much for a truck without these values? Why experiment?

THE WHITE COMPANY

Cleveland

21 Years of Knowing How

EASY TO SELL

Mr. La Rocco Sells to Three out of Five of the People He Interviews

Mr. La Rocco began selling *The Saturday Evening Post*, *The Ladies' Home Journal* and *The Country Gentleman* in his spare hours to earn money to pay for an education. He is very much pleased with his new work, which has brought him generous returns from the start. In his very first week he wrote more than 20 orders. He works solely among strangers, yet he finds the popularity of the Curtis publications so great that he sells to three out of five of the people he interviews.

CHARLES LA ROCCO, Massachusetts

We've a Splendid Opening for You

Mr. La Rocco had no experience when he began this work—he found that he needed none to make big profits. And you need no experience to enjoy the same opportunity. Just send the coupon below—it involves no obligation—and we will tell you all about our plan for making your spare hours profitable to you. Literature, supplies, a special salesmanship course, personal assistance are all offered FREE to new workers.

THE CURTIS PUBLISHING COMPANY,
691 Independence Square, Philadelphia, Penna.

Gentlemen: Please tell me, without obligation, how I can easily earn extra money by your plan.

working under," says Smear, the Wobbly, "handing themselves salaries for breathing. The Trade-Union Educational League, they call it, trying to put out this boring-in scheme under the general campaign of the R. T. U. I."

"Wait up!" says Mike. "What was that one you just got off?"

"The Red Trade-Union International," says the Wobbly; "that thing they cooked up over there last summer—to hitch the labor unions of the world back to the Comintern."

"The Comintern?" says Mike after him. And he seen the Russian now at the window turn and stare with the other brakeman.

"The Comintern, in Moscow, where they're uniting all the grand, strong, powerful trade-unions of Asia and Africa and Russia together—in the R. T. U. I., under the strong commanding right arm of the C. E. C."

"The C. E. C.?" says Mike after him. But he passed right on now, getting warmed and interested over his initials.

"Did you see that stuff the members of the P. P. W. I. U., No. 450, brought out," says the Wobbly, turning now straight and vicious on the borer, "about your band of murdering assassins? What Fellow Worker Williams had to report about that gathering of whiskers and sashes there in Moscow last July, when your poor silly R. T. U. I. was formed directly under the hand of the C. I.?"

"Hold! Wait!" says Mike. "Must you talk like two madmen learning shorthand? Let me in on this."

But they just passed along over him.

"I did not," says the borer-in, answering harsh and firm, "for I knew in advance what it would be. But did you read yourself what the Unity Bulletin had to say against Solidarity on the report of the Canadian O. B. U. delegates over there—and the grand world-wide work of the R. L. U. I.?"

"What nonsense is this?" says Mike to them, getting curious and then mad himself. "You sound like a manifest clerk reading the letters off of freight cars. For the love of heaven, talk slower and more in full."

But they whirled on regardless, scattering initials all over the place.

"I ask you this," says Twohey, the borer-in, of the Wobbly: "Did or did not the I. W. W. send a delegate to the preliminary session of the C. C. of the R. L. U. I.? And did or did not this first delegate subscribe to its theses?"

"More initials!" says Mike, standing at ease now—striving no more to follow on the different letters of the million or more of them radical societies, each one set to unite the workers of the world.

He stood now and listened to the initials rolling on—and watched them with the Russian. And after that he watched, cautious, the Russian himself—for fear he might take a notion to make a break while they were talking. And he seen then he wasn't intending to do so now, for he just stood there staring at the other two like those Hunkies do, still and quiet—with their little shifty eyes and their wrinkled-up foreheads and their little turned-up noses, with that still, suspicious, puzzled, sour look they have.

"The preliminary session of the C. C. of the R. L. U. I.," the Wobbly was saying. "Don't make me laugh!" he says.

"You'd think, I suppose," says the other one, "that the F. A. U. D. would unite them better., Or the F. R. A. U. D., as it should be spelled."

"I don't feed out of the hand of the Third anyway!" says the Wobbly, increasing the mysterious talk. "Nor the Two-and-a-Half. Nor any of them whiskered political bums—red or yellow. For they're all alike."

"You're an anarchosyndicalist!" says the borer-in. "And a decentralizer. And a dirty Wobbly yegg."

"You're a centrist and a chipmunk!" says the Wobbly back.

"And you're a separatist, and a defeatist! And a low-down dirty dualist!" says the borer-in.

"And you're a liquidater and a murderer of women. And an all-round maggot and cowardly sewer rat!" says the Wobbly.

"And you're full of the infantile sickness of leftism!" the other says, and stops for a minute, with Mike and the Russian staring.

"And as for the cowardly communists ever uniting anything," says the Wobbly, going on, "they can't crawl out of one of their underground dugouts where they live, and hold a gathering in [illegible] cellars or swamps or trees [illegible] they sneak off to meet in [illegible] up into a few hundred more [illegible] C. P. and the C. P. of A. and [illegible] and the W. P. of A.—and the [illegible] that have split off lately."

And Slattery gave a start [illegible] once he heard a grunt like, and [illegible] he seen the face of the Russian [illegible] with the puzzled wrinkles [illegible] forehead—staring and opening [illegible] if he was going to butt in and speak [illegible] all that silence.

"For the love of heaven," [illegible] to himself, watching him, "he [illegible] this! This is the kind of language [illegible] talk!"

"Unite the world!" the W[illegible] goes sneering on. "With the k[illegible] working under the C. E. C[illegible] intern? They couldn't [illegible] stamp to a letter."

And Mike looked back ag[illegible] heard the Hunk give another [illegible]

"They're torn up, among t[illegible] Russia," says the Wobbly. [illegible] fight. The C. E. C. spend all [illegible] after they've eaten up the [illegible] swiped from the famine distr[illegible] plans and diagrams how to evac[illegible] tion from the S. R. and the R. [illegible] A. S. and the W. O.—and all the [illegible] real genuine revolutionists wh[illegible] heads up everywhere now, and [illegible] eve of throwing over the ed[illegible] uniforms—the driveling, crazy [illegible] the C. E. C. and the seventeen [illegible]

"And the eighteen B. V. [illegible] thirty-one Y. M. C. A.'s!" Mike [illegible] ing to himself, giving up [illegible] crazy language that nobody [illegible] anyway but a radical. He gav[illegible] was thinking instead what [illegible] would have after the other over[illegible] train time and left the still pat[illegible] Russian, with his three hundred [illegible] him. But then he gave his [illegible] est jump, for all at once he [illegible] Russian hollering, breaking in [illegible] the mouth.

"Liar!" he says. "Dog! [illegible] The S. R. and the W. O. all [illegible] Russia! All bad mens! Ve st[illegible] them all!" he says, raising up his [illegible]

"Will you listen to this!" [illegible] Wobbly, staring. "The dead [illegible]

"The C. E. C. and the C. P. [illegible] mens. All good for other [illegible] Russia," he yells, and brings down [illegible] arms again, and goes on raving and [illegible]

But, after this, Slattery was [illegible]

"Saints reward us!" he says [illegible] to himself.

For when the Russian's arms [illegible] he heard something soft fal[illegible] down he seen his old sm[illegible] rolling down the stairs where [illegible] ing. The Hunk had it poised [illegible] hasty somewhere in his overa[illegible] and now when he got excited [illegible] lution he'd shaken it loose some [illegible] out upon the floor.

There was a kind of wooden [illegible] the top of the stairway to [illegible] and Mike ducked down under [illegible] grabbed his wallet, and opened [illegible] seen. And the three hundred was [illegible] And then he ducked up again and [illegible] them—and they were still raving and [illegible] ing and bawling out their initials [illegible] the Russian, for they couldn't [illegible]

"In Russia—in my people's [illegible] to-day. The C. E. C.'s [illegible] Oh—all fine! Oh—all grand [illegible] good!" he was hollering, waving [illegible] around. And the other two trying [illegible] him off—and not able to!

"Shall I hold him here," [illegible] considering, "till the others get [illegible] him up? For he certainly should [illegible]

And then he smiled, for [illegible] better way.

"Say," he says, jumping in [illegible] the Russian. "What do you [illegible] going to do—stay here till [illegible] to you bellowing and bawling and [illegible] up the alphabet? Get out of here [illegible] crazy scissor-bill!" And [illegible] gave him a shove down the stairs.

And when he done so, and by [illegible] ing down, he seen the other [illegible] jawing away at once, and [illegible] look at one another—as be [illegible] that they would.

"Well, so long!" says the [illegible] both together.

And with no more words [illegible] down the tower stairs and [illegible]

(Continued on Page [illegible])

1. *Best fruits are found in morning markets. Select only sound, ripe (but not too ripe) fruit.*

2. *Discard all poor fruit. Grade according to size, and degree of ripeness. Wash fruit thoroughly.*

One easy turn of the Lorain Red Wheel gives you a choice of 44 measured and controlled oven heats for any kind of oven cooking or baking

4. *Fruits being canned and foods being cooked in a Lorain-equipped Gas Oven require no attention. You can do other work, shop or visit.*

3. *Fill sterilized jars with fruit; cover with water or syrup. Adjust lids loosely over scalded rubbers. Set Lorain Red Wheel at 250 degrees.*

5. *When time is up (See Lorain Canning Chart) remove jars, tighten lids and invert jars.*

6. *Thus by noon your housework is finished—and a big canning is done, easier, quicker and better than ever.*

7. *Now you are free for the afternoon, because Lorain will cook the evening meal unwatched, while you're miles away.*

A Short lesson in the New Way to Can

WHERE housewives are asking for information about the new way to can. y wonder why this method has not been in use ever since gas became the n's most popular cooking fuel. In this easy, illustrated lesson we tell you and "how" of the new Lorain Oven Canning Method.

n Method of Oven Canning is impossible with the old-type gas range, beheat of the oven cannot be maintained at a low, even temperature. But, Oven Heat Regulator (invented in the Research Laboratories of American ıpany) enables housewives to regulate and control the heat of a gas range y cooking temperature, for *any* length of time.

r the short lesson in the New Way :e cherries, for instance: First you ıse (pitting them if you wish). Then ıem into ordinary glass jars that erilized. Next you fill the jars with :r, or with syrup if sweetening is

ce the scalded rubbers on the jars ıe lids loosely. Then you light the , set your Lorain Oven Heat Reg-) degrees, place the filled jars on ıd close the oven door.

main in the oven one hour, pint nutes. An ordinary alarm clock hen time is up. Then you remove en the lids, and your canning is and quicker than you've ever done it. Moreover, all fruits and vegetables canned by this method have a better color, remain firm, and retain that fresh-from-the-garden flavor.

Wherever gas is used you'll find dealers who sell these wonderful Lorain-equipped Gas Ranges. These dealers will be glad to demonstrate the Lorain Method of Oven Canning, also Lorain Whole Meal Cooking, another remarkable achievement of these ranges.

Make it a point to inspect a Gas Range equipped with a Lorain Oven Heat Regulator before canning season is over. And—be sure the regulator is a Lorain. Look for the *Red Wheel*.

We'll be pleased to send to you, free of charge, a chart explaining how to can 37 different fruits and vegetables by the Lorain Oven Method. Just fill in and mail the attached coupon.

"I'm After That Raise in Pay!"

"A few years from now I want to be making at least five thousand a year—that's why I'm spending two or three evenings a week at this desk. I'm tired of being a business nobody, Jack, and I've made up my mind to stick to this game until I put it over big."

Real stuff in that young man—and the wonderful thing about it is that it's a mighty *interesting* game he's playing.

Have you ever tackled a good old-fashioned puzzle and got thoroly absorbed in it? Then you'll understand why so many men become enthusiastic about the LaSalle Problem Method of acquiring specialized business training.

You see, by the Problem Method you don't just *read* how to do a thing, you *do* it. You are shown the *principles* that govern a situation; then under the direction of some of the ablest business men in their respective fields you work out *everyday business problems*—just the problems you will meet on the bigger job.

That kind of training, you'll agree, is *practical*. It explains why during only three months' time 1089 LaSalle members reported salary increases totaling $889,713, *an average increase per man of 56 per cent.*

What will you be doing with your spare time in the coming months? First thing to do, we should say, would be to *get the facts about LaSalle training.*

The coupon below will bring them to you without obligation, together with details of our convenient payment plan; also your free copy of "Ten Years' Promotion in One," a book that has proved the inspiration of thousands of ambitious men.

A stroke or two of the pencil, a letter dropped in the mail-box, and you have made your start on the road to bigger things. Make that start TODAY.

THE SIGN OF SATISFACTION

DeMOIN TOUR TENT

Easily carried in the car. This bag, 12x24, is furnished free with each equipment.

Your choice of Olive Drab or Khaki canvas, mildew and water proof. No poles used. Put up in 3 minutes. Camping space in addition to shelter for car, 7 feet wide.

ARE you taking a trip by auto this summer? Get a genuine DeMoin Tour-Tent—a camp home for your party; a shelter for your car wherever you park. Easy to carry. Whatever make your car, wherever you plan to go, whether you park at the outskirts of the city, in the mountains, along the country roadside, at the lakeshore—the DeMoin Tour-Tent is your outdoor home, your garage.

WRITE TODAY for full particulars of this most popular of tour tents.

Des Moines Tent and Awning Co.
943 Walnut St., Des Moines, Iowa

If you take measurements, you need a

"ONE-MAN" STEEL TAPE

Tape soon pays for itself, as self-holding end eliminates second man. Only tape taking inside measurements accurately. Highest grade materials and workmanship. Nickel-plated brass case,—rust-proof inside and out. Buy of your dealer or order from the factory.

PRICES: 25 ft., $1.50; 50 ft., $2.50

CROGAN MFG. CO., BANGOR, ME.
"If it's a ONE-MAN, it's a Crogan"

(Continued from Page 110)

Slattery stood watching around the corner of the window. The Russian was going on ahead—walking fast and straight. And then the two came out, and the Wobbly started hollering at him, and the trainman stopped him, glancing up at the window where Mike stood and looked down at them. And then they started on after the scissor-bill, walking very fast and stiff, but never running, for fear, no doubt, that Mike might notice them and remember when he finally found out that he'd been trimmed. And on ahead the Russian was walking, fast and stiff as well, but never running neither—no doubt with the same idea in his nut. And so, not speaking a word, they walked up to the siding across the road till the Russian, looking around quick, jumped in back of the freight train finally, and out of sight; and the other two after him, darting in just like he did, when they got up to the cover of the cars.

"Secret movements," says Mike to himself, standing wondering what they'd do to him and to one another when they got to him and found what they were going after wasn't there.

He wondered after the train pulled out—for he seen them no more—and all that night about it, until the next day—when he run across the conductor of the local freight on the street in the morning—and he seemed quite excited.

"Say, Mike," says the man, "what was going on yesterday over in the tower?"

"I dunno," says Mike. "What was?"

"Say, listen," he says. "I seen something I never seen before."

"What was that?" says Slattery.

"A silent, speechless fight," he says.

"Go on," says Mike. "Tell me about it."

So he done so.

"I was sitting there," he says, "in the caboose, waiting for them to patch up that driving rod—all alone, for the shacks were out somewheres; I thought, over with you in the tower. And then I heard the sound of steps and I looks out, and there they was chasing one of them Russian trackwalkers up and down behind the train. And just when I looked they stopped short and hurled themselves together, right underneath me, without a word."

"Without one word?" says Mike.

"Nor a loud noise," he says. "You'd hear only the stifled sounds of straining and lifting and grunting and tearing."

"Is that right?" says Mike.

"Yes," he says. "A fight without one sound but grunting!"

"It must have been," says Mike. "There must have been some reason for it."

"There was, without a doubt," he says. "Some reason for keeping it still, and not drawing attention. But that wasn't all, nor the strangest of it!"

"What came next?" says Slattery.

"At first," he says, "they hurled themselves, the two shacks, upon the Hunk."

"And what did they do to him?" says Mike, expectant.

"They didn't do nothing," says the fellow. "It was the other way round. For after not more than three or four grunts the Russian had them down, and had snatched the brake stick from the Wobbly, who was carrying his, and was beating him something terrible."

"All in silence?" says Mike.

"Yes. But that wasn't the half of the mystery!"

"No?" says Slattery.

"Not half," he says. "For suddenly, in the midst of his pounding and beating them, for some reason the Russian stopped up short and put his right hand on his chest—as if he was looking for something he'd just thought of."

"Did he find it?" asks Mike.

"He did not," says the other man, "if actions are any guide. For all at oncet, after feeling once or twice, he jumps up and begins pawing himself all over—and up and down his legs—disregarding the other two—and they both standing staring at him."

"I see," says Mike. "And what did they do—jump him again?"

"They did not—nor run—which is more surprising," says the man, "considering how much he'd banged and battered them. They stood there—all beaten up and torn to pieces, staring at him—kind of interested and anxious. And then they went in and helped him, patting him all over before and behind."

"And not a word yet?" says Mike.

"Not one," he says. "And he stood stock-still while they was doing it. But after that, when they didn't find it, whatever it was—he let out a low snarling, mooing sound, like a wild mad bull, only softer. And he come at them. And I almost mixed in then from where I was watching, concealed, around the corner of the car—for I feared murder."

"But there was not?" says Mike.

"No; for they signed to him they would do just what he wanted."

"And what did he want?" says Mike.

"He wanted to search them, it seems, like they did him."

"And did he?"

"Did he?" says the conductor. "To the taking off of most they had on!"

"And did they find it yet—whatever it was?"

"They did not," he says. "Though they searched each other persistent and suspicious. And then after that they went searching up and down the track behind the freight train where they had been running. And when they found nothing yet, it looked terrible bad. For they all stood off and glared, each suspicious at the other. And all at once the Russian came charging after them again like a mad, roaring lunatic. And the two came jumping into the front end of the caboose, carrying their shoes and pants with them, where he'd made them strip them off for searching purposes."

"And did he come on after them—the Russian?" says Mike.

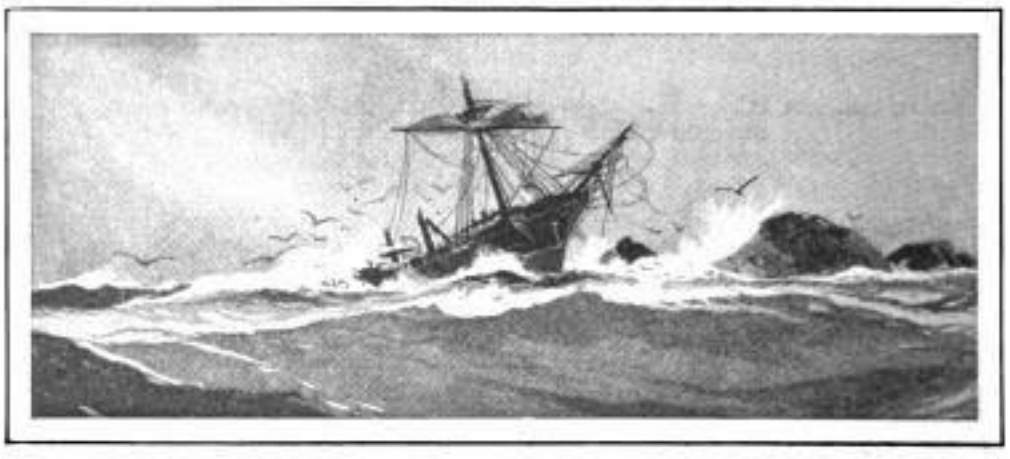
"He did, yes; up to the door," says the conductor. "Till he seen me! And then he took a sneak—as if I'd had a gun on me—scared, it looked like, to have me just see him there. And there was nothing out of the shacks neither—not a word. They won't explain nothing—except they got arguing and fighting with the Russian."

"And what did you say to that?" Mike asked him.

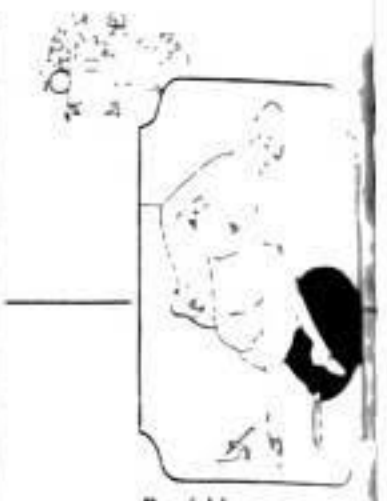
"'Do you always fight,' I says, 'with your shoes and trousers off?'"

"It must have been a hot fight!" says Mike.

"It was," says the conductor. "Both hot and mysterious. And for my part, I have no clew to it."



"I have," says Mike. "They was over in my place jawing and arguing just before. In one of them radical jawing matches."



"They was?" says the conductor. "Then probably you know what it was all about."

"I don't," says Mike. "Not unless it was one of these secret movements they have now all over—breaking out finally into open revolution."

"Revolution is the right word," says the conductor. "You'd think so if you'd seen them at the height of it!"

"Yes," says Mike, "without a doubt. That must be it. 'Twas the radical workers, probably, uniting and getting together in one mass, the way they're doing now, all up and down the known and civilized world."

Everybody's Business

By FLOYD W. PARSONS

Retail Business Practices

A MAN'S success and position in life depend largely upon the character of those with whom he is most closely associated in his everyday work. The fellow who is satisfied to mix with second-raters will never climb to a high place in business, even though there is in him sufficient latent ability to handle successfully the bigger job. Many a natural-born athlete who might have become a great star on some famous varsity team has frittered away his time playing a mediocre game at some small college where he was not obliged to extend himself in order to be better than the average. Familiarity with inferiority tends to make a man inferior. Keen rivalry resulting from competition always brings out a person's best efforts. It has ever been true that men and women react to their environment.

Such were the remarks of the president of one of America's most successful commercial organizations.

Consistent with his expressed beliefs, this executive has surrounded himself with the best talent money can procure. It is his idea that the bigger the men around you the bigger you will be yourself; the more credit you give to others who work for you the more credit you will reflect upon yourself. As a result of such a policy, the corporation headed by this executive is a live organization with a managerial personnel noted for its originality, efficiency and initiative.

The president has never permitted his increasing responsibilities to isolate him and cause him to lose touch with his workers. He is opposed to long-distance rule, and with this thought in mind has two desks—one where he can devote a part of each day to working among his associates, and the other in a more secluded office where he can transact business or consider important matters without being disturbed. It is his belief that an executive benefits largely from close contact with the rank and file of his organization. Trying to manage a corporation without getting acquainted with the employes is like trying to operate an automobile on a country highway after dark with the lights out. The motorist may succeed in avoiding a ditch, but it is certain that he won't travel very fast.

This president makes it a rule to limit all efforts toward expansion to the single line and style of business on which the corporation's success has been founded. Many failures have resulted from efforts on the part of a management to expand in such a way that it was necessary to transform the character of the business and largely eliminate the one feature which had provided the early profits.

One of his precepts is: "Don't devote tomorrow to hunting yesterday's mistakes. Finish each day the tasks set for that day, and see that the work has been done right, so that tomorrow has a clear field for its own jobs."

Ever since starting in business this successful executive has made it a daily practice to record each and every worthwhile idea gathered either from reading or from observation. First, he used only memorandum books, but now he employs an idea file which contains thoughts and clippings on various phases of business which may not be used for months or even years. Ideas that are worth little today may be life-savers tomorrow. Workable ideas are the food of business, and it is well to keep the larder filled against days of emergency.

The president attributes such success as he has attained, first, to his plan of making prompt decisions so that the same matter will not come up twice; second, to his policy of transferring all minor and many major tasks to his able assistants; and third, to his practice of providing a personal schedule for each day's work, and then not permitting anything except a matter of vital importance to interfere with the carrying out of his prearranged schedule. He suggests that the way for anyone to discover just where and how he is burdened with unnecessary work is to sit down each morning for a week or more and prepare a daily schedule that divides up the person's time. No one can work effectively in a business that requires a frequent change of thought without paying close attention to a fixed schedule and its relation to the minutes on the clock.

It was my privilege to observe some of the practices used in the different departments of the organization. Of much interest were the methods employed in fixing the limits of credit for customers and the collection of accounts. From five to twenty per cent of the capital of every big retail corporation is tied up in accounts receivable. For this reason the credit man of the large commercial organizations today is a most important individual. In this particular business the credit man is charged with collecting never less than sixty-five per cent of the outstanding accounts each month. Experience has shown that the earlier the bills are got out the greater the percentage of accounts collected. It is quite important to have your bills first in the hands of the debtors. On the other hand, it is not advisable to close the month's account before the last day of the month.

Much care is exercised in extending the proper amount of credit to new customers. In sizing up a man's qualifications as a credit risk the individual's character and ability are placed before money. In fixing the limit of the risk the credit man bases his decision on the three C's—character, capacity and capital. A customer may have both capacity and capital, but if he lacks character there is no certainty that he will pay. When character and capacity or ability are present, even though capital is lacking, the risk is a good one, for the man can create capital through his capacity, and his character will cause him to pay his obligations.

The method followed by this particular company is rather unusual. The name of each customer is written on a card, and the cards are placed in visible files. The limit of the credit allowed each customer is pasted on the card, and is indicated by a colored disk. A blue disk on the card means that the customer's credit is limited at twenty-five dollars; black indicates a credit of seventy-five dollars; yellow indicates one hundred and fifty dollars; and green, three hundred dollars and up. When the card contains a red disk it signifies that the account is closed. The authorizers are furnished with five rubber stamps, and by means of these stamps every charge ticket bears a notice of the account's limit. All bills are posted daily, and it is therefore easy for a biller to note when a limit of credit has been exceeded by any customer. Whenever an account has passed the limit of risk the matter is brought to the attention of the credit manager, and he either O. K.'s the enlarged credit risk or sends a polite letter to the customer asking that the account be reduced before any further purchases are made. The letter also suggests that the company would be pleased to review information that might lead to the extension of the credit limit. The credit man always endeavors to meet new customers personally and form his opinions first-hand. He also bears in mind at all times that credit customers are more critical than cash customers.

In collecting money the entire effort is based on courtesy and human interest. The practice is followed of having a definite understanding with each customer at the time the credit is extended as to when the account is to be paid. Under a new plan recently inaugurated each customer is asked to sign the sales check at the time of making a purchase. No accounts are permitted to drag along. The first collection letter is signed only with the firm name, for the oversensitive customer is likely to hold the signer of a collection letter personally responsible if he thinks the letter carries a sting. Each individual account is handled on its merits. Threats are never resorted to in the first two letters. The language used is cordial, and an attempt is made to point out to the customer the fairness and liberality of the house, at the same time indicating the necessity of the company paying strict observance to a fixed system. When a customer replies to a collection letter, and promises to pay on a certain date, the credit department immediately acknowledges this letter, mentioning and thus confirming the customer's promise to settle. Form letters are never used, for

"The little umbrella with the big spread"

Indias for women, men, little folks and for travelers

such a practice indicates plainly to the customer that the company has many unpaid accounts. A personal collection note rather implies that all other customers pay up promptly. None of the letters sent out by the credit man ask for a remittance by return mail, but on the other hand always state a specified day or date.

It is also the policy of the company to avoid conveying the impression that payment is requested because the concern is temporarily in need of money. When the debtor gets a letter basing the request for payment on the needs of the concern, even though he pays the bill, he will likely wait again before paying subsequent bills to see if the company is similarly situated. Collection letters should always be based on the mutual obligation stipulated in the preliminary sales agreement. Under no circumstances is it advisable to be apologetic in asking for the settlement of an account. Collection letters can be specific and dignified, while at the same time containing subject matter that is worded diplomatically.

Considerable success has followed the careful use of the telephone in collecting accounts that are two months or more overdue. Most people like to be considered busy, so the telephone call is based on the assumption that the delinquent's neglect to settle the bill has resulted from his preoccupation with other matters. All excuses offered are carefully investigated, and when an untruth is discovered forceful action is taken.

The fundamental thoughts borne in mind in writing collection letters are: Arouse interest and compel attention; impel to prompt action; make it easy to remit. In order to effect the last-mentioned object, the company recently adopted a plan of having a check form at the bottom of each collection letter with the exception of the first note mailed the customer. The idea is that the check will be filled in with the amount due, and the debtor will write the name of his bank in the blank space reserved for this purpose on the check. While the plan has brought fair returns in the way of remittances, it is said to have benefited the company to an even greater extent by creating a definite impulse in the mind of the customer to pay the bill.

The company's selling meth[ods] are up to the minute, and are ever [be]ing revised in accordance with the newest [ideas] on the subject. The concern, [for] one absolutely fixed price for each [article]. Whenever a sale is inaugurated [to] clear out a line the advertised [prices] are bona fide. It is the policy [of the] pany to refuse to handle any [article] which bears a stamp or carries a [label] is likely to mislead the purchaser. [For] stance, the company refuses to [handle] shoe that is machine-made and [yet] the stamp "Bench Made." All [the] people have been carefully taught [the] important thing to bear in mind [in the] matter of the sale, but what the [store] do after it is sold. A small sale [will] hold within it the opportunity [for] more sales, while if care is not [taken] large sale may be made and, [when] goods fail to give satisfaction, [will] have been a permanent and profitable [cus]tomer is lost. Under no circum[stances] should anyone be provided with [goods] say truthfully that the company [will] stand behind its goods.

Among other things, the company [has] orders for goods over the telephone [during] hours. Customers reading the [store's] advertisements in the evening [paper] wishing to purchase certain articles [can] out having to visit the store the [next] can telephone the orders up until [nine] in the evening and rest assured [that] goods will be delivered to them [early] the next morning, and certainly [the same] day. In nearly all cases [women] ployed to sell to women and [to] men. The men's clothing [department] taken a leaf out of the book [of those] selling women's clothes, and [have] models to display men's articles [of] overcoats, hats, suits, and [the] selling rule in practically all [departments] to describe each article as far as [possible] before showing it to the customer. [The] is that the word description may [make] appeal to the mind, thus creating [a favorable] impression making it easier to [sell] when once they are brought to [the] perience has shown that the [mind] more quickly and affirmatively [responds] to the ear than to the eye. [It's a] game—describe first and sell [after]

Foot troubles corrected easily, quickly

Walk out of the store with feet made new!

THIS is a promise you can believe—its truth is attested by hundreds of thousands of people.

No matter what form of foot trouble you have—whether it is corns, callouses, bunions, cramped toes, tender heels, weak arches, tired and aching feet, or even an extreme case of flat foot—there is available to you a scientific remedy or appliance which will bring you certain, positive relief.

Between this coming Saturday morning and Saturday night of next week, the week of June 17 to 24—Dr. Scholl's Foot Comfort Week—a nationally organized effort to promote foot comfort by bringing relief to every foot sufferer, in which thousands of leading shoe and department stores are participating, is under way.

No matter what form of foot trouble you have, you can obtain relief in your own town—*now*.

The work of a noted foot specialist

For the last twelve years, Dr. Wm. M. Scholl has given himself almost entirely to the specialized study of foot troubles. Thousands of cases of foot troubles have been examined.

And out of this study, in laboratory and clinic, out of this scientific searching for the underlying causes of foot troubles and means by which they can be corrected, have been developed methods and appliances and remedies for the relief of every form of foot ailment.

Thousands and tens of thousands of people have already benefited from this work—millions will enjoy the boon of foot comfort in the future as a result of this modern science.

Dr. Scholl's Foot Comfort Service in your town

Not alone content with having developed and perfected these foot comfort appliances and remedies, Dr. Scholl has devised a *service*—Dr. Scholl's Foot Comfort Service—which is available to the public through a nation-wide organization. In thousands of shoe and department stores are men who have been carefully trained in Dr. Scholl's methods, men who can determine the nature of foot and shoe trouble, who know which Dr. Scholl appliance or remedy will correct that particular condition.

This service—this assurance of complete and lasting relief—is offered you in a special way this week, June 17 to 24. It is Dr. Scholl's Foot Comfort Week.

Go to the nearest shoe or department store in your town that is headquarters for Dr. Scholl's Foot Comfort Service. See the window display and special demonstrations of Dr. Scholl's appliances and remedies and ask to see the man in charge.

Then and there you can have your foot trouble corrected—no matter what that trouble is. You can walk out of the store with your feet made new!

Examination over your stockinged feet. No charge for personal fitting service.

So easily, so quickly you *can* have again shapely, active, comfortable feet. Take this opportunity *now*.

Do you want your teeth to ache and get ugly?

Proper care now will save you from this spectre of the future.

You may not realize it, but the chances are that "Acid-Mouth," a frequent cause of decay, is already at work on your teeth, eating into them slowly but persistently.

Nineteen out of every twenty persons are said to have "Acid-Mouth." And so you have a slim chance of being free from this condition—unless you do something to guard against it.

Pebeco is the tooth paste that counteracts "Acid-Mouth." Thousands of men and women use Pebeco night and morning to keep their teeth clean and sound and to check the destructive work of "Acid-Mouth."

In addition to protecting teeth against decay, Pebeco chases disagreeable tastes from the mouth, leaving a sense of refreshing cleanliness.

From the first to the last squeeze, Pebeco rolls out of the tube rich and creamy.

How to tell if you

a big new summer idea!

FREEZE THESE FRUITS RIGHT IN THE CAN

No preparation ~
No freezer required ~
No turning

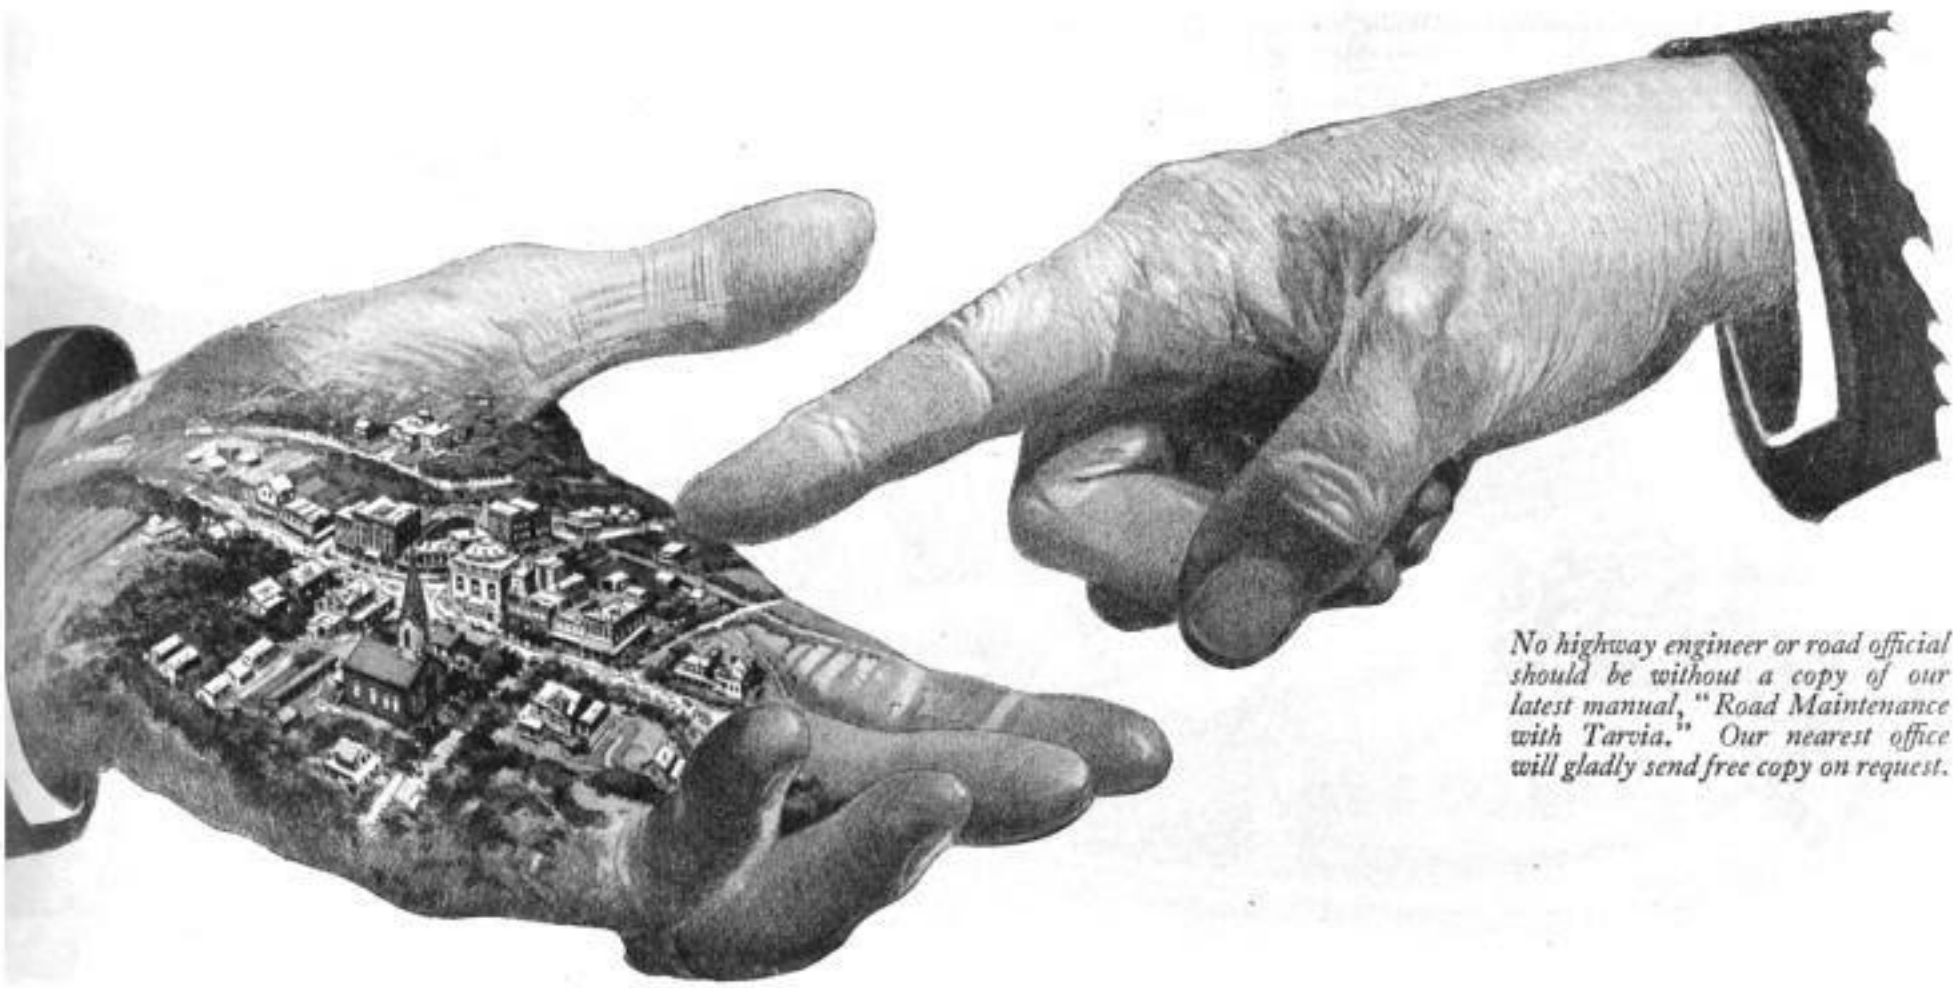
Note—Three hours is best for freezing, as fruit then turns out in a perfect cylinder. If you prefer it harder, use more salt or freeze it longer; if softer—less salt or less freezing.

Luscious fruits—frozen in their own sirup! What could be more delicious—what more fitting for a cooling, dainty summer dessert or salad?

Yet how simple to prepare—by this new DEL MONTE idea of freezing fruits right in the can! Simply place a can of DEL MONTE Fruit—Peaches, Grated Pineapple, Pears, Apricots, Blackberries, Loganberries, Raspberries or Strawberries—unopened—in a bucket of ice and salt. Leave for three hours and then turn out one of the finest frozen fruit delicacies you have ever tasted. Whatever the variety, it's refreshingly delicious—sliced as a dessert, cut in cubes in sherbet glasses, or sliced on lettuce with mayonnaise, as a novel frozen salad.

But be Sure they're Del Monte

Of course, this is a distinctively DEL MONTE recommendation. As you know, there are different grades of canned fruits on the market—each with a different quality of fruit and a different richness of the sirup in which the fruit is packed. But DEL MONTE quality is always the same—a definite, dependable standard. The fruit always has the same perfection; the sirup is always rich enough to freeze perfectly; and, more important, to taste right for a dessert, without sweetening, just as it comes frozen from the can.



That's why an ever-increasing number of housewives are finding it so important to insist on DEL MONTE Products—not only for special uses like this—but for thrifty, every-day service all year round.

CALIFORNIA PACKING CORPORATION
San Francisco, California

Send for these Recipe Books

Write for a copy of our new folder containing many special ways to serve these frozen dainties. It will be sent you free—together with a copy of "DEL MONTE Recipes of Flavor," which itself contains over 500 suggestions for the thrifty, year-round service of DEL MONTE Fruits, Vegetables and Food Specialties. Address Department E, California Packing Corporation, San Francisco, Cal.

No highway engineer or road official should be without a copy of our latest manual, "Road Maintenance with Tarvia." Our nearest office will gladly send free copy on request.

The Future of a Community often lies in the Road Commissioner's hands—

Although the Road Commissioner never "heads the ticket" on Election Day, there are few public officials charged with duties more vital to the public welfare.

Good roads are indispensable to the progress and happiness of every community. With good roads, getting to town is made a matter of minutes —not miles; business flourishes, hauling costs decrease, property values rise, children enjoy the benefits of a central graded school, community and social life is broadened and made more enjoyable. The future holds forth great promise.

Throughout the country our engineers have demonstrated to thousands of public-spirited road officials the great saving resulting from a definite policy of Tarvia construction and maintenance.

This popular road material is unequalled for building new roads, for resurfacing worn-out macadam, for repairing and maintaining improved roads of every type. Special grades are made for specific uses.

Tarvia roads are an indispensable part of every Good Roads Program. They are comparatively low in first cost, and are so much more economical over a term of years that the saving makes a more extensive road program possible.

If you want smooth, dustless, mudless roads in your community 365 days in the year, write to our nearest office for free copy of our illustrated "General Tarvia Catalog." You'll find it interesting.

Tarvia
For Road Construction Repair and Maintenance

Special Service Department

In order to bring the facts before taxpayers as well as road authorities, The Barrett Company has organized a Special Service Department which keeps up to the minute on all road problems.

If you will write to the nearest office regarding road conditions or problems in your vicinity, the matter will have the prompt attention of experienced engineers. This service is free for the asking. If you want *better roads* and *lower taxes*, this Department can greatly assist you.

Chicken Croquettes with White Sauce

2 cupfuls cooked chicken
½ teaspoonful salt
¼ teaspoonful celery salt (if desired)
1 teaspoonful lemon juice
½ teaspoonful scraped onion
1 cupful white sauce

Mix ingredients in the order given. Cool the mixture. Roll in beaten eggs, then in crumbs and fry in hot Crisco.

The white sauce is made as follows:

2 tablespoonfuls Crisco
4 tablespoonfuls flour
1 cupful milk
Salt and pepper to taste

Melt Crisco, add flour, stirring to a smooth paste. Then add milk gradually. Stir over the fire until smooth and thick. In frying the croquettes use sufficient Crisco to fill the kettle about two-thirds full. (We suggest that you order 3 pounds.) Put the Crisco in a cold kettle and heat it gradually until a crumb of bread dropped into it becomes a golden brown in 40 seconds. Notice that Crisco does not sputter or boil over when the croquettes are dropped into it. That is because it contains no moisture.

Fried Foods!

A. New Digestibility
B. New Fineness of Flavor
C. New Economy

An A B C Method for securing All Three

IN TALKING over cooking matters with women, we find that the thoughtful housekeeper thinks further than the flavor of the food she serves. With woman's mother instinct she deeply concerns herself with its digestibility as well.

A crisp outside crust, surrounding a tender inside, is her ideal in fried foods. For there she has flavor combined with digestibility.

Thousands of good home cooks are daily attaining this cooking ideal—and very simply too.

They deep-fry in wholesome Crisco.

As an example of their method, we suggest that you treat your family to something very particular in chicken croquettes—following the recipe given above on this page.

Now let us give you the reason for the resulting brown, savory crust and the tender inside—with its fresh flavor of real chicken:

Crisco (of pure, vegetable origin) withstands 455 degrees without smoking. Naturally, such extreme cooking heat quickly seals the outside of the food with a crisp brown crust. Then the fat simply can't soak through to the inside.

Notice, too, that Crisco leaves behind no tell-tale frying odors.

New Variety in your Menus

You will find, we believe, that Crisco deep-frying will introduce new variety into your menus. For example: Doughnuts—with an old-fashioned New England flavor. Patties—with a taste to waken drowsy appetites. Different and tempting ways to serve potatoes. Delightful and economical ways to use up left-overs.

And, of course, you can effect a very welcome saving by following this simple rule in making light cake and flaky pastry: Wherever a recipe calls for a certain quantity of expensive butter, simply use ⅕ less of economical Crisco.

When you order Crisco ask your grocer if he knows of any other shortening which stays sweet and wholesome indefinitely without ice-box help.

YES, you can use thrifty Crisco again and again. After deep-frying simply strain through a cheese-cloth to remove any particles of food. Then Crisco is ready to bake light, tender cakes—delicious and digestible pastry.

An exceptional cook book for 10c

Entitled "A Calendar of Dinners," it was written by Marion Harris Neil, formerly cooking editor of The Ladies' Home Journal. It gives 615 exclusive recipes, 365 complete dinner menus—one for every day in the year. Complete cooking time-table. Helpful hints for judging and cooking meats, fish, fowl and game. New suggestions about pie-baking and cake-making. Cloth bound. Profusely illustrated. Although this cook book costs more than 50c to publish, it is gladly sent to friends of Crisco for 10c in stamps or coin. Write to Section K-6, Dept. of Home Economics, The Procter & Gamble Co., Cincinnati, Ohio

For delicious cakes which stay fresh longer.

For digestible and flaky pastry.

For crisp, digestible fried foods.

Small, medium and large sized cans Crisco is also made and sold in Canada

rganized China

NG itself faces fresh complica-develops from the fact that ed to Japanese acquiescence ington agreement. Japan's npensation for her improve-leased territory will make st of the railway—approxi-n million dollars—which was l that China thought that she pay, a detail. This impend-bill for improvements will arly fifty million dollars.

Viscount Uchida, Japanese Minister of Foreign Affairs

ed and bankrupt China is in no position to meet this obligation unless she Japan. This would only tighten the already strong Japanese economic tung. Business retirement is not always coincident with military withdrawal. ks from adding to her already heavy indebtedness to Japan, and is unable quately the railway zone, then the Japanese will feel justified in detaining troops to protect the mortgage she holds. At the very moment that China oting her best energies to the patriotic task of raising the funds to buy out Holy Province—Confucius was born in Shan-tung—she is facing civil war. ach to the Washington conference was cluttered up, so to speak, with the ntanglements of antagonism and suspicion, and the highway that leads eady strewn with problems, many of them difficult of solution. The road-visioned concession that marked discussions and treaties must animate ut of their significant dictates. For tolerant internationalism is essential ation of the international economic and political structure.

e American who threw his hat in the air when the conference adjourned, and everything in the Pacific was over but the shouting, has another guess coming. These next twelve months in the Orient will be, in many respects, as delicate as those preceding the conference were ticklish.

What are the consequences, so far, of the Washington meeting? That they will be more constructive than the results of the Versailles deliberation almost goes without saying. At Paris the element of nationalistic politics was the paramount motive. At Washington toleration was conspicuous in shaping policies. Whereas disillusion and discontent have been the heritage of the Paris treaty, the documents formulated at the American capital have stirred the universal consciousness to the realization that in intelligent co-operation lies the salvation of the human race.

I went to the Far East to find out the actual situation. From a Europe rent with an unrest miscalled peace, I shifted the scene of observation to an Asia on the eve of significant evolution. I expected to find the Eastern world agog with speculation over the work of a conference that had saved a considerable portion of it, especially Japan, from bankruptcy or worse. Except for the thinking class in Japan, and a much smaller Western-educated coterie in Peking and Canton, there was very little genuine interest. Instead of rising to the opportunity created by the immense moral support that she received at Washington, China, for example, through the jealousies and intrigues of her two principal war lords, had been converted into an armed camp. Reaction in Japan is fighting army reduction to the last ditch. Even the people of Shan-tung are more disturbed about graft disclosures and bandit depredations than any kind of realization of what the American people have done for them. So it goes.

Diplomacy of Good Will

THESE are merely a few of the immediate consequences of the Washington conference. Likewise there are many compensations, even at this early date. In this and in succeeding articles an attempt will be made to interpret the results in Japan and China.

I journeyed to the Orient with an open mind. The moment you mention Japan the words "pro" and "anti" rise up. There seems to be an unwritten law that everything written about the Island Empire must fall under one of these two heads. But there is a middle ground between the adulation of junketeers for whom the Japanese stage every phase of their life, in order to create a favorable impression, and the blind prejudice of those whose opinions are formed before they leave their American port. It is this middle ground, based on the facts as I have found them, that I shall take.

Just as Germany after the war had to be analyzed not in the heat and passion engendered by the conflict but in her relationship to a larger economic structure that is permanent, so must Japan be viewed as a cog in an international business structure that must know neither caste, color nor creed. Plain honesty is the one requirement. A distracted and disorganized world, weary of the ravages of war and the no less disturbing bickers of peace, calls for coöperation. Perhaps these twelve months of grace and the gospel of a new diplomacy of good will will go down in history as the Year of Reorganization and Recuperation. Political peace will mean economic peace.

Before I enter upon the real narrative two preliminaries must be disposed of. One is to explain the difficulty of getting at anything like a real estimate of the Eastern situation. The other is the political and economic approach to the Washington conference.

Digitized by Google

Innumerable obstacles beset the path of investigation in Japan and China. In Japan you have, first of all, the language barrier. Many intelligent Japanese think they can speak and understand English, but they labor under a delusion. Even when they do speak English the habits of evasion and indirection frustrate frank expression. Few Orientals are frank. This psychological handicap is heightened by the Japanese desire to put something over. It is like the strong sense of curiosity—it is really espionage—born in every son of Nippon. Even the fairest-minded alien instinctively puts himself on guard the moment he arrives in Japan, and keeps it up until he leaves. When you talk to aliens who have lived there or who have been there, you are caught between the Japanophobes and the Japanophiles. In self-defense you fall back on your impressions and stand by them.

In China the task is no easier. Nearly every foreigner has a pet tuchun—military governor—or a favorite minister. Out of long contact with it I used to think that German, French, Hungarian, Polish and Czecho-Slovakian propaganda held the world's endurance record for persistency and prevarication, but it is amateurish alongside the flood of inspired utterance in the land of the Celestials. When an alien has lived for ten years in China he either becomes a propagandist or an adviser. If you are in doubt about the status of a man in Peking you are safe in labeling him an adviser and letting it go at that. Poor old China has had to pay the overhead freight for all this expert advice, which extends from finance to sanitation. Incidentally, if ever a country needed disinfectants in its public life, that country is China. This, however, is another and later story.

I could not have gone to the Far East at a more opportune time. Like Europe, the vast domain that teems with one-half of the human race, and where population is doubled every fifty years, is plastic as never before. The influences at work today will shape the coming centuries.

Moreover the future of China, India, Russia—for the Slavs overrun the north of Asia—to say nothing of Japan, is of immense significance to the United States. Aside from the American financial and commercial stake in the Orient and our stewardship of the Philippines, we have a definite moral obligation to China, growing out of John Hay's enunciation of the open-door policy for her.

That so-called open door long constituted one of the myths, and I might add, the jokes, of the East. Up to the Washington conference it served mainly to provoke platitudinous professions that only camouflaged selfish aggression. It was like that traditional helping hand held out to China, that invariably hid the itching palm. Most European powers openly preached the Golden Rule, and privately practiced the double-cross. You do not wonder that a hearty dislike for foreigners grew up in China, and that Japan, prize imitator that she is, laid her aggressions to the uplifting precedent established by Germany, Russia, England and France who pinched off chunks of China almost at will.

Bayonet and Sample Case

JUST as delay, compromise and petty politics have been the postwar curse of Europe, so was the conflict of national assimilations, which always masked commercial penetration, the bane of the East. China has been the battleground of most of this commercialism that masqueraded as statesmanship. Everybody but America participated in the great game of grab.

It followed that in China business leaned too much on politics and too little on permanently constructive initiative and enterprise. It helped to aggravate the squeeze, or graft system. In the same way big business in Japan has always been tied up to the government, as was the case in the Germany that was. It was really feudal in spirit and organization. But there was a fundamental difference between Japan and Germany: Japanese efficiency in commerce and industry is a vastly overestimated quantity. With the Germans efficiency was the real thing.

Now you can see why Far Eastern politics and business became entangled in just the same way that they are involved in Europe. You cannot discuss one without treading on the toes of the other. By the same token it is impossible to deal with China without involving Japan. What immediately strikes the observer in these parts is the extraordinary mistake that Japan made in reading the psychology of the Chinese. Japan's whole economic well-being depends upon friendly relations with her nearest and biggest neighbor, who is also her biggest customer.

Viscount Takahashi, Japanese Premier

Yet for years she has apparently done everything in her power to antagonize her. The usurpation by Japan of authority in Shan-tung was merely one evidence of it. This antagonism jeopardized peace in the Pacific and, together with the mad and suicidal race for armament, would have eventually precipitated a serious crisis, and possibly worse.

This leads me to an observation bearing on Japan that may as well be disposed of here as in any other place. In brief, it is this: The real Japanese problem, whether in China, Siberia or California, is fundamentally an economic and not a race problem. Touch the pocketbook and you start trouble. Japan's misfortune is that there are two kinds of Japanese. One is the type you meet in Japan, who can hold their own socially and commercially anywhere. The other is a lower caste, which seems to constitute the bulk of the penetrators in foreign countries. They are the small tradesmen and farmers who not only segregate but set up in their little worlds abroad all the institutions of the homeland. These include the vice quarter, without which no Japanese community is complete. This is true of Shan-tung, Siberia or any other place where the Japanese take economic root. Overshadowing this is the fact that they cut into the business of the white man, and the inevitable friction, born of trade rivalry, develops.

The Japanese business penetrator in Asia has usually accompanied the soldier. This has been especially the case in Shan-tung and Siberia. When the sample case follows the bayonet the commercial envoy is not inclined toward tolerant amiability. He gets his hooks into concessions and ties up leases with military authority behind him. Hence Japan can afford to withdraw in various quarters and not materially disturb her economic domination there.

When you study the Japanese at home you also discover that just as there are two distinct grades in trade exploitation so there are two distinct states of mind. The Japanese on his own heath is, in the main, a more attractive person than the average Japanese you find abroad. The moment they leave their native shores the Nipponese seem to acquire a pride and cockiness that have helped

Mr. Liang Shih-Yi, Premier of China

to aggravate the tension brought about the commercial condition that I have described.

This, however, is incidental. Let us take the highroad to Washington. The real milepost was set up when Japan surprised the world and conquered China in 1895. There is no doubt that Japan was deprived the fruits of her victory largely through influence of Russia. A vital part of the fruits was the tip of the Liao-tung Peninsula. Russia paid a heavy price for her interference because the germ of the Russo-Japanese War was this bit of Manchuria dominated by Port Arthur, which Russia later leased, and which lost to Japan in the struggle of 1904 and 1905 in which a great white race bowed for the first time to the prowess of the yellow man.

With her triumph over Russia the position of Japan as a world entity began. There is no need of rehearsing her much-discussed rise. The Anglo-Japanese Alliance, which was really a coalition against Russia, speeded her progress and enabled her to sit in the front row of the powers that be.

Asiatic Politics

ASIA entered upon a new era, with Japan the dominant agency. She bore to Asia the same relation towards Asiatic development that Germany did towards Europe. The appetite for expansion was keen. Being feudal in spirit and conception, she naturally employed more or less feudal methods. Germany became the model, militarism grew into a fetish. The mailed fist began to rival the chrysanthemum as the national emblem.

There are many well-informed people who believe that if Japan in her great victory over Russia had made an alliance with China, promulgated a Monroe Doctrine for Asia, and made herself the keeper, so to speak, of the integrity of the continent, instead of becoming bitten with imperialistic ambitions for a Pan-Japan, she would have been spared much international reaction and Behind all the Japanese power and territory was a reason. It grew out of become a vital world problem today—namely, the pressure and growing populations inadequate food supply. In the case of Japan she needed more food. Her native and available and steel remain totally inadequate for her industrial needs. The reason for her penetration where she controls three-fourths iron mines today. Just as the war was fundamentally precipitated the Teutonic desire for world domination, so was the situation in the East, which made the Washington necessary, due solely to Japan's need of room in the race for a commercial that was not without its aggressive and irritating features. Then came the Great War. was expelled from Asia, and Japan, her acolyte, place in Shan-tung. The trouble that Russia herself in Manchuria was duplicated by the which Japan sowed for herself when she sought to perpetself in China. Had she withdrawn gracefully have avoided much of the suspicion felt toward America and elsewhere. Even her treaty colleagues, underwent a change of heart.

It is no secret now that the Twenty-One foisted on China were partially inspired by a firm belief that Germany would win. Only such a would have fostered such a monstrous Japan, as most people know, made hay while the of war shone. Even before America got into the capitalized civilization's hour of tragedy with an expansion that was followed by an orgy of speculation inflation, for which she will soon pay dear. The economic collapse which has touched every part with the puncturing of the silk boom in Japan. This also is a later story. The big fact to be emphasized here is that with the signing of the Versailles Japan stood at the crossroads of her destiny. What aspirations were at that time, a new Asiatic deal

With Russia in collapse, with the German world domination ended—both of these empires had been potent factors in the Far East of national antagonism, and with them new

many replied dignity.

"And it's none of your business that it didn't happen to be four. Four is a very good number ——"

"If I ever catch you taking four cocktails," he assured her, "your diet for a long, long time will consist entirely of certified milk and the very best bread that money can buy."

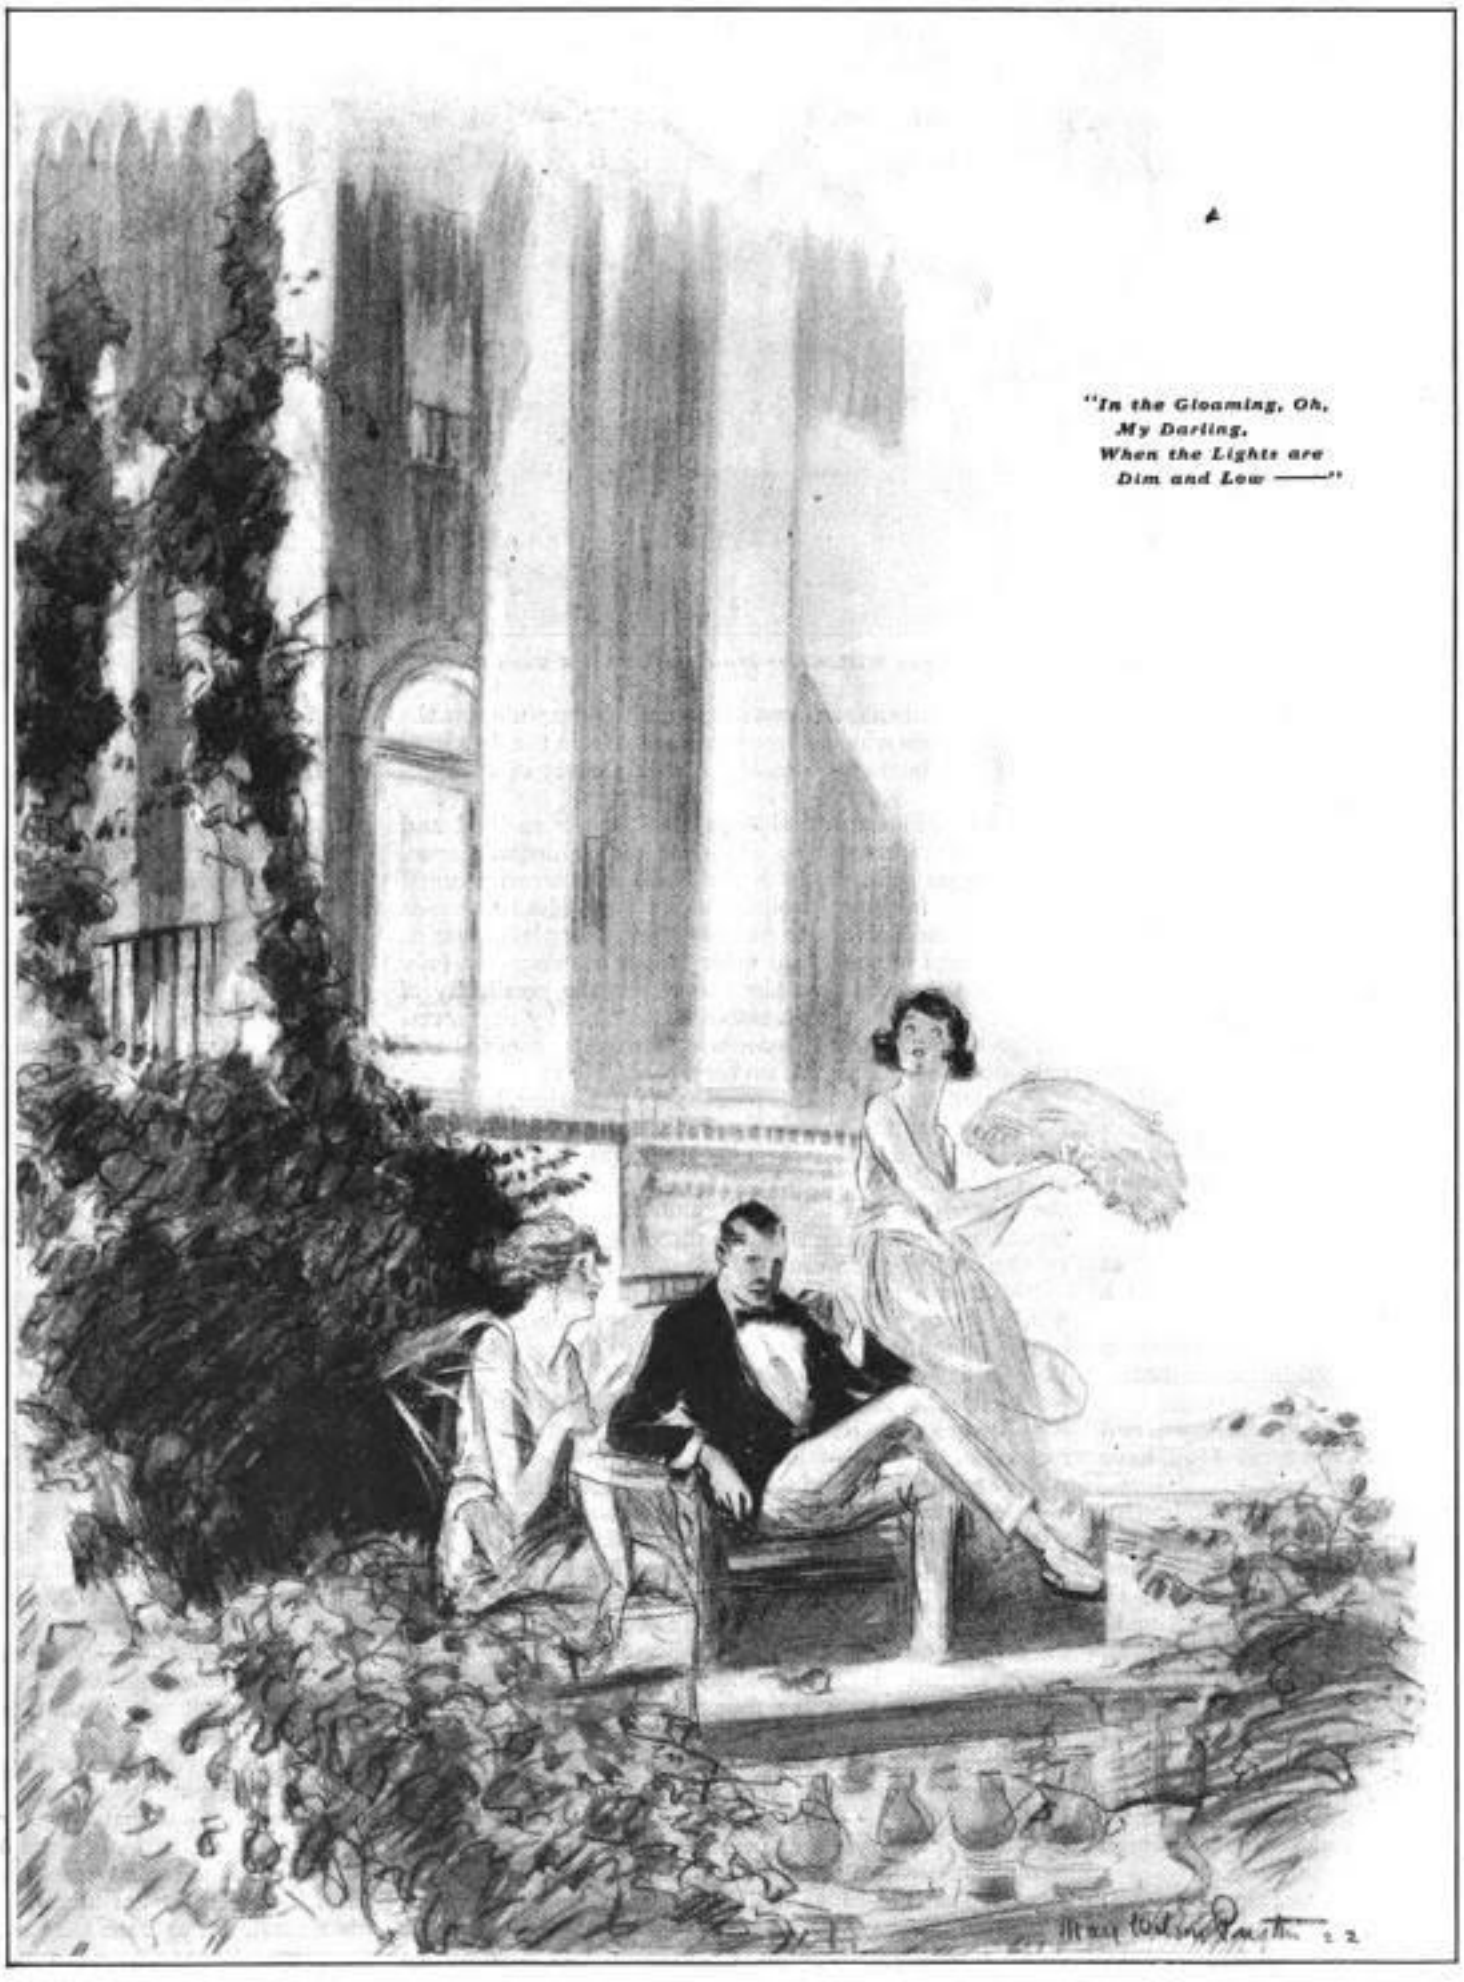
"Oh, stuff! Six nights a week you don't know what anyone in this place is doing—you and your everlasting paper. Anyway, it isn't just a hang-over that he's got; he and Polly had the best row you ever heard out of an animal house just before lunch."

"Charming, charming couple, the young Grahames. Life of the place, aren't they? Is it indiscreet to ask what caused the—er—discussion?"

"Discussion? Oh, boy, if this was a discussion, the Battle of the Marne was a debate!" Babbie wrinkled her absurd scrap of a nose in luxurious reminiscence. "Believe me, you could have heard what Robert thought of Paula right out in the middle of Texas, and you wouldn't have had to strain your ears any, at that. That boy surely was shouting pretty!"

"What about?"

"Oh, because Polly'd sold The King. You know—that police dog he was so mad about? Well, of course she had two perfectly good reasons: Bob had absolutely refused to buy her those long green earrings she sent home, so she needed the money; and then Ramon had given her the most fascinating animal, about four inches square, called Black Butterfly; she says it's a dog, and she was worried that The King might sit down on it by mistake and ——"



"By heavens, you women!" cut in Rodman Thorn, a far-off note of passionate resentment shaking his low voice. "So she sold the poor devil's dog, did she? The only thing on God's earth that gave him a moment's happiness! I swear you pass belief, the lot of you—and every last one of you can stand up in front of an altar and take an oath with a straight face to love, honor and obey us till death do us part! Thank God for the mistakes of others! I know one fine young fellow who's going to profit by them."

"You fancy yourself a good deal as Roddie the Ironclad, don't you, darling?" inquired his sister indulgently. "Well, believe me, the day's going to come when you'll fall so hard that you'll break every bone in your body, and your head too. It'll probably be for some little fuzzy-haired queen out of the third row at the Winter Garden; and serve you bally well right, at that. Speaking of queens, that prize from Paris is due to turn up here any minute. She was coming over just as fast as she could skip from one set of horrors into another. Oh, lady, that blue suit—I can see it yet!"

"But what did you find so particularly agitating about her, dear child?"

"Well, the fact that she was alive and moving around was enough to agitate anyone with two eyes. She wears skirts down to her ankles, and her hair around her head in braids, and no more powder on her face than a—than a clam." Babbie's vivid and sophisticated small countenance was brushed with stern disgust.

"Ugh! I know the kind—nasty, low-minded, holy little beasts!"

"In the Gloaming, Oh, My Darling, When the Lights are Dim and Low ——"

Digitized by Google

"The Stuff You're Getting Away With Gives Me a Pain That'd Turn Neuralgia Into a Treat"

"Now, now," murmured Rod warningly. "The mere fact that you consider Godiva an evil-minded prude for not bobbing her hair is no reason for branding this child of the Old World ——"

"Oh, shut up!" The overwrought critic searched feverishly through her meshed silk bag. "Give us a light, darling, and don't talk so much; you haven't seen her. Just because she's been out of America for a century or so is no excuse for her turning into a Manchu peasant or a Patagonian serf, is it? She ——"

"God forgive you," said Rod compassionately. "Mr. Wells never would. The study of the social system has obviously never claimed your attention, little one. Also I've been given to understand that the young person is a purely European product. Possibly the French conception of the *jeune fille* and the British of the flapper would ——"

"Oh, hire a hall!" advised Babbie whole-heartedly. "It's absolutely sickening the way you're getting to talk, Rod. You may be a dramatic critic, but that's no reason for using so many asinine words that everyone thinks you're an agent for some new dictionary. It's darned embarrassing for me, I can tell you. Joan's the only one that ever sticks up for you, and she does it because she wants to make Pete mad; I wish to the Lord you'd cut it out. As for your *jeune fille*, no one called Sarah Anne Carstairs had better try pulling any of that Continental stuff around here, even if she has a dead American father and a live French mother. Oh, Joan! Jo-an, come on in and watch the tennis; Pete's got two sets straight from the Western Wizard."

"Good stuff," commented the lady named Joan, hauling up her pony sharply, and swinging to the ground. "Take him home, Barker, and tell mother I'll want the car at seven. Hi, fellow citizens! You're looking rather fetching in that orange affair, Babbie, my girl. Don't stop playing, boys. Afternoon, Baldur the Beautiful."

Rodman Thorn grinned at her, unperturbed. "Back at you, huntress of men, and delight of my soul. Want a cushion?"

"Want two. And a cigarette; no, on second thoughts, a box of the little darlings. Anything to drink around here, honorable hostess?"

"Etienne's bringing out some ginger ale pretty soon, and the Wizard brought a flask, bless his blue eyes. Joan, have you seen her?"

"Seen who?" Miss Joan Claridge curled her diminutive self up compactly on the scarlet cushions, struck a match on the sole of one tan boot with professional dexterity, and bestowed an approving glance from her sea-blue eyes on the man beside her. "You're disgustingly good-looking in flannels, aren't you, Rod? Still no hope for an honest, hard-working girl?"

"Not a hope," confirmed the impervious Rod. "The line of aspirants still forms to the right, however. Do those unscrupulous little curls grow around your ears of their own free will, Joan, or do you get them there by brute force?"

"Will power," explained the owner of the honey-colored curls.

Her minute daintiness turned the workmanlike polo costume into pure travesty—in a moment, surely, it would fade and dissolve into pale taffetas and foaming laces—the brown crash was as absurdly incongruous as the barytone voice which seemed to emerge from the depths of her shining boots with all the startling effect of ventriloquism.

Miss Claridge could ride as hard, swear as loud and drink as competently as any man of her acquaintance, but no stain of hardness or recklessness or weariness had brushed the fairylike loveliness of her small countenance as yet. Her indifference to public or private opinion was as genuine as the rose-petal color in her cheeks; the only thing in the world that she feared was the possibility of being considered even remotely respectable by any member of the widely assorted circle of friends, enemies and acquaintances that made up her world. No breath of such a suspicion had clouded her serenity for some time, however.

"Lud, Babbie! Are these instruments of torture doped?"

"I think maybe they are," replied the proud owner of the cigarettes hopefully. "Ramon looked awfully mysterious when he gave them to me, and murmured something about poppied dreams."

"More apt to be pop-eyed, if you ask me; Car-r-ramba, what a taste! Since when has the Argentine Apollo become Ramon to you, my good child? I thought that our Polly had him roped, tied and branded."

"Well, she has, rather," admitted Babbie frankly. "I've only known him for about ten days, but it does seem sort of swanky to go on calling anyone Señor Mendoza when he calls you his little rose of darkness—eh, what?"

"God bless the Latin race!" invoked Joan with fervor. "It'll go right ahead in its sunshiny, benevolent, wholehearted way, whether Polly gnashes her teeth and lays back her ears or not. It's a great consolation to me, though I couldn't give it any silver cup as a judge of tobacco. No use struggling—I'm being driven to the strong man's refuge! I saw a perfectly maddening pipe when I was in town yesterday, lying on a little sofa of white velvet all by itself in the jeweler's window. It was black as Polly's heart, with a green jade sash around its precious tummy, and it was exactly the right size for me. Are you listening, Rod?"

"Breathlessly," Rod assured her. "But my interest is purely abstract. I am in no condition, financial or emotional, to shower trifles of ebony and jade on any creature that breathes. "If I ever grinned at one o'clock in the morning it's because I was in a comatose condition, and had lost all control of my facial muscles. Up to twelve A.M. all I need is curls to be Pollyanna's prize understudy, and after the witching hour I'd be out of place at anything but a first-class wake."

"It's a pity you picked dramatic criticism for your life work," murmured Joan with a small but ostentatious yawn. "Think of what a milkman you'd have made! Polly and I'd give up going to bed entirely to be milkmaids, and wake you at dawn by throwing dew in at the window. Wouldn't we, precious?"

"Wouldn't we what?" drawled the tall and tragic young person misleadingly addressed as "precious."

"Now, now, Polly! What's the use of crawling up behind people in that sinister fatal way if you don't eavesdrop? You've heard every word we've been saying for the last five minutes, you wonderful black panther! Come around in front so we can see your hunting costume for the afternoon—there's a good vampire."

"Thanks," replied Paula Grahame softly. "I'm quite comfortable where I am."

"Very, very disobliging, if you ask me! You can see if you just turn your head half an inch, Rod. Attaboy! Well, what's the news from the front? Has the leopard changed her spots?"

"You ought always to wear purple, Polly!" remarked Rodman with flattering conviction. "Especially with a lace veil that trails a little, and a parasol to lean on, and a deep-red rose. It's simply ——"

"Makes your senses reel, doesn't it, old dear? Wonderful what you can do when you set your mind to it, isn't it, Polly? Who was it that said that genius is nine-tenths hard work? Carlyle? Ruskin?"

Rodman grinned reluctantly. "Bet a dime you're the author," he said. "Come on, stop deviling Polly, and behave yourself, you little demon. Lots of room, Polly—sit yourself down and fall to. A good time is about to be had by all. A majestic form is approaching with tall glasses. Here, sit by me!"

"There doesn't seem to be anything but ground to sit on," murmured young Mrs. Grahame.

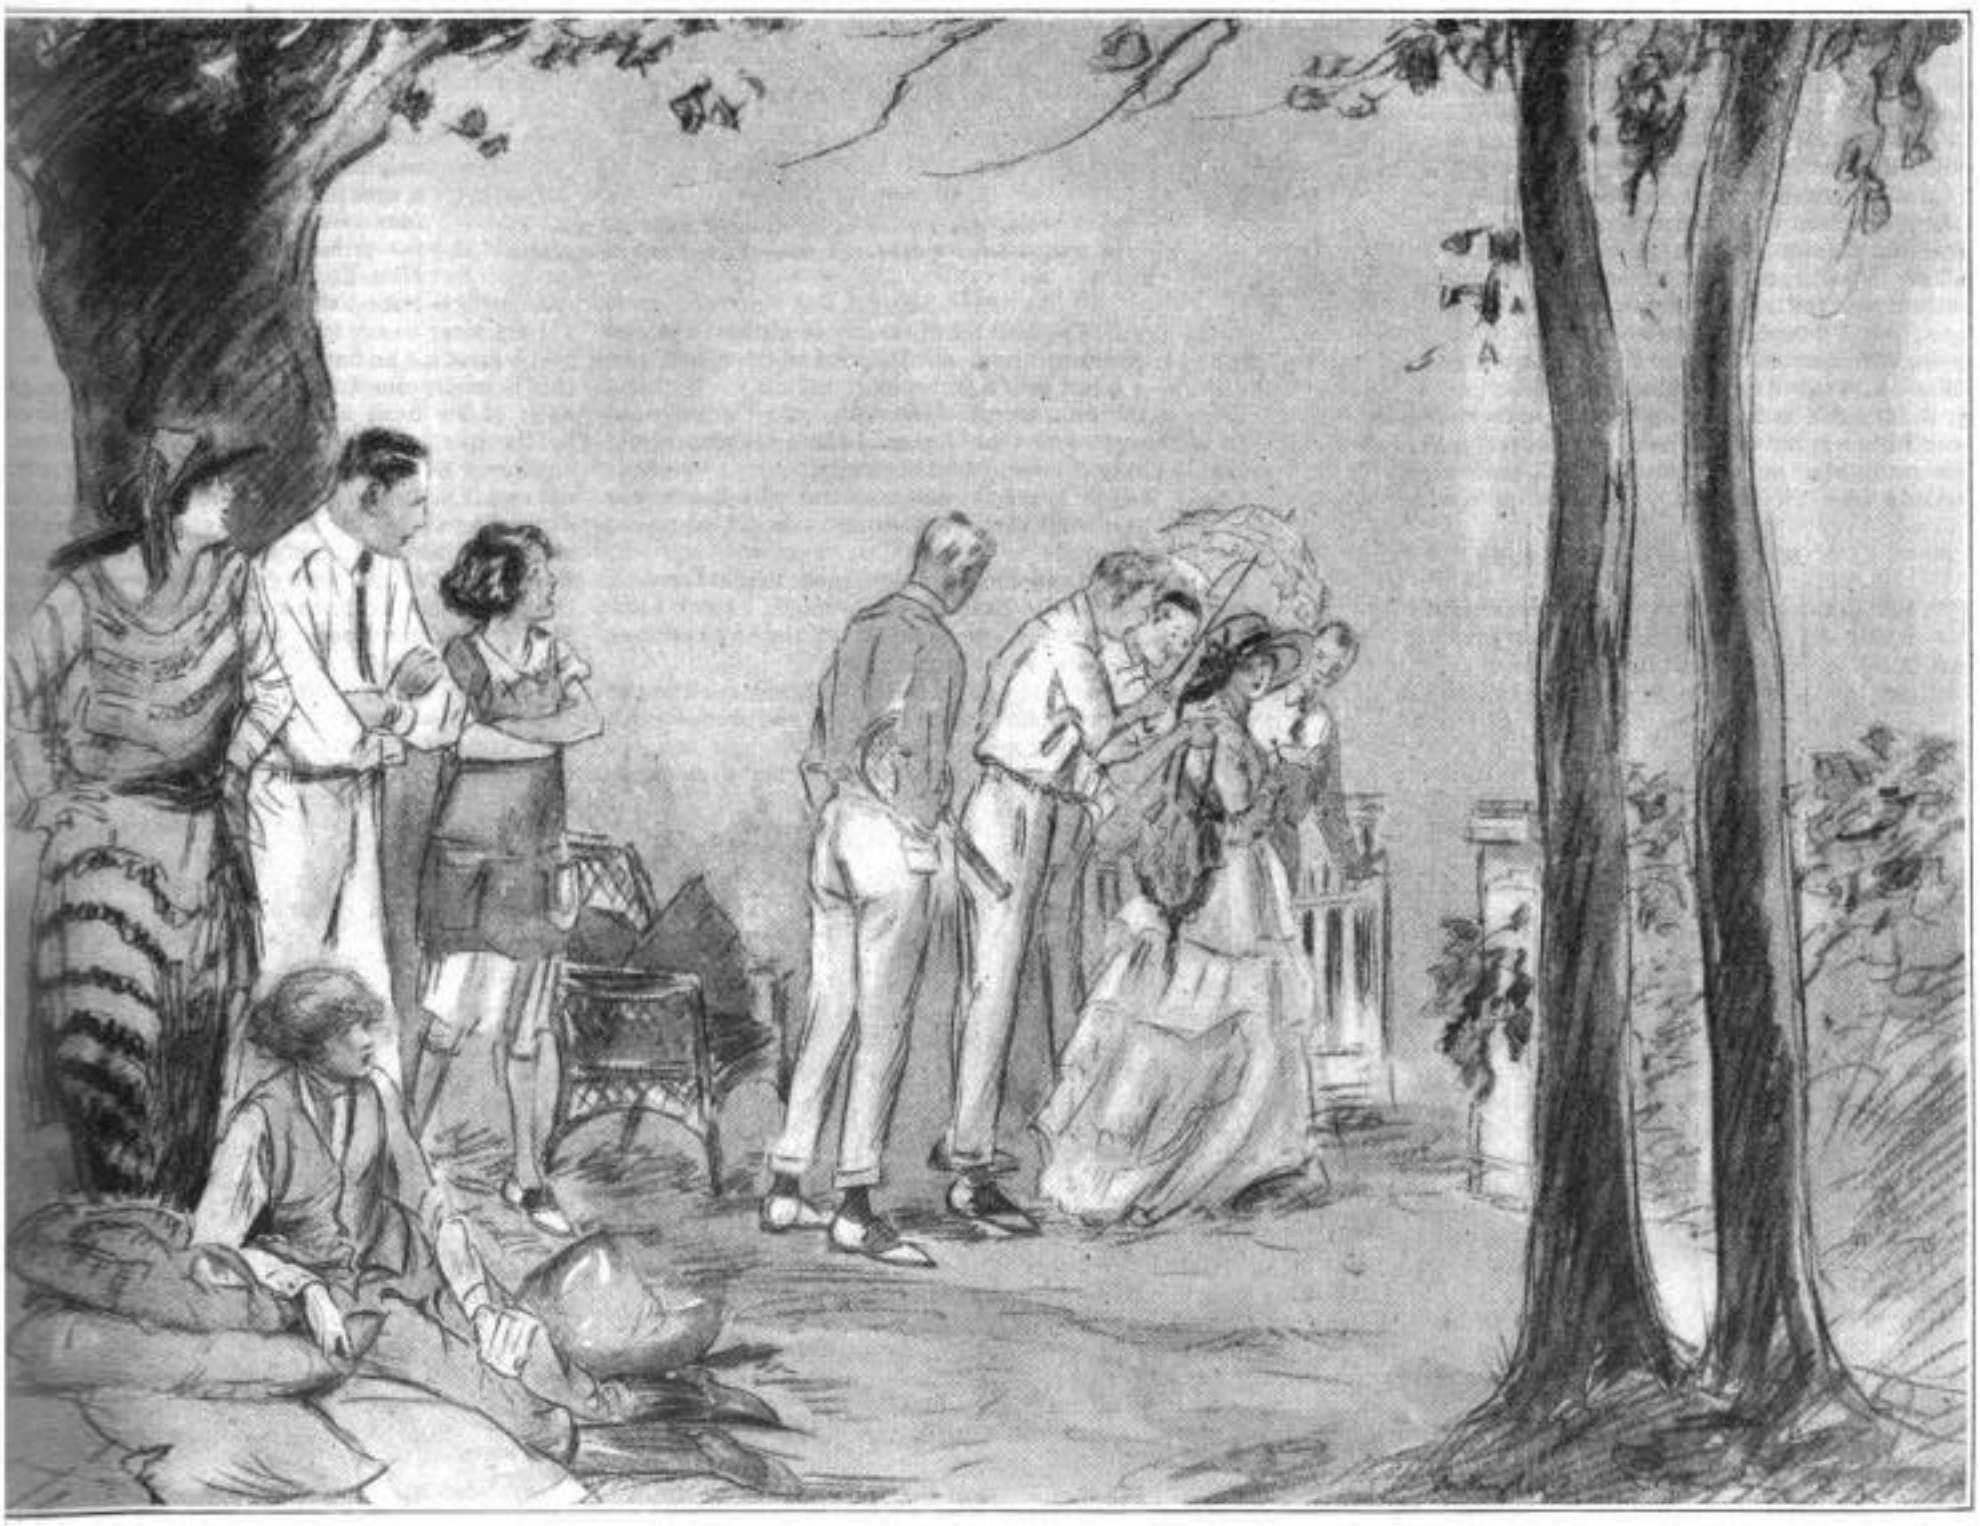
"Well, there's nothing solider than ground, my dear girl—you'll have to admit that. A chair would be nice, but it's simply out of the question, unless you can seduce the bearer of glasses. Of course there are cushions. You have more than your share, Joan—cash in, Babbie—one of mine as a special concession. Mount the throne, lady!"

Paula seated herself on the edge of the pile of cushions with majestic caution, and turned the somber magnificence of her eyes on the menial with the glasses.

"Anything in them, Etienne?"

"What madame sees—geengaire ale, ice ——"

"Thanks," said Paula hastily, and her tone was not eloquent of gratitude. "None for me, Babbie."



"Pull yourself together, darling," adjured Joan, deftly removing two very tall glasses from the tray. "Take a nice big glass and park it beside you for five minutes, and maybe the fairies will put something in it. Do you believe in fairies, woman of mystery?"

"I'll believe in anything that will put something but ice in this ginger ale. Who has the flask? You, Rod?"

"Nossir—not that I don't appreciate the pretty tribute. The gentleman from California who has just taken two straight sets and six straight games from the well-known Peter is now approaching, bearing gifts. Draw near, Lochinvar—draw a whole lot nearer! An admiring throng is eager and anxious to drink your everlasting life and happiness if you'll sprinkle just a drop of life and happiness in their glasses!"

"Go to it!" affably advised the brown young giant rejoicing in the name of La Rue Sinclair Tolliver and less formally referred to as Frisco Tolly. Babbie patted the ground beside her invitingly, her gypsy color a little deeper, and he sat down swiftly, with an expansively responsive smile. "No, wait a sec—it's in the polo-coat pocket. Say when, Joan."

What Would the Boys We Were Think of Us Now?

By Ellis Parker Butler

ILLUSTRATED BY M. L. BLUMENTHAL

THE other day, among some old papers, I ran across the photograph of a rather nice-looking little boy, and when I turned it over I found written on the back, "Ellis Parker Butler, about 1876, aged 7." That did interest me, you may well believe. There we were—the boy I was and the man I am—face to face, and if we wanted to we could say what we thought of each other.

For a man to see a photograph of himself as he was forty-six years ago is not so interesting as it would be to see a photograph of himself as he will be forty-six years from now, but it is something. Forty-six years from now I may be a wabbly old gentleman ninety-nine years old, taking nourishment out of a soup spoon; or I may be standing in line at the window of the supply department to ask for a new G string for my golden harp; or—but I hope not—I may be looking at a thermometer that registers 2697 degrees above zero and saying to the man next me:

"It looks as if it would be warmer today if we don't have some rain, and I'll bet a million to one we won't."

No one can guess what a photograph of himself taken forty-six years from now will show. If there is anything in this transmigration-of-souls business, as the old Druses believed, a twelve-dollar-per-dozen cabinet photo of me taken forty-six years from now may show me as a Rocky Mountain goat or as a Peruvian llama or as a plain but dignified ox. On the whole I don't believe I will care to be an ox unless the pasturage is fair to middling and the work light, but I would rather have my photograph show me an ox than as something in the fourth-dimensional-space plane—say, as a transparent parallelepipedon marked A, B, X and Y at the corners. For a man who has always been rather proud of his looks, a photograph that showed him as nothing but an invisible whiff, represented by the formula 7A+3B(—Z+2X), would be quite a comedown.

The Boy I Used to be Decided That He Must be a Blacksmith. I Confess I Have Failed the Young Man

My Photograph in 1968

EVEN if the photograph showed me resolved into my constituent chemical elements, I don't believe I should care much for it. I should hate to go over a lot of proofs with my family and have my daughter say: "I don't like this one at all. The H_2O hardly shows at all, and the carbon and iron are so prominent they make papa look like the inside of a last year's stovepipe."

Even if the photograph showed me as an angel—and that is almost more than I dare hope—someone would probably study it a while and then say:

"Yes! Yes, it is a good likeness; but why didn't you wait until you were through molting? Or did you need insect powder?"

On the whole, though a photograph taken forty-six years from now would be interesting enough, I think I like the one taken forty-six years ago, even if the boy in it does not look at me with enthusiastic pride.

This seven-year-old boy in the photograph is sitting in the photographer's plush chair, sideways and cross-legged, with his right elbow on the back of the chair and the fingers of his right hand spread out like the rays of the sun. I can still feel the moist hand of the photographer as he lifted one finger after another and put it exactly where he wanted it to be, exclaiming, "There! Good! That's fine!" Then he jumped back to his camera and hid under the black cloth and took a look at me and jumped back to me to move a finger an eighth of an inch south by southwest.

"Now, ready! Don't move! At 7 proofs will be ready Friday."

His name was J. P. Phelps, Artistic Photographer, Muscatine, Iowa, the card says. I have a memory that he was short and hairy. The interior of his gallery was [illegible] smelled like an oversterilized hospital. While you were posed a large iron clamp gripped the back of your head. In those days the photographer was as fussy as the undertaker and being photographed was almost as [illegible] some as being undertaken. You did not decide on the spur of the moment to be photographed, and dash up and have it done and dash down again. The family started talking about it in June, and during July and August held consultations with the neighbors trying to decide which photographer to go to. All of September and part of October were spent trying to decide whether to get a dozen *carte-de-visite* size or half a dozen of the newfangled cabinets with the jaggy edges.

Short of the Mark

BY THAT time the photographer had moved to Davenport or Asa [illegible] neighbors had to be called in again, and a new photographer had been chosen. Christmas was at hand, and the photographer could not promise to have the pictures done by New Year's Day; so the whole business was put off until spring.

I am sorry to say that when this boy in the 1876 photograph faces me he has a somewhat resentful look. I think this is partly due to the iron clamp that is gripping the back of his head and gradually pulling three hairs by the roots; but I don't know that I blame him anyway. He is probably looking me over and sizing me up, and it makes him feel sick. Sitting there on that chair the young Ellis is a pretty fine-looking kid. He has a nice forehead—a mighty fine-looking forehead—and his skull looks as if it had a good brain capacity. He looks the sort of boy to grow up and be President Harding or Frank A. Vanderlip or the Bishop of Eastern Pennsylvania or some other great or wealthy or famous man the time he is fifty-three.

A boy like that, seven years old in 1876, might be Herbert Hoover or governor of Iowa or the president of Columbia University, in 1922. He might even be

to be cut out, lying flat on the table,
ars eating through it, allowing for
ears going "creak! creak!" as they bit
nd with the boy's mother stopping suddenly with a catch of the breath in sudden fear that she had cut out two backs to the trousers and no front. She had!

It seems to me that the boy spent several years—long and torturing years—standing on a stool and trying on that suit. He had it pinned on him in separate pieces, and tried on in basted sections and in every stage of development. Sometimes he tried on one sleeve and sometimes both sleeves; sometimes one pants leg and sometimes two pants legs at a time. Then it would be the coat without the sleeves.

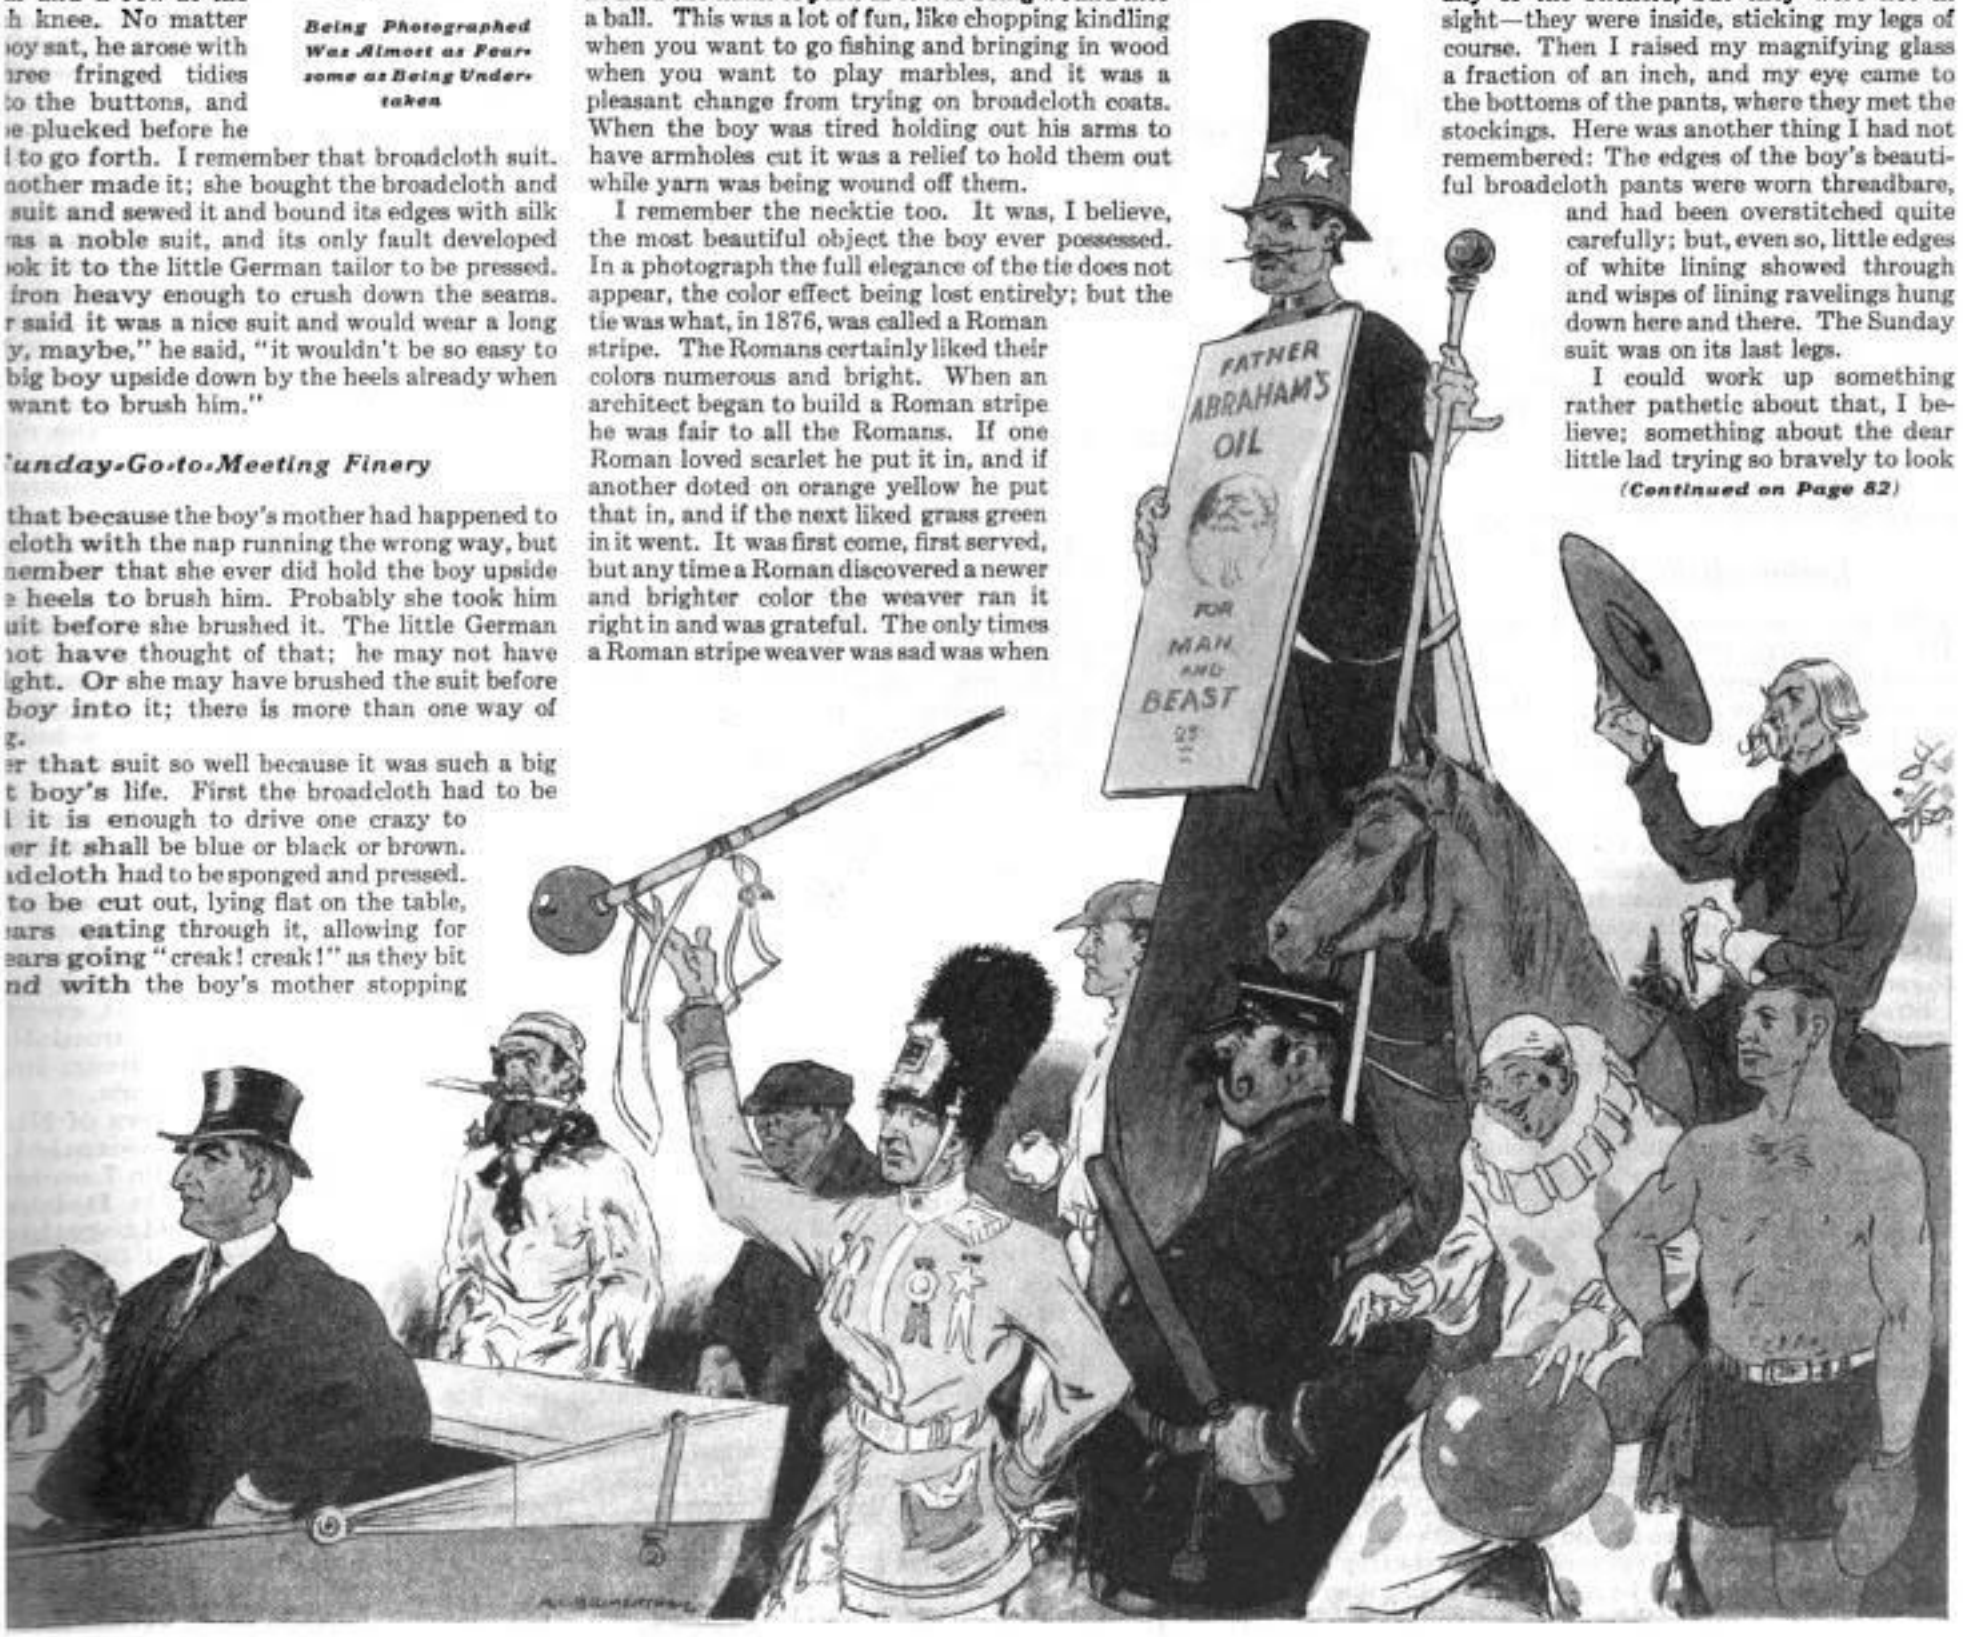
"Please, please!" the boy's mother would beg through a mouthful of pins. "Do please hold up your arm!"

Then she would gather up a fold of broadcloth and stick a pin in it and, inadvertently, into the boy somewhere, and when he yipped she would sit back and say she didn't know what she would do if he could not stand still a quarter of a minute at a time; she was just about discouraged with the suit as it was. It must be admitted that it is difficult for an amateur tailoress to cut an armhole to the right size when a boy keeps his arm clamped down tight and giggles every time he is touched, except when he is crying; but after a boy has tried on a suit a couple of thousand times he begins to think it is monotonous. He wishes he was an Indian and could wear a blanket and a couple of ready-made feathers.

I remember the boy's blue-and-gray-striped wool stockings too. His grandmother knit them, but she did not put in the sand-bur tips and other stickers—they were in the yarn when she bought it. The boy did not have to try on the stockings; all he had to do was stand and sigh while he held the hank of yarn as it was being wound into a ball. This was a lot of fun, like chopping kindling when you want to go fishing and bringing in wood when you want to play marbles, and it was a pleasant change from trying on broadcloth coats. When the boy was tired holding out his arms to have armholes cut it was a relief to hold them out while yarn was being wound off them.

I remember the necktie too. It was, I believe, the most beautiful object the boy ever possessed. In a photograph the full elegance of the tie does not appear, the color effect being lost entirely; but the tie was what, in 1876, was called a Roman stripe. The Romans certainly liked their colors numerous and bright. When an architect began to build a Roman stripe he was fair to all the Romans. If one Roman loved scarlet he put it in, and if another doted on orange yellow he put that in, and if the next liked grass green in it went. It was first come, first served, but any time a Roman discovered a newer and brighter color the weaver ran it right in and was grateful. The only times a Roman stripe weaver was sad was when no one was discovering new and more gorgeous color, and then he wove in a little good honest black to show his sadness. The black sort of set the colors off and made them more showy. The boy's tie had fringe on the ends, and he admired the tie with pure unblemished admiration. It was worth it. No matter what else the boy wore, he was all dressed up as soon as that tie was around his neck, and everybody within a mile knew it.

When I picked up this photograph of the boy I was forty-six years ago I thought I remembered the gold buttons; but I could not be sure, so I got a magnifying glass, and sure enough, they were the very same buttons, with a gold knob in the middle and little gold dots scalloped around the edges. Then I looked at the shoes, but they brought back no memories; I suppose that was because they were polished—they did not seem natural. I seemed to remember the shoe strings, wrapped twice around the ankles and tied in a hard knot; and the mud on the shoe heels—good old Muscatine clay that stays where it is put—but the fancy loops of stitching around the shoe tops meant nothing to me whatever.



Revelations of the Magnifying Glass

IT IS remarkable how faulty one's memory is. The only way I can account for it is on the theory that perhaps they were not the boy's shoes at all, but borrowed shoes. The metal tabs on the ends of the shoe strings seem to suggest this; they are all there, and I cannot remember the boy's shoe strings ever did have tabs on them one day after he got them. A large portion of the boy's life was spent wetting the ends of shoe strings in the manner most convenient and then twisting them into points that would reluctantly poke through the eyeholes. But perhaps these were brand-new shoe strings, purchased to be photographed in.

I was having a grand time with my magnifying glass. I looked at the striped stockings to see if I could discover any of the stickers, but they were not in sight—they were inside, sticking my legs of course. Then I raised my magnifying glass a fraction of an inch, and my eye came to the bottoms of the pants, where they met the stockings. Here was another thing I had not remembered: The edges of the boy's beautiful broadcloth pants were worn threadbare, and had been overstitched quite carefully; but, even so, little edges of white lining showed through and wisps of lining ravelings hung down here and there. The Sunday suit was on its last legs.

I could work up something rather pathetic about that, I believe; something about the dear little lad trying so bravely to look

DIFFERENT SHADES OF ROSE

By Eleanor Franklin Egan

The Homeless and Starving Gathered From the Streets at a Place of Refuge. Above—Famine Refugees Camping by the Wayside

THE proof of the pudding being in the eating thereof I went to Russia feeling confident that if anything good and desirable had been proved in applied communism under the soviet system of government I should have no difficulty in observing it, since it would be plainly manifest in the lives of the people.

Nobody pretends to believe that the social organization as it has formed itself during the great period of rapid industrial development throughout the world is in any of its aspects wholly satisfactory.

On the contrary those of us who take time, in the midst of our perpetual occupation of making the best of it for ourselves in our several ways, to pause and look at it from as many angles as may happen to be visible to our minds, find it a good deal of a hopeless muddle from whatever viewpoint it may be viewed; and we know perfectly well that any system that can prove itself to be better than the system upon which it is based is bound to win sooner or later, no matter what measures may be taken to defeat it.

There is something very attractive in the communistic principle: "From each according to his ability, to each according to his need"; the great difficulty being that human nature is human nature in more ways than one. Most of us are drawn to this idea largely because we need a great deal and have very little ability.

Lenine's Definition

NEARLY everybody has given some thought to the theory of communism, and groups of people here and there have actually put it into more or less satisfactory practice, but these people have invariably been regarded by ordinary folks as belonging to the great universal brotherhood of the partially demented, and I am sure that nobody—none of the ordinary folks, at any rate—ever dreamed of the possibility that an experiment in communism would be made upon the national life of one of the strongest peoples on earth.

Strong numerically, that is. There are more Russians in Russia by many millions than there are people in the United States—including Russians.

The high-toned, communistically conservative and ordinarily respectable communists are telling us now that the Russian system is not communism. And one can readily believe this, because the renowned advocates of communism—back through the years since the beginning of the nineteenth century—have been accredited by common assent to the highbrow section of the world's catalogue of intellect, and it is so difficult to believe that any really intelligent man could ever have imagined that such a system as pretends to be in operation in Russia today could possibly be made to operate.

No theory is proved until it is demonstrated, of course, and there is this to be said: When you are working on a formula you never know when, by accident or design, some element may be introduced into it that will change its character altogether and cause your experiment with it to fail dismally or to end in one spectacular catastrophe.

The good communists, who are no more willing than the rest of us to compromise with brutality, bestiality, selfishness and crime in all its phases, say that it is the element of Bolshevism in the Russian experiment that is responsible for the horror and the hideousness of it, but they fail for some reason to tell us exactly what Bolshevism is. Bolshevism is nothing more nor less than the majority opinion of the Russian Social Democratic Labor Party, and, as such, is Nicolai Lenine's own interpretation of the Marxian theory that the state has developed into an organ of class domination and oppression, and must therefore be overthrown.

The state, which most of us think of loosely enough as being a social unit resting upon an accepted constitution, upheld by a code of laws and functioning under a parliamentary form of government, is defined by Mr. Lenine as "the product and the manifestation of the irreconcilability of class antagonism."

And I should like to hear a guess from anybody as to how many of the class to which Mr. Lenine makes his appeal find this definition wholly intelligible.

influenced, because, after all, we had no way of knowing the truth when we were being overwhelmed all the time with anti-Bolshevist propaganda. Propaganda can be so insidious, you know, and we ought really, for our own protection, to be on the alert for it in everything we read or hear.

"The anti-Bolshevik propaganda has been the work of a few syndicates of international capitalists—you know it costs an awful lot to do that sort of thing!—who consider nothing but their own interests and who are too sordid and merely commercial to have any concern about the soul of a people. And isn't it too dreadful that America, this country that ought really to be everybody's country—because, after all, you know, as history is written it was only discovered a little while ago; and though I am just as good an American as anyone I can quite see why America should still be looked upon by the world brotherhood as being in a sense common property; it is so much broader, so much more intelligent, so much more in keeping with the inevitable trend of history—if you know what I mean—to look at it in that way—but isn't it too dreadful that this great new country should have produced the most heartless capitalists, the most ruthless exploiters, the most unthinking oppressors in the world?

"Mr. Tellitallsky didn't finish explaining to us the principles of Bolshevism, but he convinced us that we had been shuddering all these years at nothing at all, and I felt ashamed of myself; I did, really! Of course we don't want communism here in our country; not yet; not until we are better prepared to receive it. Mr. Tellitallsky frankly admits that we are not ready for it; but that's no reason why we should turn our backs upon a people who have accepted it and are trying so bravely to make a success of it in the interest of the masses.

"If we can induce Mr. Tellitallsky to meet with us again next week we shall devote another hour to the subject. It's perfectly fascinating! There is an undertone of sadness through it all, but in another way it's awfully funny. It's like walking right up to something that has simply thrilled you with terror for ever so long, only to find that you have been terrorized by a monster of straw. It gives one such an opportunity to laugh at oneself, and that's always such a very healthy thing to do, don't you think?"

I beg everybody's pardon, and especially the pardon of Mr. Don Marquis, for such a weak imitation of one of his several inimitable styles, but I myself have actually heard more or less that kind of talk. And the parlor socialists, those earnest and devoted bridge-table and dinner-party students of world problems who began along sometime in 1917 to suffer from an acute attack of diminishing interest in socialistic theories, are beginning now to come back into their own.

The Parlor Socialists' Grievance

THEY all believe—with an ethical belief, of course, not a commercial belief. They abhor the very idea of sordid commercialism, even though they do cling tenaciously to all the advantages that have accrued to them through commercialism—they all believe that the United States should recognize Soviet Russia, and regard it as being inexcusable that a supposedly enlightened and so-called liberal government such as ours purports to be should obstruct the way of a great people struggling to be free. They declare—with an air as though they were daring you to call in the police—that there is nothing particularly sacred about the American Government; that, as a matter of fact, almost any change in it would be a change for the better; that the soviet system should at least be permitted to prove itself one way or another, and that if it proves itself to be better than the established failures to which the world is now subjected they are all for it.

And all well and good, says I. But I wish I could gather up a little company of such Americans—all of them, mind you, either unalterably bourgeois or irredeemably rich—take them to Russia and compel them for a period to live in the midst of the Russian experiment as the average Russian is compelled to live. I should take them empty-handed, thereby saving the soviet authorities the trouble of emptying their hands, thrust them forth as mere people among the people, and ask them to play the game according to the rules laid down. They would not find any of their admired leaders or revered teachers doing this; but as

YOU NEVER CAN TELL

By Lawrence Perry

ILLUSTRATED BY TONY SARG

He Took a Toe Hold and Swung Like a Windmill

YOU can take it from me that a champion is always a champion, no matter where he is or what company he is in. That is, the stuff that made him what he is and keeps him there is stuff that is recognized even by folks he chances to meet or be with who don't happen to be acquainted with the fine points of his specialty, or maybe don't know anything about it at all.

He stands out from the ruck, and there is something about him that lets you know he does. Tell me what that something is and I'll tell you what makes him a champion. But it's there and everyone knows it's there. You might call it personality. Personality—get the idea?

Now I'm not reaching for credit in the way of making anyone think I dug this line out of my own head. A manager who has piloted a ball club up to and through two World's Series, and aims to do it again if a certain deal goes through, can stand on his record without wasting his time trying to bat in this guy Einstein's class; I mean the fellow the papers were so full of a while ago who doped out that the stars and the earth were near relations, and not even the highbrows could come back at him, because no one knew what he was talking about.

No, I saw it demonstrated; I mean that champion idea of mine. And, like most things one gets by experience, it cost me something. It cost me the best batter the world ever saw, next to Babe Ruth, and I figure you'll agree with me when I say it was Bab Schnitzler. Remember Bab? If you don't you never had a passing acquaintance with the national pastime.

I got Bab from the Three I League in exchange for a pitcher who had put his fast ball back in the trunk where he kept his first toothbrush and a utility infielder who carried the only elastics he had left in his sock supporters. Bab—which was shortened from Baboon after he had put four of the Grays' regulars on the hospital list for insisting upon the full title—was not highly regarded in the bushes, in spite of his size and strength. But English McCune, who does most of the scouting for the Grays, figured that if Schnitzler, who threw left-handed and batted right, could be turned to the south side of the plate the fences wouldn't keep the balls he hit inside any more than they would a flock of blackbirds. I don't know just how he doped this out. McCune is a close-mouthed bird and isn't handing away his inside stuff. Maybe what struck his eye was the thing I was speaking about when I began this spiel—the personality, or something, that sets out a champ ahead of the bunch. I don't know.

Anyway, the manner in which Bab, after I had sweetened him on the bench for a season, broke into the Grays' regular line-up and made opposing pitchers wonder whether the outfield had shrunk is a familiar story. If you remember, he made twenty-two homers in his first season of regular play, the season we won our first World's Series, and then came back the next year and waved thirty-two good league balls out of the various lots.

Oh, Bab could hit! And he could field. He was a ball player, the best I ever saw or heard of. I am perfectly willing to hand him this bouquet, and wherever he is I hope he suffocates when he inhales the perfume.

When he came to the Grays I take one look at him and then a long, cold look at McCune.

"Mac," says I, "haven't you got this ball park mixed up with the Bronx Zoo?"

"Oh, no!" replied Mac, who can see everything but a joke. "No, I ticketed this bird correct."

"Bird! You mean a grizzly bear."

Maybe I was flattering the newcomer at that. He had a chest like the back of a jitney bus, and above it a big tousled head with heavy eyebrows that met in the middle. He looked about as human as a coonskin coat. But his legs tapered as an athlete's should, and amidships he was flat as a prize fighter. Taking their cue from me—and I'll hasten to say it was a bum cue—the boys were jocular about the rookie.

"Where's your glove, Baboon?" inquired Rats Finnegan.

"On the ground near where you're going," was the reply.

It was even so, and Rats had nothing on the glove when it came to lying still.

This quick come-back of Schnitzler's made me suspect he wasn't as bushy as his eyebrows. I was sure about a minute later.

The Baboon Sat There Up-Ending the Coffeepot

"Is there any other big leaguer," inquired Bab, looking calmly around, "who don't think he can live happy without putting me into the monkey class!"

Hop Bruner, our regular catcher, famed throughout the league for his ability as a one-two puncher, opined that he couldn't, and proceeded to live up to his convictions.

A few minutes later when I bent over him, he faintly murmured for water, whereas to all physical indications he ought to have been asking for a stiff hold.

Thereupon Bill Trott and Bill [illegible] adopting the name of the state of Kentucky as their [illegible] form, declared [illegible] dangerous name in unison, and went [illegible] grass so nearly at the same time that would have taken a quick-motion camera to tell whether it lived up to the divided-fall part of the motto or not. Well, anyhow, already said, the name by popular vote was reduced to syllable.

No, Bab wasn't a slow thinker. He was one of those guys whose ideas come quicker than he can let you in they're coming—could think faster than he could talk. hadn't had much education, but he could read and write all right; and when it came to figuring in a pinochle game or estimating his exact value as a ball player he knew the head.

He never said much about his past life, probably considering the less said the better. But you wouldn't guess his table habits without knowing that he was never in the home of a bank president. I remember the first at the hotel Bab ordered a squab because the attracted him—he was always that way, eager to When it came he picked it up and swallowed it quinine pill, ordering the waiter to bring half a dozen of those little birds.

But, as I say, he was eager to learn and fairly quick too; but only one thing at a time. On the ball field, hotel, wherever he was, whatever you wanted him had to be slipped singly. Give him two things about at the same time and the big baboon stopped ing about anything. Give him three and he was like who has kicked over a beehive.

All you had to do was be patient. I was. I worked that cave man like a father, and I will say he was He had no bad habits—that is, no vices, unless you cards. And pinochle is never a vice when you sistently as Bab Schnitzler did. As for his ball was a natural left-handed hitter, and how any manager had ever let him hit from the other yet have figured out. The minute the ball pitcher's hand he lamped it and his eye it like a spotlight on a lady dancer, or how it broke.

When he struck out, as he did, of course if not more so than the rest of the not because he was fooled but because put into his wallop affected his timing His hitting helped a lot to win that first year he played regularly, and you the seven home runs he made in the World's

Next season the Grays were never July first, and we took the well-known series from the Trojans in straight future looked pink to me. Here I had sweet a lead-off man as ever choked a bat; had hit for more singles than any man in the years running; then Larry Boyle, an annual and Bab in the clean-up compartment. There four men who were harder for a pitcher to work gave the Grays an attack that promised to

made as it met the ball. And fielding? Those Grays red the ball park like a Billy Sunday tabernacle. e was nothing to the league race in those days.

fact I got pretty heady over the situation. I got the that no one man was indispensable to the club's suc- that everything was due to team play, and, over and all that, to the managerial genius of a man whose would be recognized as my own if it were spoken . I know better now. Now I know that the strength arch is the keystone, the solidity of a building its ation, the greatness of a ball club a single nucleus d which all the other parts gather and form a battling . Bab Schnitzler was that nucleus in the Grays.

nd myself enough credit to think I really knew this be was with the club. But, if so, I didn't digest the edge sufficiently to get it circulating through my . No, on the surface, I just took the Grays as a tuck out my chest and felt good. Maybe I'd be the same today; maybe the Grays would be up ighting in the first division instead of pulling a life- uth duel with the Plaid Sox to keep out of the f it hadn't been for that English trip. In fact it's they would.

y time I think of England I wish somebody would orth of Vladivostok and forget to anchor it. I gave 's winnings at the track to the Irish Republic fund ar, hoping they'd go over there and cut Lloyd s hair for him. That's how I feel about England. for that oily, fat-fingered little guy, Cephas Pratt, the Grays over there, let it go with the simple nt that I hope I live long enough to meet him face

as a class, I haven't got anything against press I have used them once in a while when I didn't way the regular newspaper guys were treating me ly. But I've got a lot against this bird Pratt. Yes, press agent. If he sees this it will be getting back a little bit, because that description of his par- rofession never made any hit with him. Standing st the bar at the Savoy or Claridge's or some of gh-flown places in London, sticking out his little and chest like a pouter pigeon, twisting his waxed e and puffing out his fat cheeks, he would talk l, as long as someone was buying, about his g a press agent rnalistic—what oh, yes, a jour- plenipotentiary; of international and developer on understand- g the nations of . Oh, he had a ht! Wish I could more of it. s one of those would rig up a

public movement, get a lot of snuffy old millionaires or millionairesses interested, and then land in a swivel chair before a roll-top desk with plenty of push buttons and a fat rake-off. Come to think, I guess Cephas was a plenipotentiary, if it means what Judge Connolly, the umpire, said it meant the time I asked him. All I'll say is that Cephas couldn't have meant what Connolly said it meant. But then the judge was prejudiced, too; he was on that English trip.

This Pratt didn't figure in the deal at first; at least not with us. The first we heard was just before we played the World's Series and the newspapers began talking about a great symposium of sports to be held in London with the idea of bringing all the nations closer together in the brotherhood of a better understanding, not only as regards sports but politics and everything else. Smooth idea, what? Each was to learn all that could be learned about the other's sports and carry them back to the native land and push them along, so that finally all the world would be playing the same kind of games and there would be international leagues and all that sort of bunk designed to bring alien peoples closer together.

If I'd known Pratt or anything about him when this stuff came through I'd have tumbled quicker than a hod-carrier who thinks a plank is three feet longer than it really is. As it was, I fell instead of tumbled. So did everyone else, the newspapers included. It was a great program. The best ball club that the U. S. A. could boast was to go over—at its own expense, mind you—and play ball. The English were to show the fine points of cricket; the French were going to tip the world off on handball and croquet; the Finns were going to throw the javelin; the Spaniards were going to throw the bull, or something, and so on.

As for the Baboon, He Grabbed One Fork and Never Let Go of it No Matter What Came and Went

The owners of the Grays fell harder than anyone. Magnates somehow are always anxious to show off the national game to the world, and have pulled off more than one world tour. So it was agreed by old Wolverton of the Grays and Galvin of the Reds that the team that won the World's Series should go over, picking up an opposing nine from the clubs of the league.

A lot of the Grays, including myself, growled over the idea at first; but by the time we had copped the series and the money was in sight there wasn't a man who wasn't keen to put in a month on the jaunt; while Wolverton, our owner, had so many volunteers for the opposing nine that you'd thought war had been declared.

The newspapers of course made a hurrah about the trip; made so much noise and printed so much that no one seemed to notice the fact that the international stuff—all this proposed big explosion of international sporting spirit—had boiled down to a visit of the Grays to London. Good as Cephas Pratt was, he couldn't get the French, Spanish and the rest beyond the point where they were willing to talk about the idea.

Beyond that, the mere fact that they would be required to finance their sporting tour was more than sufficient to spike it.

This bird Pratt of course had been behind the whole scheme the whole time. He had gone to London as ballyhoo for an invading Broadway musical-comedy troupe, and finding that the dear old English loved to fall for his particular brand of bunk he remained there, cultivating a London accent, clothes that needed shaving and a bank roll.

When the foreigners fell by the wayside Pratt simply howled more about the Americans—the Londoners had never been much impressed by the French, Spanish, Italian, Finn and Greek stuff anyway—and drew down what he called his honorariums week by week with cheerfulness that never failed.

Schnitzler balked at the idea of the trip at first when he learned just where England was and what you had to do to get there; but when he heard they fed you four meals a day on the steamship, with five o'clock tea besides, he changed his mind and was crazy to go.

"Look here, chief," he said the day before we sailed, shoving over a newspaper, "what's the idea?"

A USE FOR CLODS

By Ben Ames Williams

ILLUSTRATED BY CLARK FAY

YOUNG Carl Van Wert had never before been north of Boston, and he felt like a pioneer. He had gone to sleep the night before on the Pullman, from whose windows he had been able to look forth across a familiar countryside. This morning he saw bold and barren hills, brown fields, leafless trees close reefed for winter's gales, and everywhere the warmth and color of spruce and fir and hemlock and of pine. There was, about the towns where the train stopped, an air of impermanency. The houses were of frame construction, narrow and high; they seemed flimsy. He thought a stiff wind would have toppled many of them. As a matter of fact, a stiff wind was blowing that morning; dry leaves scurried in panic before it, for it came from the north and there was ice in its breath; but young Carl Van Wert, in the warm Pullman, had no hint of this.

He began to see, on the platforms along the way, men garbed for winter in kersey pants and felt boots and heavy, sheep-lined coats. They repelled him, for they did not look scrupulously clean, and he had been taught from babyhood to brush his teeth twice or thrice a day, bathe at least once a day and tend his nails. These matters had been insisted on so strenuously that they had assumed in his eyes more importance than they deserved. So he did not like these soiled-looking men; but they interested him, and he wondered if there were any here aboard the train, and decided to inspect the day coaches and see.

The coaches offended his nostrils, and on the platform between the last of them and the smoking car he stopped to light a cigarette; then opened the door of the smoker and was immediately grateful for the precaution. The car, to his first glance, seemed full of men: enormous men with wide shoulders and broad faces and mustaches and greasy hair. The air was foul with the smoke from their foul pipes; the floor was littered and stained so that he could find no clean place to set his foot; and the odor of many hot and steaming human bodies, each swathed in garments too long worn, struck him like a shock of horrible and nauseating fear. One or two of the men saw him and grinned good-naturedly; and then the brakeman came across the swaying platform at his back and stood beside him in the open door. Van Wert welcomed this brakeman as an ally.

"Who are they?" he asked.

"Crew going into the woods," the brakeman replied.

"Lumberjacks?"

Van Wert had seen the word in a book. The brakeman grinned faintly, but he nodded.

"Yeah."

The young man, with no further parley, fled back to his Pullman. The experience had been a shock to him; he weighed it in his thoughts and was faintly appalled. For he, too, was going into the woods. At Princeton he had decided on forestry school.

His father weighed the idea, asked acutely, "Sure you want that kind of life, son?" His son was sure. "Then I'll tell you," said old Van Wert. "I'll fix it up for you to go into the woods for two-three months—see how things are done on the ground. It'll do you good physically, and you'll learn something; and you'll know whether you want to go on."

It had been so arranged. When this train should presently stop—he looked at his watch and saw that it would be less than ten minutes now—he would be at the jumping-off place. There remained ahead of him a long automobile ride, a motor-boat trip, probably some tramping before he should reach his destination far up in the spruce forests. He had expected to enjoy himself, but the sight of his potential fellow workers in the smoking car ahead disturbed him.

"They say even a pig, given a chance, will keep himself clean," he thought disgustedly. "They're lower than swine; they're clods."

Remembrance of them made him go into the lavatory and wash his hands. Then the engine whistled, the train began to hiccup on its brakes, and he knew it was time to get off. The porter helped him on with his coat, bore away his bags. There was also a steamer trunk in the baggage car ahead; but by the time he had alighted that end of the platform was thronged with the men from the smoker, so he made no attempt to claim the trunk until they should have disappeared.

Their voices came to him—hoarse, shouting yet strangely musical voices. A young man in corduroy knickerbockers and a plaid Mackinaw had met them, was checking their names, shouting at them, grinning in response to their jests, answering their loud calls. As they answered to their names they climbed into large-bodied motor trucks that would transport them on the first long stage of their journey into the wilderness. Van Wert watched from a vantage at the other end of the platform, and when the last of the trucks was loaded and had lumbered away he was not surprised that the young man in corduroys turned in his direction.

The Flames Were Moving Forward Very Swiftly, Pressing the Men Back

This young man looked at him for a moment, then said pleasantly, "You're Van Wert, aren't you?"

"Yes," Van Wert nodded. "Did you come to meet me?"

The other held out his hand.

"Jenks is my name. I came down to get that bunch headed in the right direction, and the boss told me to bring you back. I've got a flivver around behind the station. Hope you didn't mind waiting?"

"You had my sympathy." Van Wert smiled. He meant to be friendly, but Jenks seemed surprised.

"Sympathy? How's that?"

"Oh, having to handle swine like that!"

Jenks chuckled a little.

"They're not so bad. You ought to see some of the stuff we get up here. Those were good men. I know 'em. They were up here all last winter."

"A good half of them had drunk more than was good for them," Van Wert suggested.

"Half?" Jenks laughed. "Lord, all of them!" He was inspecting the trunk to which Van Wert had led him. "That yours?"

"Yes—if you can manage."

"Oh, transportation's the best thing we [illegible] up here. I can take your stuff right on [illegible] flivver. There's no one going up with [illegible] Trunk on the running board and the other stuff in back." He turned away. "I'll back her in here to the platform."

Ten minutes later Van Wert's luggage was bestowed [illegible] Jenks had promised. The train meanwhile had pulled ahead into the yards. As Jenks tied the last knot in the rope that held the trunk a brakeman came out on the rear platform of his train and yelled [illegible] him.

When Jenks answered, the brakeman shouted, "One of your gang's scared the smoker here."

Jenks smiled a little and strode [illegible] way. Van Wert hesitated, decided to wait where he was. By and by Jenks and the brakeman appeared, dragging between them a small, soiled and abhorrent figure. The man's head sagged and swayed [illegible] from side to side. His stumbling feet dragged along the cinders. They brought him down the track and stuffed him [illegible] into the tonneau of the car.

Van Wert had moved to one side, out of the way, but at this he asked, "Why did you put him in there?"

"He was asleep on the floor between two seats," Jenks explained. "The others probably thought it was a joke to leave him. I'll take him up with us."

Van Wert said slowly and painfully, "But he's so damned foul, you know."

Jenks looked at him with quick surprise, then looked away.

"Well, it's my job to get him in, [illegible] way. He ought to have gone in the truck, but they're on their way now."

"I shouldn't think carrion like that was worth carting in," Van Wert suggested, and Jenks smiled that ready smile of his.

"He's a good hand with an ax," he replied. "And he can drive a team; he's a first-rate mechanic." Van Wert must have seemed incredulous. "I know he doesn't look it," Jenks added. "But he's a good man."

Their little car rattled through the [illegible] and began the long climb beyond. The great lake spread to their left and [illegible] and toward the crest of the hill [illegible] stopped so that Van Wert might [illegible] splendor. The strong northerly wind was whipping the water into whitecaps, between which lay deepest blue. Mountains behind them and up the lake ahead were as blue as the water, beneath a sky that was covered with scudding, shadowing clouds. There was a somber quality to this blue that predominated everywhere, and the two young men buttoned their coats more snugly.

"Cold," Van Wert said. "That's gorgeous all right, but it's cold as the devil in this wind."

Jenks, starting the car, nodded.

"Wind holds that way, we'll be frozen up pretty soon. There was ice in the coves this morning."

They dropped down toward the lake again, along a marvelous road built for forty-odd miles through the woods by the great company which Van Wert had come to observe. Jenks told the story of the road.

"It's pretty good now, but I can remember when it took six horses to pull a buckboard through here," he said. Van Wert wondered audibly. The man in the back slept, with loud snores.

They stopped for a moment at Pickerel Bay while Jenks went into the store there; stopped again at Bright Water, a dozen miles farther on, where heavily clad men stood idly along the veranda rail before the store watched them from narrow eyes. These expressionless [illegible] disturbed Van Wert. The men were unshaven and [illegible]

When Jenks came out and they drove on toward Plant Farm, Van Wert asked, "All the workmen up here as dirty as the specimens I've seen?"

Jenks looked at him sidewise and chuckled.

"Why, they're not really lily-white lads, you know." He saw the other's movement of repulsion and [illegible] hand lightly on his companion's knee. "You'll get used to it, son," he said paternally, though he was scarce older than Van Wert. "You can't go much on looks up here. I've seen some pretty seedy-looking bums turn out a good day's work." He jerked his head backward. "That man in the back seat there—he's a Polack, or something, with a name like of a name. We call him Tom Jack. He was in the [illegible] Army for a while; but he deserted first chance he got

over here somehow and tried to get in with our when we took hold; but they wouldn't take a on him. Tom's a good man; can sing like the devil ork like two devils. But I don't suppose he'll take bath from now till spring."

ought to be made to," Van Wert said hotly. —they're not men. They're children. They can't or themselves. You have to tell them what to do, -nurse them to keep them from getting sick, and em amused and see they don't stumble over their t. They're not half so intelligent as a good ma-

He looked at Tom Jack, snoring peacefully behind "He's a clod!" he said, and liked the word. "A

was not by nature argumentative. He pointed where a flock of partridges fed in the road, mov- y to one side to let the car go by, like rather tame . A little farther on they jumped four deer, and tures bounded through the forest beside them, away on a tangent, for a hundred yards before ppeared. By and by a turn in the road brought into view ahead of them, and Jenks pointed. 's some little hill," he commented.

Vert, by the stark beauty of that uncouth and le, was silenced and made breathless; little more and so presently they reached Plant Farm.

midafternoon, when the early dusk of a cloudy already upon them, Van Wert began the next is journey. The manner of it was none of his he found himself in the hands of destiny in the Matt Riley, who was in charge at the Farm. He by motor boat up Summacook Lake, a thirty- and with him would go that crew of men who his traveling companions on the train and whom nks had passed, in the lumbering motor trucks, y to the Farm. Tom Jack, awakened from his ad rejoined his companions. The motor trucks r them on to the foot of the lake; Jenks drove over and turned him over to Chiswick, who had of the boat in charge.

rt looked out across the tumbling waters of k with some misgivings. The wind was blowing ver colder; he was glad he had found an oppor- change into rough and warmer clothing. He e along the shore in both directions, and thick coves and a scum of ice out toward the open

n't be able to run this boat much longer," he ick, and the engineer nodded.

g ice now all the time," he grumbled. "They oving back and forth up the lake so fast she

a score of men had packed into space fit for little more than half that number. He meant to stay with Chiswick, preferring the fumes of gasoline, which hung heavy over the craft and especially heavy in the engine cabin, to the reek of the human bodies. When the men were all aboard they got under way without ceremony.

Jenks, from the wharf, called "Good luck, old man," to Van Wert.

The engine, cranked painfully by hand with a long iron lever, barked and caught, and the broad-beamed craft turned its nose through the slush ice toward midlake. It was about three o'clock in the afternoon.

"How long shall we be on the way?" Van Wert asked Chiswick, and the engineer said, "Ought to make it by eight o'clock, unless something happens."

Van Wert smiled a little at the pessimistic tone which seemed habitual to the other.

"What's likely to happen?" he asked.

"This rotten scow—you never know," said Chiswick gloomily. "She's a child of misfortune. Nothing ever surprises me."

Bursts of laughter came to them now and then from the men in the cabin forward or under its lee in the waist. Van Wert stepped out to fill his lungs with fresh air and the cold wind whipped him stingingly. The sky, he saw, was covered with clouds now.

"Snow?" he shouted in to Chiswick, and the other nodded sulkily.

"Yes!" he assented.

Tom Jack, the only man in the gang forward who was an individual in Van Wert's eyes, crawled aft and went in to see Chiswick. Van Wert, outside, listened curiously. The Pole spoke, he discovered, fair English—understandable enough. This surprised him; he had expected a twisted, foreign tongue.

"How she hitting?" Tom Jack demanded, grinning good-naturedly at Chiswick and pointing to the engine.

"Now and then," Chiswick told him.

Tom Jack nodded in cheerful understanding.

"Same ol' goat, she is," he agreed. "She soun' lak hell."

"Why, say," cried Chiswick, warming to the subject, "she can think of more things to do that she oughtn't—it's wonderful!"

Tom Jack clapped him on the shoulder.

"Tha's right," he applauded. "You tell 'em. Well, you all right this trip. Tom Jack fix her if she go bust any."

Chiswick actually grinned.

"Sure!" he agreed.

Shouts arose from the men forward, and Van Wert saw they were looking at him; but he could understand no word. Then Tom Jack climbed out of the engine cabin and yelled at them in jumbled syllables, bending to explain to Chiswick.

"I'm go'n' sing them little song," he explained. "These boys crying for me."

He winked elaborately, grinned at Van Wert and climbed along the rail beside the cabin. Van Wert heard his voice uplifted, sweet and clear and rich of tone. The words were meaningless, the melody strangely disturbing. Van Wert found himself responding to the charm of that voice, shivering a little. Then the men burst into a great guffaw, and he guessed that the song was ribald, and was disgusted with himself for having been affected and went below with Chiswick again.

Darkness began presently to thicken about them. Two or three of the men, grinning apologetically, sidled into seats beside the engine, by their gestures indicating how cold it was on deck. Van Wert was driven into the open, and went forward, picking his way. Overside, bits of ice slid along the side of the craft, and he could see that they were running through a channel, in some places narrow, in others almost as wide as the lake; could see that everywhere ice lined the shores. The whipping wind was dead in his face when he looked forward, but he was warmly clad and welcomed the clean sweep and scourging of it; and he climbed along the rail beside the cabin to the very bow; found there in the forward end of the main cabin a smaller compartment he had not marked before, in which a man tended the wheel.

This man slid open a window and shouted to him, "Come on inside. You'll freeze out there!"

Van Wert liked him. He had a round, freckled face, and he had a scrubbed look which Van Wert thought pleasing. There was barely room for two of them inside his cubbyhole.

"I didn't spot this place," Van Wert explained, "or I'd have been begging shelter before. These chaps aboard here are too strong for me in close quarters."

The other laughed cheerfully.

"Right you are, son," he agreed. He added, as though it were an unimportant afterthought, "Roberts is my name."

"Van Wert's mine." They shook hands.

"Going in?" Roberts asked. Van Wert nodded.

"To learn the game," he explained. "I'm green as grass."

"Nothing much to learn," Roberts said casually. A gust shook the boat. "Ain't this some night, what?" he asked.

"Surely is. Freeze up pretty soon, don't you?"

"Any day. This wind stops, it'll freeze overnight."

They fell silent, staring ahead into the darkness. Roberts turned on a searchlight set on the roof above his head, and its rays illumined the tumbling water. The shores were dimly to be seen on either hand, their distance unguessable. Dark was almost fully come. Darkness had quite come when, half an hour later, the throbbing of the engine became uncertain, reluctant, and stopped. Roberts grinned.

"There she goes again," he said casually. "I'll bet Chiswick is swearing. Well, time for a pipe."

He lighted it. Secure from the wind as they were, Van Wert began to feel cold, for there was no heat in the cabin. Roberts' pipe glowed.

By and by he asked, "You know how to steer?"

Van Wert nodded.

"I'm going back—see if I can

FROM McKINLEY TO HARDING

Personal Recollections of Our Presidents—By H. H. Kohlsaat

XIII

PRESIDENT McKINLEY was inaugurated March 4, 1897. A few days later I took supper with the President and Mrs. McKinley in the White House. Mrs. McKinley insisted it was supper, and not dinner. The food was of the simplest kind, such as is served in thousands of homes in the Middle West. I noticed the colored butler waited on the President first. Mr. McKinley saw my look of surprise and, when the man left the room, said, "That is one of the things I cannot get used to. All my married life Mrs. McKinley has been served first, but it is a custom and we cannot change it. We are governed by White House etiquette, handed down for generations. The employes pass from one administration to another. Some have been here over thirty years."

The President assisted Mrs. McKinley to the living rooms above and rejoined me at the end of the hall, where palm trees and rattan furniture gave an effect of summer. Neither of us spoke for ten or fifteen minutes.

Finally McKinley, with a whimsical smile, said, "What are you thinking about?"

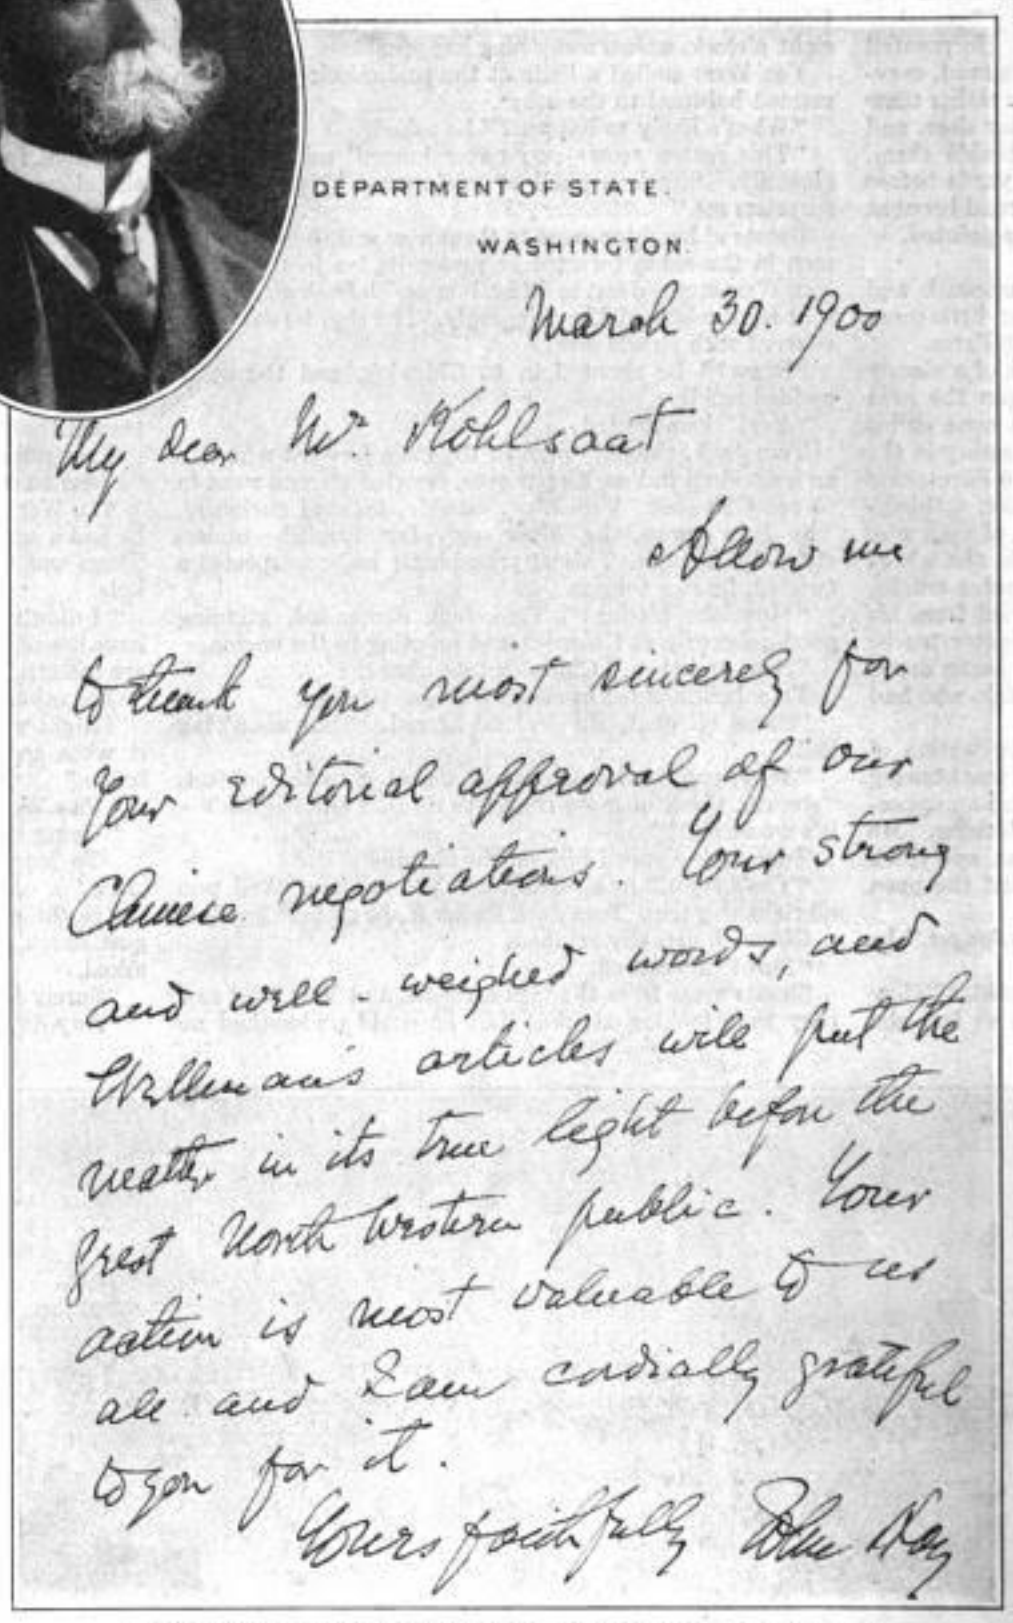
"I was wondering if you would be wearing the same sized hatband in a year from now."

"Do you think I am in danger of a swelled head?"

"You would be more than human if you were not influenced by the adulation paid you by 98 per cent of your callers. Not more than 2 per cent tell you the truth!"

"Well, if you see evidence of an expansion, please tell me."

About a year later we were sitting in the same place, smoking. McKinley said, "Have you seen any evidences of my hatband expanding?"



"No, but I am still watching it!"

The President told me that on return from the inauguration exercises with ex-President Cleveland to the White House, Mr. Cleveland said, "I am deeply sorry, Mister President, to pass on to you a war with Spain. It will come within two years. Nothing can stop it."

McKinley thought it could be avoided. His pacific nature could not visualize war. For the moment he was supremely happy. Thirteen months later, April 21, 1898, Mr. Cleveland's prophecy came true.

The first sign of a break in the McKinley cabinet was when Secretary of State John Sherman gave evidence of mental deterioration. His memory failed him on matters of vital importance, which embarrassed the President very much. When war with Spain was declared McKinley felt he must have someone in the State Department on whom he could rely; so he wrote his old intimate friend, Judge William R. Day, of Canton, and asked him to accept the position of Assistant Secretary of State. I was with the President when a telegram was handed him. He said, "It is from Judge Day, accepting the Assistant Secretary of State. He gives up fifteen thousand dollars a year to take a forty-five-hundred-dollar position. He would not do it if he did not love me." Judge Day's acceptance was a great relief to McKinley. Secretary Sherman soon retired and Judge Day became Secretary of State, until Ambassador John Hay came from London a few months later and assumed the office.

Colonel Hay told me it was a great disappointment to give up the ambassadorship. He loved the London life, but he added, "I am a soldier and go where I am sent."

DEPARTMENT OF STATE.
WASHINGTON.

March 30. 1900

My dear Mr. Kohlsaat

Allow me to thank you most sincerely for your editorial approval of our Chinese negotiations. Your strong and well-weighed words, and Mr. Millard's articles will put the matter in its true light before the great North Western public. Your action is most valuable to us all and I am cordially grateful to you for it.

Yours faithfully John Hay

Former Secretary of State John Hay and a Facsimile of One of His Letters to Mr. Kohlsaat

XIV

FEBRUARY 15, 1898, the Maine was blown up in Havana Harbor. It stirred the country against Spain. In April I received a wire from Mr. Cortelyou: "The President wants to see you."

At Harper's Ferry a telegram invited me to dine with the President and Mrs. McKinley. My train was two hours behind time, making it too late for dinner, so I wired I would come as soon as possible.

There was a piano recital in the Blue Room of the White House. Mrs. McKinley was seated near the pianist, looking very frail and ill. The President was in the center of the room on an S-shaped settee. There were eighteen or twenty guests present.

As I stood in the doorway someone said, "The President is trying to catch your eye."

He motioned me to sit by him and whispered, "As soon as she is through this piece go and speak to Mrs. McKinley and then go to the Red Room door. I will join you."

I did as requested, and when he had shaken hands with some of the late arrivals we went into the Red Room. We sat on a large crimson brocade lounge. McKinley rested his head on his hands with elbows on knees.

He was in much distress and said, "I have been through a trying period. Mrs. McKinley has been in poorer health than usual. It seems to me I have not slept over three hours a night for over two weeks. Congress is trying to drive us into war with Spain. The Spanish fleet is in Cuban waters, and we haven't [illegible] ammunition on the Atlantic [illegible] fire a salute."

He broke down and cried [illegible] of thirteen. I put my hand on his [illegible] der and remained silent, as I thought [illegible] tension would be relieved by his [illegible] As he became calm I tried to assure [illegible] that the country would back him in [illegible] course he should pursue.

He finally said, "Are my eyes very [illegible] Do they look as if I had been cry[illegible]

"Yes."

"But I must return to Mrs. McK[illegible] at once. She is among strangers."

"When you open the door to enter [illegible] room blow your nose very hard and [illegible] It will force tears into your eyes and [illegible] will think that is what makes them [illegible]

He acted on this suggestion, and [illegible] was no small blast.

After the musicale the President [illegible] went into the old cabinet room and [illegible] until very late.

Congress voted to put fifty million [illegible] lars in McKinley's hands—with no [illegible] on it. War was declared April 21, [illegible]

Ten days later, May 1, 1898, the [illegible] tle of Manila was fought. I visited [illegible] President a few days after the vic[illegible]

McKinley said, "When we received [illegible] cable from Admiral Dewey telling [illegible] taking of the Philippines I looked [illegible] their location on the globe. I could [illegible] have told where those darned [illegible] were within two thousand miles!" [illegible] months later he said, "If old Dewey [illegible] just sailed away when he smashed [illegible] Spanish fleet, what a lot of trouble [illegible] would have saved us."

The Battle of Santiago was [illegible] July 3, 1898, and saw the Spanish [illegible] sunk, and the war soon ended.

McKinley told me they had [illegible] Schley on the carpet to court-martial [illegible] for disobedience of orders in [illegible] Porto Rico and going to Santiago [illegible] his successful fight against Cervera [illegible] captured the imagination of the [illegible] they dropped the proceedings, as [illegible] would have been resented by the [illegible]

Poor Admiral Sampson never got [illegible] the credit to which he was entitled [illegible] part in the destruction of the Spanish [illegible] fleet. He died a disappointed man.

XV

IN THE treaty of peace with Spain [illegible] signed at Paris, December 10, 1898, [illegible] acquired the Philippines, Porto Rico [illegible] Guam, paying Spain twenty million [illegible] lars for them.

The question of tariff on imports from Porto Rico [illegible] subject of much debate in the Senate in March, 1900. [illegible] Chicago Times-Herald, under my ownership, strongly [illegible] posed the 15 per cent tariff against our island [illegible] claiming it had the same rights as the territories [illegible] and New Mexico. Senator Hanna made the fight [illegible] free imports from Porto Rico. I could not understand [illegible] opposition, and wrote and wired him there was great [illegible] prise and resentment that he should so oppose [illegible] new territories. He wrote me as follows:

UNITED STATES SENATE
WASHINGTON, D. C. March [illegible]

My dear Kohlsaat: I do not agree with you on the [illegible] Tariff Measure, and I honestly believe if you had been [illegible] would not have taken such a position, but as I have no [illegible] I can change your views, I will not enter into an [illegible] feel my responsibilities and shall stand by our policy [illegible] I know is right. Sincerely yours, M. A. [illegible]

UNITED STATES SENATE
WASHINGTON, D. C. March [illegible]

My dear Kohlsaat: I am in receipt of your telegram [illegible] that I am sorry the people are so very sore over the [illegible] defiance," and yet it is strange that every one who [illegible]

STATE OF NEW YORK
EXECUTIVE CHAMBER
ALBANY

August 20, 1899.

Hon. H. H. Kohlsatt,
Times-Herald,
Chicago, Ill.

My dear Mr. Kohlsatt:-

I thank you for yours of the 14th instnt. Your advice is as sound as a dollar—a good deal sounder than a forty-eight cent dollar. When the President requested me to go to Ohio, of course I had to go. That is all I shall do. I have, however, consented to give the gold medal to the returning 10th Regiment of Pennsylvania troops, because that was something that seemed appropriate and proper. However, it is not yet definitely determined that I shall go there.

Faithfully yours,
Theodore Roosevelt

Bill I asked Sen-
na to tell me frankly why he took the position he laughed and said, "I'll tell you exactly. We receive from two hundred and fifty thousand cigar at if we admitted Porto Rico cigars free of duty he two hundred and fifty thousand would get er union men to vote against the Republican November, 1900, making one million votes against ."

XVI

President McKinley and Secretary of State Hay ched the powers demanding the open door and ortunity in China.
announcing his Far East policy McKinley unplans to me. His great ambition was to create ets for American producers and manufacturers. d to keep our people busy. His motto was, employment, good wages and education bring and happiness."
John Hay, as our Ambassador in London, met ssadors and statesmen of the world. He was y popular with them, which greatly aided his efforts to bring them and their governments to an agreement on the open door. I spent some hours with him in his library and promised to aid in creating sentiment among the people of the Northwest to urge their senators and representatives to back McKinley and Hay in their Chinese negotiations. The treaties were ratified and have been the means of creating new markets for our goods and bringing about a better understanding between the Far East and the United States.

The following letters were among those received during the Open-Door negotiations:

DEPARTMENT OF STATE
WASHINGTON, March 30, 1900.

My dear Mr. Kohlsaat: Allow me to thank you most sincerely for your editorial approval of our Chinese negotiations. Your strong and well-weighed words, and Wellman's articles will put the matter in its true light before the great Northwestern public. Your action is most valuable to us all and I am cordially grateful to you for it. Yours faithfully, JOHN HAY.

NEWBURY, N. H., Aug. 11, '00.

Dear Mr. Kohlsaat: I have received your kind letter of the 7th and the inclosed leader from the Times-Herald. I need not say how much I am obliged to you. Somebody thoughtfully sent me a marked copy of Stilson Hutchins' paper which said I was dying of remorse and shame in New Hampshire and that they were d—— glad of it, and that it would be a good job for the country if I had died long ago. These things are said with such evident earnestness and sincerity that I sometimes wonder if they are not true. But when I see what a judicious person like you says, I feel as if I had the right to live on awhile.

Give my compliments to Mrs. Kohlsaat and believe me always

Sincerely yours,
JOHN HAY.

XVII

THE Hay-Pauncefote treaty negotiations began in 1900 and were finally closed in 1901. The first treaty was defeated in the Senate because a majority of the senators strongly objected to the nonfortification feature. They did not believe the world had advanced far enough toward universal peace to permit leaving the canal unprotected. Their fears were justified in the World War of 1914 to 1918, when the news was received that a German raider was sinking ships in the South Atlantic. What would have happened to the Panama Canal if it had not been fortified?

After the Senate defeat Messrs. Hay and Pauncefote amended the treaty, authorizing fortifications, and resubmitted it to the Senate. It was ratified with little delay.

Lord Pauncefote, the British Ambassador, died in Washington the next year, May 26, 1902. He was greatly respected for his personal charm and statesmanship.

I was in the old cabinet room with President Roosevelt one noon in June, 1902, when his barber brought in a skeleton reclining chair. Taking off his coat, but not his collar, the President reclined on the chair. The barber lathered his face and began shaving him, but Roosevelt did not stop talking.

I said, "He will cut you if you don't stop making faces and talking." The look the knight of the razor gave me for even suggesting such a thing silenced me.

IX

IT SEEMS to me it's highly suitable that I should get to the edge of telling about Mr. Dallas' misfortunate visitations on the thirteenth day of the month, which, as everybody knows full well already, thirteen is the unluckiest number there is in the whole alphabet. When you projects with Old Lady Thirteen you flirts with sudden disaster. With Mr. Dallas, though, his troubles don't come on all at once, like a stroke; they comes on sort of gradual, one behind the other, like the symptoms of a lingering complaint.

Up to a certain point everything with us has gone along very lovely, the same as usual, with parties occurring regular at the apartment and the Japanee boy cooking up fancy mixtures and me serving drinks by the drove. Thanksgiving time we has a special blow-out with twelve setting down to the table at once. But Christmas is when we cuts loose and just naturally out-to-dos all previous to-dos.

All day long folks is dropping in to sample the available refreshments, and most of 'em likes the sample so well they camps right there till far into the night. I mingles up a big glass reservoir full of eggnog, which it seems to give special satisfaction to one and all. The way these here guests of ours bails it up you'd think they was in a sinking skiff half a mile from shore. As he ladles out the first batch Mr. Dallas states that this here eggnog is made according to a recipe which has been handed down in his family since right after the Revolutionizing War. But when she's took the second helping, Miss O'Brien, who's got a mighty peart way about her of saying things, allows that it sure must be older even than that. She says she's willing to bet it had a good deal to do with bringing on the Revolution. Of all the crowd that Mr. Dallas is in with I likes her the best. She's got a powerful high temper and is prone to flare up when matters don't go to suit her; but it seems like to me she ain't devoting so much of her time as some of the others is to seeing what she can get for nothing. Sometimes I catches her looking at Mr. Dallas like as if she's sort of sorry for him on account of some reason or other. But to look at him on this Christmas Day, doing his entertainingest best, you'd think nothing had ever bothered him and that nothing ever would. As long as that eggnog holds out he's bound and determined the party shall be a success. Which it is!

But Mr. Bellows he ain't got no storage room for eggnog. Seemingly he figures that all of them eggs and that rich cream and sugar and stuff will take up space which is needed for chambering the hard liquor. He just sets off in a corner with a bottle of Scotch and a bottle of squirt water handy by, curing his drought or striving to. He may not be such very good company, but one thing they've got to say for him—he's a man of regular habits. You may not like the habits, but they certainly is regular. I hears Mrs. Gaylord saying once that Mr. Bellows can hold any given number of drinks, sort of pressing her voice down on the word "given." She don't need to say it twice, neither, so far as I personally is concerned. I got her the first time.

It's maybe two or three days after Christmas—anyhow, it's somewheres around the middle of Christmas week—that I first takes notice of a sort of a change coming over Mr. Dallas' feelings. When there's nobody else round but just me and him he acts plumb bothered. His appetite is more picky and choosy than it used to be; and by these signs I can tell something is on his mind a-preying.

On New Year's Eve he goes forth with his friends for a party, but first they all stops by our place for what they calls appetizers, and whilst they is gathered together it comes out that him and Miss Bill-Lee is now engaged. Not no regular announcement is made; but all of a sudden, seems like, everybody present appears to know how things stand with him and her. Also Miss Bill-Lee starts in treating him more or less like he belonged to her. I don't scarcely know how to state it in words; but it's like as if up until now she's been holding a piece of property under mortgage but has finally decided for to foreclose on it and is eager for the papers to be fixed up in order for to begin making improvements and alterations. She's what you might call proprietory.

"I Don't Want Tips," She Says. "I Want Facts, and I'm Going to Have Them Here and Now — and From You!"

Well, I can't say the news is much of a shock to me, seeing what has been the general drift of events since last August when we first got here. But, on the other hand, neither, I can't say that, considering everything, I'm actually overcome with joyfulness on Mr. Dallas' personal account.

I can't keep from thinking to myself that he's fixing to marry himself off into a mighty different set of folks from the kind he was born and brung up amongst. And I can't keep from thinking what a sight of difference there is betwixt this here Miss DeWitt and Miss Henrietta Farrell, which, as I said before, he was courting her before we moved to New York.

One of 'em sort of puts me in mind of a rosebud picked out of the garden in the dew of the morning, and the other, which I means by that, Miss DeWitt, reminds me of one of these here big pale magnolia blooms which has growed on the edge of a swamp. I ain't meaning no disrespect by having these thoughts; only I can't keep from having 'em.

I reckon it's having them ideas floating round in my [illegible] which makes me study Mr. Dallas specially close that [illegible] Year's Eve. For all that he's laughing and joining [illegible] carrying on, I figures that way down deep inside of [illegible] he ain't entirely happy over what's come out. By my [illegible] culations he ain't got the true feelings which a forthcoming bridegroom should have. As near as I can judge, he ain't hopeful [illegible] as he's sort of resignated. Also furthermore likewise, he's got a [illegible] of a puzzled-up, befuddled look on his face, as if he'd been took up [illegible] by something he wasn't exactly expecting to happen so soon, if at all. It ain't exactly surprise and it [illegible] exactly bewildedment, but it's something that's distant kinfolks to both of 'em.

X

ANYWAY, that's that, as we [illegible] up here. I will now pass along what comes to pass about a week later on. All along through that week Mr. Dallas don't impress me like a young man should which he is starting out in the new year full of good cheer and bright prospects. As the catchword goes, he ain't at home. At the breakfast table when I'm passing things to him he's often looking hard at nothing at all. It's plain his thoughts is far away, and not very happy in the place where they strayed off to neither.

Well, on this particular day, when it is getting along toward the middle of the month, he don't get home downtown until long after dinnertime and when he does get in he don't scarcely touch a morsel to eat; he just pecks at the vittles. After dinner is over and the dishes washed up I passes through the hall on the way out, being bound for the Pastime Club to consultate with one U. S. G. Pierce, colored, touching on our own private affairs. Mr. Dallas had done told me at dinner that I could have the evening off, and there was not no reason why I should linger on. But as I passes the setting-room door I looks in and he's setting there all hunched down in his chair, with his elbows resting on a little table and his face in his hands, seemingly mighty lonesome.

Something seems to come over me and I steps in and I says to him, I says, "Scuse me, Mr. Dallas, for interruptin' yore ponderin's, but is there anythin' fur you befo' I goes out?"

He sort of starts and looks up at me, and if ever I seen miserableness staring forth from a person's eyes I sees it now. He speaks to me then, and what he says hits me with a jolt. Because this is what he says:

"Jeff, why is it that white people are forever committing suicide on account of their private worries, but you never hear of a darky killing himself for the same reason?"

I studies for a minute and then I says:

"Well, Mr. Dallas, I reckin it's 'is yere way: A white man gits hisse'f in trouble an' he can't seem to see no way to git shet of it. An' so he sets down an' he thinks an' he thinks, an' after while he shoots himself. But a nigger man gits in trouble an' he sets down an' he thinks an' he thinks—an' after while he goes to sleep!"

He smiles the least little bit at that. But it is no regulation smile—it's more like the imitation of one.

"But suppose you're brooding so hard you can't sleep," he says.

"I ain't never seen no nigger yit," I says, "but what could sleep ef the baid wuz soft nuff. They may not be many 'vantages in bein' black, the way the world is organized," I says, "but this is shore one place where the culler has it the best."

He don't say anything back at me. So after lingering a little bit I starts to move on out, and then another one of them inmost promptings leads me to speak again.

"Mr. Dallas," I says, "sometimes we kin git shet of our pestermints ef only we talks 'bout 'em to somebody else. Sometimes," I says, "it's keepin' 'em all [illegible]

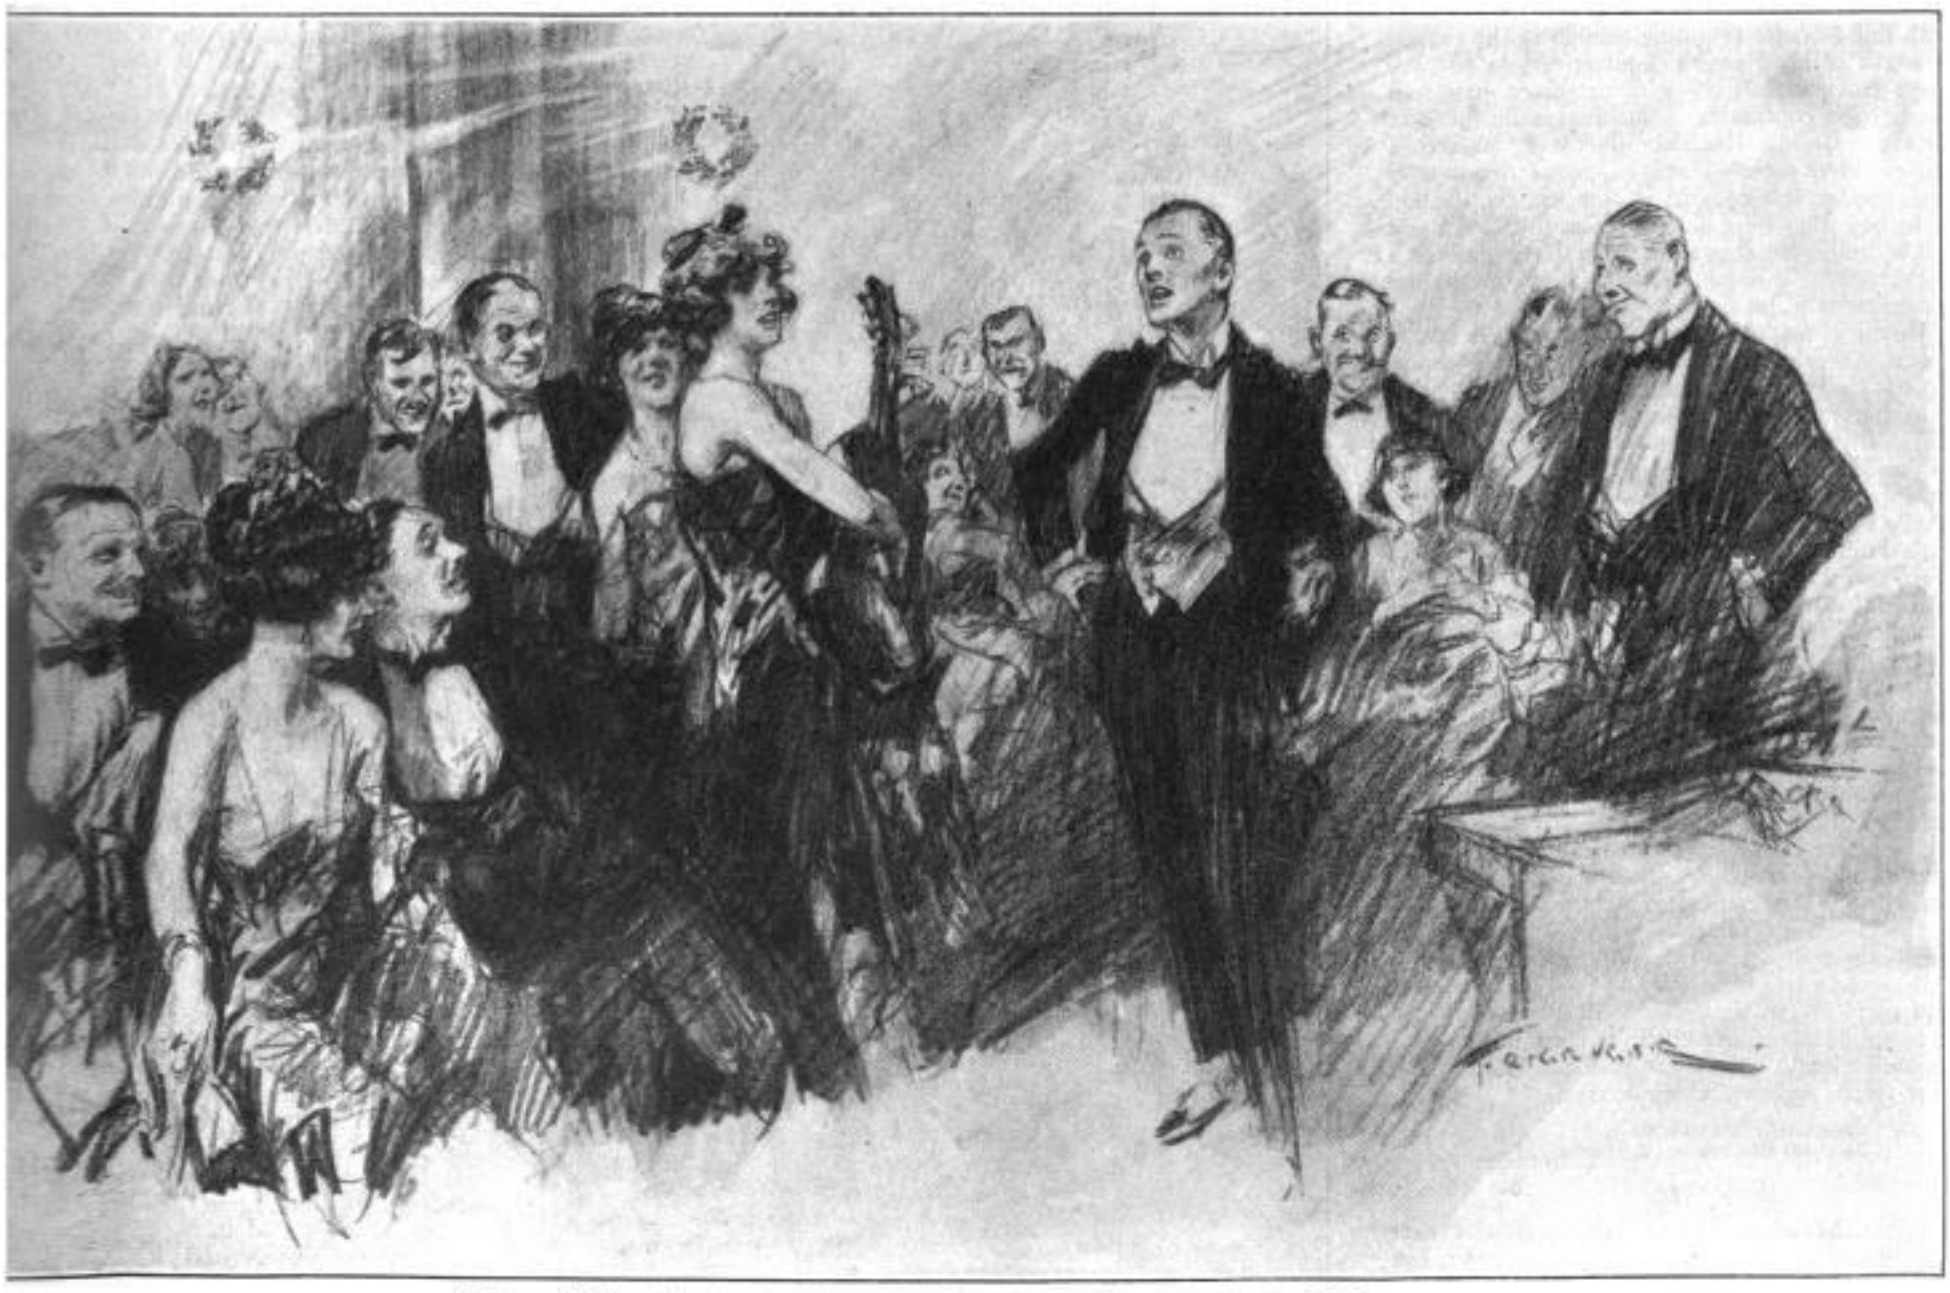
lies a minute and then he continues to resume.
he says, "I'd head for home in the morning—
It has taken a hard jolt to open my eyes, but,
e, they're opened now. The chief trouble is, though, that even with them opened I can't see any way out of the tangle I'm in. Jeff, the big mistake I made at the start was that I tied up with the wrong outfit. I thought I was joining in with a group of typical successful live New Yorkers; I know now how wrong I was. There must be plenty of real people here; people who take life in moderation; people who are fair and kindly and reasonable; people who can find pleasure in simple things and who don't pretend to know all there is to know, or to be what they're not. But I haven't met them; I've been too busy running with the other kind."

Down in my soul I says to myself there's a chance for him to pull out yet if he's beginning to see the brass work shining through the gold plating which has so dazzled him heretofores. Yes, sir, if he's found out all by himself that New York City ain't exclusively and utterly composed of the Mr. H. C. Raynorses and the Mr. Hillary Bellowses and such, there certainly is hope for him still. All along, up to now, I've been saying to myself that it looks like the only future Mr. Dallas has to look forward to is his past; but now I rejoices that he's done woke up from his happy trance. But of course I don't let on to him that such is my feelings.

I merely says to him, I says, "I ain't the one to 'spute wid you on 'at p'int, suh. Naw, suh, not me! But whut's the reason you can't pull out from yere ef you's a mind to?"

At that he lit in and the language just poured out from him like a flood. There's a lot of rigmarole about business, and some parts of this I cannot seem to rightly get the straight of it into my head; but I'm pretty sure I got the hang of all the main points clear enough. To begin with, I learns now for the first time that him and Mr. Raynor ain't actually been selling oil downtown; they've been selling oil stocks, which as near as I can figure it out, an oil stock is the same kin to oil that a milk ticket is to milk, only it's like as if the man which sells you the milk tickets ain't really got no cows rounded up yet, but trusts in due time he'll be able to do so. Still, if there is folks scattered about who's willing to take the risk that the milkman will amass some cows somewhere and that the cows won't go dry or die on him or be grabbed by the sheriff and thereby leave the customers with a lot of nice new onuseable milk tickets on their hands, why, the way I looks at it, there ain't no reason why their craving for to invest should not be gratified.



It seems, furthermore, that Mr. Raynor ain't actually been selling as many oil stocks in the general market as he has let on. Leastwise, that is what Mr. Dallas suspicions, even if he can't prove it. When first they went into partners together last August Mr. Dallas tells me he put up a large jag of money for his half interest. He was content to let Mr. Raynor manage the business and keep the run of the books and all that, seeing as how Mr. Raynor had the experience in such matters and he didn't. Anyhow, he felt amply satisfied with the gratifying amounts which Mr. Raynor kept handing over to him, saying it all was from the profits.

But this very day there's been a show-down at the office growing out of Mr. Raynor having called on him to put up another big chunk of cash for running expenses, and whilst all the figures and all the details ain't been made manifest to Mr. Dallas yet, he's got mighty strong reasons to believe there really wasn't no profits to speak of, and that the money he's been drawing out all along was just his own money, which Mr. Raynor let him have it in order to keep him happy and contented whilst he was being sucked in deeper and deeper.

And so now, Mr. Dallas says, that's how it stands. If he goes on and on along the way he seems to be headed it's only a question of time till all his money will be plumb drained from him. He tells me that he'd be willing to pull out now and take his losses and charge 'em up to the expense of getting a Wall Street education, only, he says, he can't. I asks him then what's the reason he can't. And he says because when the papers was drawed up—by Mr. Raynor—he obligated himself in such a twistified way that it seems he's bound hard and fast to stick to the bitter end. Of course, he says he might start up a lawsuit and throw the whole thing into the courthouse; but, even so, he's afraid he wouldn't have a leg left to stand on by reason of his having tied himself up so tight in writing; and anyway, he says, before he got through with a lawsuit most doubtless the lawyers would have all the leavings.

To myself I says there is still another reason. I knows how much it would hurt Mr. Dallas' pride to have all the folks down home finding out that he's made another disasterful move in business. By roundabout ways it has come to my ears that he's been writing back down there about how well he's doing up here in New York, and now if it should come out in the papers that he's made one more bad bust-up on top of all them finance mistakes he committed before he come North, and he should have to go South again, broke and shamed at being broke, I reckons it would just about kill him. Besides which I knows full well from hearing Judge Priest talking in the past that even

THE CLIFF DWELLERS

By Frederick Orin Bartlett

ILLUSTRATED BY J. E. ALLEN

IT IS always dangerous, even in the interest of truth, to disturb the traditions that cluster around romance, but it is equally dangerous to disturb truth in the interest of romance. Possibly this difficulty explains why the real story of the affair between Stephen Cotter and Jeanne Buckingham has never been told. The truth forces, at the very beginning, the admission that when Stephen considered the possibility of marrying Jeanne he was not in the slightest in love with her. To offer as an apology the explanation that he was handicapped by the fact he had not then met her only complicates matters. It makes a bad beginning. But, after all, that's the whole story.

Cotter was a curious fellow—a little bit too practical to be a poet and a little too much of a poet to be practical. He came of a good but none too prosperous family in California, and was struggling without much success through a sun-kissed university when the summons to war made a welcome break in his life. He served his country creditably, and thoroughly enjoyed the experience. He was then shipped to New York, given his discharge, and transportation offered him back to the land of coöperative sunshine, but he preferred to remain where he was. He had never seen the East and this seemed like a good opportunity. It was, in a way, and yet it had its difficulties. Merely to see, one must subsist; and on a few hundred dollars saved from army pay this is not long possible—not, at any rate, at the Hotel Vandemore.

Whether from the riotous dreams of his grandfather, who had crossed the plains in '49, or from the somewhat more sober but no less grandiose expectations of his father, who speculated and consistently lost in San Francisco realty, or whether from the golden atmosphere of his native state, Cotter inherited an attitude towards money that had cultivated in him extremely expensive tastes. He had really fine sensibilities in the matter of his dress and surroundings and, perhaps unfortunately, had both the physique and manner for displaying these to advantage. Tall and slight, with fine features retaining enough of the rugged strength of his New England ancestors to save them from insipidity, with jet-black hair and black eyes containing a lurking smile, he was always noticed. He had, moreover, an air—a self-confident poise—that is supposed to come only with comfortable security. Nor was the illusion disturbed when he spoke. He was intelligent and talked well, with a careless smile that suggested a background. He could do that with no more than fifteen cents in his pocket.

He saw New York by strolling downtown after a leisurely breakfast at nine, swinging a light walking stick, sitting over a cigarette for a forenoon in Washington Square, watching the children at play and often enough joining them in a game of tag, to the delight and admiration of the nursemaids; strolling back to Central Park for the afternoon after a light lunch, and spending the evening over a good dinner and an agreeable lounge in the hotel lobby, where there was as much to see as at any of the theaters, at a considerably less cost. It was here that he first saw Jeanne Buckingham. She came in with her father, evidently from a train, with half a dozen bell boys to carry her luggage. The episode was something worth watching—this stern-faced, autocratic, important-looking guardian giving her the proud protection which she did not need and to which she was utterly indifferent.

While her father registered and had even the blasé Vandemore clerks standing on tiptoe, she turned and calmly surveyed all her natural enemies in the lobby, including Stephen Cotter, with her tidy chin well up and a challenge in her eyes. But she was trig from head to toe—slim and trig and perfect! In those few minutes Cotter took in every detail and fixed them in his mind as worth remembering. Then she vanished and he sauntered over to the register, where he read:

"JOSHUA A. BUCKINGHAM,
"JEANNE BUCKINGHAM, Boston, Mass."

II

IT WOULD be absurd to say that Stephen Cotter followed Jeanne to Boston. He did not, but when some three days later he saw her and Joshua A. go out with their bags to catch the one o'clock

"But, Jeanne, Don't You See I Got It All by a Trick?"

train it suggested to him that not all of the East was included within the Borough of Manhattan. In a desultory way he had made one or two attempts to secure employment in New York, but quite without success, and it occurred to him that he might stand a better chance in the smaller city. It had become increasingly evident that some sort of change was necessary. And so on the spur of the moment he rushed upstairs, crowded his few belongings into his bag, paid his bill and was fortunate enough to secure a seat on the same train and, by accident, in the same car. He found her not three chairs away, but that was all the good it did him except that it gave him an opportunity to appreciate her a little more in detail—to study the fine line about her nose and mouth, to note that her eyes were a deep brown, and, when she turned her head upon him, to realize that her arm resting upon the chair was quite symmetrical, and that her ankle, glimpsed in the aisle, were unusually small and shapely. Every now and then Joshua A. caught him making these observations and glared.

When at the South Station a uniformed chauffeur met the pair and escorted them out of sight, leaving Stephen to find quarters as best he could in a strange city, life suddenly struck him as a decidedly cold-blooded proposition. It was, of course, unreasonable to expect the Buckinghams to be more interested in him than they were—which was not at all—and yet, to change the situation, but little more was needed. A casual introduction, however perfunctory—the sort of thing he might have been able to arrange at home in a dozen different formal ways—would have been enough to carry him over that first barrier now so impregnable.

Cotter was no anarchist. He believed in conventions. But, like every law, they at times defeated their own ends. Often enough society permitted, as a matter of routine, introductions that should never have been allowed. He had known plenty of men with whom he would not care to have his sister associate who had been passed on from one group to another until they had met every nice girl in town. On the other hand, many a decent fellow had been barred absolutely because he had had no initial opportunity. That at present was his own situation.

Cotter, however, was not cad enough to assume that an introduction to a girl like Jeanne Buckingham was all that was necessary to assure him immediate and intimate friendship. It would be no more than enter him in the field where he would have the privilege of making good if that were in him. But this was all that any man had a right to ask, and this much, except for the accident that this was Boston instead of San Francisco, he could have arranged. The detail that fretted him most now was that these opportunities were so often a matter of chance and that under the present circumstances he did not have a chance in the world. It came like a challenge.

That first night Cotter spent at a hotel, but the next day he secured a modest room in a boarding house and started in to look seriously for work. It was not a pleasant task and it only emphasized his loneliness. As long as he had funds he could fill the position of a guest in any city of the world where he might find himself, but the moment he sought admission to the business life of the community he was looked upon with suspicion as an interloper. He had no credentials, of course, except his army discharge papers, and these were only of negative value as a recommendation. If he had had any business experience which he could offer. He was merely a young man looking for a job, and there were at this time only too many such.

It was an extraordinary fact that during the depressing days the deep brown eyes of Jeanne Buckingham should have given him encouragement. This young woman was carrying on her own meeting if not particularly significant affairs, quite oblivious of any such philanthropic result as that. But that was not important. She did not want anything more than she had, while Stephen Cotter needed everything more than he had.

Day after day he answered advertisements of one sort and another, and although invariably he made a favorable impression wherever he secured a personal interview, that, unfortunately, was

Digitized by Google

too much or not enough. It was too for the minor position of office boy, and ite enough to qualify him as an office yer. And there it seemed as though atter might rest indefinitely when he d into the real-estate office of Pudkin & , dealers in the better class of sea- roperty. This was in March and one Pudkins had taken this inopportune to become ill. It happened, too, that the good-looking Pudkin. The other, C., was short and stout and more ed in the details of office management than in prospective customers, conveying them by bile to choice building sites and making them ate the beauty of adjacent shore and sea and he younger Pudkin had a pretty knack at

r strolled into the Boston office of the firm thout hope, attracted by the name and by the tion of the words "real estate" and "shore n the door. It suddenly occurred to him that I had no personal experience in the real-estate could at least claim something by inheritance. heard the business talked over enough at though on those occasions his mother did quite talking as his father. She had been urging nior for twenty years to drop it and take up or market gardening or portrait painting or promising at least a small element of profit- m.

C. looked up with a frown from his desk when tered, but the next second made his feet. The e laid eyes on that tall, neatly dressed young ad visions of selling that ten-thousand-dollar rth Cotuate which had been so long on his enry C. did not often get a hunch of this sort, t it that time. The only trouble was he was d to keep it long.

he inquired politely of Cotter.

er smiled pleasantly—the sort of smile some l have given a fortune to possess.

king a long chance," he began. "It occurred was going by that at this time of year you ible to use a salesman."

gasped Pudkin.

ther is in the real-estate business in San Fran- ter offered as his only recommendation.

ean you want a job?" asked Pudkin bluntly.

r."

'm—hanged!" murmured Pudkin.

own again in his chair and motioned Cotter to neighboring one. This was more encourage- the latter had received in a week. Pudkin ray gloves and spats and yellow walking stick.

She Turned and Calmly Surveyed All Her Natural Enemies in the Lobby

They made upon him a distinct impression. They inspired respect and confidence. And, what was more to the point, the young man wearing them backed up this successfully in his general bearing. If he was able to accomplish this as a total stranger for Pudkin, why would he not be able to produce the same result in the case of Pudkin's clients? When all was said and done, respect and confidence were as important as a knowledge of real estate. That end of it he would look after himself.

"What kind of job do you want?" inquired Pudkin cautiously.

"Any kind," declared Cotter. "I'll sweep out the office or manage it."

"Any experience?"

"No."

"Recommendations?"

"No."

"What you been doing?"

"Fighting."

"Eh?"

"I've just been discharged from the Army."

"Oh, I see. Didn't know but what you'd been in the ring."

"No; I'd have more capital if I had been," smiled Cotter.

"Ever try selling anything?"

"Only my secondhand clothes in college."

"Know anything about the South Shore?"

"It's on the Atlantic Ocean."

"Yes," admitted Pudkin. "But the Atlantic is a big ocean."

"You bet. I've just sailed across it."

"We're interested here only in that part of it that hits the shore."

"I see."

"The South Shore within easy commuting distance of Boston."

"That eliminates a good chunk of it all at once," said Cotter.

"Forty miles from town is our limit."

"A man ought to be able to cover that ground without much trouble."

"And we handle only the better class of property."

"Another chunk gone."

"I might give you a trial if you knew the territory."

"I'll learn it."

"You can't do that in a day."

"I know the sky and the sea. That's two thirds of it. The rest ——"

"The rest is what we're selling," interrupted Pudkin.

"Right. If you'll give me a list of your offerings I'll go over them."

"Got a car?"

"No."

"Any money?"

"No." *(Continued on Page 40)*

PHILADELPHIA, JUNE 24, 1922

The Direct Primary

IN A RECENT interview Senator George Wharton Pepper is quoted as suggesting modification of the primary-election law to define the status of the "organization." The senator urged "constructive thinking" along that line in order to avoid in the future such confusion as occurred in connection with his nomination.

We fail to see how any changes in the primary law can affect the fundamental question involved, for it is purely a matter of one's conscience and convictions. Organization for political purposes is necessary and desirable, but there is no reason why the voter should swallow any organization without question or analysis because it bears a reputable label. That label may be counterfeit and the stuff behind it bootleg of the worst quality. It is not incumbent on anyone, no matter how strong a party man, to vote for the candidates of any organization whose promises will not stand the closest scrutiny and whose aims are so doubtful that they admit of no doubt. Those who will weigh promise against performance and platforms against records will not find the answer hard to reach.

As a matter of fact, average men and women are in small doubt about the status of the average political organization, and they openly declare themselves for or against it. That is exactly as it should be. Senator Pepper's problem may be one for the candidate, but it is not one for the voter.

The primaries in Pennsylvania and in Indiana are the most significant and important political events of this generation—not particularly because the women took part in them, though that is important; nor because Pinchot and Beveridge were nominated, though that, too, is significant; but because they indicate that both men and women are beginning to realize that the fight for good government must be made before and at the primaries. Otherwise, nine times out of ten the voters are offered a choice of hand-picked and boss-picked nominees.

There need be no surprise if a vigorous campaign to abolish direct primaries follows the spring nominations. Heretofore they have not worked out very well in practice, because the voter has not prepared for and used them intelligently. But in the hands of an informed and earnest electorate they will be a powerful instrument for clean and honest government. To abolish them, to use them blindly and unintelligently, is to confess our total unfitness for the duties of citizenship. The real problem of the primaries is the failure of so many voters to avail themselves of a privilege that has a direct and daily bearing on their homes, their earnings and their lives.

It is not amendment of the direct-primary law that is needed, but education of the voter as to its possibilities.

Lame and Halt and Blind

CHIEF JUSTICE TAFT, according to press dispatches, is spending his English holiday in a close personal study of British judicial methods, with a view to making recommendations to the American Bar Association looking toward the speeding up of our own courts, both state and Federal. Our own practice is deficient in two respects: The almost interminable delays that ensue before cases can be heard, and the dilatory tactics that are permitted in open court.

The subject of Mr. Taft's studies is not a new one. For at least one generation our lawyers have been perennially aware of the time-wasting procedure that has been getting a tighter and tighter strangle hold on American courts and has been making litigation of every sort progressively more costly and protracted, with a general tendency to enrich attorneys and impoverish clients. Every year leaders of the bar have directed attention to the unfavorable contrast afforded by comparison of our slow-footed practice with the speed and efficiency with which similar business is dispatched in the English law courts. There has been no end of talk about the adoption of more expeditious methods in this country, but only in sporadic instances have substantial reforms resulted.

This matter is not to be numbered among the academic technicalities that are of interest only to members of the legal profession. It is, on the contrary, a live issue and one that concerns every citizen of this country; for no man is so peaceable or so obscure that he may not become involved in a lawsuit, or so innocent that he may not, through untoward circumstances, stand accused of crime. The more elaborate the judicial procedure in which he becomes entangled, the smaller is his chance of getting substantial justice in the end; and, as it works out in practice, complicated and dilatory procedure almost inevitably accentuates the unavoidable disparity that exists between the rich litigant and the poor one.

Mr. Taft has long had at heart the situation of the poor man who must struggle in the toils of our cumbrous legal system like a gnat on fly paper. Only a few weeks ago in a public address he impressively called attention to the high cost of litigation in our Federal courts, and expressed the hope that conditions might be materially bettered.

The classical conception of Justice was a goddess with bandaged eyes. In America we have gone the Greeks one better and have made her lame and halt as well as blind. If, as a result of Mr. Taft's studies and recommendations, she can be prodded into a swifter gait, and if her feet can be set on unobstructed paths, he will have performed a great public service and will have made his holiday as fruitful as his working days.

The Neglected Science

THE average man who makes an occasional inventory of the furniture of his mind, in order to list those branches of serviceable knowledge that he most conspicuously lacks and of which his daily need is greatest, is either very learned or very self-complacent if he cannot find serious deficiencies in his mental equipment; and it is commonly true that the wiser a man is the more acutely he feels the pangs of his own ignorance.

If all the business men of the country could be herded into one great examination room and could be put over the educational jumps by a staff of specialists the chances are that the one practical and essential study in which the lowest scores would be made is economics. Nor would that result be unnatural, for a science that has a scant century and a half of history and tradition behind it can scarcely be expected to have acquired the momentum of those older studies, such as reading, writing, arithmetic, geometry, logic, philosophy, whose beginnings trace back to the philosophers of ancient Greece or antedate the Pyramids of Egypt.

The eighteenth-century poet who wrote that "T proper study of mankind is man" was dead and gone fore economics blossomed out into an accepted sta recognized utility; but the line was as good for the as for the past. After all, economics is little else tha study of man as he goes about his daily tasks of sow reaping, hiring out his labor or engaging that of oth trading, mining, manufacturing, buying, selling, ren transporting the products of his own hands or of tha doing his best to keep a tight roof over his head and st ing every nerve to provide for his children and to s some overplus of savings wherewith to stake other men would engage in enterprises not immediately produc

If there be any study more homely, more demo than this, any that clings closer to the soil or lies near man's bone and marrow, it would be hard to name yet there is many an institution of learning, whose de ment of economics is admittedly weak, that is seri considering the establishment of courses in wall-pape sign, tea-room management and God knows what el

Mr. Thomas B. McAdams, president of the Ame Bankers' Association, lately made some pointed rem on our national ignorance of economic science in an ad that deserves a wider audience than that afforded by roomful of Texas bankers to whom he spoke. His rem were primarily directed against those soft-money mo tinkers who speak with the tongues of sirens in adv of their private systems for making money easy to ge worth little when got:

When you see men of such outstanding stru Thomas A. Edison and Henry Ford seriously advo bringing into play in this country the instrument perhaps, has produced more chaos than the war i Europe—that is, the printing press for creating mon is the time for the conservative business men to wa and say "No!" If the silver movement, which at proposed a concrete metallic basis for money, was v as unsound, infinitely more important is it to reject proposing intangible credits as a currency basis.

Upon the soundness of our money depends the of our business life. Currency issued in keeping volume, with the actual needs of constructive com and industrial operations, and, as to quality, on a ready redeemability in gold, is sound money. Cu issued, on the other hand, simply on the basis of th ber of revolutions the high-geared wheels of p presses are able to make per day can lead to but sult—business demoralization and financial disa

This is not a matter of abstract theory, but it is of oft-repeated, concrete experience in every co the world that has tried the fiat-money experiment. are to be a farseeing and a growing people we s better educated in the sound principles of econom govern business just as surely as the laws of physic the world we live in. Economic understanding mu thinking and sound methods.

Mr. McAdams was not afraid to hint that the themselves might profitably learn a little more ab own business, and he made it clear, what not every hind rail or window knows, that banking may be a job or an intelligent participation in the outwor world-wide science. The increasing rapidity wi college men who have majored in economics w snapped up by progressive banking institutions i the most hopeful signs of a more general appre the indispensability of this science in modern com and business life.

Amerikanski Again

THERE is no more galling reading in the dail than the well-displayed interviews with alie hyphenates who resent every effort made by Co protect our own people from the wholesale im European slum-dwellers. When the extension of the Per Cent Law was under discussion, aliens in ev took pen in hand to denounce it as "un-Ameri a proposal was made in the House to require al register, aliens again rose to brand the bill a American." Strangely enough, all over the co were editors, well-meaning and patriotic citizens, w lowed their columns to be used for the dissemination propaganda. Americans and Americans only are to say what is "American" and what is "un-Amer

No Compromise With Bolshevism

WAS only about two years ago that sensible hard-rking people in Western Europe as well as in this intry were thoroughly frightened by the specter of volution. Indeed revolution, or strikes approaching n violence, were attempted in Germany, Italy, and rance and England. Nothing quite so extreme was n this country, but several large strikes had a lly radical bearing, and the air was filled with the t shouting of agitators who wanted to see this or ajor industry taken over by the workers and who a more or less revolutionary change in the form of under the name of syndicalism, one-big-unionism torship of the proletariat.

westward sweep of Bolshevik ideas has been . To many who had looked upon the Russian as a workman's paradise came disillusion. At- revolutions were defeated. Abortive, ill-conceived etered out. The excessive appeal which revolu- ideas had for many minds gradually diminished, ny extreme ideas always do.

The Russian Bonfire

it is just as grave a mistake today to minimize uly the danger of the revolutionary disease as it years ago to exaggerate its portent. Forces are work to undermine the foundations of civilization ress. It takes an eternal vigilance, which receives appreciation from those not directly concerned, on ot only of the police and Federal authorities but of the labor organizations themselves, to prevent the tearing down of the entire social and industrial structure, merely for the glee of seeing it fall. For though it has required the painful effort of many centuries to achieve what we have today, there are those who would destroy it overnight, just as there are fire bugs whose greatest joy is to see a stately building consumed in flames.

It may be a one-sided and partial view, but the statement is certainly correct that the foundations of society seem very weak at all times to those who are in really intimate contact with the long and arduous struggle against the social paranoiac. But this struggle has become far more severe, a hundred times more difficult, since those who would destroy have before them the maddening vision of the Russian proletarian dictatorship, that vast destruction of a nation.

It matters not that the Russian revolution has resulted in misery, barbarism, tyranny, degeneration and slavery. To many disordered minds it is the verbal claptrap, the theoretical and rhetorical humbug of a Marxian philosophy that counts, rather than the hard practical outcome. It is the false slogan of the class struggle, the verbosity and professional patter of doctrinaire socialist quackery, rather than the facts of a tragic failure, that still appeal.

The Russian experiment turns out to be little else than a bonfire of Russia itself. But it is a mistake at once strange and dangerous to assume that large numbers of people do not actually glory in a bonfire, no matter whence the constituent fuel comes. The brighter the fire the more their disordered minds are affected.

Thus when Samuel Gompers, for forty years president of the American Federation of Labor, draws attention again and again to the efforts that are being made by Russian revolutionists and those in their pay or in sympathy with them to undermine the American labor movement and turn it over to the red international, the attendant circumstances make his statements worth listening to. One may think what one pleases of Mr. Gompers. He may be old and, as his enemies assert, behind the times. But to deny his experience, his knowledge of labor conditions and his sources of information is patently foolish.

The Radicals' Chance

BUT we do not have to depend upon Mr. Gompers to learn what a constant struggle it is on the part of any labor movement or organization to prevent the solid, substantial gains of years of struggle from being lost because of the interference of doctrinaire revolutionists. The plain, obvious facts are that whenever a labor organization strikes or threatens to strike or in any other way, wisely or unwisely, attempts a brush with employers the radicals rush upon the scene and usually bring about the defeat of the labor movement as such, because of their extreme, excessive, impractical and often actually insane projects.

The true radical, the one who looks to Russia for inspiration, is discontented with and sneers at any labor leader. Even those who hold socialist beliefs are shouldered aside if possible by the extreme left, by the truly militant. Fidelity of service and the sum of gradual steady accomplishment in improving the lot of labor are not what the Bolshevik inspired radical really wants. Indeed he is not interested in labor at all. His real

THE EAGLE AND THE WREN

XI

By ROLAND PERTWEE

ILLUSTRATED BY H. J. MOWAT

THE Honorable Mrs. Conyngham was a lady of unshakable purpose and unswerving moral rectitude. It is presumable that throughout life she had never once found occasion to doubt her own infallibility, and here is an asset and a cause for congratulation it is impossible to overestimate. She awoke of a morning knowing full well the right thing to do, and she retired at night with the pleasant consciousness of having done it. In many instances her scrupulously attended-to duties might, to persons of gentle disposition, have proved too painful and disastrous to contemplate. But not so with Mrs. Conyngham. She reveled in unpleasant duties, willingly confronting the rudest obstacle and sweeping it majestically aside. As a result she bruised the susceptibilities of many, but never of herself. Constitutionally she was a kind woman, but always on her own lines; and if, as was often the case, her kindness proved unwelcome or even hurtful to others it was never varied on that account. Her juggernaut well-meaning flattened out many she had sought to raise, but Mrs. Conyngham did not mind about that, for she knew she was right.

It Would be Idle to Suggest That Leslie Kavanagh, as a Modern Young Lady of Keen Understanding, Was Unaware of the Tenderness She Had Inspired in Cyril's Bosom

Her deceased husband had been a little man, born with a bright and sunny nature and given to the habit of laughter and of jest. A very short while after marriage the sun of his disposition set prematurely and did not rise again. His laughter was frozen at the main, his jest annihilated. The white ship of his ambition foundered on the rocks of matrimony, and like Henry IV he never smiled again—if we except the fact that for a reason best known to himself he died with a smile on his lips.

It will have been observed that Mrs. Conyngham spelt her name with a *y*, an odd circumstance indeed, since *i* was the dominant letter in the lady's alphabet. The foregoing may give rise to misunderstanding, for the Honorable Mrs. Conyngham was not self-centered. Had this been the case the world would have been a gainer. It was the steady *rafale* of altruism she directed at her friends, relations and acquaintances which made her a scourge for their backs. In a drawing-room she would emplace herself like some piece of heavy ordnance and discharge her shells in every direction, heedless of the splinters that ricocheted from the smitten targets.

Having no children of her own, she had adopted a nephew by marriage. Cyril was his name and, although outwardly he was a presentable and engaging young man, inwardly he had the makings of a thorough-paced young rascal. He was as unscrupulous in the matter of sin as his aunt in the matter of salvation. He spent his own money and anyone else's he could get hold of with equal prodigality. He was utterly, wholly and magnificently selfish. He had no affection whatever for verity or admiration for honor. He infinitely preferred socks to truth and a well-cut pair of trousers to an honorable tradition. Indeed, if he worshiped any gods at all they were either sartorial, sporting or those spiritual providers dressed in white who shake up cocktails in American bars.

The few virtues he possessed were his by accident rather than by will. Thus he could not help a certain reckless courage that had earned him the M. C. He could not avoid a quality of generosity that allowed him to share his last bean with whoever happened to be about. The fact that he probably came by the bean in questionable fashion does not affect the situation. Also, he was distinguished in the fields of sport and played whatever game he might be engaged in to the uttermost letter of the law. Here are qualities not to be denied. His plausibility earned for him the company if not the confidence of men and the society if not the affection of women. As may be imagined his dealings with the latter were various and torrid, escapade following escapade with clockwork regularity, and concluding in the general instance with the most unwilling disbursements from his aunt.

The kindly disposed may feel for Mrs. Conyngham in the possession of such a nephew, but their sympathies are misplaced. Cyril's wastrel ways provided the good lady with an unrivaled stage for the performance of her talents, and it is very doubtful whether she could have contemplated his regeneration in a spirit approaching thanksgiving. They were extremes who met in daily conflict, understanding each other to a nicety, and thoroughly enjoying the resultant clash of arms that sounded throughout the engagement.

To the Hôtel La Rhone, Nice, at the invitation of this ill-assorted pair, came Leslie Kavanagh on a visit. The sun shone brightly, the sea sparkled as only the Mediterranean knows how, and the air was as full of thrills as the voice of a nightingale.

Mrs. Conyngham for the moment was at peace, since Cyril, who was enjoying an ill-earned vacation from the embassy at Vienna, had decided, after a close and disappointing inspection of the hotel guests, to behave well.

Leslie felt happy because in a few days Martyn would be arriving. She had hated the long weeks of separation, and now at his near approach experienced that thirsty kind of feeling which the sight of a distant inn brings to the traveler. Soon their engagement would be announced, soon they would walk hand in hand in a glorious inarticulate paradise of their own [illegible] he would behave just like a schoolboy and they would run together on the shore, and [illegible] out very late at night, and paddle in the sea after dark, and have very serious talks about nothing at all and very tremendous silences. Also, they would kiss each other a great deal and variously—[illegible] of kisses they would have, that lovers are so fond of—[illegible] start at an early hour and travel in an [illegible] quiring circumstances very properly [illegible] everyone knows.

Also, she might speak to him of the future and of the future, and he all that would be expected of him and what he must do earn her regard and what she would do earn his. And perhaps if the most [illegible] rightly they might view the beginning of their love as a particular [illegible] art inspired the sentiment in their breasts.

To lovers all the world over [illegible] matters of the moment, and [illegible] can come to the [illegible] grove too much prepared in thought [illegible] too readily to [illegible]

Wherefore Leslie Kavanagh, her [illegible] close packed with [illegible] ticipation, smiled rapturously [illegible] perfect earth looked such as [illegible]

lute darling that Cyril Conyngham, who had very rarely esteemed himself proof against innocent charms, head over ears in love with her for the second time career.

With Cyril the first time was a small affair and [illegible] worthy of chronicle—a mere childish liking—a [illegible] year-old romance springing to life with the fall of [illegible] and perishing with the dawn of the next. Very [illegible] course, while it lasted, but not of sufficient [illegible] forgo in its favor the delights of a cat hunt.

But here was sterner passion altogether, evident [illegible] dozen different ways—an added pulse rate, a positive [illegible] to please, a definite loss of appetite, and even some [illegible] difficulty to get to sleep o' nights. To Cyril these symptoms were unusual and distressing, and called for immediate remedy. He took stock of the case and was astonished the depth of his feelings. Something would have to be done quickly. It was not right that such as he should woebegone and starve for want of love.

A canny sense, however, not entirely uninspired by experience, warned him that Leslie Kavanagh was not a girl who would respond to a rush attack, a method of courtship he had employed with marked success in other arenas. He would need to watch his step and proceed by the chivalry of his bearing and the gentleness which he ministered to her welfare that he of all men was the ideal husband. Of her engagement to Martyn he knew nothing—not that the knowledge would have deterred him from paying addresses—and consequently he was reasonably sure of success.

Cyril could make himself most agreeable when the mood possessed him, and it possessed him violently in the present instance. On the morning after her arrival a basket of roses lay upon the breakfast table in the place of honor for Leslie. Unhappily Mrs. Conyngham arriving first at the table mistook this floral tribute as a peace offering

herself, and carried it off to be refreshed in her water ewer before the others were down. That Cyril refrained from drawing attention to the error speaks volumes for the good resolves to which he had pledged himself.

"I've hired a motor boat for to-day, Les," said he, "if you care for that sort of thing."

"Love it—ripping!" came the reply.

"We might take lunch, then."

"Rather!"

"Splendid! Aunt, you'll be able to amuse yourself?"

Mrs. Conyngham reviewed the prospect critically.

"A motor boat is far removed from my idea of enjoyment."

"Yes, that's what I thought," Cyril butted in. "There's a new band playing at ——"

"But," said Mrs. Conyngham momentously, "since the boat has been hired I may as well sacrifice my own feelings and occupy a seat or chair or deck, or whatever it is one sits on."

His aunt's presence was the last thing Cyril desired, but he knew her well enough to accept the inevitable without protest. Mrs. Conyngham proceeded to weed out the principal features of the expedition one by one.

"We will not, however, spend the entire day in this manner, since neither Leslie nor myself is proved as a sailor."

"Oh, I'm right as the Mail," said Leslie. "Never sick."

Mrs. Conyngham flinched a little at the word, but let it pass.

"It would be a mistake, for example, to lunch on board."

"Yes, but ——" Cyril began.

"I do not care for sandwiches, as they always taste of the paper that wraps them up; and to eat a tomato without the aid of a knife and fork has been the ruin of more dresses than I care to contemplate."

"There are knives, forks, everything, aunt. I've arranged all that."

"Balancing a plate upon one's lap is distasteful to me," said the lady. "We will lunch at the hotel. Indeed, I think if the cruise lasts longer than one hour we shall all have wearied of it."

Cyril's temper was beginning to go.

"If you'd rather cut the whole idea ——" said he.

"Perhaps, after all, that would be the wisest course," came the reply. "After yesterday's journey Leslie could hardly fail to enjoy a day of complete rest."

Thus it came about that the cruise was abandoned and the entire day wasted in mooning round the hotel garden and listening to a band in an atmosphere of chaperonage disastrous to the cause of inspiring love.

It would be idle to suggest that Leslie Kavanagh, as a modern young lady of keen understanding, was unaware of the tenderness she had inspired in Cyril's bosom. She guessed his feelings almost as rapidly as he realized them himself, nor did she make any strenuous effort to discourage them. On the contrary, after the fashion of all true members of her sex, she was very kind and gentle to the youth. Women have a sure insight in these matters, and it is rare indeed for them to hold up the traffic of admiration with a warning hand. Hopeless affection is a form of nourishment upon which every healthy-minded young woman feeds, secure in the knowledge that she is never likely to overeat of this forbidden fruit nor produce in herself a love sickness in other than the right direction. Women are the governors of the universe, and to govern properly it is essential to maintain a number of subjects. If perchance the subjects are enlisted from the wicked ones of the city, so much greater is the credit. Your willing slave and voter is all very well in his way, but can hardly compare in interest to the captive of the desert, rounded up from his native fastness and brought meekly to heel with gyves upon his feet.

This practice of gathering moss from rolling stones is not unattended with hazard, else would women surely allow to their menkind the opportunity of behaving likewise. The fact that they resolutely set their faces against any such proceeding speaks volumes in favor of the superior judgment and control of women over men. It turns on a matter of sex equation and, as all must agree, men habitually inhabit zones far too near the Equator to admit of their entry into the Royal and Ancient Society of Moss Gatherers.

During the few days before Martyn's arrival Leslie Kavanagh sistered Cyril Conyngham with untiring sweetness. She listened tolerantly to his confessions of past misdemeanors—a favorite topic with men—and gave advice that should insure future amendment. And when Cyril, at the hour of retirement, took her hand in the hotel corridor and blurted out, "I'm not really fit to talk to a girl like you," her smile was an absolution in itself. So much so that Cyril, whose conduct of speech and bearing had throughout been a mere series of stunts designed to excite sympathy, repaired to his bed gravely doubting whether he was fit to talk with such as she.

Ah, errant Cupid, how several are your ways and variety of darts and arrows your quiver holds—but your aim, how capricious your device! Your bow an arch of an eyebrow, your *flèches* are smiles whose points dipped in the sweet poison of a maiden's glance

XII

IT WAS the workshop patrol who came upon the unconscious guard and raised the alarm. First upon the scene was Mr. Butterwick himself, sleepless and responsive last to those inner warnings that all day long had whispered in his ear. He was not two hundred yards away when he heard the shouts raised at the discovery, and running fastest he burst into the midst of the small, excited group of men at the door of Saville's office. Two of them were splashing water over the guards and applying rough remedies.

Ames' eyes were opening and Flaver was moistening his tongue against the roof of his mouth.

Butterwick flung himself at the door. That it yielded to a turn of the handle excited an exclamation of surprise. Sprawling beside the grate lay Taudridge, his huge body moving up and down in rhythm to his noisy breathing. He appeared to be coming to, and as Butterwick seized him by the shoulder and shook him fiercely he opened his eyes and blinked.

"Here, sit up. Pull yourself together. Answer me. What's happened?"

But Taudridge was not capable of coherent reply. He continued to blink and work the muscles of his face painfully.

Mr. Butterwick swiveled round.

"Keep outside!" he shouted to the patrol, one of whom was on the point of entering. "Keep outside! Send a runner to the gates. No one to be allowed to leave. Get Mr. Diplock on the phone. Ask him here at once. Have my car and driver. Send for John Slave, 2 Unicorn Street, and—wait a bit—for George Wedderton too. If they won't come willingly, bring them under escort. Get Palmer and say I want him. Shut that door."

The door slammed and Butterwick with head up sniffed the air.

From the floor came the unexpected voice of Taudridge.

"Chief, the air—gassed me—same as Wipers."

In an instant Butterwick sprang to the gas tap, sniffed it, caught a faint odor, noted the tap was not

(Continued from Page 26)

the burner missing, and saw the clean brass thread inside, stood back and cursed volubly.

"Who opened the door?"

"Me. Last I remember—choking—opened door."

"And let 'em in! And let 'em in!" roared the little detective distractedly. "See anyone?"

"No."

"Stay where you are."

"Chief!"

"And don't talk."

There followed a piece of breakneck reconstruction. Butterwick wasted no time bothering how the two men outside had been dealt with; that didn't affect the case. He wanted to know what had happened inside, and before ten minutes he had the entire series of events set up and ordered in their actual sequence. Indeed, he discovered more clews than George had provided. For example, three tiny indents on the surface of the linoleum where the tripod of the camera had stood. The magnesium powder he had already collected and tested with a match. There were the finger prints, too, amazingly clear, unpardonably so.

A sudden flash of meaning made him search his pocket and produce an envelope, the one George Wedderton had given him a day or two before.

To find that the impressions on the paper and those in different parts of the office were identical, to have been forestalled in knowledge by a member of the official service, to have received beforehand a proof of identity of the very man who would make an attempt to secure the plans, and to have failed utterly in frustrating the effort—those were matters of such intolerable distress and humiliation to Butterwick that he almost failed to observe the marks on the picture glass where the drawing had been affixed.

The arrival of Mr. Diplock synchronized with this discovery. The old gentleman had lost no time in coming round, having been waked up some ten minutes before the patrol hammered on his door, by an inexplicable telephone call.

"Yes," he had said, "I am Mr. Diplock."

And the answer came: "Don't worry—privately."

It was very peculiar, especially in view of subsequent events. Butterwick ignored all courtesies.

"The safes—want 'em opened."

And while Mr. Diplock fiddled with the lock: "Who knew the combination besides yourself?"

"Martyn Saville and ——"

"Yes, and ——"

Mr. Diplock hesitated. He had received instructions from so high an authority that the ordinary standards of truth were in abeyance.

"Just Martyn Saville."

"The plans have been photographed."

"No, no, no."

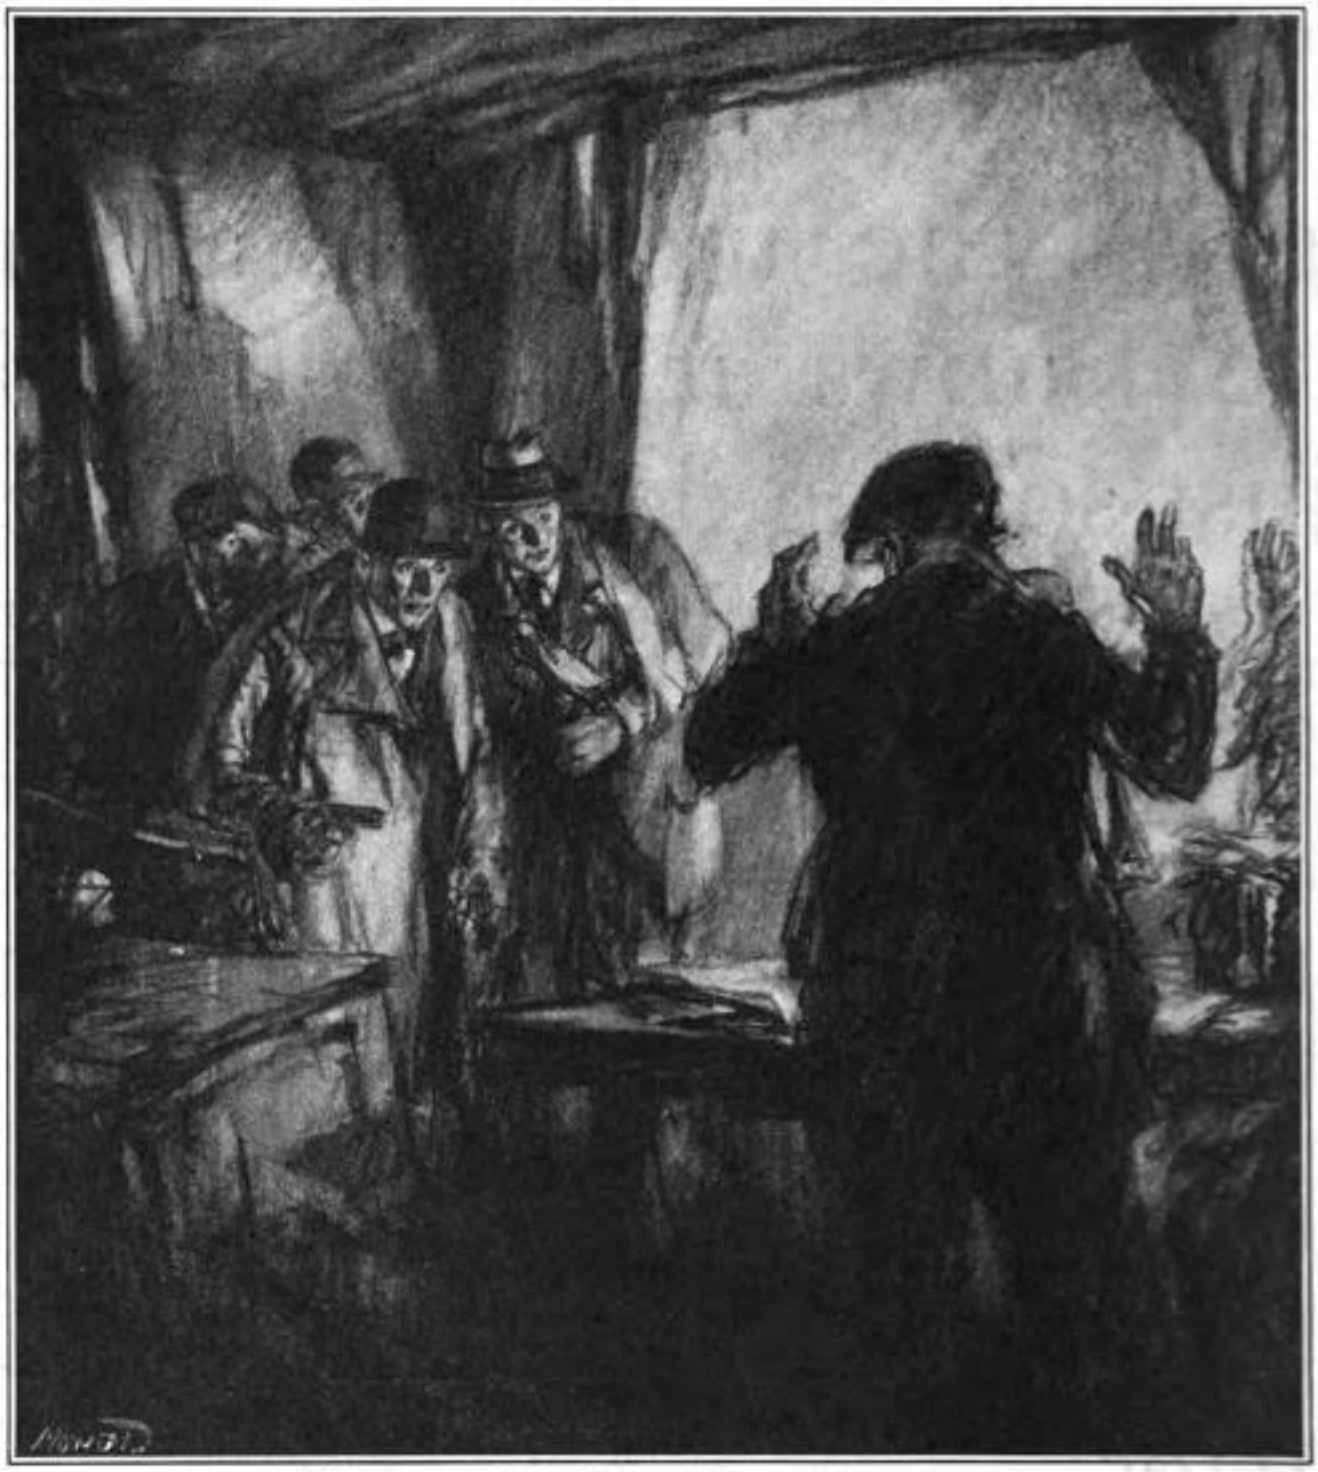
Butterwick raced over the old ground leading to his deduction.

"But it's impossible." He carefully examined the inside of both safes. "As far as I can see nothing has been disturbed. Here are the drawings as I left them the day before yesterday after showing them to Lord Wallingford."

Butterwick flicked the drawing out of Mr. Diplock's hand and held it over the four dabs of chewing gum.

"See! It fits, doesn't it? It fits. Now am I wrong?"

Mr. Diplock looked very grave indeed.



"Butterwick," he said, "if what you say has really taken place it may well prove the first step in the most frightful tragedy the world has ever known. Ruin to civilization, red revolution and a world gone mad."

He stopped and took a pinch of snuff, a habit he rarely indulged in publicly.

"But I pray heaven," he added, "no such calamity will befall. After all, there may be an explanation to all this. I have only one thing to say—we must keep our heads."

The door opened and the man called Palmer entered and said: "Neither John Slave nor Mr. George Wedderton are anywhere to be found, chief. Your car is waiting. The main gates are closed, the station's watched. Denver is telegraphing the port authorities and the boys have started a big round-up."

Butterwick slapped the envelope containing the finger prints into the man's outstretched hand.

"Clear 'em Out of This. I Want to Examine the Place Alone"

"Find the owner of those," he said, "if you put every single man of my staff on the job. Find the owner of those."

He plunged out of the office, leaving Mr. Diplock, Senior, fastening the door of the smaller safe with the word "Worry."

"But why the devil I shouldn't worry in private," he murmured to himself, "beats me altogether."

XIII

GRAY dawn was showing in the east when George Wedderton presented himself at the place Mossi had appointed. As the district headquarters of a movement claiming to bring light and freedom to an oppressed and benighted world the premises themselves were cheerless and dispiriting. Access was obtained through one of a hundred arches supporting a railroad that bisected the town with a score of tributary lines. The arch in question was used as a dump for a quantity of old government war stock and was therefore practically free from observation or protection by the authorities. Beneath was a series of cellars, damp and ill-smelling, which nightly accommodated as big a set of ruffians as could be met anywhere in the world. Political outcasts of every nationality, men of violence, anarchists, crooks and fugitives from justice—gathered together in a common fraternity with a single object—chaos.

Gazing down the lines of faces on either side of the [illegible] trestle tables, listening to the wild utterances, and [illegible] ened by the fist-banging orators, one might have imagined oneself back in the lawless days of the French Revolution. Yet not altogether was the likeness complete. A [illegible] fierce patriotism ruled those long-dead fanatics, a [illegible] rough justice signed the warrant for the blood they [illegible] But here were men of a different stamp—communists [illegible] their own failure in trade and achievement, corrupt[illegible] disinterested in a real cause as paid gunmen, [illegible] for the sake of gain, agitators to be bought at a [illegible] gathering of mercenaries to whom the banner of Liberty, Equality, Fraternity meant no more than lawless[illegible]

The air was thick with smoke and men's breath and rank with the smell of bodies. As he entered, [illegible] smote George with the violence of a blow. He [illegible] up his hand in greeting and gave the words of the fellowship:

"The world set free, brothers."

There was something bestial in the chorus of [illegible] that followed. The [illegible] was as electric with excitement as the points of a trembler coil. By [illegible] George gathered that [illegible] Italian, Mossi, had given the company a hint of success. But it would [illegible] more than the veriest [illegible] for, children of one [illegible] though they might be, [illegible] brothers, with enviable [illegible] cuse, trusted one another but little.

"Has he arrived?" George demanded.

"In there," [illegible] answered, nodding at a tunnel at the cellar [illegible]

There was a man [illegible] at a rough door a [illegible] yards along the tunnel. He allowed George [illegible] after a whispered [illegible] of words. George [illegible] the tunnel till he came to another door, upon which he rapped.

"Johann," he replied a voice from within.

"Yes," came the [illegible]

A bolt was slid [illegible] tered, to find himself with Mossi in a [illegible] siderably smaller than of its fellows.

"Well?"

"All's well. Shut the door." And after the door had been shut and [illegible]

"You see."

There was a table in the center of the cellar, which was a small [illegible] holding the negative [illegible] design. A bright light shone through it, and the surface was stretched a sheet of the finest paper.

"In two minutes I shall have finished the [illegible] Wait."

George waited in silence while Mossi with [illegible] care completed his work with a fine pen dipped in [illegible]

"So." He removed the paper and held it [illegible] George's inspection. "Not many would have done it so well."

George agreed, for the tracing secured was [illegible] good.

"And the negative?" he demanded.

Mossi raised his shoulders.

"By order it is to be destroyed."

"That would seem a pity."

"The orders are clear."

George ruminated in silence, then: "I was [illegible] friend, this negative is of great value and — we are poor men."

"Hush!" said Mossi warningly. "Careful, [illegible]

"One may be too careful," he grumbled.

The Italian edged a little nearer and lowered [illegible] to a whisper. "I had been thinking myself—a [illegible] quietly made—there are plates here. No one knows [illegible] you and I."

George smiled slowly.

Grover Cleveland as Governor of New York—By George F. Parker

WHEN, late in October, 1881, less than a fortnight before the election, after many declinations I finally consented to accept from my neighbors in Buffalo the nomination for mayor I had no idea that I was thereby entering upon a belated public career. I not only did not seek the place but did not want it. I had never been better satisfied with myself or my way of life. I was nearly forty-five years old, had reached a comfortable financial position, was more than contented with my place in both profession and community, and was looking forward, not to retirement, but to steady continued work and to opportunities for study and a fair amount of personal comfort. Indeed I can say to you with perfect truth that I did not indulge a single ambition. Though willing to do a service to my community when it came my way, the time had long since passed when in my belief such a demand would be made.

"I was a strong, unyielding partisan, and though I saw the unfavorable conditions found in our local politics, as everywhere else, I never thought even for a moment that I had either a call to cure them or the gift for doing so. The outlook for success was unpromising, and at this distance from the event itself I confess that I accepted the urgent call thus made only when reminded that I could not honorably decline it after the favors that my party and my neighbors had bestowed upon me.

"The prospect of election was so remote that it did not look alluring, so that when within a week the conditions had so changed that there was real danger of success I suppose I was the most surprised and perhaps the most careless man in Buffalo. Once elected, there was nothing but to accept the office, and then so to do the work that it should accord with what I had tried to make of my life. From my first day in office it never occurred to me that even if I had a whole cluster of ambitions I was taking a single step in the direction of satisfying them. I soon found myself interfering with things as they were, and, as you know, this is never a promising or comfortable thing to do, especially in a small community where everybody so knows everybody else as to promote jealousy and misunderstanding.

"The work of the mayor's office did not take all my time, but even then I did not give any part of it to thinking what I should do next. Although I had not known any of them in person, so far as I had been able I had studied the distinguished men who as governors of New York had brought credit upon the state, without so much as harboring the thought that I might be called upon to succeed them. But as I had never run away from responsibility, I finally consented to accept this one, though never with any idea that it would be tendered to me or that, if preferred for the nomination, I could command election."

The Letter of Acceptance

DURING the many years that I was privileged to come into close relations with Grover Cleveland he spoke freely of the many phases of his opening public career, and I have only condensed in this quotation conversations then noted. It will serve as a text and will show how this man who was to rise so high had less than no thought that for him such a fate lay among the possibilities. Our history as a country, and that of every state, perhaps all the history of free government, might be searched in vain to find another example of a man with less aspiration for public distinction. Most men start out with some ambition, or at least with some willingness. They go to the legislature, they seek the state senate or accept places on managing committees—local, county, district, state or national—or push themselves in as delegates to this, that or the other convention or popular body of some kind. But here was a man who neither sought nor accepted a place that seemed to lead to another or served to put him ahead of any of his neighbors in any relation outside the profession in which he had chosen to work.

From that late midsummer day when the friends, without regard to party, of the then mayor of Buffalo met at a clambake on the farm of George Urban, Jr., and it was proposed that steps should be taken to present the name of their friend to the forthcoming Democratic state convention, which was to nominate a candidate for governor, until on the first Tuesday in November, when one of those whirlwinds of popular opinion had declared his election by a plurality of more than one hundred and ninety-two thousand, perhaps the least excited of all the electors who participated in that contest was the candidate who in the meantime had successfully run the hazards of a party

PHOTO. BY MC DONALD & STEERY, ALBANY, N. Y.

Grover Cleveland as Governor of New York, 1883

nominating convention and an election. He had formally accepted the place thus tendered, but had gone on about his official and professional work without attending a rally or making a political speech, without making a journey into any other county than his own; without going to Albany or elsewhere to consult with party managers; without visiting any of the great figures of his state; and without so much as making a kotow to a party boss of any or no nationality. Perhaps there is almost no other example of a man coming up with so little of looking down, giving so little thought to the average method of seeking support.

But he did not come to his high place without knowledge of what lay before him. Though he had not had occasion to think of it, chance had led him to measure himself for a few exciting moments with the man of whom he could not then foresee himself as the successor. The Flanagan pardon case, into which he had been drawn without a thought of results, had stripped the high dignities of any semblance of mystery, and he had seen that he was not unworthy to show his power over a man in authority.

Once nominated, Mr. Cleveland's position became easy. Being so new to politics, he had not aroused the opposition of factions. Tammany and the canal ring and other various bodies and influences that had opposed Tilden and his régime had no excuse for enmity or opposition to the successor designated by the latter and his friends. In due time he prepared and submitted his letter of acceptance. It contained nothing very striking, but reiterated the principles enunciated by him while mayor; expressed anew his interest in civil-service reform, upon which he took very strong ground; announced his adherence to the doctrine of home rule in the government of municipalities; defined his thought about the laboring classes; pronounced firmly against the methods by which the Republican convention had been managed without using any offensive language; showed an interest in and knowledge of the canal question, and took strong ground against the expenditure of money to influence elections or secure legislation, and again emphasized his doctrine that public office was a public trust. Perhaps his most important utterance was that relating to a question that had just recently attained importance, his position upon corporations being announced in a paragraph which even at this distance of time seems important enough to bear repetition:

> Corporations are created by the law for certain defined purposes, and are restricted in their operations by specific limitations. Acting within their legitimate sphere, they should be protected; but when by combination, or by the exercise of unwarranted power, they oppress the people the same authority which created should restrain them and protect the rights of the citizen. The law lately passed for the purpose of adjusting the relations between the people and corporations should be executed in good faith, with an honest design to effectuate its objects and with a due regard for the interests involved.

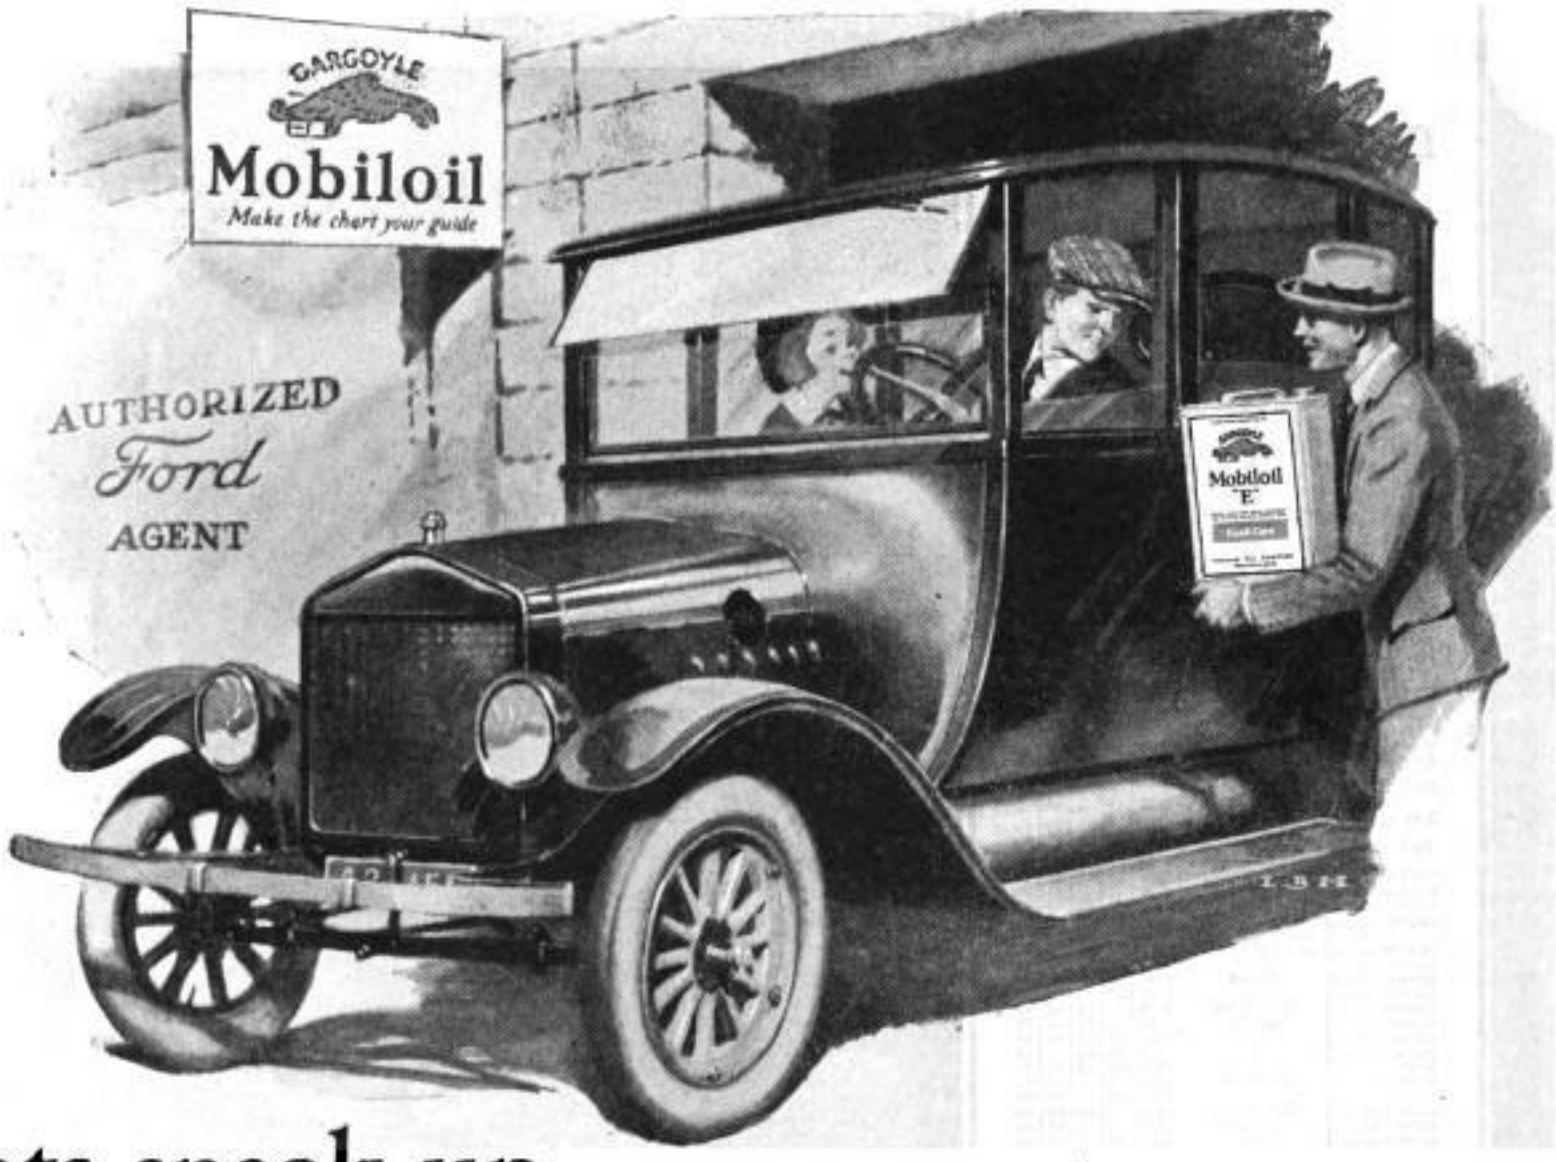
He made no speech other than a friendly one in reply to a serenade tendered by his neighbors; he took no part in management except as an adviser or listener, and [illegible] at a distance, and applied himself with his usual diligence to his duties as mayor.

There was perhaps less opportunity for a candidate to do anything outstanding, other than canvassing, than in any other campaign known to the political history of New York. Indeed the Republicans attended to that. This was manifested by their action in the convention; but as soon as this body adjourned it seemed they were at loggerheads locally and in every other way. In the preceding year there had been the Conkling and Platt resignations with the positive refusal to reëlect these gentlemen and the substitution in their places of two weak men, both belonging to the faction that had long been in the minority.

The Blaine influence, which had been impaired by the death of Garfield and the retirement of the Secretary of State, was either hostile or occupied an attitude of indifference, thus refusing to become interested in the Fall campaign. The supporters of civil-service reform had already sensed the situation, and finding that they had a Democratic candidate who was a friend, they were active against the Republican ticket not only as to its candidates but as to its methods. As there were state quarrels, likewise faction ruled in almost every county. All [illegible] tended to unite the Democrats, and Mr. Cleveland's aloofness in politics made divisions in that party almost [illegible] to impossible. Nobody was therefore surprised when the unprecedented plurality was registered.

Even at the risk of hinting at history, it cannot be amiss to refer to the political heritage of this new and [illegible] man when on January 1, 1883, he became governor of the state of New York, long after the office had assumed importance scarcely realized even by its successive [illegible] and still less by the people of the state, who were [illegible] form the habit of seeking to push their leaders into the presidency—the strange hold of Virginia in its [illegible] with Pennsylvania being still too strong for that [illegible] so grown in population, wealth, enterprise and energy [illegible] all unconsciously to itself it had become the Empire State in reality as well as in name, but could maintain its prestige only so long as it held real leadership in men. In 1882 any one of its people might have looked back over a hundred and five years that had passed since [illegible] the first governor took office and responsibility, and counted on his fingers, with little overplus, those who made its traditions and led in its achievements. I venture to gather up anew and in a few sentences the names and services of this little band of governors.

Governor Clinton's Unique Record



GEORGE CLINTON was of long American lineage, of whose mature years had been spent in the public activities of the colony. Coming into office in 1777 he served uninterruptedly until 1795, and then returned for a short term during the early years of the nineteenth century. There are instances in our politics, both Federal and state, where a man has held some executive office for a long period, after long service in state legislature or in the Senate or House; but it has not been given to any other man to fill an executive office when he had to submit himself, year and over to the chances of election. This was the unique service that George Clinton rendered, because when he retired from the governorship he was for eight years Vice President of the United States.

In September of the year that Clinton became governor John Jay held in Kingston his first term as chief justice of the state, engaging during the remaining years of the Revolution in diplomatic work. He took an active part in the making and adoption of the Constitution, and when Washington became President he was tendered and accepted the chief justiceship of the United States. The first holder of this office, which he soon resigned, in 1795 was elected as the successor of Clinton as governor, an office held by reëlection for six years.

The next important holder of the governorship, Daniel D. Tompkins, who, from having been a colleague of both his important predecessors, remained in office ten years. This was a vital time in the history of the state, while the second war with England was under way. It was not only the actual conduct of the war that was [illegible], a considerable portion of which passed on the soil of New York—but the political management also. It was the time that the Federalists in New England [illegible]

rd Agents speak up

Why they advise Gargoyle Mobiloil "E" instead of merely "a quart of oil"

PROGRESSIVE FORD AGENTS have a favorite letter in the alphabet, it is the fifth one—"E". at is why you so often find the Gargoyle Mobil- sign beside that larger sign which reads "Au- rized Ford Agent."

The Ford agent can ill afford to have many com- ints or calls for free service on a new car just put operation. He must fully protect his customers order to keep his own modest profit per car from g wiped out.

his Michigan Ford agent is typical of a growing entage of dealers who sell Ford cars. He says, e always fill up a new Ford with Gargoyle biloil 'E' and try to get the new owner to take gallon can away with him. We know then that as started right."

hy "started right"?

issouri answers. A Ford dealer out there says, th Gargoyle Mobiloil 'E' I find that we give ct piston seal, correct lubrication, showing er second-hand value, more miles per gallon asoline. We have never had a complaint from of our customers on Gargoyle Mobiloil 'E'."

Ford agent in Minnesota explains why Gar- Mobiloil "E" *saves dollars by the year.*

Up until about a year ago," he writes, "we were e opinion that one oil was as good as another Ford. Before we started to sell Gargoyle Mobil- oil 'E' to our customers, we made very extensive tests in our own cars. While we had been satisfied with from 40 to 50 miles per quart on all of the oils we had been using, we find without exception that we can obtain from 100 to 125 miles to the quart of 'E'—to say nothing of noticing a very consider- able difference in the condition of the engines."

Why not begin today to get this greater economy in your own Ford car?

Not a gasoline by-product

Do you realize that 9 out of 10 lubricating oils on the market are simply by-products in the manu- facture of gasoline? The refiner secures all the gaso- line he can from a good gasoline "crude." He then makes lubricating oil from what is left. In the mak- ing of Gargoyle Mobiloil "E" every by-product is subordinated to the production of the best obtain- able *lubricating* oil. The crude oil is chosen espe- cially for *lubricating* values. Gargoyle Mobiloil "E" is a *specialized lubricating oil—not* a by- product.

It is produced by lubrication specialists who are recognized the world over as leaders in lubricating practice. Gargoyle Mobiloil "E"—like every other grade of Gargoyle Mobiloil—is manufac- tured by processes designed to bring out the highest *lubricating* value—not the greatest gallonage of gasoline.

Warning:

Don't be misled by somesimilarsounding name. Look on the container for the cor- rect name *Mobiloil* (not Mobile) and for the red Gargoyle.

Don't believe false statements that some other oil is identical with Gargoyle Mobil- oil. Gargoyle Mobiloil is made only by the Vacuum Oil Com- pany, in its own re- fineries, and is never sold under any other name.

YOUR DEALER or garage man has a book which specifies the proper Edison MAZDA Lamps for other cars in addition to those listed above.

"Your light's out!"

A SWERVE—A SHOUT—the other car thunders by. By a hair's breadth you have avoided an accident.

The next time your headlight goes dead, there may be no warning cry. Just a crash—and a car in the ditch.

For economy's sake, you specify your oil and gas and tires. *For safety's sake, specify your lamps.*

Ask for Edison MAZDA Automobile Lamps. They mean more dependable lights at night, a brighter pathway to follow and minimum drain on your battery.

There is a particular lamp for every socket on your make and model of car, as shown by the chart at the left. And the handy kit of spare lamps should be in the pocket of your car. Some night it will be as useful as a spare tire.

Edison MAZDA Automobile Lamps are sold by garages and accessory and electrical dealers throughout the country. *For safety's sake, specify them by name and MAZDA Lamp number.*

NEW REDUCED PRICES

These prices are "over the counter" prices and do not include installation service.

MAZDA Lamp Numbers 1129, 1130	40 cents each
MAZDA Lamp Numbers 61, 62, 63, 64	25 cents each
MAZDA Lamp Numbers 1141, 1142	45 cents each
MAZDA Lamp Numbers 67, 68	25 cents each
MAZDA Lamp Number 1126	40 cents each
MAZDA Lamp Number 1158	45 cents each

ed to take any active part in the war and indeed were
y cases, as the Hartford Convention showed, its un-
ng opponents. Few men have better deserved the
conferred by their state than did this outstanding
a service still further recognized by his election
a Vice President.

ne time De Witt Clinton, nephew of the first gov-
after having been in Congress, from which he
d to become mayor of New York, succeeded to the
orship. It was his privilege to carry out the vision
d appeared to his uncle and to Washington when
re traveling together across New York, in seeing
ibilities and finally in executing the scheme of
g the Erie Canal.

a few weeks in the governorship Martin Van
esigned to become Secretary of State, Vice Presi-
the second term of Andrew Jackson, and, as his
r, President on his own account. In spite of the
of his term, he was also one of the important
n the governorship.

m L. Marcy held the office for six years. He, too,
distinguished predecessors, had been a judge. In
e he became Secretary of State in the cabinet of
Pierce and there made many precedents for a
foreign policy.

his turn was defeated by William H. Seward,
ed for four years, had a long term of service
nited States Senate, and in his turn became
y of State under Lincoln.

Wright, who, as was common in those days, re-
ter a distinguished service in the United States
o become governor, was a worthy successor,
ntained at its highest estate the dignity and
tions of the office.

ton Fish succeeded to the fag end of a term as
t governor and then for a full term as governor.
went to the United States Senate, and ended
icuous career by eight years as Secretary of
der Grant.

xt outstanding governor was Horatio Seymour,
elected in 1852, defeated at the end of his
ten years after his first election returned to
conspicuous service to the Union cause during
War.

the distinguished figures to become governor
John A. Dix, who at the age of seventy-six was
a Republican, after having been a lifelong
. He furnishes the only example in New York
elected to high office by a party with which
thy was slight. He was defeated when he
but in spite of this brief term he must be
among the real men who have held this out-
ffice.

he was succeeded by Samuel J. Tilden, who
ome the most influential figure in the modern
New York and of the country.

f course not possible that even so great a state
ays have available such commanding figures as
I have enumerated. To make a long story
ng the one hundred and six years between 1777
e office of governor had been filled for sixty-nine
rs by these twelve men. During this period the
of the United States scarcely surpassed the
ip of New York as the refuge for character,
high statesmanship. Naturally, during the
there were a large number of mediocre men.
e were seventeen of them, but their whole serv-
regated thirty-six years.

Official Life at Albany

ANT with the times, each of the men was called
r and authority only after the most exacting
ip. Here was one who had sprung up almost
nd as he himself, with all his inexperience and
ew what they had done, it was no cause for
his assumption of their responsibilities at a
new problems were awaiting solution should
something of a task. Neither he nor any of
nor even his intimate friends could have pre-
e would show himself fully the equal of any
d thus preceded him in this office, nor even
was there any reason to believe that he would
d man who, after holding it, would be nomi-
ected President of the United States.

Cleveland was ready to move from Buffalo
ing free from the usual tyranny of furniture
, or even of wife and family, there was not
ut to pick himself up and go. He declined to
ies of public farewells, but when the time
d from the mayoralty, moved on a few miles
he harder tasks of the governorship. On the
he year 1882 he traveled to Albany with a
mer partner, Wilson S. Bissell, and was ready
hat lay before him.

week he was walking to the mayor's office in
in the next he was getting the same exercise
three or four times daily in the mile between the executive mansion and the capitol. He no more put on airs in Albany than in Buffalo. He was there the same plain man going about his work, helping a cripple, a woman or a child across the street, just as he had done all his life. He made his modest arrangements about taking up his residence in the house provided by the state for his occupancy, installed his unmarried sister, Rose Elizabeth, as its mistress and brought William Sinclair from home for steward.

But when he settled down in the executive mansion it was not to be all work and no play. Here, as elsewhere, he never forgot the amenities, but recognized them, believed in them and knew how to use them. He began at once with proper entertainment of his new friends. He saw them at his house as well as at his office, and there was for all that good cheer that goes with trained manners and a wholesome mind and body. He took part in the life of the old capital town, where he found himself such an important factor. He attended dinners and receptions, and only avoided dances and exhibitions of youthful gayety, but was ready to go to his real friends when time permitted and they wanted him.

In this he and everybody who went to Albany in those days was exceedingly fortunate. Mrs. John V. L. Pruyn

John Jay, First Chief Justice of the United States and Governor of New York in 1795

George Clinton, Governor of New York in 1789

had been the social mentor of many governors before Mr. Cleveland, as she and her daughters were to be of many of his successors. With a tact that was faultless and an experience almost unsurpassed in the history of either state or national capital, without display or ostentation, without cause of offense to officials or to people, she made for herself and for the gracious hospitality that she dispensed a place that will long distinguish her as the highest development of an American hostess.

In Grover Cleveland as governor she found an apt follower. His nature fitted him to accept and to assimilate such a leadership, and the discipline through which he had passed under his mother and his aunt—something I have already described—gave him a facility which would not have been looked for in the lonesome fraternity of bachelors. So though the executive mansion did not become a center of unrelieved gayety, it did dispense, under the influence of the governor and his sister, a hospitality that was large, dignified and consistent both with itself and the standing of the great state which it represented. Not a single feature that was either necessary or desirable was neglected.

It would thus not be too much to say that this lonely bachelor demonstrated here in this high post, as well as during all the years of his Buffalo life, his liking for all those with whom he came into contact, so far as his time and tastes permitted. He was to demonstrate this for years to come in the White House, and here again the executive mansion in Albany might be treated as in the nature of a preparation for the higher duties that were to fall upon him.

He thus devoted himself to his new work as if he had done nothing else and expected to keep at it during the rest of his life. Reaching his office, he was ready to see everybody who had business. There was no exclusiveness, no listening to some important case or man in the executive office only to slip out for a whispered conversation in the hall with some cheap politician from upstate. He thought things in the open and so did them in like manner. Perhaps but for the fact that he went to the executive offices earlier in the morning than his predecessors and stayed later at night the average attendant would hardly have known the occupant of one day was a different person from the one there the day before. Perhaps the most conspicuous difference was that he did for himself so many things in which other governors had required assistance.

Handling Pardon Applications

AND yet the work itself went on with a difference. The legislature and the public found in the first week that in both houses every movement was watched a little more closely than usual. Though there was an absence of anything resembling either bargaining or dictation, it was apparent even from the first day that nothing would be overlooked or neglected. There was no room for doubt as to the attitude of the executive about any of the business of the state, so far as either the legislative or departmental branch was interested in his policy. He showed at once that he would take nothing on trust; that he must know everything that related to the business of the state which had been intrusted to him.

Curiously enough, the first business that engaged his attention, after the inauguration exercises were over, was pardons. Instinct as well as his experience had told him that of all the duties devolving upon him by law and custom as governor this was distinctly his job and that nobody could tell him how to do it. He had been a rigid disciplinarian where criminals were concerned, with not so much as a suggestion of softness. He had succeeded a governor whose policy it had been not to issue or even seriously consider a pardon unless it was forced upon him by judges or lawyers. True to his character, he went out of office without even so much as opening—to say nothing of considering—a number of pardon applications.

Though the new governor did not have to look for work, one of his first acts, after appointing an efficient as well as sympathetic pardon clerk as successor to one whom he had disliked on sight, was to take up the pending cases. Finding from the applications some things that struck him as probable oversights or possible injustices, he proceeded to clear them away by the most direct methods. He probed all of them to the bottom. In some of the cases tried years before he sent for witnesses, practically reopened the most flagrant, satisfied himself of the claims or charges made, and then acted with a promptness that surprised all concerned. There was no cell emptying, no indication that he intended to invite new or unnecessary applications, no intention of interfering with the courts; but he was able both to correct mistakes and to serve upon courts and lawyers notice that so far as he was concerned he had tried to avert future danger and thus save himself and his successors much work. This particular policy is worthy of early notice in thus dealing with his work as governor because it not only marked the principles that were to govern him during ten years of the most serious executive responsibility but was to have a far-reaching influence everywhere upon governors and Presidents.

This interest in pardons and his way of dealing with them were developed after he attained power as governor. These qualities had perhaps been heightened in their development by reason of his experience with his predecessor, Governor Cornell, in the Flanagan case. I have already told this story in THE SATURDAY EVENING POST for August 28, 1920. They were illustrated to me by a conversation with Judge D. Cady Herrick. In the courts of Albany County a young man had been convicted of assault upon a woman. It was charged by himself and his counsel that he had been railroaded to serve twenty years in the penitentiary. After some years had passed application was made to Governor Cornell for a hearing looking to the grant of a pardon or commutation. It was this governor's fixed determination that so far as he could avoid it—and his methods were really those of his pardon clerk—though such applications might be received the applicants had to be unusually energetic and pushing if they expected to get a hearing; and a good deal of pull or influence was necessary to bring this about.

When the new governor came into office the case in question was taken up again by the young man's counsel, and

the district attorney of the time also interested himself in it after he had convinced himself that an injustice had been done. When reclaiming the papers in order to bring the application up to date it was discovered that they had not been opened during the Cornell term. They were recalled, revised, new facts applied, and then presented again. Time had so strengthened the case that Mr. Cleveland took it up, heard the attorneys, saw the applicant himself, which was usual with him when possible, and went to the bottom in seeking the real facts.

Although the supposed assault had occurred some years before, the governor put to work all the forces of the state then available in the way of detective and other agencies. These sought out the guilty women in the case, discovered that the accusation was the result of a conspiracy by a dissolute woman under the lead of the mistress of a questionable house. Not only were all steps taken to get the information in the way of affidavits and statements in every form that could be obtained, but the governor haled to his office all the available persons, held a hearing in legal form, examined the statements they had already made, procured a confession of the methods employed and the motives that lay back of them. Upon this the young man was pardoned.

Whether the governor was able to bring the guilty people to justice is not told. Perhaps this lay entirely out of his purview; but it is an example of the way in which he dealt with pardons both in the governorship and in the Presidency. He took nobody's word for anything in relation to a pardon where an injustice, a life or a breach of trust was involved. No work was too great and none too small to attract his attention, and yet no man was ever so rigid in requiring the utmost proof. From his long experience at the bar and from innate knowledge he was fitted to know just how he might be imposed upon and to realize the danger such things meant to society and to justice.

A Courageous Veto

To some this may seem almost an exaggerated devotion to a dull office routine, but from the beginning to the end of his career as an executive this man insisted that no more important or vital duty was laid upon him than that growing out of this particular method of carrying out a policy to which he was attached.

But the new governor soon had to deal with matters more important than anything relating to the routine of purely executive duties. The management of a legislature was thrown upon him. New measures vitally affecting the interests of the state had to be considered almost at once.

Among these was the bill reducing fares on the elevated railroads of New York City from ten to five cents. When these structures were built there was grave doubt as to their success. The population of the city was in a more or less chaotic condition. The downtown districts were overcrowded, and removals to other districts which were intermediate or uptown were always clogged by the lack of transit facilities.

The old-fashioned stage or omnibus was only just disappearing. It was before the days of through street cars, Broadway being entirely free from this method of transportation, while the older car lines on the east and west side streets of the city were primitive and imperfect. So when the elevated roads were finally fairly completed up into the Central Park region and thereabouts there was no method by which the probable returns could be measured; but as the roads were extended it was found that the properties gave far more than the expected return upon the investment, and as they finally reached or approached Harlem and the upper parts of the city the increasing distance did not impair this somewhat exaggerated return.

When this discovery was made strong popular movements were soon under way to force the reduction of fares by cutting them in half. The question had been dealt with by previous governors, and as the movement went forward it gained momentum, and reached this development just as Mr. Cleveland was entering upon his duties. The bill for the reduction of fares was therefore passed, and awaited the action of the governor before it became a law.

This action was taken in February, Mr. Cleveland having become governor in January. The discussion had been protracted, angry and exciting, and the pressure for the lower fares became so great that both houses of the legislature surrendered to it.

The bill finally reached the governor towards the end of his second month, and on March second, in a long and careful message, he vetoed the bill. He naturally expected that this action would make him exceedingly unpopular. In order to meet this he reasoned out the question fully and put it upon the very highest lines. He knew what he had to meet; he knew that to this popular pressure was added the feeling that these properties had fallen into the hands of speculators who stood upon the verge of being almost financial pirates. He recognized every side of the whole question and proceeded accordingly.

In his veto he outlined the steps that had been taken, reviewed the obligations of the city, assumed under the authority of the charter given to the railroad company, and he also argued in full the relations that it bore to the growth of the city and to the convenience of the people. His message, aside from that part of it sympathizing with the needs and demands of the city, was really based upon the obligation of contracts; so that certain passages in the veto message, prepared with great care, without consulting the lawyers or the representatives of either the roads or the people, set forth in the paragraphs dealt with the duties of the city and of the people rather than with their rights:

> It is manifestly important that invested capital should be protected, and that its necessity and usefulness in the development of enterprises valuable to the people should be recognized by conservative conduct on the part of the state government.
>
> But we have especially in our keeping the honor and good faith of a great state, and we should see to it that no suspicion attaches, through any act of ours, to the fair fame of the commonwealth. The state should not only be strictly just, but scrupulously fair, and in its relations to the citizen every legal and moral obligation should be recognized. This can be done only by legislating without vindictiveness or prejudice, and with a firm determination to deal justly and fairly with those from whom we exact obedience.
>
> I am not unmindful of the fact that this bill originated in response to the demand of a large portion of the people of New York for cheaper rates of fare between their places of employment and their homes, and I realize fully the desirability of securing to them all the privileges possible, but the experience of other states teaches that we must keep within the limits of law and good faith, lest in the end we bring upon the very people whom we seek to benefit and protect a hardship which must surely follow when these limits are ignored.

These utterances have in them all the old-fashioned ring and response embodied in Webster's plea in the Dartmouth College Case and in Chief Justice Marshall's decision. They probably exercised more influence in emphasizing the intelligence and the courage of the new governor than any other act of his whole career.

Unforeseen Results

Though this veto took on an entirely different color from what he himself expected so far as public sentiment was concerned, it did bring upon him the abuse and malediction not only of the traditional enemies of conservatism in New York and of the followers of the political machine, but it drew to him almost instinctively the support of the conservative people, not only of the state but of the country.

I shall have occasion in another place to gauge its influences upon his future career—something that from his own attitude and from his study of conditions he could not possibly foresee.

The charge was at once made that this veto message, the first long and important one that he had sent, was not his own. All sorts of reports were made, the favorite author to whom it was credited being Roscoe Conkling. It was alleged that he had not had sufficient experience to carry on and write such an argument. His outstanding position as a lawyer was not yet generally recognized, although those acquainted with him knew even then that nobody could write anything for him to sign. Just before he was to submit this veto message his friend, D. Cady Herrick, upon whom he had begun to rely even thus early, called by request at the executive office, when the governor said:

"I have something here that I want you to hear. I have not submitted it to anybody or asked anybody's advice about it, but I want you to know just what I am going to do."

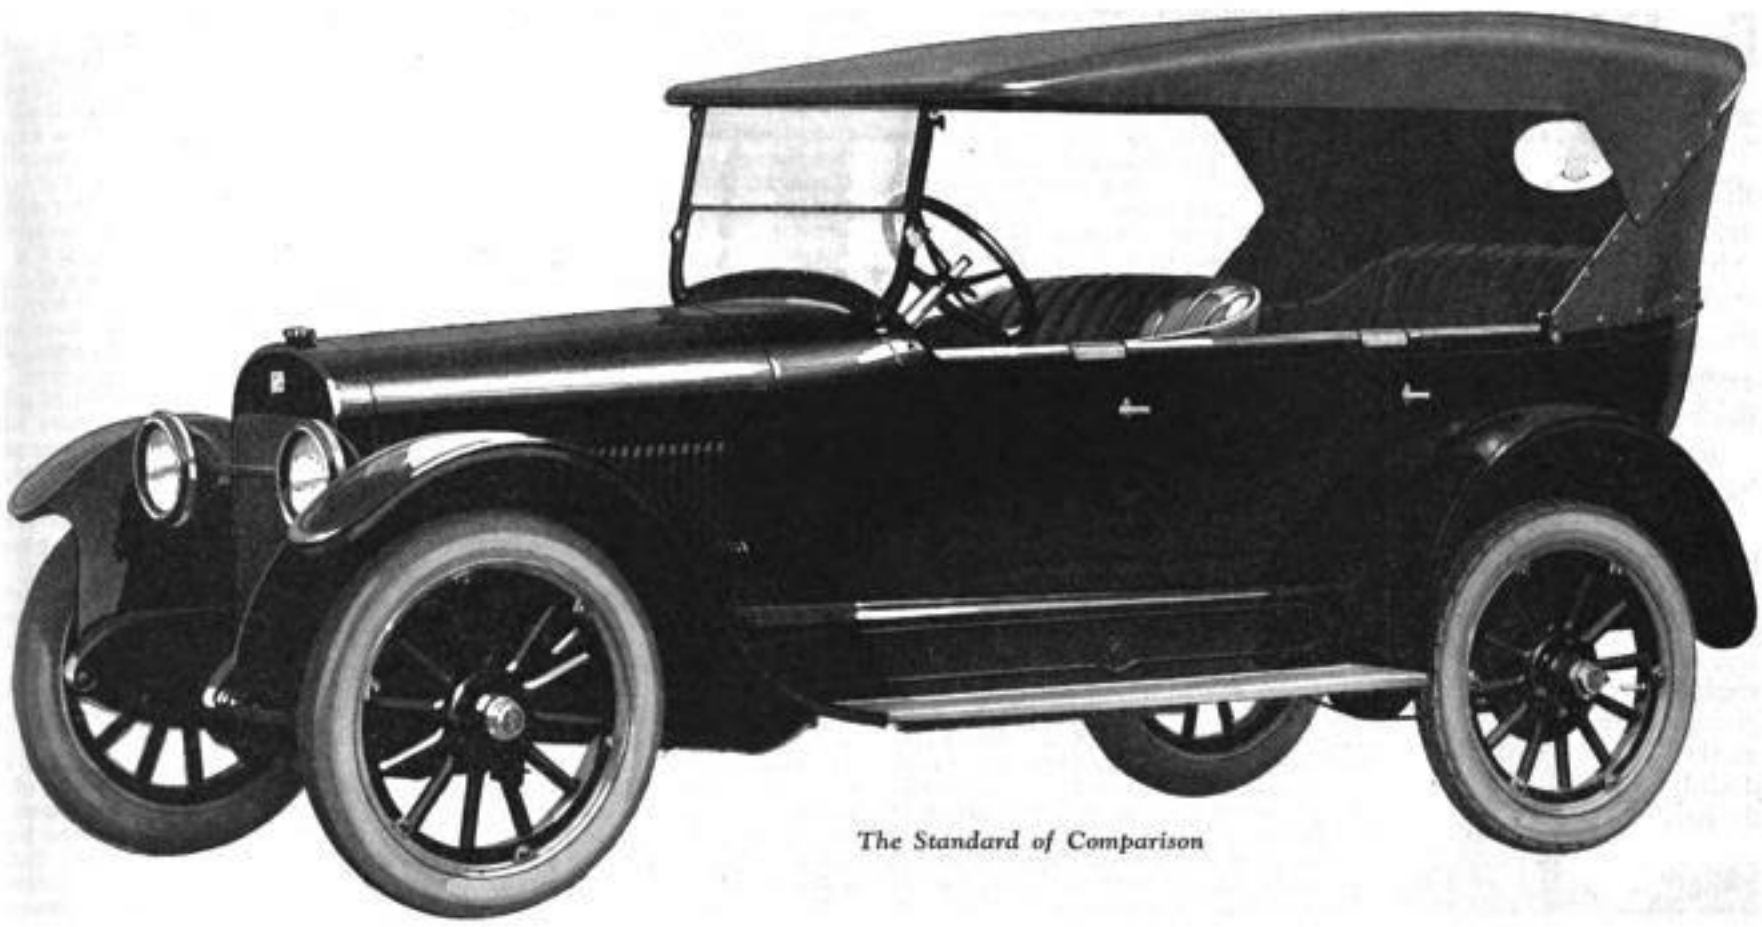
In accordance with his practice during all his responsible career, he read to his friend and auditor from his own manuscript the whole of the message just as it was transmitted.

To the end of his life Mr. Cleveland used to say that when going to bed the night after he had submitted this message he looked into the glass and said to himself: "Well, tomorrow I shall be the most unpopular man in the state of New York."

Contrary to his usual rule, he awaited the appearance of the New York newspapers next morning in order to test his own judgment. To his surprise he found that he had made a serious mistake. His care in examining the matter before he reached conclusions and the cogency with which he had given his opinion had made a profound impression upon the public mind. had brought to him from every part of the state and also from the country at large the highest commendation both for courage and for the solidity of his opinions.

When reviewing his rapid rise in politics he often expressed the opinion that of his earlier acts and their resulting circumstances he was inclined to believe that the elevated-railroad veto was probably the most effective in attracting attention, in spite of the fact that he himself had wondered at the time whether from a political point of view it was anything better than deliberate suicide.

Doing His Best, Regardless



"In the general rise of popular feeling against corporations," he said, "a great many people had confused it with a mere opposition to private property. Laying this aside from the merits of the question itself it was important to separate these two agencies, and I am thankful to believe that the veto, coming just at the right time, helped direct attention to the large features of the whole issue and thus assist in the process of clear thinking so vital at the inception of any agitation involving fundamental principles. The instant response which came from every part of the country convinced me that this exposition in a purely official utterance had the effect of causing the people to think beyond mere sectional or local conditions and thus emphasized the importance of public honor. It was not long after this assertion of obligation that the five-cent fare was accepted as a matter of course and became the basis of a rate universally adopted."

At no time during this session of the legislature did he ever depart from his refusal to deal with any question from temporary, personal, demagogic basis. He met all labor questions that were brought up during this session with the same courage that had characterized his action on others. He always seemed to have known that he ought to go on and do the best he could and let politics and his own personality take care of themselves. In his first great and responsible work he forgot himself and everything else and, though he kept on fairly good terms with his party, he refused to do the things that were most wanted by its leaders.

Mr. Cleveland had gone to Albany with little knowledge of party conditions in the state. He hardly knew which way to turn to get the proper advice and assistance. But before he had been there long he had put himself into close touch with Daniel Manning, who was the special representative of the old Tilden interests and the elements that had chosen the new governor. He could not have found a better man. He was owner and manager of the Albany Argus, which for many years had been the recognized organ of Democratic opinion. It had been dominant in the days of the Albany regency, which, though it had changed its form, had in no way lost its power or changed its methods.

The paper was a sort of gospel to Democrats all over the state north of the Hudson River. Mr. Manning seldom wrote for the paper, and yet nothing went into it that did not practically dictate so far as policy was involved. No editor could get away from the wonderful suggestions of this man. His power of analysis held steadily, and as it included both politics and business, which he himself represented as a banker, the combination proved to be almost ideal. He was able to see and carry out a policy, to see the end of everything he undertook from the beginning. (Continued on Page 38)

The Standard of Comparison

Buick Cars Live up to Buick Reputation

An automobile is a fabrication of steel and wood and other materials.

One make of automobile differs from another in the quality of these materials, the skill which designs them and fits them together, and the proof of the product's worth established through performance.

Consider these things back of the car you contemplate buying.

Do they, as with Buick, assure to you an automobile that—everywhere, every day—gives honest, dependable service; a car so designed and built that each year's product throughout a business history of 20 years has consistently given such service?

It's not what you pay, *it's what you get for what you pay*, that counts when you buy an automobile.

Buick Sixes: Three Passenger Roadster, $1365; Five Passenger Touring, $1395; Three Passenger Coupé, $1885; Five Passenger Sedan, $2165; Four Passenger Coupé, $2075; Seven Passenger Touring, $1585; Seven Passenger Sedan, $2375

You Too Will Like the Steel Shaft

Golfers everywhere are now using the Bristol Steel Golf Shaft and they regard it as the most interesting development in golf.

A Bristol Steel Shafted Club feels and hangs right. Since it is lighter than hickory, it places the weight lower, thus giving a more perfectly balanced club—you feel the head.

Bristol Steel Golf Shaft

TRADE MARK REG. U.S. PAT. OFF.

Notice: Basic and Supplementary Patents covering Steel Golf Shafts are controlled exclusively by us.

Patented Nov. 21, 1910, Oct. 3, 1911, May 21, 1912, May 7, 1918

A good hickory shaft is hard to get and every one is of different quality, but every Bristol Steel Golf Shaft is of the same quality—equal to the very finest hickory. This removes the inequality due to variation in club values.

Buy a set of Bristol Steel Shafted Clubs of your "Pro" or have him fit Bristol Steel Golf Shafts to all of your old heads. If your "Pro" cannot supply you, order direct from us. State length and whether whippy or stiff shafts are desired.

Write for descriptive circular, giving us the name of your club and professional.

Hole-in-One Club: A Bristol Steel Shafted Club will be presented to any one who gets into the Hole-in-One Club.

Professionals: Write for Directions for Fitting Bristol Steel Golf Shafts to Old Heads.

Golf Shops and Sporting Goods Dealers: Investigate at once this interesting proposition—good profits, increasing demand.

Bristol Steel Shafted Clubs can now be supplied by The Crawford, McGregor & Canby Co., Dayton, Ohio, and The Hillerich & Bradsby Co., Louisville, Ky.

The Horton Mfg. Co.
465 Horton St. Bristol, Conn.

Meek and Blue Grass Reels

Meek and Blue Grass Reels are made just as carefully as the finest watch. They are made for fishermen who take pride in their equipment and want the best. These reels since 1833 have been noted for their strength, power and smoothness of action.

Bristol Steel Fishing Rods and Kingfisher Silk Fishing Lines have also long been the choice of leading fishermen.

Bristol, Meek and Kingfisher Fishing Catalogs mailed *free* on request.

(Continued from Page 34)

Every man of importance in the party came to him, and that not only as a follower but with original ideas as to what ought to be done in a given county, district or even in a town. He understood all these from the point of view of the highest intelligence. He bore no resemblance to the modern boss, because everything that he took up had two ends to it—that of principle and that of policy. He had no pecuniary interest in anything that grew out of politics other than his own business and that of his paper. He had been for many years a growing man, never showy, but always solid. He never made a speech, he guessed at nothing. He had come in course of time to be Mr. Tilden's right-hand man and his successor in the chairmanship and management of his party. He was not the kind of man so to play favorites as to create a series of enemies in every county in the state, and yet the men whom he followed, like Seymour, Tilden and Cleveland, had a genius for making enemies of bad, dangerous or designing people.

Not only did Manning have these characteristics, but he became a student of economics, so that he knew all questions as they affected the prosperity of the great state which he represented. His paper could always be depended upon for soundness upon all fiscal questions. He could always be relied upon as the opponent of the greenback heresy and of the silver question when it developed. In other words, he was thoroughly orthodox from the old Democratic point of view, and had become a dominating force at the capital of the state at the very center of its politics, and had thus acquired a position and influence that can hardly be understood now.

It was fortunate for Mr. Cleveland that such a man had taken an interest in him from the beginning and had had the foresight under the advice of his friends to push him for the nomination to the governorship. He had no personal knowledge of him other than what he had obtained through Manning's brother, who was prominent in Buffalo, and through the industrious and intelligent work of his lieutenants throughout the state.

It was only natural that when the new governor came to Albany, with so little knowledge of details, he should in due time come to rely upon Manning. This was all the more natural because he belonged to the reliable type of man, the type of man who never deceives his chief or tries to get any favors of a personal character. These two men soon found themselves congenial. Manning had been fighting Tammany and all that it meant for years, and he had also been antagonizing mischievous local organizations all over the state. The canal ring was his enemy, as was every other kind of ring or body that undertook to use the party machinery for bad purposes.

Relations With Dan Lamont

Before Mr. Cleveland went to Albany he had been familiar with the organization known in New York as the County Democracy. Among the few friends he had in the eastern part of the state was Hubert O. Thompson, who was the head of that organization. The first trace that I could ever find of him in the great city was during his term as mayor, before he was even thought of for the nomination as governor, when he came on a visit to his friend. It was then that William C. Whitney and Thomas F. Ryan first saw him—men who in such different ways were to be closely allied with him during the coming years. It was easy enough for him to take on from Manning and other associates the color of his new surroundings so that nobody could deceive him about the bad influence that emanated from the old Tammany organization in New York. Entirely aside from this, he was saved from mistakes of this kind by the reliance upon the friends right at hand. As the result of all this, before he had been a year in the governorship, the two men under special consideration were not only related in politics, associated in everything that was congenial to them both, but they were working hand in glove. The influence of the Argus was at Cleveland's service, while the power of the state was ready for Manning's use for the good purposes to which it could be devoted.

This association brought him into relations with Daniel S. Lamont, who commanded fair and prompt recognition. When very young he had become a clerk in the assembly and also a reporter on the Argus. In both these relations, which fitted into each other, he showed himself efficient, faithful, quiet and worthy of confidence, and especially skillful in knowing the men who meant something, with an almost instinctive power of separating the two classes. Upon the recommendation of Manning, Apgar and other men in the party organization he was made military secretary, and soon he became private secretary and in many respects the right hand of his chief and the representative of his friends.

Being a born politician, he was thus in a position to separate the worthy sheep from the unworthy goats and to send each to its proper place. Not even when Mr. Cleveland was President did his secretary either push his own favorites or repel unnecessarily those to whom he was opposed. He was too shrewd for that, even if his fidelity had permitted him to resort to such a method; but his knowledge seemed to be innate.

The Faithful Three

I have never known a man who had so much of that insight, amounting almost to the instinct attributed to women, as Daniel S. Lamont. He could listen for half an hour if necessary and never give a sign that he either heard or cared, and yet it was plain that he understood everything. It was only when he knew his man that he became responsive. He would then speak out plainly and tell more genuine truth in a few words than is generally found in politics or anywhere else. Perhaps of all the men who have been secretaries to Presidents he has never been surpassed, and perhaps only equaled as a wise adviser by William B. Lewis, who bore a similar though somewhat smaller relation to Andrew Jackson.

When, in 1882, the Democrats of the state began to look around for a proper candidate for governor the initial work was done by Edgar K. Apgar, who for many years had occupied a peculiar position in the politics of the state. He was the close friend and confidant of every leader or associate in the Tilden organization. He wrote editorials, made speeches and had put himself into touch with a large number of the leaders in the various districts and counties. He was one of that wise, far-seeing order of men who are never satisfied unless they are discovering something new in any work congenial to them. Apgar first sensed the situation when he began to hear about this new and wonderful mayor of Buffalo who was turning things upside down with vetoes and other activities. He began to tell Mr. Manning about these and before long he had his chief interested. He was then authorized to make closer inquiry and finally to write to this mysterious figure and suggest that perhaps the great Democratic Party might look to Erie County for its candidate for governor. Although this suggestion was not eagerly accepted, it was not repelled, and thus came to fruition in the Syracuse convention. When the new governor went to Albany there was Apgar, not looking for a job, but still desirous to use his marvelous party and general knowledge to the best advantage. This completed the trio of Manning, Lamont and Apgar, who were always at the governor's call.

With such materials and beginnings the second year in the governorship came to be rather easy. A right start had been made in the first year. From that time forward the rest was a matter of detail. When the time came to send to the legislature the second message there was no hesitation. In other words, he then knew his way about, and both the legislature and the people knew what they could expect in the matter of politics, and also pretty well the methods by which his work would be carried on. He became even a little bit more positive regarding morals in the plain speaking that had characterized him at Buffalo.

One veto was almost savage in the few words in which he declared that "of all the defective and shabby legislation which had been presented to him, this was the worst and the most inexcusable."

The civil service commission, which had been appointed the year before, had started its work; while in like manner the railroad commission, which was also a part of his first year's work, gave him an opportunity to review much more fully than he had ever done, and with a knowledge which was increased by daily association with it, a relation to the railroads, to the people, and the emphasis upon the policy which had been outlined upon the enactment of the law.

A good deal of real progress, which may not here be enumerated, was made in many questions. With it all, he did not play personal politics at any time. The veto was still his great weapon, as it continued to be to the end of his public life. Plain and direct dealing with the big things within his scope became rather more common than before, and if he had higher ambitions many of his supporters thought he had a poor way of forwarding them. No man could have had less of subtle or outward tact, and unsympathetic people everywhere freely predicted that by no chance could he expect to go any further. He did make a few more addresses and thus put himself into closer personal touch with the people of his state; but he accepted no invitations outside its borders and seldom made a reference to national issues. In short, he was governor of New York and nothing more.

When he first became governor Cleveland declined to interfere with local nominations or even with the legislature, with the exception of the Grady case herein narrated. He maintained this policy to the end. But even the reactionary results of 1882 and 1883 were not able to defeat his party in the state of New York. With the exception of the candidate for secretary of state, Isaac H. Maynard, who was defeated on the liquor question, the state ticket carried through in good shape. After this particular defeat, the office of comptroller became really the head of the ticket, and for this was chosen, by general consensus of opinion of the party Democrats, Alfred C. Chapin, of Brooklyn, who had been speaker of the assembly. This was in due course of a very successful political career, which included the mayoralty of Brooklyn and a commissionership service in Congress.

Upstate Minutemen

The new governor was the beneficiary of the momentum that had been accumulated by the Tilden movement from December, 1872, onwards. The most fertile and interesting mind that in all our history has devoted itself to the study and practice of politics in any individual state had set to work with all the resources before it for the task. Tilden had money, but this was never any wasted or used for base purposes. His strength lay in the fact that he had been able to enlist the upstate sentiment, especially the farmers, in a movement that proceeded without cessation. There were never any let-up with him in the practice of politics; whether an election was important or unimportant, it was all the same to him. He never remitted his efforts, whatever might happen, so that when he finally retired from politics and Mr. Flower came in as his beneficiary there was registered through the upper counties of New York perhaps ten thousand active party workers thoroughly devoted to the principles which both these men represented. They were always subject to call day or night and like the country doctor, they never failed. In like manner all the organizations in New York and Brooklyn which were called Tammanies were enlisted in decent politics and always in harmony with the strong underlying movement upstate.

It was this element that came prominently to the front when Mr. Cleveland began his fight with Tammany and the unfriendly forces after he became governor in 1883. He himself did not know much about this organization, and less about its management, but he did realize that his task was to find support for the liberal policies he had in mind he must find among these people, and they responded to him with the same loyalty and enthusiasm with which they had greeted what they fairly termed their master. Tilden in the preceding years.

The bolder the new governor was the better this organization liked him and the closer they clung to him—a fact which was shown not only in the support he was able to command in the state, the nomination and election campaign of the succeeding year.

He maintained this policy of [illegible] until his first legislature had adjourned. He had worked in both houses with a Democratic majority that was [illegible] tain. Tammany held a balance of power which—according to its way—[illegible] the utmost recklessness [illegible]

AFTER Dempsey knocked Carpentier for a row of Chinese pagodas it doesn't seem possible that any lightweight could whip a heavyweight. Yet thousands of motorists are placing their money on lightweights. And they're winning, too.

Of course, you understand that I am referring to light weight pistons—and particularly the Spencer-Smith Pistons—as opposed to the clumsy, over-weight, lumbering pistons that bungle about with their excess avoirdupois and cost motorists more irritation than a covey of motorcycle cops.

Now, a heavy weight piston is fine if you slip it into a woolen sock and use it as a blackjack. It makes a fairly satisfactory paper weight if your desk can stand the strain. But that's about where the logical uses of a heavy piston stop.

Now, I don't want you to feel that I am anti-avoirdupois because I happen to tip the ice man's scale at 131. I am all in favor of weight when the coal man drives his wagon across the platform. And for a well loaded down wallet my admiration knows no bounds. And speaking of wallets, yours will be a lot fatter at the end of the year if you invest in a set of Spencer-Smith Precision Pistons. Why? Yes, I knew you'd ask that question.

Well, in the first place, a special design and a special grade of casting makes Spencer-Smith Pistons weigh a lot less than ordinary pistons. This gives your motor less dead weight to buck. Less dead weight gives more mileage—and with gasoline selling at a dollar a twist on the pump, that means something.

In the second place, they're machined and measured so carefully that I think I'm in a watch factory every time I stroll through the finishing room. Spencer-Smith measuring machines insure a perfect fit. A perfect fit means a perfect seal. And a perfect seal means no compression leaks.

And in the third place, beneath the lower ring of each Spencer-Smith Piston you will find a groove which traps the oil from the cylinder wall on the down stroke. This groove is drilled with sufficient holes to promptly drain the oil back into the crankcase. Result: Yes, hold your breath—no carbon knocks, no greasy spark plugs, no smoke screen behind your car.

If you're really curious to know other reasons why Spencer-Smith Pistons will give your motor more pep and vigor just subscribe for our correspondence course, "Making Your Pistons Pay a Profit." The boss is the author—and he shoves a nasty pen. He has cut down the paper so that the entire course is available in one lesson, and without a nickel's expense to you—not even return postage. A post card will bring you this liberal education. Address me care of the Spencer-Smith Machine Company, Howell, Michigan.

A Patented Oil Drain Groove

Notice that oil groove and oil holes. They stop oil pumping and prevent carbon troubles caused by burning oil. On the down stroke of the piston the oil is wiped into the groove by the third ring and is then drained through the holes back into the crankcase.

in the senate by failure to confirm nominations or by obstructions of almost every possible order. He was asked to name candidates known to be unfit, was treated with disrespect of every imaginable order, abused in open session and met by everything that could be devised by a strong and ingenious faction. He was patient outwardly, though boiling over inwardly.

Finally, before the election of 1883 came on, he concluded that patience was no longer a virtue. The most tantalizing man that he had to deal with was a young and pushing state senator, Thomas F. Grady, who was active, popular with the followers of the Tammany organization, glib and effective in speech, and wholly out of sympathy with the aims and ideas of the governor and the forces back of him. He was perhaps the most active and able of Kelly's agents, and apparently fully intrenched. He had pushed the most useless or the worst men for appointments only to find himself beaten at every turn, rebuked in private by the governor, without any word in public. Finally he avowed his purposes and motives when his candidate for an important place was discarded.

A Spoke in Kelly's Wheel

Then he apologized, and in explanation said, "Well, there's an old man in New York who says come and we have to come, and go and we have to go."

As this referred to John Kelly, the leader of Tammany, it gave the governor an idea upon which he finally concluded to act. While the state campaign was under way, less than three weeks before the election, the following letter was written and sent:

EXECUTIVE CHAMBER, ALBANY,
October 20, 1883.

HON. JOHN KELLY.

My dear sir: It is not without hesitation that I write this. I have determined to do so, however, because I see no reason why I should not be entirely frank with you. I am anxious that Mr. Grady should not be returned to the next senate. I do not wish to conceal the fact that my personal comfort and satisfaction are involved in this matter. But I know that good legislation, based upon a pure desire to promote the interests of the people and the improvement of the legislative methods are also deeply involved. I forbear to write in detail of the other considerations having relation to the welfare of the party and the approval to be secured by a change for the better in the character of its representatives. These things will occur to you without suggestion from me.

Yours very truly,
GROVER CLEVELAND.

Kelly indulged in mysterious outgivings about the receipt of the letter, but neither he nor the governor gave it out for publication. The boss looked around, knowing that if he nominated Grady in his own district the latter would defeat him and thus humiliate the organization. He soon discovered that even his own followers would not permit this action, and after one or more futile attempts to find some other district where the risk would not be so great he gave up the unequal contest and Grady did not return to the state senate until two or three terms had intervened, which was after the close of Mr. Cleveland's first term as President.

During the rest of his life Mr. Cleveland often spoke of this Grady episode. He expressed his surprise that he had finally worked himself up to it and had been able to carry it out as he did. Out of various conversations on the subject coming at odd times I glean the following:

"Before I was elected governor I had become familiar with the treatment meted out in the legislature in both houses to Governor Tilden and his successor, Lucius Robinson, by the representatives of Tammany, acting under the control and direction of its head. Remote from it as I was, I had felt how humiliating this attitude of theirs must be to the man charged by both party and people with such high responsibilities. I had then no idea or suspicion that I should ever stand in their shoes or be in a position that would bring home to me the realities of the case. I had not been long in office until the shame of it was brought out in a form even more shameless than before. These people seemed to think that they could go to any length with a governor new to them, evidently upon the theory that he would not dare to resent or rebuke their methods.

"But I had only a few weeks to wait. While detraction worked in the open, all the underground sinister methods, long familiar to this order of politics and much more effective for creating dissatisfaction, were used with an energy that was increased by despair. I soon saw what I had to face, and so gave anxious thought to ways of meeting it. I was helpless either by denunciation or by any attempt to dive into the sewers of politics. I made up my mind that open and direct appeal to the public was the only road open to me. How to do this caused me much study until I hit upon the method finally resorted to. As I went on doing my own work and gradually gaining the confidence of the people it became clear that I could throw upon these Tammany leaders the responsibility for the recalcitrance of one of their chosen tools. I did it without advice, and, as I avowed, with extreme regret. I took into my confidence nobody except my secretary, Colonel Lamont, and he advised against it.

"In the end the act, which in all frankness I should characterize as audacious rather than bold, fully justified itself, and from that time purely mischievous intra-party opposition so declined that I had nothing more to fear. If I had indulged any ambition it would no doubt have seemed a fatal policy, although the response was so immediate and so favorable that even this danger has always seemed to me remote or absent. It was not done out of pique or resorted to at all until I saw no other way out, no possible relief for efficient government and honest party politics.

"It could only be used then or in the future when a consistent public policy with ample time to carry it out lay ahead. Unusual, almost desperate, as it was, I have always congratulated myself that I was able thus to set a precedent for dealing with such men."

Playing No Favorites

It was not until Mr. Cleveland came into the governorship that the world gained some idea of him and his personality. Before that, in spite of his known ability and the activities of his professional career, he could be fairly defined as an obscure man. But the day after he came into this prominence he was just as modest as he was the day before. He did not develop any of the assertiveness so common to small men. Clearly he had taken fair measure of himself all his life, so that when his scope was enlarged he did not have to change his standard.

When he became governor—the importance of which has been underestimated or neglected as a step in his career—he was compelled for the first time to make a choice of men in any large way. There were then presented to him important problems to which he had given thought within his own range without any idea that he would have to deal with them in a practical way. His knowledge was theoretical, not practical, and it was only when he was forced into responsibility that he had demonstrated that practice and theory traveled not in tandem but in pairs. Only when he came into state politics, with its large responsibilities, did he have to adjust himself to the acceptance of help.

He had come into contact with a few men in his own particular district; the moment he went to Albany there were standing before him men from hundreds of self-governing communities demanding and deserving attention. In the main they were of real consequence, and though a minority deemed themselves so, they all represented, in their way, ideas, interests, localities, the narrow or the broad aims of ambitious persons or groups, so that he was compelled to discriminate between them. Thus he had at once to deal with both the good and the bad, with the efficient and the useless or the designing. Whatever they were, they were different from what he had seen or known. If he needed help, as he did at every turn, he had only to ask for it. He thus drew upon his innate power to discriminate between the proffered help that would be idle and the real help that would be useful.

In these things his position was different from that of any predecessor, whether great or little. These had been trained in all the minutiæ of New York State and national politics. From youth the men among them had indulged ambitions, some of them boundless. That preparation was supposed to keep them ready for emergencies. On the contrary, Mr. Cleveland had to study and to adjust himself to these new demands upon his time and energies and duties. Fortunately for him, instead of having indulged in aspirations, and having practically entered upon his higher career without either friends or rivals, so that he could consult with everybody and arrive at that came before him, he could and did deal with them upon their merits. He did not have to play favorites and, as he soon found, to keep him from his own surroundings those upon whom he could lean for advice had to find advisers and new friends, both personal and political.

Mr. Cleveland's Economy

Thus a great public service and personal character made the friendship attracted to himself from every part of the state. The instinct of self-preservation recognition that this was not their time man made his enemies. Wherever government and decency were in danger there were the friends; wherever there crookedness, or rings and combinations wherever municipal corruption was there were the inevitable enemies.

Under these conditions he passed two his term as governor with as much economy proper economy as efficient administration would permit. It seems surprising, that we look back upon it, to realize during his second year it cost less than and a quarter million dollars to run the affairs of the Empire State. There are, too, many new things like the new Niagara Park, the organization and conduct of the railroad commission and the civil service commission. It seems less than astounding, in the light of experience, that such results could be obtained in a state where its governor legislature discuss with coolness a budget of two hundred million dollars then find extreme difficulty in reducing to two-thirds of this vast sum.

When, with the presidential election 1884, Mr. Cleveland was called upon the governorship, he had made himself most powerful public man in his state less than two years, and yet in spite of the character which had made him he was he was little known beyond the limits of his own state, and even there to a few.

He had taken no steps to exploit himself beyond his own obvious public duties and except for two three-hour visits to New Jersey and Connecticut during the campaign he was still a mystery with regard to the presidency or any other obligation or ambition incident to it. But there had been no neglect of the duties of his office—the one thing that counted his real work. He could no more shirk any responsibility put upon him than he could forget his duty to family or friends.

Left to himself, he had demonstrated the absolute absence of a gift for putting himself before a world keenly desirous of knowing all about him and always on the lookout for instruction and leadership. He had no assistants or fellow officials, however sympathetic, were not put or kept in touch with the conduct of personal or political propaganda for his benefit. It was the

Oldsmobile

LIGHT EIGHT

The 1923 Light Eight Five Passenger Touring $1595

Something Better in Motordom

Something better than you have ever experienced in motoring delight and comfort awaits you.

You will find it when you take your first ride in this Oldsmobile Light Eight.

You will sense it as soon as you see this car. You will experience it when this Light Eight carries you over that first, never-to-be-forgotten mile.

Speed! Step on the accelerator. Dash along up to 60 miles an hour. Note how *vibrationless* the motor is. The short, perfectly balanced, rigid crankshaft does this.

Flexibility! You can throttle down the motor to let you roll along at a mile an hour. Yet you will be experiencing the same effortless action.

Reserve of power! Certainly no motorist, whatever the demand, need ever call for its maximum effort. The excess power that provides economy of upkeep by preventing engine strain is always waiting—always present.

Comfort! The wide seats with their deep upholstering, and the extra long body springs of this Light Eight, give you as easy riding as in the most modern Pullman.

Dependability! You know that you can drive along hour after hour, day after day, with no more thought of the car than to give it gasoline, oil and water.

If a hill is climbable, it can climb it. If a road is at all passable, it can travel it. The Oldsmobile Light Eight makes you independent of road conditions.

Get the thrill of this something new in motordom by letting your Oldsmobile dealer give you a trial spin in this Oldsmobile Light Eight.

Oldsmobile, as in 1900, is still building "The Best Thing on Wheels."

TRUSCON STANDARD BUILDINGS

Meet All Needs

The purposes for which Truscon Standard Buildings are being used are innumerable. Their economy, permanence and adaptability are continually suggesting new uses. Made entirely of interchangeable steel units, they exactly fit individual needs.

Factories—In every industry Truscon Standard Buildings are being used not only for large factories, with cranes and monorails, but for storehouses, foundries, garages, time offices, cafeterias, etc. They provide ideal working conditions.

Shops—There is a type and size of Truscon Standard Building for every shop and manufacturing need. Permanent, fireproof, daylighted, well-ventilated, they also provide supports for shafting, etc.

Warehouses—Fireproof, economical in cost and quickly erected with minimum labor cost, Truscon Standard Buildings are furnished in all sizes and can be readily enlarged or re-erected in new locations with 100% salvage.

Garages—Truscon garages provide fireproofness, good ventilation, ample daylight, unobstructed floor space. Designed with any desired front—low in cost and upkeep.

Service Stations—Truscon service stations are good looking, fireproof and sturdy. They are readily dismantled and re-erected in new locations without loss.

Free Information—If you are planning to build, learn how a Truscon Standard Building can serve your needs. Return coupon for valuable suggestions and catalogue.

their duty to hold him up to the view of a waiting world in some or many newspapers. He rarely submitted to an interview, and often declined to entertain at his table even the most important editors, who on the contrary were sometimes treated with scant courtesy.

If his associates had been so disposed and had known how they would have stood in constant peril of having all their work and thought go for nothing—upset perhaps by some word of denunciation of what he deemed journalistic impudence or dishonesty, or by some still more potent act of neglect when dealing with some man who deemed himself an important figure in the state or country. These were far more likely to be his fate than it would have been for him to attract attention or to command friendship.

So he passed out of his two years as governor, and even on into the presidency, with a Doctor Johnson sort of reputation for being bearish rather than otherwise. No kind of artificial puffery could do anything for such a strange person. He must go on and, in what he called his own blundering way, do everything for himself. He must somehow work out his own salvation. This was the reason why during a recent and great outstanding five-year world crisis, long after he was dead, millions of people who during his life had bitterly opposed him on party lines or were indifferent in every way to his career while he was here doing their work with honesty and efficiency were impelled to cry out as with one voice, "Oh, for an hour of Grover Cleveland!"

In analyzing this two-year phase in the life of Grover Cleveland I have sought to deal frankly and concisely with the most intensive political apprenticeship known to our public life or perhaps to any other. As I am not writing chronicles, I have shunned that routine so often filled with maneuver and intrigue, and have sought to detach him from the details that overwhelm most men in high and responsible places. I have written of him as a man who was forced by the necessities of his position, and whether he willed it or not, to seek friends and supporters among the unknown thousands of good, well-meaning people in a state filled with them, and—as must always be the case with strong men—to welcome in hundreds the keen unscrupulous enemies always ready to put to foul use the machinery that has grown out of our institutions. He did not belong to the type whom Lord Rosebery described in his epigram, "The man who does not make mistakes [illegible] nothing," but was one who admitted [illegible] had rather more than an average [illegible] for blunders. He wanted the [illegible] would get the work of government [illegible] honestly and efficiently as possible. From these two years of obedience to that [illegible] of hard masters, his own conscience [illegible] to emerge into a responsibility that [illegible] never so much as thought of as [illegible] human possibilities.

His success, coming without the [illegible] which has hampered so many [illegible] gests the thought that perhaps we are [illegible] clined to overlook a great [illegible] human material that might be [illegible] carrying on our public work. If [illegible] caught after he was forty-four [illegible] achieve such important results [illegible] then in a state and later in a [illegible] many like men may be awaiting [illegible] duty in many other communities [illegible] prompts these questions: Are we [illegible] people, quite so dependent, after [illegible] the formal products of party [illegible] Do all men, in order to be [illegible] high usefulness, have to go through [illegible] routine that so often destroys [illegible] character and originality or [illegible] honesty? Is it really necessary [illegible] governed by human talking machine?

THE CLIFF DWELLERS

(Continued from Page 21)

"Then ——"

"I own two legs and they've done a lot of hiking in the last few years."

Pudkin reflected. He believed the man would actually undertake the venture on foot. But that would spoil his spats and his shoes, which would never do.

"Well," he said slowly, "I might take you on trial. I'll start you on twenty and expenses."

He was not assuming much of a risk on that basis. He could get ten dollars' worth of work a week out of him as an office boy if nothing more.

"Done," agreed Cotter. "When do I start?"

"Tomorrow?"

"Today if you say so."

"Hang your hat behind the door. I'll give you a map to look over."

III

INTELLIGENCE and a willingness to work will carry a man a long way in a short while. Cotter possessed both qualities. He not only studied all the maps Pudkin turned over to him but he secured a bluebook, several guidebooks and local histories, and in a week had learned considerably more about the past of those small towns along the South Shore than Pudkin himself knew. But Pudkin would probably have explained that he was not selling the past, but the present. That was true, and yet Cotter was able to use his information to good advantage. In the meanwhile he cheerfully did the work of office boy and ran as many errands as Pudkin found for him—the more the better, because it gave him a welcome opportunity to be out of doors, and as long as he was out of doors he had a chance of seeing once more the haunting face of Jeanne Buckingham. He had only one chance in a million, to be sure, but a chance in a million is still a chance. Men have fought through and won on that. He had seen it done on the battlefields of France.

In the course of the next week or two Cotter probably caught fleeting glimpses of at least several thousand women, and of them all there was not one he could remember or cared to remember. There was variety enough to suit almost any taste, but they left him wholly indifferent. As for Jeanne, she might have been at the North Pole for all he knew or for all the good it would have done him had he known. He did, however, learn two or three facts about her: that the Buckinghams were an old Boston family, that her father was a retired wool merchant, and that they lived on Beacon Street, which was supposed to be a mark of distinction. Just why, however, it was difficult to understand. He took a walk up there one afternoon and found a dozen houses for sale or to rent. They were on the market for anyone to purchase who had the price, whether wool merchant or wine merchant, banker or bucket-shop owner, lawyer, doctor or Indian chief. There were no restrictions as to past or caste. The only essential was to have sufficient money to make a partial payment, and that, for all the real-estate men cared, could be made at three-card monte. Yet for some reason or other occupancy of one of these rather gloomy looking residences immediately conferred a sort of prestige. Had Cotter been in a position to walk into a real-estate office with a certified check he might within twenty-four hours have claimed that distinction himself. This would have established him at least upon the first rung of the social ladder.

Cotter began to run across this sort of arbitrary and artificial barrier, supposed to be social, but which, as a matter of fact, was only financial, in the business of Pudkin & Pudkin. Certain summer colonies were rated as exclusive simply because land was valued at so much per square foot. This was particularly true of Pudkin's pet development at North Cotuate. Here was a group of thirty or forty residences upon what was known as The Cliff—an eminence some fifty feet high falling abruptly to a graceful curve in the ocean, making a small beach so exclusive that ordinary folk were not allowed to bathe there. Even the wreckage that was occasionally washed in here—the northeast winds and the stern rocks which made up this rugged shore had not yet lost their primitive cruelty—was looked upon askance as in the nature of an unwarranted intrusion. The sea, however, had little respect for the No Trespass signs which frightened off timid picnickers.

"We allow only the better class at North Cotuate," Pudkin explained to Cotter.

"How do you know they are the better class?" inquired Cotter.

Pudkin was surprised at such a question from such a well-dressed young man.

"We are asking from eight to ten thousand dollars for the few remaining lots. That means something, doesn't it?"

"Yes," admitted Cotter, "it does mean something."

"On the ocean front itself we have only one lot left, and that is next to Joshua Buckingham," boasted Pudkin.

"Next to—what was that name?"

"Buckingham. He comes of an old Boston wool family. Know him?"

Cotter shook his head sadly. "But I've heard of him," he explained. "Does he spend his summer there?"

"He'd rather be there than anywhere on earth. Goes down the middle of May and stays until October."

"Family?"

"Wife and daughter. He ought to buy that neighboring lot, but he's stubborn about it because he thinks the price too high."

"That is the ten-thousand parcel?"

"Ten thousand," said Pudkin with a certain firmness, as though he were talking to Buckingham himself.

"I shouldn't think he'd mind that."

"He's offered eight, and now he's just mad enough to stick to it. But I'll surprise him by getting rid of it this summer, and he won't like that."

"Ten thousand dollars," [illegible] "That isn't much for a lot when [illegible] sider the advantages."

"Why don't you buy it yourself?" gested Pudkin in a playful mood

"I will if you'll make it possible," came back.

"Eh?"

"I'll pay fifty dollars down, give [illegible] note for two thousand and a first [illegible] for the balance," declared Cotter

"What do you want of it?" Pudkin suspiciously.

"I like the location," answered

"But you've never seen it."

"Is that necessary?" "One-third sky, one-third sea, [illegible] better class—could anything be more fect?"

"You aren't serious?"

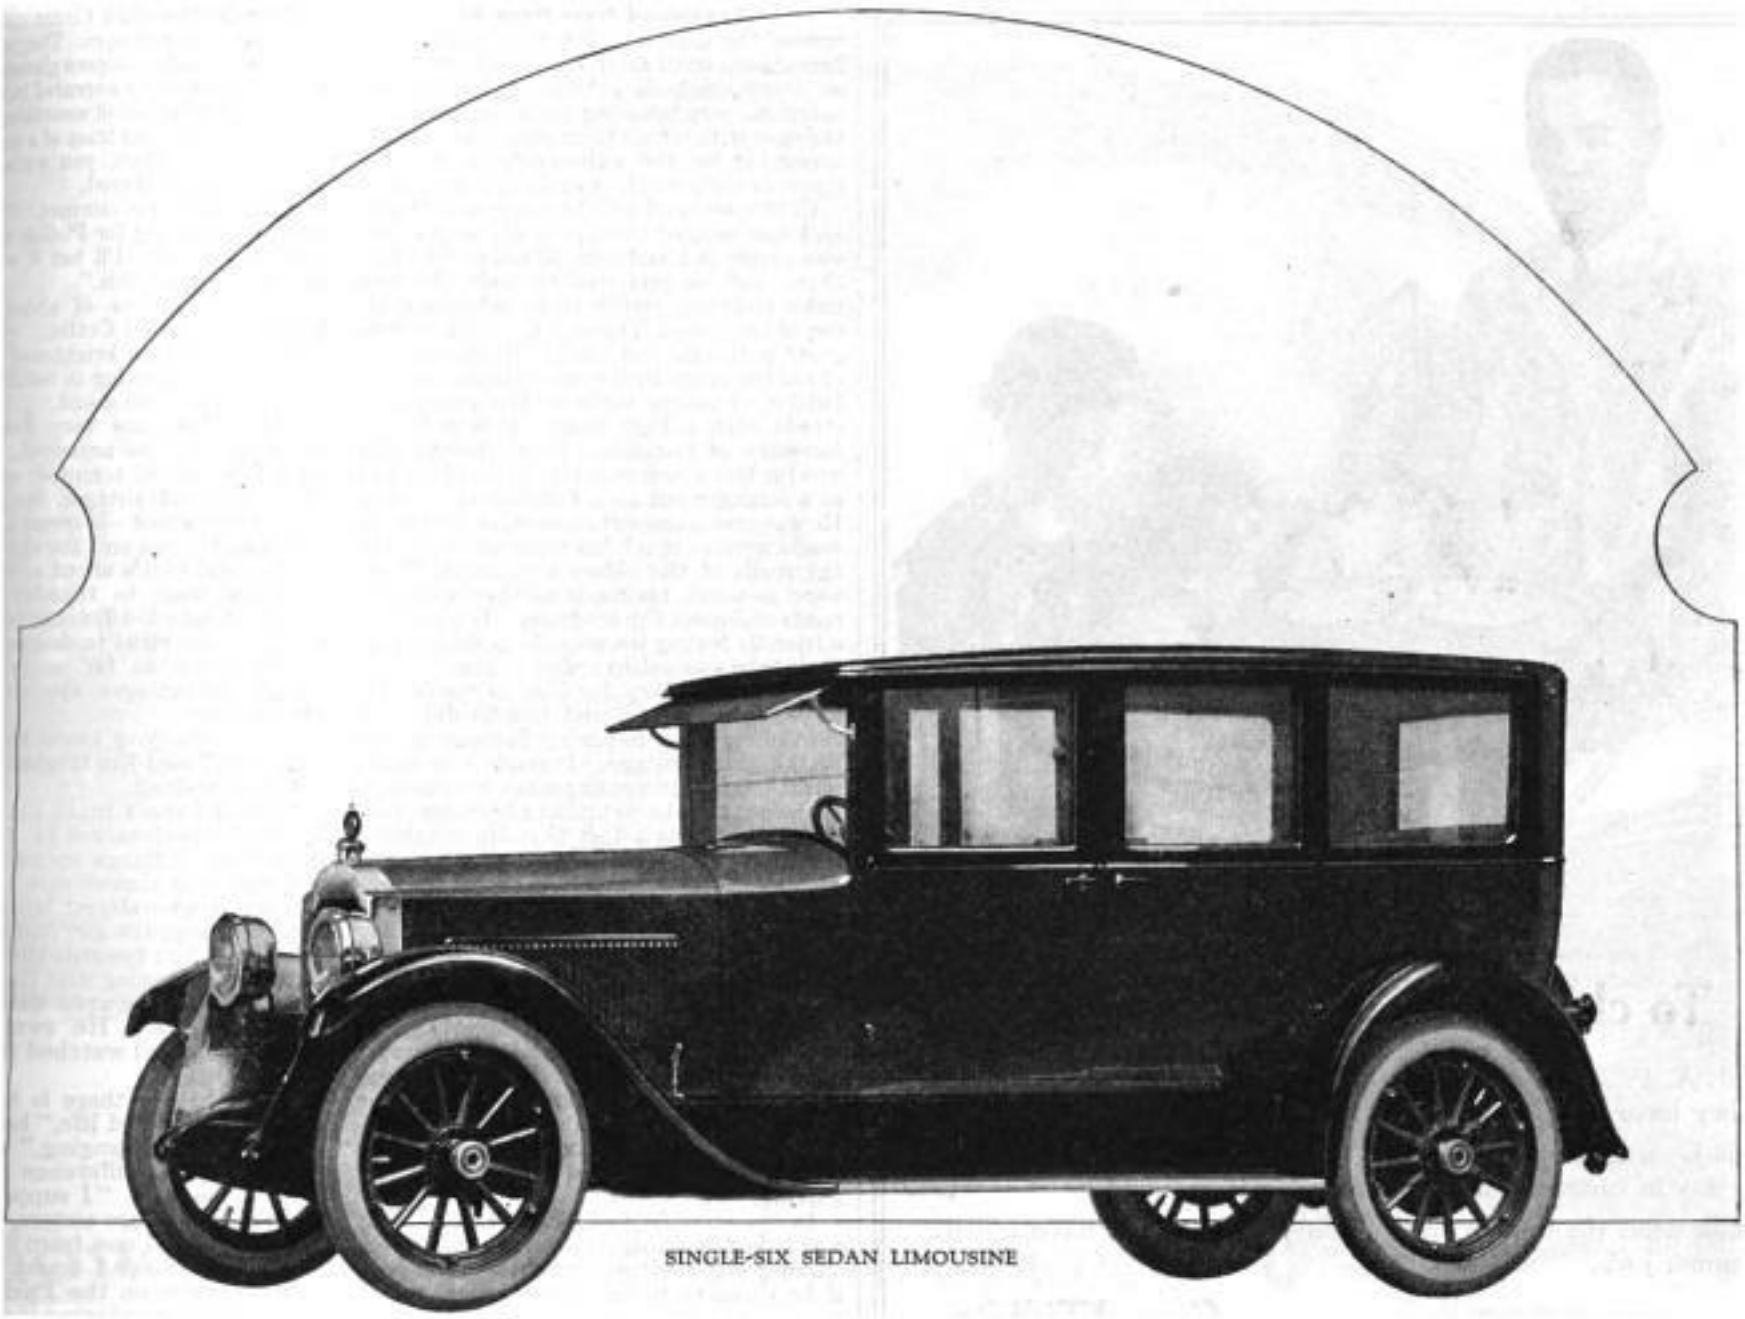
Cotter opened his leather [illegible] drew out five ten-dollar bills—[illegible] he had in the world. He placed desk before Pudkin.

"I'm that serious," he said. [illegible] is as serious as it's possible for me at the moment."

Under ordinary circumstances [illegible] would not have considered the [illegible] but he was influenced just then considerations: It struck him a [illegible] portunity to force the hand of [illegible] born old tyrant Buckingham, and place Cotter in a position where [illegible] be assured of his services for some come—and this quite without [illegible] kind.

He reached forward and took [illegible] ten-dollar bills.

"I'll have the papers drawn afternoon," he said.



IV

IT IS perhaps going too far to [illegible] at this point Cotter had already mined to marry Jeanne Buckingham it is certain he had it in mind as esting possibility. What he had done deliberately was to establish of contact. By an investment dollars he had established himself Cliff as Buckingham's neighbor dizzy height, which a few hours appeared as inaccessible as Mont he had scaled in a few minutes much as getting out of breath should be so easy seemed almost him. Yet that this was a fact to by the warranty deed which minutes he held in his hand he it over as security to Pudkin Government of the United States its armies and navies, stood back him up if necessary in a lawful claim of being a true

A few afternoons later at the work he took a train and went look over his property. It was towards the end of May, and in full swing. The grass was and the trees though not fu passed the timid sub-deb stage

SINGLE-SIX SEDAN LIMOUSINE

It was inevitable that out of the two basic advantages of Packard experience and Packard equipment should come such a car as this new Single-Six.

In the fabrication of really fine motor cars there has probably been no experience so exhaustive as Packard experience.

So, too, there is probably no equipment in existence, dedicated over a long period to that high purpose, so exact and so effective in its application as the Packard equipment.

With these for the foundation, Packard has built for itself, among cars of its own calibre, a leadership so outstanding as to be unmistakable.

Carried beyond the best and most beautiful in Packard tradition, the new Packard Single-Six also sets itself apart and alone, as the most vivid example of value in its class.

Five-Passenger Touring, $2485; Seven-Passenger Touring, $2685; Runabout, $2485; Sport Model, $2650, Coupé, $3175; Five-Passenger Sedan, $3275; Seven-Passenger Sedan, $3525; Seven-Passenger Sedan Limousine, $3575; at Detroit

The Packard Twin-Six is recognized as a superior car, which performs in a superior way. Packard Trucks are recognized as the unequalled hauling investment. Packard standardized service now insures an even lower cost of Packard upkeep

His Gift

To children—Bubble Grains

Prof. A. P. Anderson gave to children the finest cereal dainties they have ever known.

It is he who invented Puffed Wheat and Puffed Rice. And every day in summer they bring delights to millions.

Think what the bubble grains, flimsy and flavory, have added to summer joys.

The finest breakfast dainty homes have ever served

Cereal Tidbits

Puffed Grains are food confections. So dainty, so delicious they seem too good to eat.

The texture is like snowflakes, the flavor is like nuts. There was never a dish more enticing.

Yet scientific, whole-grain foods

Yet these are whole grains made wholly digestible. Every food cell is exploded. Over 125 million explosions occur in every kernel.

The ideal supper dish—Puffed Wheat in milk

Thus every granule is fitted to feed. All the elements become nutriment.

The supreme foods for summer

If you believe that children need whole-grain foods, this is the way to serve them—morning, noon and night. This is the way to make them tempting—this is the way to get their value to the full.

Mix Puffed Rice—flimsy, flavory, nut-like—in every dish of berries

Puffed Wheat

Puffed Rice

(Continued from Page 40)

course the season did not officially open hereabouts until after Harvard Class Day, an increasingly large number of summer colonists were breaking tradition, owing to the ease with which their places were made accessible by the automobile, and going down as early as the weather permitted.

Cotter stepped off the train at Cotuate and was obliged to inquire his way to his own place. A bus driver offered to take him there, but he preferred to walk the two miles, and every step he took made him gladder of his choice. Through the mild air, fragrant with salt and filled with the melody of hidden frogs in the marshlands and the twitter of sleepy birds in the bushes, he strode with a high heart. It was like a foretaste of paradise. Even though this was for him a new country, he was here not as a stranger but as a full-fledged citizen. He was now a property owner, and so these roads were as much his roads as they were the roads of the oldest inhabitant. They were as much his roads as they were the roads of Joshua Buckingham. It gave him a friendly feeling towards them and they in their turn seemed to welcome him.

It was necessary for him to inquire his way now and then, and this he did most conveniently by inquiring his way to the Buckingham cottage. It made him smile, but it bred an increasing sense of intimacy. He meant to take no undue advantage, but, after all, it was a fact that Buckingham, whether he knew it yet or not, was now his neighbor. And neighbors were neighbors. They shared the same sky, the same sunshine and clouds, the same view; they were parts of the same community and shared the same corporate interests; they shared, willy-nilly, the sight and sound of each other; they shared a knowledge of each other which enforced an interest whether friendly or hostile. The great barrier was down. Whatever might come of it he was now in the same field of consciousness with Jeanne, and not even Joshua could prevent that except by moving.

In the same field of consciousness—that was a heady thought! Even now he was sharing with her this glorious twilight and, if he chose to remain late enough, might even share with her the stars and the deep breathing of the night ocean. It made him quicken his pace.

The road began to climb. It was not a steep ascent, but it was a very significant one. The country to the right and left was more or less flat, but in this one place it rose to a point where those who dwelt thereon looked down upon all the rest. In five minutes Cotter stood upon the summit and saw spread out before him the mighty Atlantic, saw nearer a group of charming summer residences, saw in their midst one vacant lot. He walked to this with his chin up and passed, in their garden, Joshua Buckingham and his daughter. They both glanced in his direction, but whereas Jeanne immediately went on with her task of poking around among the rosebushes with a light rake, Joshua continued to stare at the intruder. Cotter sat down on the grass—his grass—and calmly lighted a cigarette.

He had sat there perhaps ten minutes when Buckingham came towards him.

"This isn't a park, young man," Buckingham declared sternly.

Cotter rose to his feet. "You're quite right," he agreed with him willingly enough.

"It's private property," Buckingham explained further.

"Exactly," nodded Cotter.

"Therefore you're trespassing."

"In that I think you're mistaken, Mr. Buckingham," said Cotter with his smile. "I've just purchased this lot from Pudkin & Pudkin."

"You—what?" exploded Buckingham.

"The lot is mine. My name is Cotter."

He offered Buckingham a card and the latter accepted it with caution.

"But look here," he sputtered, "I intended to buy this myself."

"Really?"

"It's outrageous of Pudkin to do this! Why ——" He half turned towards his daughter. "Jeanne," he called.

The latter looked up indifferently.

"Jeanne," he repeated while Cotter held his breath.

She came nearer, rake in hand.

"Pudkin has sold us out," he said. "This fellow ——"

"Cotter," the latter reminded him, removing his hat.

"He—he has bought here."

Even in the dusk Cotter could still the brown in her eyes. They were as impersonally as opera glasses, from to foot, and there appeared in them plexed effort to recall something. lips broke into the trace of a smile.

"It seems, then, you wanted father," she ventured.

"Waited!" he stormed. "I was only waiting for Pudkin to be able, that's all. I'll bet it was the fat one who did this."

"The stout one of about Napo height," admitted Cotter.

The girl's face brightened appre

"You are planning to build this Mr. Cotter?" she asked.

"My plans are very indefinite, Buckingham," he answered. "It situation which tempted me. A offers some advantages, but as far view is concerned—it seems almost to admit the sea and the sky only cracks, and that's about all

"Then what in thunder do you pose?" demanded Buckingham, he had every right to demand.

"To enjoy as far as possible natural advantages the site offers plied Cotter.

"Of course you know the building strictions," said Buckingham.

Cotter nodded.

"But if I don't build I'm not by the restrictions, am I? I have more room as things are now."

Cotter was almost sure he heard rippling laugh—almost but not quite. For one thing, the girl had turned away from him towards the open sea. dusk was deepening and the breeze upon the green waves were shaping restless ghosts. He swung around Buckingham and watched the path her.

"Next to fire, there is nothing ocean for color and life," he said.

"It's always changing," she agreed.

"There's a difference even oceans," he said. "I suppose the and the Pacific are sisters, but It's easy to tell one from the other."

"I don't believe I could."

"I was born on the Pacific and well, but I'm wondering if there is to know about her as about her sister."

A servant came creeping through dusk.

"Supper is served," she announced Buckingham.

"Come, Jeanne," he broke in in relief.

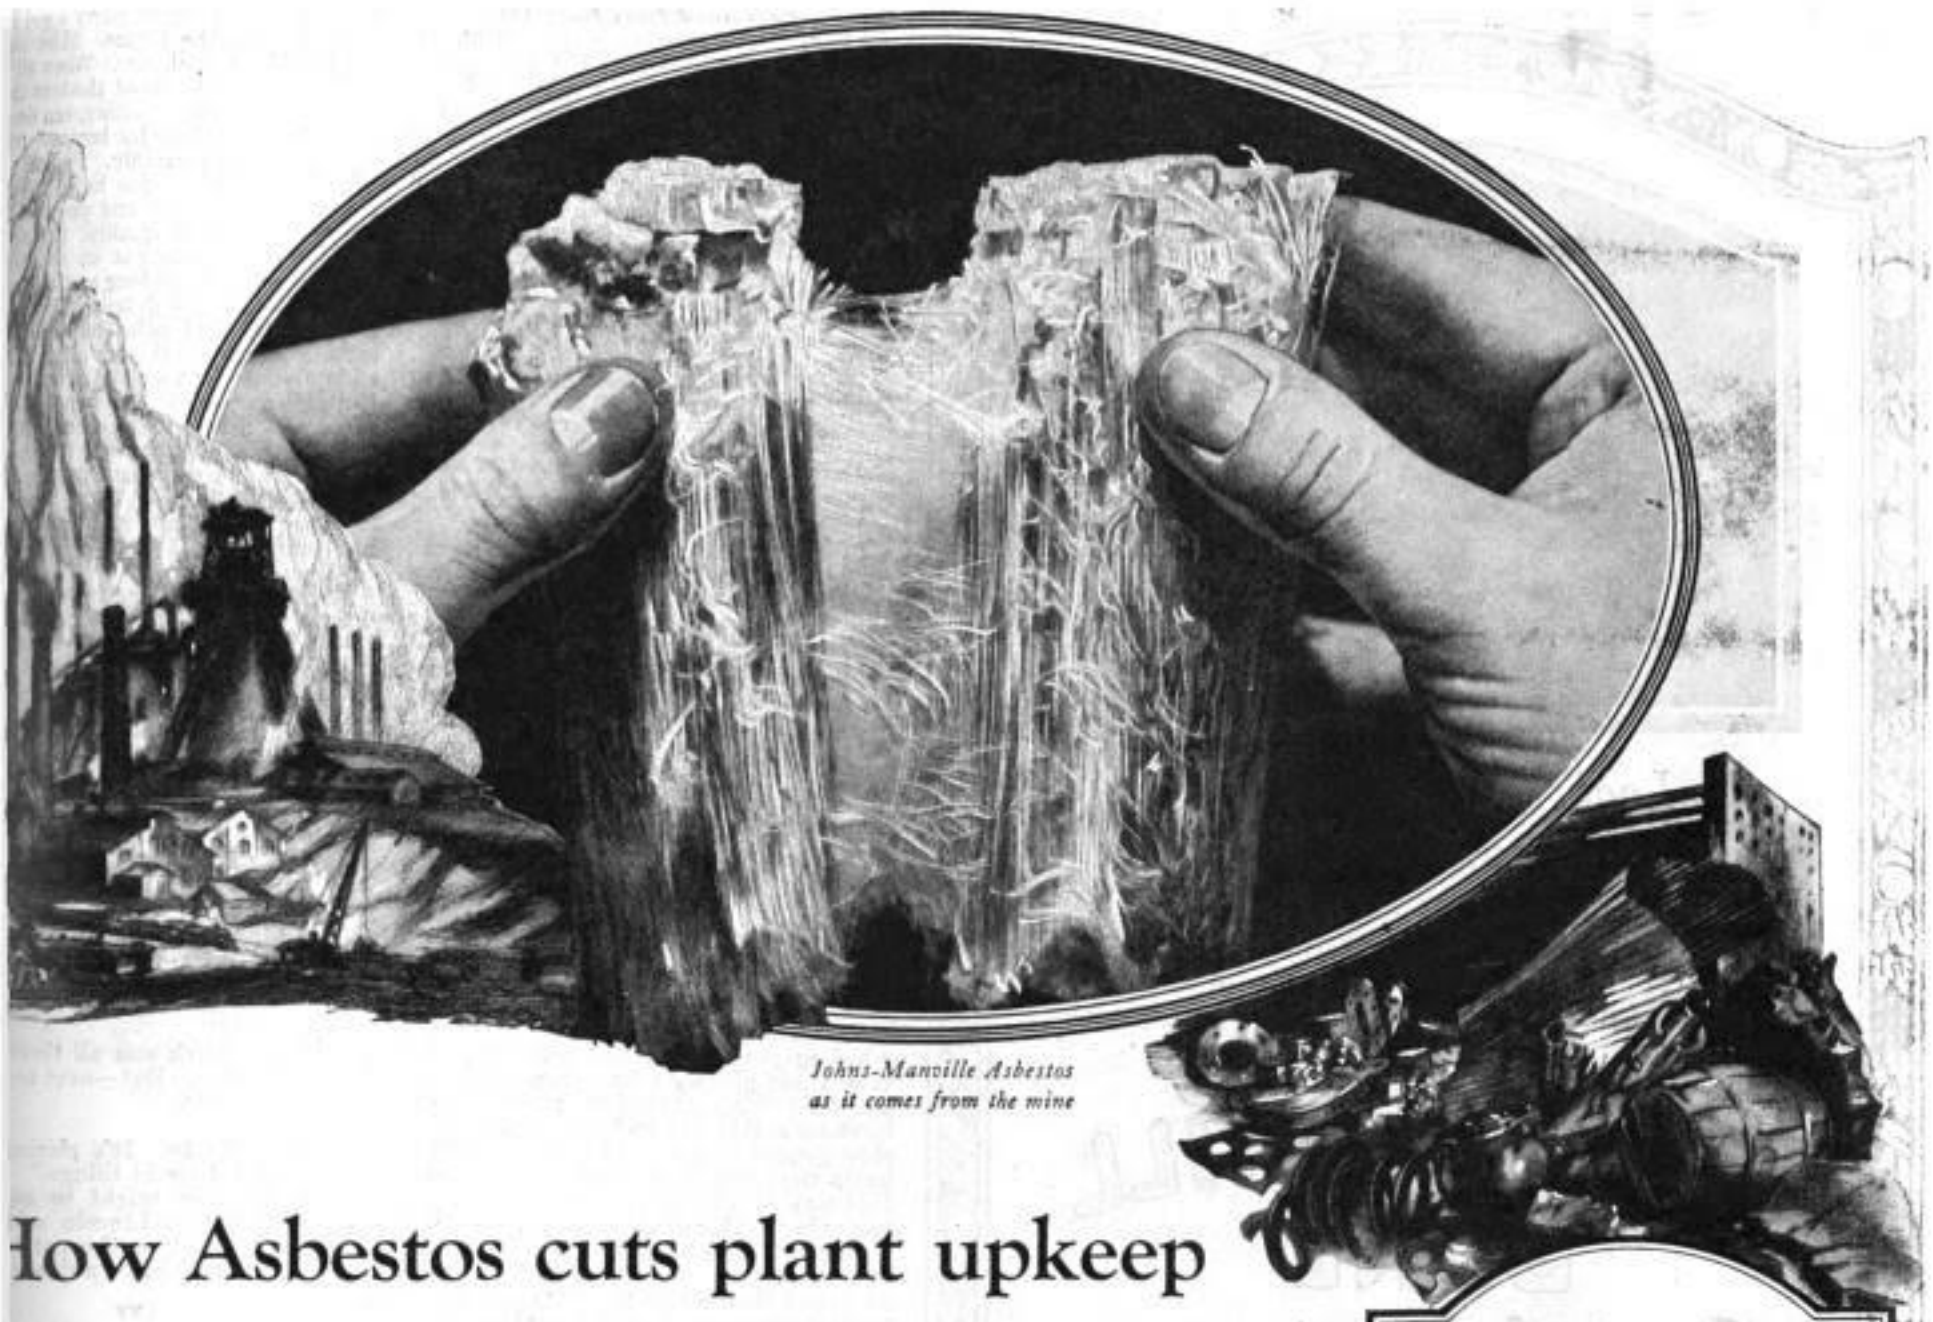
But before going she faced Cotter more. It appeared an inhospitable leave him like this. The least she to offset such seeming impoliteness to be as polite personally as she right to be.

"As neighbors we shall be even in the house you don't," he smiled.

"As a neighbor perhaps you will the benefit of your advice in plan

She did not commit herself further with a quick nod and a "Good-by" joined her father. Cotter watched until she disappeared in the house he sat down again on the grass and lighted a cigarette.

TO BUCKINGHAM there was thing absurd, not to say amazing, situation which permitted a girl who was a total stranger to occupy what was practically his dooryard. the following week Cotter came times, and though he was not in objectionable or intrusive he cross-legged like a Turk and stared ocean. Buckingham could not go putter around among his rose without seeing him. What was Cotter could Jeanne. What was still more instead of fussing about Cotter about her father. Mrs. Buckingham kept severely indoors all summer when she went to ride in a closed in the middle of the afternoon, her husband that Jeanne had gone as to say she thought him lacking mon courtesy in ignoring his presence completely.



When he challenged the girl's quotation, which he should have better than to do, Jeanne very sweetly peated her words.

"He seems nice enough," she

"What of it?" demanded Buckingham

Johns-Manville Asbestos as it comes from the mine

How Asbestos cuts plant upkeep

ıe whole history of a ton of coal, a pound eam or a unit of heat in power produc- is a constant battle against loss.
re Asbestos is champion!
cuts fuel losses. It reduces wear and ınd it prevents shut-downs. Three fac- that actually determine the price you or power.
developing Asbestos into packings to nt friction and leakage, in adapting it to ce cements that improve the efficiency xtend the life of boilers, or in evolving nsulations that save hundreds of times veight in fuel per year, Johns-Manville ade possible new records of efficiency ost any plant.
of fifty years of constant work and comes this formidable contribution of -Manville Asbestos in spun, woven, or molded form that makes up the own on the right.
e is a powerful aid in the job of getting maximum power at minimum cost from fuel at so much a ton. And what could be of greater importance to many industrials—now; for fuel, lubrication, equipment and labor are still relatively high, while markets are more closely fought for than ever.

So power costs are more than ever being scrutinized. It is vital now to find out whether wasteful plant practices are eating into narrowing profit margins and, if so, to convert these wastes into productive savings.

Right now there are thousands of plants that can economize by using these Johns-Manville Power Plant Materials, and often without loosening a single bolt or disturbing operation, and without a great outlay in money. Expertly applied as advised by Johns-Manville men, these products will transform poor showings into good ones and even raise good records for low cost of power generation into exceptional ones.

We are proving this, in the field, every day.

To men who are concerned about plant wastes

Note:—Not even industrial men realize what the Johns-Manville materials listed below will accomplish in efficiency and economy. To such we will be glad to send literature or arrange a call by a Johns-Manville man.

Packings

Sea Ring Rod Packing
Service and Seigelite Sheet
Universal Piston Packing
Kearsarge Boiler Gaskets
Duplex Rod Packing

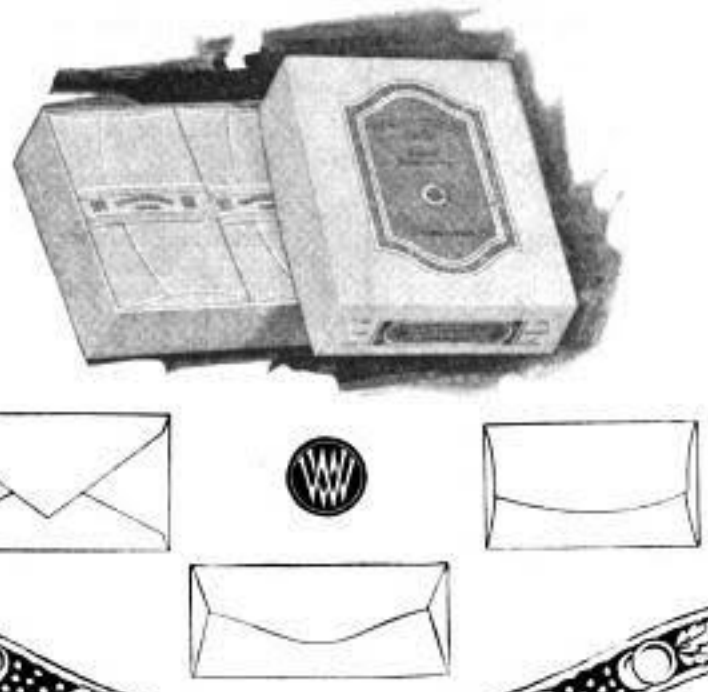
Look at that stack of unanswered letters

UNANSWERED letters have a habit of piling up at a great rate—particularly when there is no social stationery in the house. The way a lot of people manage to answer letters promptly is by keeping a supply of personal note paper on hand.

HAMMERMILL BOND

Social Stationery



At drug stores, stationery stores, and department stores you can see Hammermill Bond Social Stationery in eight envelope sizes, with sheets to fit. These sizes are for general family correspondence and for men's correspondence. The paper is made in three finishes—linen, bond, and ripple. The price is from 35c to 75c a box. The same papers are also supplied in writing tablets in all sizes, with blotter and sheet of guide lines.

To make it easier for you to choose the best personal stationery, we will send you samples of different styles and finishes for ten cents (stamps or coin).

Hammermill Bond Social Stationery prepared by

WHITE & WYCKOFF MANUFACTURING CO.

Master Makers of Distinctive Social Stationery Holyoke, Massachusetts

(Continued from Page 42)

"Well, that's something in a neighbor."

"A neighbor?" snorted Buckingham. "We'll see how long he's a neighbor!"

That very day Buckingham wrote a letter to Mr. Stephen Cotter, in care of Pudkin & Pudkin, making an offer of fifteen thousand dollars "for the lot of land adjacent to my summer home, which I understand you have lately purchased."

He received a reply the next day which read as follows:

Dear Mr. Buckingham: You are correct in your understanding that I have lately purchased the lot to which you refer in your letter of May 12. While your offer of fifteen thousand dollars is generous and in all probability more than the land is worth, I have no desire whatever to sell. Very respectfully yours,

STEPHEN COTTER.

"The cub!" snorted Buckingham. "That simply means he wants more."

Intolerable as matters were, however, Buckingham was not prepared at that moment to go beyond this figure.

As a matter of fact, Cotter did want more—but not more money. He wanted more of Jeanne. A lonely dreamer dreaming on a cliff will dream strange dreams. It was not long before this small plot of land took on for him all the identity of a home. This came first with the sense of possession. This little portion of the earth was inviolably his. It was the first time he had ever owned any part or parcel of the globe, and when he stopped to consider what it meant the fact filled him with awe. Down through the ages, a billion years or more, this land had been in the making. In buying this he had bought a bit of creation, and so linked himself up with all the history that had ever been—those terribly silent early years, then the crawling years, then the monster years, then those ghastly white years when the glaciers sullenly ground their tedious way to the sea, then the melting years and the slow genesis of a new life when a million years were but as a single day. Lordy, that was a lot to buy, and it was only the beginning! Man could not count the following centuries when this bit of soil had lain under the sun by day—this same sun; and then under the stars at night—these same stars. It had played a part, a passive part, but a necessary part, in binding the world together, while men abroad were fighting through the dawn of civilization like beasts, and then like men, to the end, as far as he was concerned, that he might sit here cross-legged and undisturbed and call this his.

This was the foundation upon which his house rested. The roof was the sky, which had been even before the earth. A man could not think when he attempted to grasp the meaning of that. His mind was not big enough. He could only blink and say the words. The four walls were the limit of his vision—north, east, south and west.

Living in such a home it is small wonder that Cotter found it difficult to understand the arbitrary boundary lines which Buckingham seemed to establish between the two houses. He did not even try, except as far as his legs were concerned, and though legs are an important and useful part of a man they are by no means all. Yet the law, in dealing with trespass, considers legs alone. It does not bother itself with the eyes, which, with all they connote, are the chief trespassers.

Cotter saw Jeanne often as she glanced at odd times from her window, which overlooked his own windows on the south, as she lounged in the easy-chairs on the broad piazza facing the sea or toiled in the rose garden at the rear. Every time he saw her and she saw him he felt glad. Every such time he felt, too, just that much closer to her. Whether he had a chance to speak or not made no difference. This visual contact alone was establishing them more and more clearly in each other's field of consciousness. And nothing on earth that Buckingham could do—except to carry her off—could prevent that.

Cotter was now taking the affair very seriously. He shoved Buckingham farther and farther into the background. Jeanne herself was all there was to the problem. He was assuming a good deal, to be sure, to suppose that her feelings were at all kindred to his; and yet it is generally what a man does assume until he is given proof to the contrary. It is doubtful, too, if, strictly speaking, he had any right to call himself in love with her. It was more, he felt, that, given an opportunity, love would follow. A man could marry a girl [illegible] and bank on the future. Most [illegible] would take the chance. When a man and done that is about the best that any man, or any woman either, can do.

In the meantime his business prospects were improving rapidly. Pudkin was not mistaken in the value he had placed on Cotter's appearance and personality. He possessed another quality, to be sure, which Pudkin was not so appreciative intelligence; but as long as the young man made his sales the details of how were unimportant. And sales he did make. It seemed almost as though all that was necessary was to turn a client over to "our Cotter" and allow the two a day at the shore and a sale was accomplished. And often enough Cotter took it upon himself to add another thousand to the asking price.

"It seemed a pity not to allow him to pay more when he was willing," was his explanation.

"Willing?" exclaimed Pudkin. "What do you do—hypnotize them?"

"No," answered Cotter seriously. "It's a wonderful shore the old Atlantic made for you, Mr. Pudkin. You don't half appreciate it yourself. I don't know any place on earth where you will find a variety of cliff and marsh, of cove and beach, of colorful rocks and golden sand. There isn't a point between here and Plymouth where a man can't stand and see a hundred pictures. Even on gray days it is wonderful. And when the nor'easters blow in ——"

"Look here," demanded Pudkin suspiciously, "you trying to sell me?"

"I sat on my porch until midnight last night, Mr. Pudkin."

"On what?"

"Oh, the porch was all there. I did have to build it. But—ever see the waves at midnight?"

"No."

"You ought to. It's glorious. It makes you believe in things."

Well, the man might be mad, Pudkin concluded, but as Lincoln said of [illegible] he'd like to discover the particular [illegible] he used, and he'd have a dozen such men.

VI

ON THE tenth of July, Buckingham in order to put an end to the waste made Cotter an offer of twenty thousand. Cotter refused it. He would have taken fifty thousand, because the [illegible] in the meantime done for him a little thing. He had been seated in front of the house watching an interesting picture of coal-black clouds over the [illegible] waters. The gods were disturbed. They were working themselves into a rage. He knew that trouble was brewing, but did not expect it so soon. It came in seconds—wind and rain and thunder. He bent his body against the fury of the elements and held on fascinated [illegible] a voice to the left. He glanced in the direction and saw Jeanne beckoning. He obeyed her call and a few moments stood wet and happy by her side on the Buckingham porch.

"Didn't you see it coming?" she demanded.

"Yes," he answered, "but I wanted it coming."

The wind drove the rain under the shelter of the porch.

"We'd better go in," she said.

He would have much preferred where he was, but as she opened the door followed her. Mrs. Buckingham, who was anxious, was seated before a window, a middle-aged woman with a [illegible] and delicate features.

"Mother," said Jeanne, "this is Mr. Cotter—our next-door neighbor."

Mrs. Buckingham timidly [illegible] come. Her husband, it seemed, was in town. Cotter was sorry for that. He did not like to feel that he was [illegible] taking advantage of his absence. On the other hand he was able to give Buckingham a good deal of [illegible] assuring her that he did not [illegible] house would be either struck by lightning or blown into the sea. Concerning the contingency he could only guess at the probability, but concerning the wind he could speak with authority.

"The wind is the wrong way for blowing off the ocean."

"But it might blow the house down." She shuddered as a particularly heavy gust rattled the shutters.

Way-Stations for Mileage

ALONG main-traveled highways, the motorist finds well-kept garages and dealers' stores bearing familiar orange and blue signs—Firestone Tires.

Here he knows he may buy mileage on a sound assured basis, free from speculation or risk. In the Firestone Cord he purchases values that protect his purse and insure his comfort and safety.

He has learned by experience not only to expect mileage delivered at the lowest cost per mile, but smooth, easy riding, unmarred by tire troubles. He does not need to be convinced of the superior strength of the Firestone Cord carcass and the wear-resistance of the non-skid tread.

It has been demonstrated to him, too, that the dealer who links his name with that of Firestone stands for the *value principle* in tire-selling—protecting his customers, giving Most Miles per Dollar.

Locate the dealer nearest you, whose store carries this name. Remember it when next you need tires—and all it implies in facilities and experience to give you the best tire ever produced at the lowest price at which true quality can be sold.

MOST MILES PER DOLLAR

"Yes," he admitted, "it might. That's where my house has an advantage over yours. The elements can't disturb it."

"Your house?"

He saw Jeanne smile. That was all he desired.

Before he could reply she broke in with, "Mother, it's late, but mayn't we have tea?"

"Yes, dear. Will you ring?"

Tea was served, and though Cotter was conscious of his somewhat disheveled appearance he could not remember when he had ever passed a more enjoyable half hour. By that time the storm had cleared and Buckingham had arrived. He was obliged, of course, to be polite, but by no stretch of the imagination could he be said to be cordial. That, however, was perhaps not to be expected under the circumstances.

In thinking over this new development during the next few weeks, Cotter, himself, oddly enough was not altogether pleased. Up to this point he had been an absolutely free agent. Owing nothing to Buckingham he had been at liberty to act in all respects as he chose. The moment he crossed his threshold as guest, however, there were certain obligations which could not be ignored. And these came at a most inopportune time. If Cotter up to this point had made his approach to the heart of Jeanne with a deliberateness that could hardly be called romantic, once fairly within her sphere of influence he found conditions quite changed. With every passing day it became increasingly difficult for him to reason conservatively or to think sanely. In actual contact she appeared more wonderful than in his wildest flights of fancy he had imagined her. It was easier to keep his head when he dreamed about her eyes than when he was able to look into their brown depths. It was one thing to remember the little that could be gathered from a passing glance of that fine nose and those delicately sensitive lips, and another to have them before him as living realities. Without either design or effort she tempted a man to throw discretion to the winds—as sometimes when he stood on the edge of the cliff the ocean tempted him to jump because he could associate with its amazing beauty nothing but gentleness.

And just because of this newborn emotion he must hold himself steady. Up to this point this had been an amusing adventure; now it was something more. He felt a responsibility towards her as great as Buckingham's—the responsibility of a friend, a gentleman and a lover. He felt it the more as he saw her eyes brighten and her cheeks flush in response to the unspoken secret of his heart. There were other guests in and out—many of them—during the course of that summer. He met them and often became merely one of the group surrounding her. There were perhaps a dozen such upstanding young fellows, with a dozen more on the outskirts—most of them brothers and friends of the pretty young girls who made up the social life of the colony. He was swept into their midst, and though because of his business duties he could not participate so actively as they in their sports, he had enough; more than enough, for they forced him to share what he would have liked all to himself.

He walked with Jeanne and danced with Jeanne, and seated on the broad porch to which the nor'easter had driven him he talked, sharing the ocean with her. And by September he knew she knew what he knew, though he had kept his lips sealed.

He had kept his lips sealed because he realized that at the start he had not been quite honest—that he had tricked himself into her life. Night after night after leaving her he had tried to argue himself out of that belief. He had called his contention quixotic and overstrained, which was all very well until the next time he met those trusting, clear-visioned brown eyes; and then he had to begin all over again.

One evening in September, Cotter came down to his place and found Buckingham alone in his rose garden. He strolled over to the foot-high hedge that separated the two lots and astonished that gruff gentleman with the query, "Do you still wish to buy this lot, Mr. Buckingham?"

"Do you want to sell?"

"No, I don't want to sell; but I think I might sell."

Buckingham thought rapidly; then he put it this way: "I'll pay you thirty thousand dollars and give you five minutes to decide. This is final. I won't [illegible] another darned cent if you wait fifty [illegible]"

"I can't accept, Mr. Buckingham," answered Cotter.

"Then you go to blazes!"

"I can't accept, because thirty thousand is over the market value of the lot. My price is ten thousand two hundred dollars—what I paid, plus interest."

"Eh?"

"And I'll give you two minutes to decide."

"Taken!" snapped Buckingham like a sprung steel trap.

"If you'll meet Mr. Pudkin at the town tomorrow we'll close the deal," concluded Cotter.

With that he turned, walked to the edge of the cliff and sitting down, Turk fashion, lighted a cigarette.

A half hour later he heard in the distance shy rustle of skirts, and looking up he saw Jeanne. He sprang to his feet.

"It's true—you've sold to dad!"

"Yes," answered Cotter with a tremor in his voice.

"But why?" she exclaimed.

He hesitated only a second, then he said, "Because I love you."

"Oh!" she exclaimed.

All by itself that did not mean very much, but taken in connection with the fact that instead of being startled away from him she threw up her head almost proudly it meant a great deal. Even so, Cotter continued to hold himself steady. She could not yet know the full truth.

"I bought this lot with the only money I had in the world—fifty dollars," he confessed. "I did so with the sole idea of meeting you. The house—it was a castle in story. I didn't have enough to build a chicken coop."

Her eyes grew bigger, but the words she caught up were these: "A fairy story!"

"I'd seen you just twice—once in New York and once in the train."

"I remember," she said.

"But you didn't even look at me."

"No?"

"Most of the time your back was turned."

"Yes?"

"At the South Station a breathless chauffeur dragged you off and lost me in a tangle of taxicabs."

"That was Peter."

"I've forgiven him, but at the time I could have choked him. It was the end of you until Pudkin told me about this. I came here, like a fortune hunter—just to be near you."

"But why—why did you want to be near me?" she asked.

"Because you are beautiful."

"That is all?"

"It was all then. Now—there is much more now! But Jeanne—Jeanne—don't you see I got it all by a trick?"

She did not reply, so whether she saw or not he did not know.

"There was nothing left for me to do but give it all back."

"To—to dad?"

What, in reality, he asked himself, was the answer to that question, had he not met Buckingham? This strip of earth, this [illegible] what of the ocean and the sky which made up two-thirds? And what of the [illegible] embodied in this woman by his side? Well, he had not sold those for this paltry sum. He had particularly refused to accept more than the market value of the land. He had rendered unto Caesar the things which were Caesar's, and so was quits with him. For the rest—he must give back to her what she and he received them. That was only fair. It was simple justice.

"Jeanne," he whispered. "My money, which came from you—it's yours. Will you take it?"

"You—you want to give it back?"

"For you to do with what you will," he answered humbly.

"But, Stephen," she exclaimed, "what are you going to do with mine?"

The dusk had deepened into night. The waves were singing on the shore and the stars were singing in the sky.

"Keep it forever and forever and ever, let me," he said.

Her lips were near to his.

"Jeanne," came Buckingham's voice.

But he was too late. The moment which technically and legally made bargains had been made.

It is generally agreed that one of the most attractive houses on The Cliffs is the one located next to the Point—the cottage occupied by Cotter and his wife. Cotter, of Pudkin, Pudkin & Cotter,

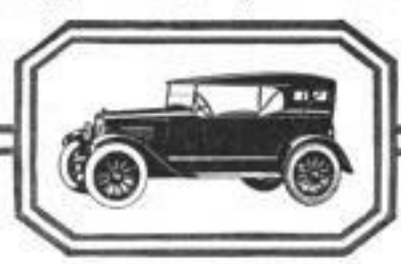
"Do You Endure Summer or *Enjoy* it?"

Overland, always a good investment, now the greatest automobile value in America

PACK this summer full of Overland days. Get out. Roam around in this chummy, cheery car that's made itself a necessary member of thousands of American families.

If you can't snatch whole days, make the most of bits of them, both ends, night and morning. Overland is ready for anything any time; takes you anywhere you like in a jiffy. Brisk, breezy, stout-hearted, sweet-tempered. Light as a feather on tires; easy on gas, and easy to ride in because of a wonderful spring suspension that gives it the cradling length of the big, expensive cars.

Don't wait. Put on your hat *now* and buy your Overland.



Today's Overland: 25 miles to the gallon; all-steel body; baked enamel finish; 130-inch spring base

WILLYS-OVERLAND, INC., Toledo, Ohio - - Canadian Factory: Willys-Overland Ltd., Toronto

Today's Overland at $550

TRADE MARK REG.

TOURING $550 ROADSTER $550 · COUPÉ $850 · SEDAN $895 F. O. B. TOLEDO

Booth's
CHOCOLATES

BOOTH'S CHOCOLATES are becoming better known and growing more popular every day. Everywhere more and more people are finding out what wonderful chocolates they really are. How happy this makes us—for 27 years our constant endeavor has been to make Booth's Chocolates just as fine chocolates as could be made. Everything which goes into them is of the best—pure, wholesome and delicious. The cream is brought daily from our own dairy farms; the butter is the best creamery brand; the fruits are real; the nuts carefully selected.

There are many different assortments of Booth's Chocolates—all are delicious, all of the same high quality.

Made For Candy Lovers

If you have any difficulty in obtaining Booth's Chocolates from your dealer, send us his name and address and we will supply you by mail postpaid, upon receipt of the following prices: True Blue Chocolates, 20 oz., $2.00; Butter Chocolates, 1 lb., $1.50; Esther Chocolates, 1 lb., $1.25; Billy Chocolates, 1 lb., $1.00. Other sizes in proportion.

Leading Druggists and Confectioners in certain localities can still obtain our Special Agency Proposition for their stores. Write for particulars on your business letterhead, stating principal lines of candies now handled.

BOOTH'S CHOCOLATES
ELMIRA, N. Y.

NO COMPROMISE WITH BOLSHEVISM

(Continued from Page 23)

interest is political. It is not the improvement of the condition of the laboring man. It is a wholly new form of barbarism that he is after. In the last few years there have been strikes in half a dozen of the basic industries of this country, the radicals have tried to get control in nearly every case, and in practically every case the employers have won. Naturally. A vast majority of the people of this country are not radical, any more than they are reactionary or czaristic, and they do not propose to see any soviet experiments tried out here.

The simple fact is that the spirit of American institutions is incompatible with communism, the one big union, the proletarian dictatorship or any other form of dictatorship. The American workman, the American citizen in general does not propose to give up his individual liberty and initiative to any organization stronger than the Government itself, and so vast and powerful that only military dictators can operate it at all. But that is precisely and exactly what those who argue for communism, syndicalism, guild socialism, Bolshevism, and similar radical and revolutionary forms of government are trying to impose upon labor. It has been tried out upon more than a hundred million people in Russia; why should it not be tried here? That in substance is the radical argument.

The Appeal of Bolshevism

Now it must be recognized that, just as many people are willing to burn down houses for the fun of it, so many more are eager to try anything once. Bolshevism naturally appeals to those intellectuals, so called, who have no occupation save that of following one fad after another. It appeals to that comparatively large group of individuals who are unwilling or unable to face the realities in their own lives, who have failed to solve their personal problems and who compensate for this failure by grandiose schemes of world revolution. It appeals of course to a few men of strong mentality who see the opportunity of building their own careers upon the ruins of the old order.

It appeals obviously to the scum of those poverty-stricken and downtrodden portions of Europe which have never known the working principles of this country—liberty, democracy, opportunity. Men come here from the squalid pestholes of Europe and, without ever learning or becoming familiar with the life and institutions of a large majority of our people, attempt to apply to our sound wholesome body politic theories which have arisen on another continent from centuries of misery, tyranny and starvation.

Finally the hideous communistic and Bolshevist doctrine appeals to many of those who because of mental and moral defects are so beaten in the game of life that they can find no hope or attraction in anything except the most desperate and illogical schemes. Such are the forces, such the supporters of revolutionary mania, and though a few thousand have gone back to Europe far greater numbers still remain here to fester and germinate.

But what in brief is this experiment that so inspires these defective and unwelcome elements of our population? Surely the great main facts are known. Lenine secured power when he sent a band of sailors to disperse the Constituent Assembly, fairly elected by the people. He and his associates have tried out many plans, they have many theories and talk glibly of them. But there have been no elections, and there is no safety of person, no freedom of the press, of speech or of assemblage. The government has no authority from a popular representative national assemblage of the people. Large portions of the population have been exterminated, or terrorized into dumb submission. Even socialists holding different theories have been persecuted no less than members of the capitalist or middle classes and such intellectuals as did not swallow the program whole. Even labor unions have been suppressed, and workmen forced to labor at the point of the bayonet.

Mr. Gompers has gone so far as to say: "The enslavement of labor is indeed the chief underlying cause of the entire collapse of the Bolshevist system and of the frightful suffering it has inflicted not only upon labor but upon the entire population of the country."

Another representative of labor, former Secretary of Labor William B. Wilson, has said: "In the evidence presented to me in the Martens case it was clearly shown that a group of men calling themselves communists had set up a military dictatorship in Russia; that they had camouflaged it under the name of a dictatorship of the proletariat, seeking to convey the impression that it was a dictatorship by the proletariat; that it had by force of arms introduced compulsory labor, in other words, slavery, into Russia; that the proletariat were compelled to work at occupations selected for them at meager wages and long hours imposed under the direction of the military masters."

In other words, the Bolshevik experiment has struck at the foundations of democratic institutions which enlightened men have struggled for centuries to create. Lloyd George, who has sought as much as any man to bridge the gap between Western Europe and Russia, said just before going to the Genoa conference, "There was never a man so complete a dictator as Lenine."

But this is not all. Even while the Russian Government has been seeking political recognition from and the establishment of trade agreements with other countries, it has sought to stir up revolutions in those lands and overthrow their governments. Time and again the soviets have announced that they did not intend to be bound by their own pledges to bourgeois governments. They do not even pretend to recognize ordinary international obligations. Every now and then it is said that the Bolshevik leaders have capitulated to capitalism. But they deny it fast enough themselves.

Waste While Millions Starve

The chief delegate to the Genoa conference stated while there: "The most farseeing statesmen of the capitalist world hope to tame us by commerce. That is Lloyd George's idea. We have, then, taken the bait. But our way is not that of Lloyd George. Both of us want trade, but we differ on future results. We await the disintegration of the capitalist system. Lloyd George awaits our conversion. We cannot be forced into any abandonment of our communistic principles."

Only a few months ago Lenine himself said that concessions to capital were only temporary retreats and that the true revolutionary applies all means to attain his ends. He still talked of the class struggle, of other governments being bourgeois, and of commerce being merely the main lever "whereby we will surely and quickly found the economic and social basis for socialism. History has closed on an old chapter of bourgeois parliamentarism and is now opening on one of proletarian dictatorship."

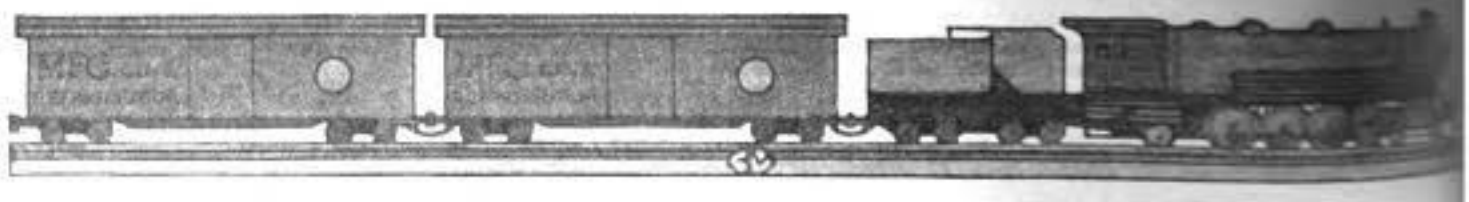
"In the United States and in all European countries, as well as China, Persia, India, Turkey, Mexico and even in South America, soviet agents have been repeatedly caught carrying vast sums for the purpose of propaganda," says Mr. Gompers. "While Russian agriculture is degenerating for the lack of plows and even of sickles and scythes; while the laboring class is starving from the degeneration of agriculture; while the railroads are falling to pieces and three-fourths of the children are out of school, the soviet finds ample means for vast expenditures for propaganda. Democratic governments, no matter how large and powerful, have no propaganda funds."

Shortly before his death James Bryce, one of the most sympathetic students and friends in the entire world of the [illegible] tions of liberty and democracy, said [illegible] the Bolsheviks "are a set of [illegible] ruffians." But the vicious and [illegible] persons who would like to try it out [illegible] country complain that Russia has [illegible] from blockade and famine. Now there [illegible] overwhelming evidence that under [illegible] shevism Russian industries have [illegible] degenerated even where no imports were needed, and under a far more rapid [illegible] ade German industry boomed during the war. Nor has there been any evidence of improvement in Russia since the blockade was lifted.

The famine itself has been due to a [illegible] extent to the breaking up of large [illegible] upon which scientific farming was [illegible] on, to the disorganization of the [illegible] market through the collapse of the currency system and the decay of [illegible] the towns, and to the disorganization of the railway system.

Disillusioned Reds

Delegations of labor leaders—[illegible] of them socialists and practically [illegible] from the moderate wing—have gone to Russia from nearly every civilized country in the world to investigate, and the great majority have come back wholly disillusioned and with a detailed story of incompetence, breakdown and [illegible] barbaric misery. As one writer has expressed it vividly but with no exaggeration: "Numerous persons have gone into Russia as fervent soviet advocates, only to come out running, hands over their heads, fugitives from a scourge."



Indeed the Russian experiment has gone so far as to deny any worthwhile [illegible] existing science as well as art and literature. It has been proposed in Russia to create a new astronomy which should be a "projection of the workers' efforts" instead of that of the bourgeois astronomers.

This is the sort of mental disease, the softening of the brain which [illegible] the revolutionary movements of the [illegible] this country as well as in Europe. The Russian people have suffered [illegible] vast sums are needed to rehabilitate the country. But as Secretaries Hughes and Hoover have so often said, the [illegible] credit must come from within and [illegible] without. No lasting good can come of relations between this country and Russia according to their view, "so long as the present causes of progressive impairment continue to operate. It is only the productivity of Russia itself that offers any hope for the Russian people. Productivity is conditioned upon the safety of the recognition of firm guarantees of property, the sanctity of contracts and the rights of free labor."

Even before the war only 1.3 per cent of our foreign trade was with Russia. The present broken-down condition of Russia is not whether commercial relations will maintain any substantial volume for many [illegible]

She has few goods to exchange, and, as Mr. Hoover says, goods do not move in an economic vacuum. But certainly it is the view of decent Americans the profits to be made in Russian trade are of no importance whether they be large or small. It is infinitely more moment that the American people should be alert to learn of and be vigilant to repel the attacks made upon the institutions of freedom, democracy, opportunity and prosperity, in whatever guise they come, by those who take as their ideal the communistic experiment in Russia.

In a measure Europe's troubles are our own—but in a much smaller measure. The foreign propagandists and interested American ones would have us believe. Our present business revival is proof positive that we are much more independent of Europe than they tell us. Even if Russia's trade were important to us—which it is not—the decent, liberty-loving American people will not compromise with the blood-drenched men in charge of Russian affairs with anything but loathing and disgust.

Vigilance that forestalled impending ruin

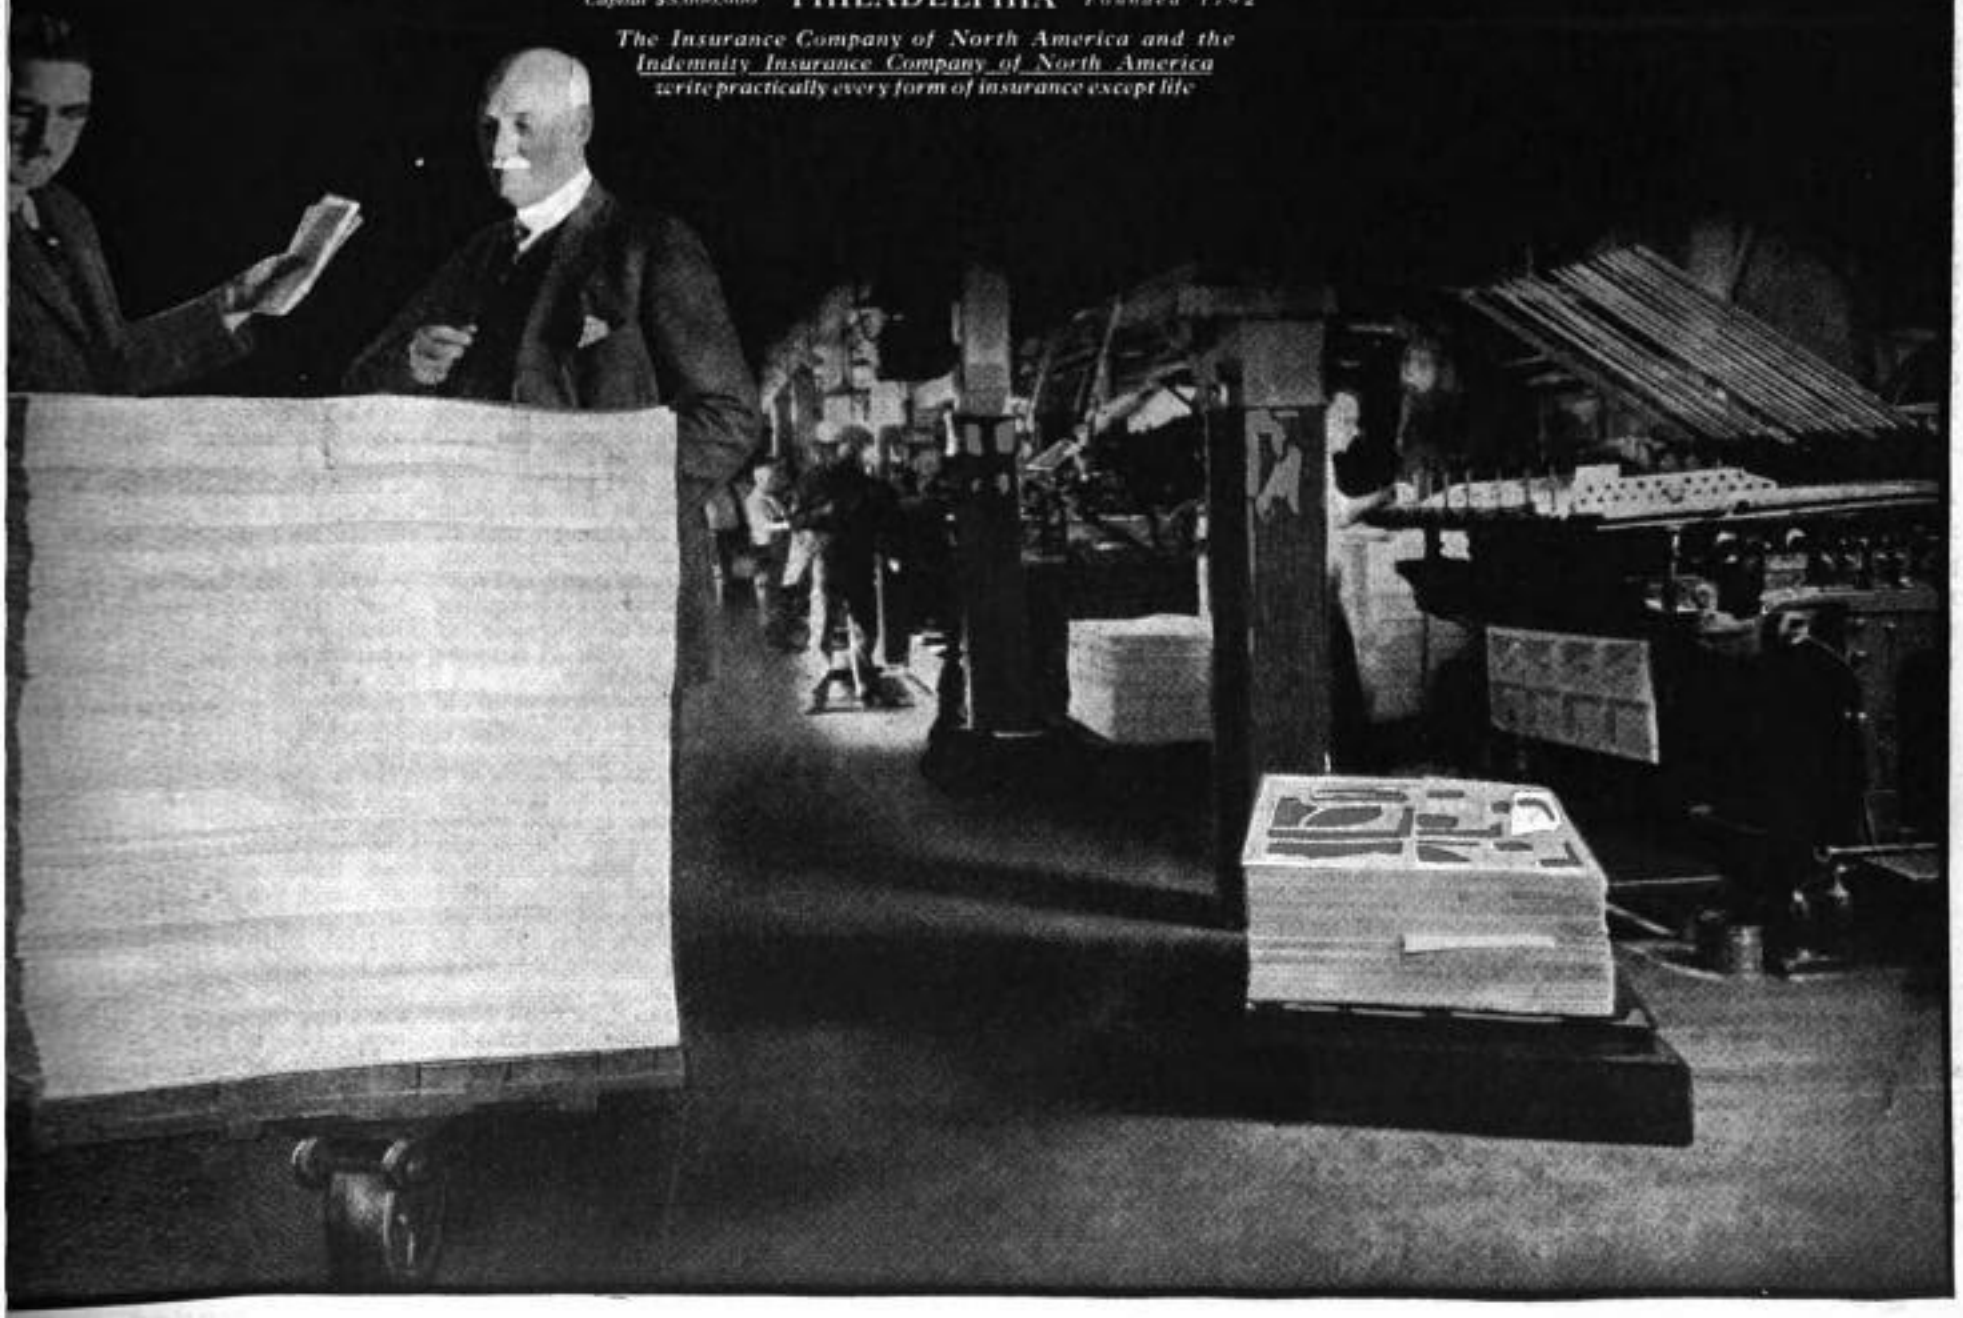
"Since we covered your paper stock for $50,000," said the insurance agent, "paper values have depreciated. It is safe to reduce the insurance to $30,000.

"On the other hand, I must remind you again that your building is insured for only $200,000. Based on present building costs you should carry $350,000. Otherwise, in case of fire, you could recover only about one half of your loss."

Due to the vigilance of the insurance agent, this printer saved the premium on $20,000. Moreover, he safeguarded his business against ruin by fully insuring his property.

Responsible insurance agents and brokers everywhere are earnestly striving toward the end that all property may be adequately protected. And the service that they render is of great benefit to industry and to civilization.

Confer with your insurance agent as you would with your lawyer. He can help you quite as much—and he will.



Any insurance agent or broker can get you a North America policy.

Find the Lead in this Bathroom

WHERE, in your bathroom, would you expect to find that common and useful metal, lead?

In the pipes leading to your tub and wash basin? Very likely you would find it there, for water-pipes of lead are to be found today in many well-built houses.

But when you had found these pipes of lead, you would have just begun to discover the articles into which lead enters. The glossy surfaces of your tub and basin contain lead—so does the glaze on the tiled walls. There is lead in the rubber stoppers. The collapsible tube that holds your shaving cream contains lead. The solder that seals the joints of all the plumbing is composed largely of lead. The paint on the woodwork is made of white-lead and oil.

The electric-light bulb is made of a kind of glass in which lead is a necessary ingredient, because lead gives clearness, brilliance, and heat-resistance. Little pieces of lead wire, called fuses, prevent damage when wires are overcharged.

These are just a few of the ways in which lead enters into your daily life. There are dozens of others, and of them all the most important is the use of white-lead as the essential ingredient in good paint.

"Save the surface and you save all" means that paint prevents decay—and the more white-lead any paint contains, the greater its protecting power and its durability.

Paint manufacturers use white-lead in the paint they make. Most painters prefer, for all outdoor work, "lead-and-oil," which is simply pure white-lead thinned with pure linseed oil. For interior walls and woodwork, white-lead mixed with flatting oil gives a beautiful and lasting finish.

National Lead Company makes white-lead of the highest quality, and sells it, mixed with pure linseed oil, under the name and trade-mark of

Dutch Boy White-Lead

Write our nearest branch office, Department A, for a free copy of our "Wonder Book of Lead," which interestingly describes the hundred-and-one ways in which lead enters into the daily life of everyone.

J. POINDEXTER, COLORED

(Continued from Page 19)

medium-size lawyers is plenty costive persons to hire for an important lawsuit, and naturally in the biggest town of all, where the lawyers run bigger, they'd cost a mighty heap more.

When he gets through specifying the situation to my understanding I gets another notion.

"I wonder," I says, sort of casual like—"I wonder, Mr. Dallas, w'y it wuz 'at Mr. H. C. Raynor should 'a' picked this pertic'lar moment fur callin' on you fur a big bunch of cash, specially w'en ef he'd 'a' kept silence you'd 'a' prob'ly gone on wid him, never suspicionin' anything wuz wrong."

"Oh, I'm not so stupid but what I can figure that out," he says. "He's afraid so much of my money will be spent soon in another direction that he'll be deprived of the lion's share of what is left. He wants to strip me down close while the stripping is good."

"In 'nother direction?" I says, kind of musing. "I wonder whut 'at other direction kin be?"

"Can't you guess?" he says.

"Yas, suh," I says, "I kin; but I didn' think 'twould be seemly fur me to start in guessin' along 'at line widout you opened up the way fust."

"Jeff," he says, "I feel like a low-down dog to be dragging in a woman's name, even indirectly; and so I guess the best thing I can do in that direction is to keep my mouth shut and take my medicine. It appears that here lately I've acquired the habit of committing myself to serious obligations at times when I'm not exactly aware of what I'm doing. At the moment I don't seem to remember how it all comes about; then I wake up and I find I'm signed, sealed and delivered. I may be the damndest fool alive, but at least I'm an honorable fool. I was raised that way. Where my sense of personal honor is concerned I'm going to stick, no matter what the costs may be. I've been fed fat on flattery; now it's time for me to sup on sorrow a while. Do you get my drift?"

"Yas, suh, I think I does," I says. "Mr. Dallas," I says, "scuse me fur persumin' to keep on 'long 'is yere track, but is you right downright shore 'at you solemnly engaged yo'se'f in the holy bonds of wedlock to the lady in question?"

"I suppose I did," he says. "I must have. She assumes to think so; everybody else assumes to think so. And yet, as heaven is my judge, I never intended to lead anybody to believe that I wanted to make a marriage up here. It—it just happened, Jeff; that's all. I can see now how a lot of things have been happening, and why. But what can I do to clear myself from either one of these two tangles? I've asked myself the question a hundred times since noon to-day, and there's no answer. I can't lick Raynor at his own game. He's too wise; he's covered his prints too well. When I hinted at a lawsuit this afternoon he laughed in my face and told me to go ahead and sue. And as for the other thing—well, unless I go through with it, against my will and my better judgment, it means a breach-of-promise suit or I miss my guess. Besides, I still have some shreds of self-respect left. I can't deliberately try to break an engagement which I suppose I must have made in good faith."

"S'posen' the lady herse'f wuz to up an' brek it on her own 'sponsibility?" I says.

He laughed kind of scornful.

"No chance," he says; "no such luck for me! I've walked blindfolded into every trap that was set for me, and now it's up to me to play the string out till the last penny is gone. At the present rate that shouldn't take long. But see here, Jeff, I wonder why I sit here unburdening my woes on you? I know you would help me if you could, but what can you do? What can anybody do?"

"Mr. Dallas," I says, "you can't never tell. Sometimes the humblest he'ps out the greates'. Seems lak I heared tell 'at oncet 'pon a time 'twuz the gabblin's of a flock of geese w'ich saved one of these yere upstate towns—Utica, or maybe 'twas Rome. I don't rightly remember now whut 'twas ailed 'at town. Mebbe 'twuz fixin' to go fur William Jinnin's Bryant—somethin' lak 'at. Anyway, the geese gits the credit in the records fur the savin' of it. An' ain't you never read whar a mouse come moseyin' 'long one time an' gnawed a lion loose frum the bindin' snares w'ich he[r] [illegible] So, ez I says, you can't never te[ll]. But I wonder would you do me a [favor]? I wonder would you read a [piece] out of a suttin' book ef I wuz to bring [one] you out of the liberary, an' w'en you['re] done 'at, ef you would go on to bed [and] try to compose yore min' an' git some needful sleep?"

"What's the idea?" he says.

"Nummine," I says. "Wait 'twell I fetches you the book."

So I goes and gets it down from the shelf where it belongs. It's the furtherest one of a long row of big shiny black books which all of 'em has got different names. But the name of this one is: Vet to Fyre.

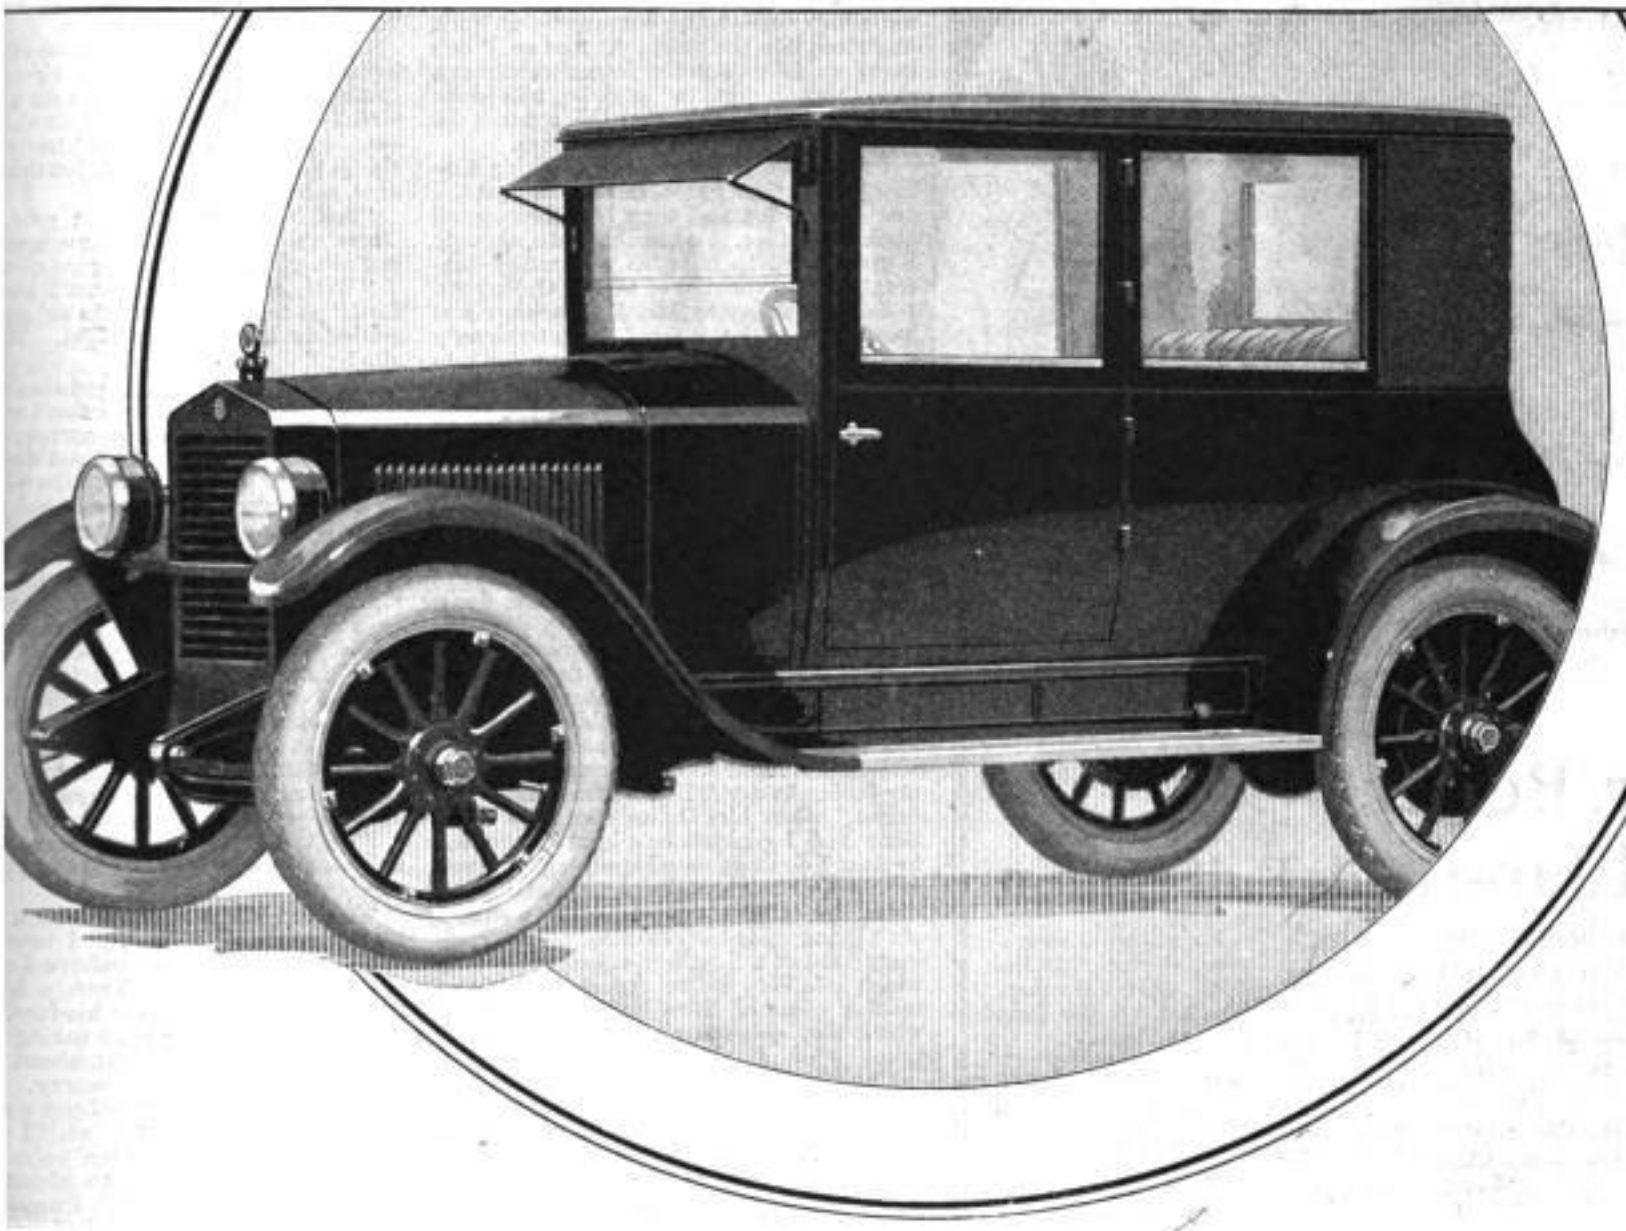
He takes a look at it when I lays it before him and he says, "Why, this is a volume of the encyclopedia! What bearing can this possibly have on what we've just been talking about?"

"Mr. Dallas," I says, "you's no doubt often seen ole Pappy Exall, w'ich he is the pastor of Zion Chapel, struttin' round the streets of Paducah in times gone by. Well, the Rev'n Exall may look lak one-half a baby elephant runnin' loose, but I tell you, suh, he ain't nobody's fawl. One time yere some yeahs back he hisse'f into a kind of a jam wid his 'count of some of 'em bein' mos' dissatisfied wid the way he wuz [handling] the funds fur to buy a new organ for the church. Nigh as they could figger it he'd done confisticated the organ money his own **pussonal an' private purse**. Try ez they **mout, they couldn't** in the **congregation git no satisfaction** of him **reguardin' of it. So** unbeknownst to him, **a investigatin' committee formed itse'f, an'** while he was **settin' at the supper table** they **come bustin' in on him an' demanded** then an' thar, how 'bout it? Wid one voice they called on him to perduce an' perdare else they gwine start yellin' fur the police. Wid that he jes' rise up from his chair an' he look 'em right in the eye an' he says to 'em very ca'm like:

"'My pore bernighted brethren, in response to yore questions I directs yore prayerful considerations to Acts, chapter eight an' seventeenth; also Timothy fust an' fifth; lakwise Kings, second fust. Return to yore homes an' prayerfully read the messages w'ich is set forth in the 'foresaid Scriptures, an' return to me on the morrow fur fu'ther guidance.'

"Well, they-all dashes off to git they Bibles an' see what the [answer is]. Bright an' early next mawnin' they's back to say 'at w'ile them is mighty soundin' verses w'ich he has [quoted], still they ain't nary one of 'em what's to relate in ary way whutsoever to the missin' organ fund. Then he smiles pitiful-lak an' he reaches his hand in his britches pocket an' he hands out money to the las' cent. The [committee] he had done played out 'em had got a chanct to slip out an' borrow [from] a couple of w'ite gen'lmen [friends] fur to mek up the shortage. The needed wuz time an' time wuz [provided].

"Now, Mr. Dallas, I aims to [draw a] lesson frum the example of [Rev'n] Exall. I asts you to set yere an' [read] chapter out of 'is yere book. It [makes] no diff'ence to me w'ich chapter he reads, jest so it's a good long one. I looked th'ough 'at book the other day an' most of the chapters in it is long [enough] 'em is tiresome. You jes' wait [till it] gits good an' sleepy, an' 'en you go [to] baid an' refresh yo'se'f in slumber. In the meanwhile I aims to steddy right over these yere pressin' matters of [state] an' see ef I can't see the daylight [shine] th'ough somewhars."



I can tell by his looks that he [has] no hope of success on my part, he's plumb wore out from worry. He ain't got the spirit for to resist [me]. He says to me he won't promise to [read the] book, but he will promise to [put] aside his botherments and go to [bed] which that is sufficient for me.

I leaves him there and I goes back to my room, after telephoning to "Lizzie" that something important has come to our place which will detain me away from him for the time being. And then when I gets to my room I sets down and takes off my shoes. It seems like I [have]

ESSEX COACH $1345

Its owners like it—the best test of all

Driving an Essex is so free of fuss and effort that every owner praises that remarkable difference. The hours they spend in their cars, above all, are comfortable hours. Controls are easy and natural. One is hardly conscious the hand directs them. Gears shift as easily as lifting a fork at table. Light-steering as a bicycle. Light pressure operates brakes and clutch.

And so reliable that thousands go out from the sales-rooms and serve for thousands of miles without returning for even a minor adjustment. That, too, is an experience not common to motor car owners.

Drive the Essex. It is altogether different from any car you have ever driven. It will delight—and tempt you. Any dealer will be glad to arrange such a ride.

A Few of the Many Who Praise It

"This little Coach is a revelation. Handles easier, runs smoother than any car I ever owned. I don't think I will ever want to drive a big car again."

F. CODA, Jenks & Muir Mfg. Co., Detroit

"We are highly pleased with the Essex Coach. We like, especially, its simplicity, ease in operation, gas mileage, and price. I do not know of a car where you get as much for the money invested." FRED E. BODIE, Lincoln, Nebraska

"After owning various multi-cylinder cars, I was a bit skeptical whether I could be satisfied with the four-cylinder Essex Coach. Have had ample opportunity to test its worth, and must admit everything is on the favorable side of the ledger. Economical in upkeep, satisfactory gas and oil mileage, and power and speed aplenty. In short a 'delight' from every standpoint."

F. O. HANSON, 253 W. Utica St., Buffalo, N. Y.

Touring Car, $1095 **Cabriolet, $1295** **Coach, $1345** ***Freight and Tax Extra***

ESSEX MOTORS—DETROIT, MICHIGAN

A Bigger, Better Thermal Jar—Holds Full Gallon

YOU can carry eight times as much lemonade, iced tea or hot coffee in the Aladdin Thermalware Jar as in the ordinary pint thermal bottles. 16 big cups! Enough for the whole crowd!

Or use it interchangeably for food. Big four inch opening admits fried chicken, potato salad, baked beans, ice cream—whatever you choose.

Unusually sturdy. By a new process of **sealing glass to metal,** we use a thick, heavy, special strength glass inner. Further protected by extra outside steel shell. Sanitary insulated glass stopper—no cork. Easy to clean. High thermal efficiency. Capacity, usefulness, sanitation and durability considered, the lowest price thermal container you can buy.

For motorists, sportsmen, at picnics, in the home, office, sick-room, hospital, on the farm—everywhere.

Ask Your Dealer to Show You the New Aladdin Thermalware Jar

Call for it by name at leading **Department Stores, Drug, Hardware, Jewelry, Sporting Goods and Auto Accessory Stores.**

If your dealer hasn't received his supply, write us.

A Three Purpose Thermalware Dish for the Home

—Cooking
—Serving
—Heat Retaining

Enables the busy housewife to prepare the food in advance, set the table, and have everything **piping hot** at mealtime. Keeps the food **hot through the entire meal.**

You can cook soups, stews, vegetables, puddings, desserts, in the insert dish on stove or in oven in usual way. Place insert dish in insulator and put on cover. **The three parts instantly seal by vacuum.** Released by touch of air-vent valve. Ask your dealer to demonstrate the new Aladdin Thermalware Dish.

If your family is late or irregular at meals, all can enjoy hot food from the Aladdin Thermalware Dish.

For luncheons or afternoon parties, prepare such foods as chicken à la King, flaked crabmeat, etc., in advance. Steaming hot when you're ready to serve. In Satin or Polished Silver, Polished Nickel and Copper. 3 Pint Capacity. A most acceptable gift.

To Dealers—Write us or your jobber at once for prices on Aladdin Thermalware Jars and Dishes.

think better when my feet was been freed from them binding shoes. When a nigger boy is fixing to run his fastest he's got to snatch his hat off and sail bareheaded, and I'm much the same way about my feet when I craves to think. So, my shoes being off, I just rears back and sets in for to give the problems before me the fullest considerations.

XI

THE way it looks to me, here is Mr. Dallas Pulliam, one of the most free-hearted, good-willingest young white gentlemen that ever lived, about to be throwed to the raveling wolves. He's elected to be the live meat, with a two-sided race on to see which one of the contesters can pick and clean him the quickest. And so, if he's going to be saved for future references, something is got to be done, and done mighty speedy, too, else there won't be nothing left but the polished bones.

I therefore splits up my thinking into two parts. First I studies a spell about the one proposition and then I studies a spell about the other. To tell the truth, though, I don't need to have so very many concernings over the case of Mr. H. C. Raynor. I did not let on to Mr. Dallas what was passing through my mind, but at the very same instant when he turned to me for help after telling about the row downtown at the oil offices with Mr. Raynor I hit spang on what might turn out to be proper medicine for what ails the gentleman. It ain't so very long, setting there in my room by myself, before the scheme begins to sort of routine itself out and look like something.

With regards to him I'm going mainly on the facts that he's like a lot of these here Northerners which ain't never been down South to speak of, and is therefore got curious ideas about the South in general. Long time before this I has took note that he thinks a colored person naturally enjoys being called a dam black rabbit or a worthless black scoundrel whilst he's waiting on white folks. Also he can't seem to get over my failing to say "Yas, massa" and "No, massa," when Mr. Dallas asks me a question; and I can tell he's kind of put out because I don't go round speaking of myself as dis nigga this and dis nigga that and dis nigga the other thing. In other words, I ain't living up to the character of the imaginary kind of a Southern-raised black man which he's been led to expect I'd be from reading some of these here foolish books which they gets out up here from time to time.

I knows full well what his sensations is in these matters, not only from the look on his face but from one or two things which I has overheard him saying in times past. So now I just puts two and two together and I says to myself that if he's entertaining them misled ideas about my race he doubtless is also got the notion in his head that every quality white gentleman from down South, and more especially them which hails from Kentucky, totes a pistol on the flank and is forever looking for a chance to massacrete somebody against which they've took a disfancy. I remembers now that he asked me once how many feuds there was going on in our part of the state at the present time. Rather than disappoint him I tells him several small ones and one large one. And another occasion he wanted to know from me whether they ever tried anybody in earnest for shooting somebody down our way. Secretively, at the time, I pities his ignorance; but I ain't undertaking to unlearn him from his delusions, because if that's his way of thinking it ain't beholden on me to try to educate him different. Looking back on it now, I'm mighty glad I didn't try, neither, because in the arose situation I figures that his prevailing beliefs is going to fall right in with my plans.

Inside of half an hour I is through with him and ready to tackle the other matter, which is a harder one, anyway you look at it. I takes my head in both my hands and I says to myself, what kind of a lady is this here one we got to deal with? With her raisings, what does she probably like the best in the world? What does she probably hate the most in the world? What would scare her off and what would make her mad, and what is it would probably only just egg her on? What would she shy from and what would she jump at? Where would she be reckless and where would she be careful? And so on and so forth.

All of a sudden—bam!—a notion busts right in my face. Casting round this way and that for a starter to go by, I recalls to mind what I heard Judge Priest narrating years ago touching on a funny will [illegible] rich man in an adjoining county to [illegible] drawed up on his deathbed, and how the row over it was fit out in court; and [illegible] that I says to myself, I says, "Hallelujah to my soul, ole problem, I shore does believe Ise got you whar the wool is short dog-gone me ef I don't!"

It's getting on towards eleven [illegible] when I puts my shoes back on and [illegible] to see what Mr. Dallas is doing. He's [illegible] setting right where I left him, with the book in front of him. But his eyes, seems me, is beginning to droop a little. Whether there ain't nobody living could longer hours over them Vets to Zyms without getting all drowsied up.

"Mr. Dallas," I says, "I thinks the [illegible] light is startin' to sift in th'ough the cloakin' clouds. I seems to see a [illegible] streak—in fact, a couple of streaks. [illegible] even so, I is got to be lef' free to work things out my own way. Is you thus agreeable, suh?"

"Jeff," he says, "I'm in your hands. There's no one else into whose hands I can put myself. What do you want me to do?"

"Well, suh," I says, "fust I wants you fur to go tek off yore things an' git [illegible] settled in baid fur the night. That is the starter."

"Agreed!" he says. "And then what?"

"Well, next," I says, "I don't want you to go downtown a-tall to-morrow. I wants you fur to stay right whar you now is. Let the mawnin' keep 'way frum the telephone. Ef I ain't yere to answer it jes' let Koga let it ring its haid off an' don't pay no mind. In the afternoon you may have 'portant visitor answerin' to the entitlements of Mr. H. C. Raynor, Esquire. But he gits yere I'll tell you what's to [illegible] off betwixt you two, purvided the preliminary 'rangemints, ez conducted by me, wukked out all right. But I ain't aim to tell you the full plans yit—too much is got to happen in the meantimes. To-morrow's plenty time."

"Just as you say," he says. "I'm going to my room now."

"Wait jest one minute, please, suh," he says as he gets up. "Mr. Dallas, you ain't owning' no pistol, is you?"

"What would I be doing with a pistol?" he says, sort of puzzled. "I never owned one in my life. I don't believe I ever shot one off in my life." Then a kind of ashamed smile comes onto his face. "Why, Jeff," he says, "you aren't taking seriously what I said early to-night about suicide, are you? You needn't worry. I'm not thinking of shooting myself yet awhile."

"I ain't worryin' 'bout 'at," I says, "I ain't figgerin' on you shootin' yo'self. I am figurin' on yore havin' to shoot somebody else. Never'less, though," I says, "in the contrary notwidstandin', seein' you ain't got no pistol, you's goin' to have one befo' you is many hours older—a great big shiny fretful-lookin' one."

"What am I to do with it after I get it?" he says.

"Mr. Dallas," I says, "please, suh, go to bed lak you promised me. I got a headache now clear down to the quick, just from answerin' my own questions."

I speaks this to him just like he is a little boy and I is his nurse, and off he goes, just like a wore-out, desponded, onhappy little boy.

XII

AS I LOOKS back on it now, after the passing of two weeks, about, it seems to me I never traveled so fast and covered so much ground in all my born days as I did on the next day following immediately along after this here night before. That while you just naturally couldn't see for the dust.

In the first place, right after breakfast time I glides out and I scoots uptown. I puts up ten dollars for security and thereby I borrows the loan of one of his extra spare revolovers off of a pink complected person named Seale-Ervin son, which it is his habit to go round colored districts recommending himself being the coroner's friend and using gunnery towards parties that he gits satisfied with. I don't know how many folkses he's killed in his life, but he's got bury his dead where they fall, because I ain't never had none of the graveyards pointed out to me. But, anyway, he's heeled on both his hips at all times, and makes him onload her before he hands over to me, because I is not taking chances of that thing going off [illegible]

Output Doubled Prices Reduced-

An Important Announcement to Tire Dealers and Car Owners

ONE of the most important announcements in the history of the tire industry was made a few weeks ago, when prices on HYDRO-TORON tires were reduced. Having begun work in our new factory, which had made possible a daily output more than double the plant's previous capacity, we announced as follows:

20% reduction on all Ford sizes (30x3, 30x3½, and 31x4 Clincher Type) and
10% reduction on all sizes of straight-side tires.

Such savings mean much to the tire-buying public, because HYDRO-TORON tires—notably successful in service as the result of distinctive processes—are now available at prices not only lower than cords, but lower than the prices of many of the fabric tires.

All Previous HYDRO-TORON Values Remain:

The Internal Hydraulic Expansion Process, whereby hidden defects in the course of tire building are prevented;

The Toron chemical process of treating fabric, which seals the tire against moisture and decay, and increases the tensile strength and holding power of the tire's various parts;

The unusual guarantee of 10,000 miles against stone-bruise, rim-cut and blow-out;

The oversize feature;

And now the lower prices, for tires that represent values which are really conspicuous in this industry.

Dealers: Open territory is available. Our proposition is uncommonly attractive. Write for information regarding discounts, and for proof of what other dealers think of HYDRO-TORON as a money-making line.

Car Owners: HYDRO-TORON tires are in use in every part of this country, and in some sections are among the leaders. If, however, there is no dealer near you handling these tires, we will tell you how you can be supplied.

How much per month?

MARMON maintenance has been reduced to a remarkable minimum. Nation-wide records disclose new economies.

For example, the maintenance of all Marmons purchased during the past year in the Kansas City territory, where much is demanded of a car, shows the average to be only $4.28 per month per car.

But minimum maintenance is not the only attraction. The price of the Marmon has been reduced to $3185!

Such attainments have won for Marmon its rank as The Foremost Fine Car, and the preference of graduate motorists.

and maybe crippling somebody. I totes this here large and poisonous-looking chunk of dark-blue hardware back to the apartment and stores it in a safe place where I can put my hand upon it on short notices. Then I waits until Mr. Dallas is in the bathroom with the water running so as to hide the sound of my voice and I goes to the telephone and I calls up Miss Bill-Lee's* number over on Riverside Drive. She must've rose early so as to have her complexion laid on so it'll get set good before she comes forth for the day, because it's her which answers my call instead of the maid. I tells her it's me on the wire, and I asks her as a special favor can I run over to her flat soon as it's agreeable to speak with her on a very important matter. She says yes so eager like it must be she's expecting I'm fetching a present from Mr. Dallas same as I has done quite often before this. She says I can come at ten o'clock.

Ten o'clock and I'm at her door. She's in her setting room waiting for me. She looks sort of disappointed when she sees I ain't brought along no flowers nor no candy nor no jewelry box nor nothing with me; but she welcomes me very kindly. I don't lose no time getting going.

"Miss DeWitt," I says, making my voice as winning as I can, "now 'at you an' Mr. Dallas is fixin' to git married to one 'nother I been wonderin' 'bout whut's goin' become of me in the shuffle. I 'preciates 'at he laks me fust-rate; but he idolizes you so deeply 'at I knows he wouldn't keep on keepin' me nur nobody else round him widout he wuz shore 'at you laked 'em too. Tha's whut's been worrying me—the question of whether you felt disposed agreeable to me. An' so, after broodin' over the matter fur goin' on it's nearly a week, I finally is tuck the liberty of comin' to speak to you 'bout it—yas-sum!"

"Jefferson," she says, kind of indifferent and yet not hostile, "I have nothing against you; in fact, I rather like you. If your services are satisfactory to Dallas I shall have not the slightest objection to his keeping you on as his servant."

"Thanky, ma'am," I says. "Hearin' you say 'at frum yore own lips suttinly teks a big load offen my mind. I strives ever to please. 'Sides, I got a mighty winnin' way wid chillen. I'll come in handy w'en it comes to he'pin' out wid the nursin' an' all lak 'at."

She sets up straight from where she's been kind of half laying down and some of that chain-gang jewelry of hers gives a brisk rattle.

"Children!" she says, plenty startled. "What in the world are you talking about?"

I answers back like I'm expecting, of course, she'll understand.

"W'y," I says, "the chillen w'ich enshores 'at Mr. Dallas don't lose out none in the final cuttin' up of the estate," I says.

By now she's rose bolt upright on her feet. All that languidsome manner is fled from her and her voice is sharper than what I ever has heard it before.

"What's that?" she says, quite snappy. "What's that you are saying? Do you mean to tell me that Dallas has been married before—that he has a child—or more than one child—hidden away somewhere?"

"Oh, nome," I says, very soothing, "nothin' lak 'at. Course Mr. Dallas ain't never been married. Up twell now he's practically been heart whole an' fancy free. Yas-sum! I wuz merely speakin'—if you'll please, ma'am, scuse me—of the chillen w'ich natchelly'll be comin' long ez purvided for under the terms of the ole gen'leman's will, you know. Tha's all I meant."

"Will!" she says. "What will? Whose will? Here, you, give me the straight of this thing! I haven't the faintest idea what it's all about."

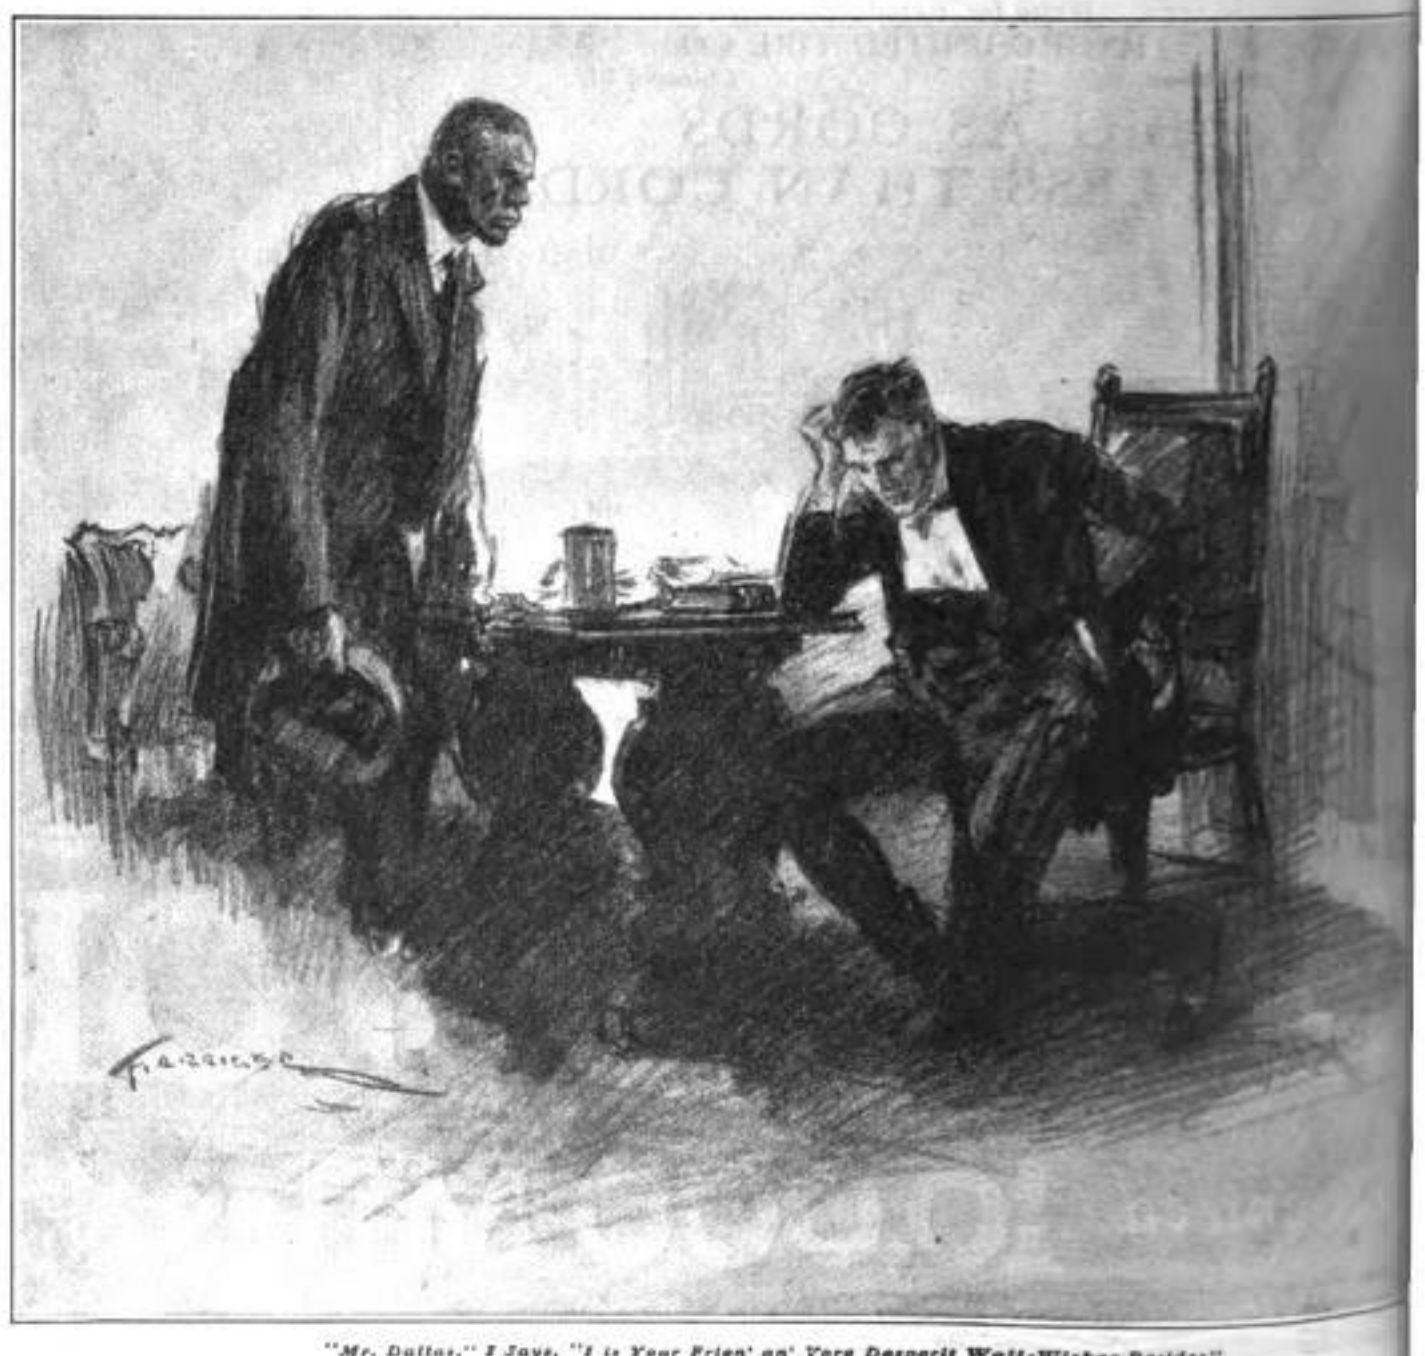
"Now, thar!" I says, acting like I'm overcome with a sudden great regret. "Ain't that jest lak me—puttin' my big foot in it, gabblin' 'bout somethin' w'ich it ain't none of my affairs? Most doubtless, Mr. Dallas he's been savin' it all up ez a happy surprise fur you. An' now, in my innocence an' my ign'ance, I starts blabbin' it fo'th unbeknownst. Lemme git out of yere, please, ma'am, 'fore I gits myse'f in any deeper 'en whut already I is in!"

She comes sailing across the floor right at me. Them big floating black eyes of hers seems to get smaller and sharper until they bores into me the same as a pair of sharp gimblets.

"You stay right where you are!" she says, commanding as a major general. "You don't leave this room until I get this mystery straightened out."

"Please, ma'am, I'd a heap rather you spoke to Mr. Dallas 'bout it," I says, pretending to be pleading hard. "No doubt in due time he'll confide to you all 'bout the way the property is tied up, an' 'bout his paw's views ez 'pressed in the will, an' also 'bout the way the matter stands between him an' his twin brother, Mr. Clarence, an' all the rest of it."

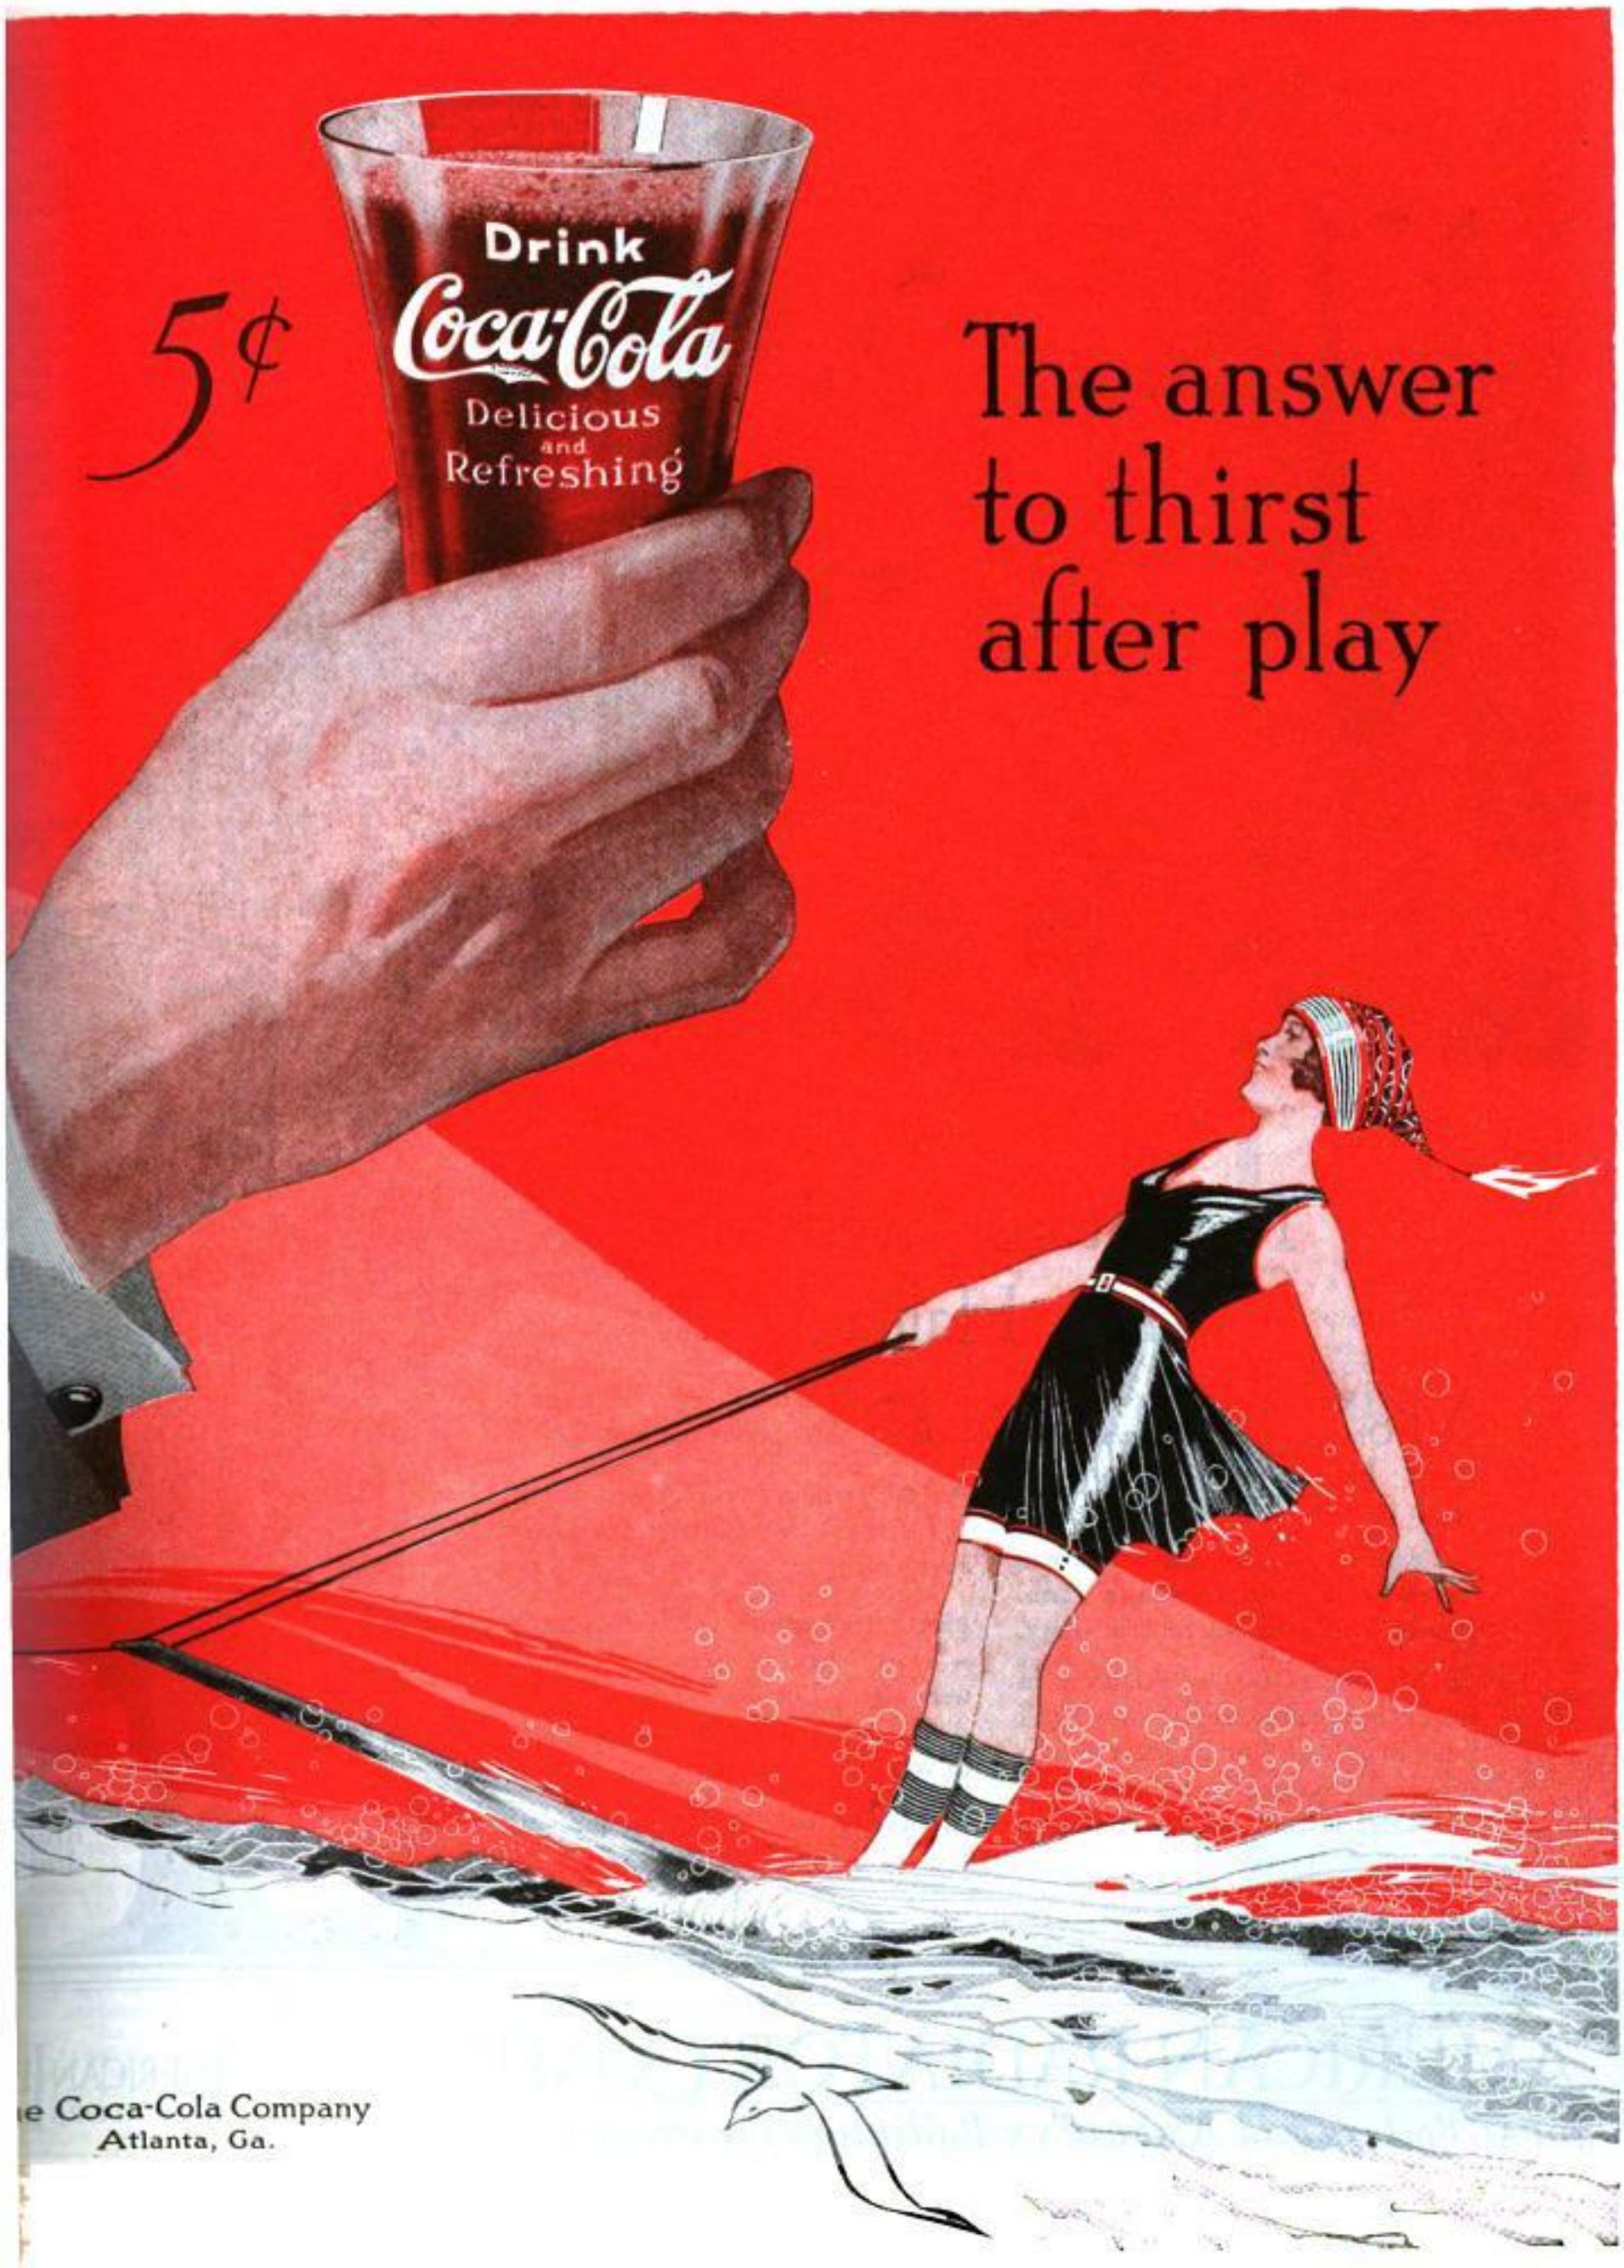
"Twin brother!" she says, and by now she's been jolted so hard she's mighty near to the screeching point. "Where is this twin brother? I never heard of him—never dreamed there was such a person. Say, are you crazy or am I?"



"W'ich 'at do settle it!" I says, very lamentful. "Ef Mr. Dallas ain't told you 'bout his twin brother neither, it certainly is a shore sign to me 'at he wuz aimin' to purserve ever'thing ez a precious secret frum you fur the time bein'. I specs he jest more'n snatch me bald-headed for this, Miss DeWitt. Please, ma'am, don't say nothin' to him 'bout my havin' give you the tip, will you?"

"I don't want tips," she says. "I want facts, and I'm going to have them here and now—and from you! If you want to get out of here with a whole skin you'll tell your vague mumblings about wife and children and estates and twin brothers that I never heard of before, and you'll tell me in plain words the entire story—whatever it is—that has been held back from me carefully. You tell it, beginning to end!"

"Yas-sum," I says, "jest ez you wishes, ma'am." I tries to make my voice sound like I'm scared half to death, which it don't call for no great amount of putting-on to



(Continued on Page 57)

*Note: It has just dawned upon Jeff's volunteer amanuensis that through the preceding pages of this narrative Jeff's more or less phonetic rendering of this word was an effort on his part to deal with the Gallicized pronunciation of an English diminutive for a common proper name; to wit: Billy.

"Mr. Dallas," I says, "I is Your Frien' an' Yore Desperit Well-Wisher Besides"

Three tons saved for Mr. Haller

MR. FRANK HALLER of Dayton, Ohio, heated his home with stoves. Many a winter night he got up in the dark to pour on more coal.

Yet with all his care the house was merely hot in spots, never really warm. Besides which the stoves were dusty.

So Mr. Haller installed ARCOLA in his kitchen, connecting it with small pipes to an American Radiator in each of the other rooms. Now he has the same hot-water warmth which American Radiators give to the finest homes and buildings throughout the world.

ARCOLA requires no night attention; *and it saved Mr. Haller the first winter more than three tons of coal.*

Hot-water warmth is ideal warmth —worth having even if its cost were high. But the fine thing about ARCOLA is that its cost comes back to you.

It pays for itself in the fuel it saves.

rt, neither, because she has done shed laziness and all her silkiness and all oothness same as a blue racer sheds n in the spring of the year, and she's ared her real het-up dangersome self me. "Jest ez you wishes," I says, I do trus' an' pray 'at you'll purtec' n Mr. Dallases' wrath w'en he finds lone spilt ever'thin' so premanture

get it!" she says. "It strikes me one who needs protection if anyoes. Now without any more dodgbacking you give me the cold truth, and? No original embroidery of n, either—the cold truth, all of it! I find out afterwards that you've olding back a single detail from "

that she stops short and pins me m eyes of hers. I can't hardly keep ching back from before her. If she rnet it'd be high time to start one ands off to the nearest drug store soothing ointments, because somertainly would be due to get all . Rejoiceful though I is inside of e how nice she's grabbed at all the ich I has flung out to her like fish, one after another, I'd be almost I was outside that room talking rough the keyhole. But it's shore t on me to set easy and keep on ng and not make no slips. Things well, but they has got to go still t if she's to swallow down the e.

XIII

READS out both my hands like m plumb cowed down and licked, I starts in handing out to her the h I'd spent half the night before together in my mind. It's a ce kind of romancing, if I do say ll of plausibleness, specially that which is built up on what I re- the old judge having told me curious case which come up that e of the adjoining counties. But it, including the most fanciest ich as Mr. Clarence and the old ly aunt and the two sets of trip-, has been made up right out of id, and I asks credit.

, whilst I'm setting there telling d watching her close to see how g it, I'm praying to the good ng Him will He please, Master, for onloading such a monstrous at-ain't-soes on an onsuspecting d-up lady. And at the same ping the spirit of Mr. Dallases' ted father, which he was one st, quietest old gentlemen that ed, won't come ha'nting me for his memory so scandalous. I vell he must be turning over in aster and faster every minute s. I only can trust he don't see om it.

Witt," I says, "lissen, please, ll know all. You see, ma'am, 'is connection dates back to n Mr. Dallases' paw made his ome six or seven yeahs ago. ou doubtless has learned befo' the bigges' part of the estate

know any such thing!" she ng in again, and even more han before. "Do you mean to s is not the sole master of his y?"

ammers and hesitates like I'm at she don't know that part My hanging back only makes fierce to hear the rest.

I goes on to say when finally able to blow clean up if I de- "the real facts of the case is actually got no property a-tall ay. He only draws down one- st frum it. He don't get nigh me, neither, ez whut folkses um his free way of spendin' ht an' lef'. Ez a matter of e strictes' confidences, Miss ys, "he is mos' gin'elly alluz e trustees by reason of him ed. But 'course," I says, "'at neither yere nor thar, is it? wants to slather his money that ever' dollar he spends ders lak it's ten or twelve, ess. Lemme git back on the e's see now: I wuz specifyin' e will, wuzn' I?

ak this: W'en folkses down d the terms of the will they wuz a heap of 'em said ez how the ole gen-'elman's mind must 'a' went back on him in his last sickness fur him to be layin' down any sech curious 'quireminta ez them wuz. Yas-sum, some even went fu'ther 'en 'at; some went so fur ez to say it wuz the streak of onsanity w'ich runs in the Pulliam fambly croppin' out agin in a fresh place."

"Oh, so it's insanity now!" she says. "The longer you talk the more interesting things I learn. Go on—go on!"

"Yas-sum," I says, "I'm goin'. Yas-sum, they wuz quite a host of folkses w'ich come right out an' said Mr. Dallas and Mr. Clarence, any one or both of 'em, would be amply justified in contestin' the will on the grounds 'at the late lamentable wuz out of his haid at the time he drawed it up. But no, ma'am, not them two! I figgers they knowed they own dear paw well 'nuff to know the idee w'ich he toted in his mind. 'Sides w'ich, all the members of the fambly is sort of techy on the subjec' of the li'l' streak of onsanity 'at flows in the blood—w'ich I reckin they natchelly is to be scused fur that—an' ef one or the other of 'em went to the big cotehouse tryin' to bust up the will on the claim 'at the ole gen'elman didn't rightly know whut he wuz doin' to'des the last it'd only quicken up the talk 'bout the craziness strain. An' so, on 'count of the Pulliam pride an' all, they jest left it stand lak it wuz. An' 'en on top of 'at Mr. Clarence he turned sort of onsatisfactory in the haid an' he strayed off an' wuzn' heared of ag'in till yere recently. An' 'en, soon as Mr. Clarence wuz found, Mr. Dallas he come on up yere an' you an' him met an' ——"

"In heaven's name, quit drooling and get somewheres!" she says, making her words pop like one of these here whiplashes. "What did the will say?"

"Yas-sum," I says, "yas-sum, I jest has reached 'at p'int now. The will say 'at the estate is to be helt in trust fur the time bein', an' 'en w'en the two sons comes of age they is free to marry, only they is both bound to marry somebody or other befo' they reaches they twenty-fif' birthday. An' the one w'ich has the most chillen to his credit at the end of five yeahs from his weddin' day, he gets the main chunk of the property, whilst the other is cut down to jest ——"

"The most children?" she says, only by now she's saying it so savigrous that she practically is yelling it. "The most ——"

"Yas-sum," I says, "tha's it—the most chillen. You see, ma'am, they seems to run to chillen, someway, the Pulliamses does. When a Pulliam gits married—look out fur baby carriages, tha's all. They don't seem to have chillen by driblets, neither, lak some people does. They is more apt to have 'em by triplets. They is two complete sets of triplets on record in times gone past, and ever' generation kin be depended on to perduce at leas' one set of twins, or even more!

"Now, f'rinstances, you tek Mr. Dallas an' Mr. Clarence—both twins. Tek they father befo' 'em an' they maiden aunt, Miss Sarah Pulliam, deceasted—twins some mo'. Only you never heared much 'bout Miss Sarah in her lifetime owin' to her bein' kep' onder lock an' key fur spasms of a kind of wildness comin' over her now an' then. Then ag'in, amongst Mr. Dallases' own brothers an' sisters, tek his two little twin sisters, not to mention the four or five singles w'ich come 'long right stiddy an' reg'lar, but alluz, in they cases, one at a time. Yas-sum, it's been 'at way in the fambly fur ez fur back ez the oldest inhabitant kin remember.

"But the gineration w'ich Mr. Dallas belongs to, it turned out sickly fur the most part, an' so by the time the old gen'elman come to die all his chillen had died off on him, 'scusin' Mr. Dallas an' Mr. Clarence, w'ich them two wuz all they wuz left out of a big swarm. Oh, I jedges the paw knowed whut he wuz 'bout! I reckin he craved 'at the Pulliamses should once more multiply freely an' replenish the earth wid a whole multitude of li'l' Pulliamses. An' so he purvided fur a healthy competition betwixt his two sons to see ——"

"Wait!" she says. "Let me see if I understand you. You say that by the terms of that old maniac's will the bulk of his estate was tied up so to go eventually to the son who had the most children five years after marriage. Well, then what does the remaining son—the loser—get?"

"He gits a hunderd an' fifty dollars a month fur life—I think tha's whut it come to," I says. "Mebbe it mout be a hunderd an' sebenty-five, I won't be shore. An' he also draws down fifty dollars a month extry fur each chile he's got livin.' But tha's all. The home place an' the tobacco bus'ness an' the money in the bank an' all else, they goes to the winner, onlessen each one, at the end of them five yeahs is got a ek'el number of chillen, in w'ich case the estate is divided even-Stephen betwixt 'em. Yas-sum!"

"Then why didn't both brothers marry as soon as they came of age?" she asks me, sort of suspicious. But I was expecting that very question to come forth sooner or later, and I is now prepared beforehand for it.

"Well'm," I says, "you see, I reckin Mr. Dallas figgered they wuzn' no need to be in a rush, seein' 'at Mr. Clarence wuz so kind of ondependable. Ef the truth must be knowed, Mr. Clarence wuz downright flighty. He had spells w'en he'd furgit his own name an' go wanderin'. Yas-sum! An' right after he come of age he took a specially severe spell an' he gauntered so fur away they plum' lost track of him. It wasn't twell last July 'at he wuz located ag'in. It seems lak he'd been detained somewhars out West in a sort of a home whar they keeps folks w'ich is liable to fits of chronic uneasiness in the haid. But now, suddenly, his refreshed memory had done come back to him, an' the doctors pernouced him cured and turned him loose ag'in; an' the latest word wuz 'at he wuz thinkin' 'bout gittin' married down in Texas or one 'em other places out yonder-ways. So Mr. Dallas must 'a' realized 'at 'twuz up to him to stir his stumps an' git hisse'f married off too; specially ez he had done passed his twenty-fo'th birthday the month befo'.

"Well, seemed lak he couldn't find no young lady down home w'ich wuz suitable to his fancies, although some folks did say quiet lak 'at they wuz a local prejudice springin' up on the part of parents ag'inst havin' they daughters marryin' him. But betwixt you an' me, ma'am, I never tuck no stock in 'at, 'cause most of the time Mr. Dallas is jest as rationable ez whut you an' me is. It's only w'en he gets excited 'at he behaves a li'l' peculiar lak. Well, anyways, Mr. Dallas he come on up yere an' he met you. So now it looks lak ever'thing is goin' turn out all right, an' mebbe we'll beat out Mr. Clarence after all, in w'ich case Mr. Dallas won't have to be worryin' at the end of five yeahs 'bout whar he's goin' to rake up the cash to pay back the money which he's overdrawed out of the estate, nur nothin'.

"So that's how come me to mention chillen w'en I fust come in, ma'am. An' I trusts you understan's."

And with that I smiles at her like I'm expecting that now, seeing she knows all the tidings, she'll be jubilated over the prospects too. But she ain't smiling. I lay she ain't got a smile left in her entire system. She's mighty nigh choking, but it ain't no happy emotion that she's choked up with. If you was a blind man you could 'a' told that much from the sounds she's making. She's saying things fast and furious. Remarks is just foaming from her; but the trouble is she keeps on getting her statements all jumbled up together so they don't make good sense. And yet, notwithstanding, I still can follow her thoughts. I catches the words "most children"—she duplicates that several times—and "twins" and "triplets" and "insanity" and "one hundred and fifty dollars a month." And all mixed in with this is loose odds and ends of language which seems to indicate she thinks somebody has been withholding something back on her or trying to take an unfair advantage of her or something. She certainly is in a swivit. A little more and she'd be delirious—she would so!

All of a sudden she flings herself out of the room, with her necklaces and things clashing till she sounds like a runaway milk wagon, mighty near almost, and she makes for the telephone in the hall and I can hear her trying very frantic to get our number rung up. For a minute my heart swarms up in my throat—anyhow, some of my organs swarms up there where I can taste 'em. I'm so afraid Mr. Dallas may forget his promise to me and come to the phone! If he does the whole transaction is liable to be busted up just when I've strove so hard to fix everything nice and lovely. That's why my heart climbs up my windpipes. But after a little bit I can breathe easy some more, because it's plain, from what I overhears, that Central tells her she can't get no responsives from the other end of the wire. So then, after one or two more tries, she gives up trying and she comes back into the

CHLOR-E-DIXO
The Tooth Paste for an Acid Mouth

OSCAR SHAW says:
I consider the care of my teeth of the utmost importance, and so I use CHLOR-E-DIXO Tooth Paste.

An Investment in Health

ONLY in recent years has medical science fully recognized the seriousness of diseased conditions of the teeth and gums.

To safeguard the health the regular use of a reliable dentifrice is indispensable.

CHLOR-E-DIXO keeps the gums firm and hard and prevents the accumulation of film and tartar on the teeth.

CHLOR-E-DIXO whitens the teeth like peroxide.

CHLOR-E-DIXO will not harden in the tube.

CHLOR-E-DIXO sweetens the breath.

Men find that CHLOR-E-DIXO is refreshing to the smoker's mouth.

ARNOLD
GLOVE-GRIP SHOES

Women's Oxford
The College

Your eye cannot see it but your feet will know

YOU lace up a pair of Glove Grip Shoes. A delightful feeling of comfort steals over your feet. It is amazing!

Amazing, because to the eye, these are normal, fine looking shoes with all the grace of the new styles. Yet, your feet realize that there is something peculiarly restful in the feel of Glove Grip Shoes.

This is due to their patented construction. The wonderful Glove Grip feature that *raises* the arches of your feet instead of pushing them down. A gentle, natural support for tired foot-muscles.

A charming oxford for women is "The College" shown above. It is made with a low heel and shield tip in a fine grade of tan calfskin.

Illustrated below is "The Avalon" for men. A conservative model with exceptionally fine lines.

Selected dealers throughout the country are now displaying these and other Glove Grip models for men and women. The name of your nearest dealer and an attractive miniature catalog will be sent on request.

ARNOLD GLOVE GRIP SHOES

setting room still spilling mumbling words—but "children" continues to be the one she seems to favor the most—and she says to me that she has a message to send to Mr. Dallas which she wants me for to take it to him.

Still playing my part, I says to her I truly hopes there ain't going to be nothing in the message which will put Mr. Dallas in a bad humor with me. But she don't appear to hear my pleading voice. She's already set down at a little writing desk in the corner and she's got a pen in her hand and she's writing away like a house on fire. The pen is squeaking the same as if it was in torment, and them five or six bracelets on her arm is clinking sweet music to my ear. I ain't no seventh son of a seventh gun, which they tells me they has the gift of prophecy laid upon them at birth; nor yet I ain't no mind reader; but, even so, I says to myself that I don't need but one guess at the true nature of what 'tis she's writing.

She gets through quite soon—there's only just one single sheet of paper—and she folds it up and creases it hard like she's trying to mash it in two, and she jams it in an enveloper and seals the enveloper and shoves it into my waiting hand.

So doing, she says to me, "There! Now you take this note to the man you work for—immediately!"

"Yas-sum," I says. "Is they any answer to come back?"

"Answer?" she says. "No—no—no—no!"

So I goes right out, leaving her still saying it at the top of her voice. It seems to me it's high time to go, if not higher. Besides, it's mighty hard trying to carry on a conversation with an overwrought-up lady which she has only got one word left in stock, which that one is a little short word like no.

So I takes my foot in my hand and I marvils thence from there fast as ever my willing legs can take me. And as I goes along on my way, speeding 'cross town bound for our quarters, I'm trying to think of a stylish word which in times gone by I has heard some of the white folks use as a pet name for a note from one loving soul to another. Presently it comes to me—billet *doux!*

I stops right still where I is at.

"Bill-Lee do, huh?" I says to myself. "Yas, sometimes Bill-Lee do. But this time—glory, hallelujah, amen!—Bill-Lee do not!"

(TO BE CONCLUDED)

The Poets' Corner

The Sailor

HE WHISPERED a word or two, an old gray man,
Dying, alone and poor, on a summer day,
In the county poor farm, in rage. I heard him say
One word; and a smile came into his eyes,
And his look was odd;
As though, in a pleased surprise, he had met with God.
His face was furrowed and lean
And his skin was tanned;
And he murmured, "The things I've seen——
She was undermanned; but we brought her through."
Ere his old eyes closed, smiling, he looked at me,
And "Ships" was the word he murmured; "Ships—and another sea."
And it seemed, as he died, that I heard
A far-off cry,
The ring of a sailor's song; and his parting breath
Was joined to that distant singing, as though, in death,
He had leaped to the windlass bar and heaved again,
Rousing an anchor up, to an old refrain.
They buried him there in the potter's field
By the side of the railroad track
Down which he had slowly wandered with his blanket pack
Strapped to his bowed frame.
There is no name there, but a ship flies by,
With a murmur of roving song, on the midnight sky;
And again I hear his voice as he says to me,
"Ships—thank God! There are ships—and there is another sea."

—*Bill Adams.*

The Lady Spring

THE Spring, like a lovely lady,
Creeps into the world's sad heart,
Touching it with new magic,
Healing its hurts in part;
Thrilling dim streets with glory,
Sweeping dark ways with mirth;
The Spring, like a lovely lady,
Sings to the waiting earth:

"I am a gypsy person"—
This is the song she sings—
"I am the love of living,
I am youth's eager wings,
I am the lute's soft sighing,
I am the foe of age,
I am a lyric written
On an untarnished page!

"I am all dreams of beauty"—
This is Spring's vivid cry—
"I am the charm of color,
I am the dawn of day,
I am the pale arbutus
Kissed by an early dew,
I am the romance stirring
Deep in the soul of you!"

Over the land she dances,
High on a hill she stands,
Holding a mass of blossoms
In her white, outstretched hands;
Singing—because she wants to—
Filled with a glad surprise,
And, like a lovely lady,
Laughing into life's eyes!

—*Margaret E. Sangster*

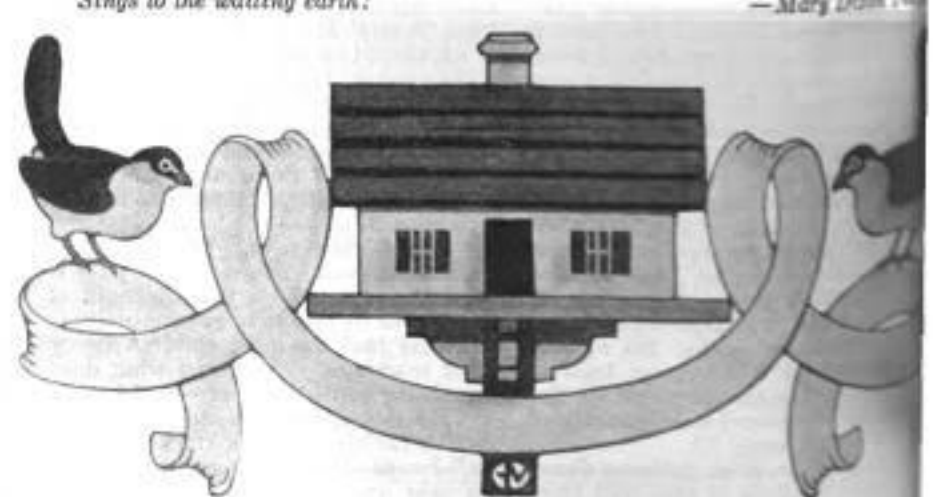
Morning

I LAY in bed. I heard the sun
Cry out, "Today—today's begun."

I lay in bed. I kept my eyes
Tight closed. I knew that all the skies

Were washed in pale pink tenderness
But I thought that I did not care

I lay in bed. A little breeze
Came hurrying among the trees,



And, leaping o'er the window sill,
Crept close beside me and was still.

And then a bird began to sing
"Wake up! Wake up! You lazy thing!"

I tumbled out of my warm bed—
Oh! The sky was as red—as red!

And the world trembled, every bird
I laughed. And kissed my hand to

YOU NEVER CAN TELL

(Continued from Page 13)

It was an article telegraphed from London saying that all British cricketers were looking keenly forward to the trip of the two American ball clubs, and that it was doubted that the big leaguers could prove a match for the best of the English cricket clubs.

"I thought," added Schnitzler, "that we was going to play baseball."

"Sure we are!" I said. "When you read something in the papers about why you bat the way you do, or why you did something or didn't do something in a game, what do you think?"

"I think it's bunk," says Bab.

"Well, bunk isn't confined to this town," I says. "You'll get just as much in London. That's what this article is—bunk. That's all."

That was just where I was wrong. But I didn't know it at the time, and maybe it was just as well for this guy Pratt. In fact, I know it was.

"What is cricket?" asked Schnitzler.

My policy has always been not to let a ball player know that you don't know anything about everything.

"Cricket," I says, "is like baseball, except the pitcher throws the ball with a stiff elbow."

"A stiff elbow! Is that so?"

The Bab stretched himself, and I saw right then that there wasn't any human power was going to keep him from trying to show those English guys up at their own pastime.

But at the time I had other troubles on my mind. Old Wolverton developed his favorite malady—sciatica at the last minute—and howled with pain every time he thought of the damp Atlantic breezes. The result was I was put in charge of the trip. The ball players would have been bad enough to handle, but there were four newspaper guys along with us. To say that much is to say enough.

We left the last week in October, a fine warm day; and the send-off, what with flowers and speeches and handshakes and a tug filled with fans following us out to sea, was all that heart could desire.

That is all of a favorable nature that can be said about that trip. Not a one of us had ever been across before, and the way the ship began to act as soon as she had lost sight of land made me think someone had tipped off the old boat to that effect. The captain was heard to remark that it was fine North Atlantic autumn weather. I think he was a liar; but if he really liked it, then he was the easiest pleased man the world ever produced.

Bab Schnitzler passed out first. He was in the saloon at dinner the first night, waving his knife over a fillet of beef, when suddenly his eyes began to stare and his face turned green. The next minute he was gone. It took four stewards to carry him to his room. It was a good joke to the rest of us—for about an hour. Then we stopped laughing suddenly. Thereafter the only thing to prove that there was any big leaguer on the boat was the list of names in the purser's office.

It wasn't until the last day of the run that I got out on deck, and at that I was a good twelve hours ahead of the rest. And when the ship tied up at Liverpool the outfit that came down the gangplank looked more like convalescents from a Louisiana fever camp than a selected bunch of the world's greatest athletes.

It was then I first met Cephas Pratt. He was at the pier in undertaker clothes—plug hat, skirt coat, gardenia and all. With him was a committee all dressed up like a horse, with faces as serious as though we were the President and cabinet of the United States. You can't beat an Englishman for acting up to an occasion.

"Yes, we're the ball players," I says to Pratt, in answer to his question, adding that old Wolverton was sick and that I was in charge.

"Quite so, quite so," smiled Cephas, raising his lid. "Then perhaps you're the famous Mr. McGann."

"Quite so," I counters. And then didn't he become the pop-eyed little live wire of that particular dock? He waved up the bunch who had stood by looking on and introduced them as the members of the Royal and Honorable Cricket Club of London, appointed to make us welcome. They hadn't spared nothing collecting that committee, I'll tell the populace. There was Lord Duffle, Lord McQuarrie, Lord Chichester-Burke, Col. Fittington-Watts, Sir Michael Finucane and a lot of other top-liners that don't come to mind.

They tried to be nice, and in their stiff up-stage way they were all right enough. But they didn't speak our language at all; that is, none except Sir Michael Finucane. He was a sure regular guy. I knew him well by reputation because of the labels on his Scotch and Irish whisky bottles you used to see in every barroom in America.

"Have ye had a pleasant trip?" he asked.

"Look us over and take a guess," I says, not feeling in especially good humor.

"Well, well," Cephas Pratt butted in, "we'll have to see that you get your land legs, eh, Sir Michael? Fortunately there will be nothing on hand for you until Saturday, today being Thursday. You'll have a good chance to rest. Sir Michael has graciously requested the honor of entertaining four of you at his country place, Faugh a Ballagh."

"The name sounds good to me," says I, brightening up.

"Excellent! Then if you will be good enough to select your companions"—Cephas rubbed his fat little hands—"the other gentlemen will be put up at the Royal and Honorable Cricket Club, where I'm sure they will be comfortable."

"They'll be comfortable any place that doesn't move up and down."

I brought up the invalids and introduced them round, at the same time doing a lot of quick thinking about this guest business. Most of the Grays and the picked team were clean-cut young fellows, several of them college men, and I knew they could season the cricket-club bunch; that is, they could if I kept Bab Schnitzler away from them. For as soon as the Baboon got his appetite and his spirits back I knew what would happen.

So I picked him as one of the men to go to Sir Michael's place; then choosing Judge Connolly, the ump, a quiet little chap, and Tim Holliday, of the Plaid Sox, who was captain of the team we'd brought along to play against us.

Reporters? Sure, shoals of them; a snuffy-looking bunch, very serious and earnest. I made a few modest statements; and then, having no time to bother with them, turned them over to the Baboon, Rats Finnegan, Bill Pitt and the rest. At the time I didn't pay much attention to what the ball players said to the newspaper mutts, but I found out all right when I read the newspapers next morning.

When we reached London most of the bunch got into automobiles and were taken out to the cricket club, while Sir Mike and his four guests piled into his big limousine. As I have said, this big distiller was a regular guy. He was known all over the world, including the United States, and not only because of his whisky either. For there never was an advertiser like Finucane. I figured this stunt of entertaining me and the other three was merely a part of the game he was playing to keep in the public eye. He was one of the Rockefellers of England and one of the P. T. Barnums of the world, who had improved upon the circus man's famous dope to the extent of making it read that a souse and a sucker are born every minute.

After about an hour's ride we rolled into a big gateway, with a little stone house standing beside it, and drove a mile or so among trees and bushes, until finally we stopped in front of a castle.

"What armory is that?" asked the Baboon.

"Faugh a Ballagh," says Sir Mike, with a wave of his hand. "It's your home while you're in England."

At the door was the butler and a couple of movie guys in short pants and velvet coats, with white stockings, who grabbed our bags and started for the stairs. Sir Mike said he suspected we'd like to team up in rooms, although there wasn't any real necessity if we wanted to park by ourselves. I told him it was fine the way he had doped it, and picked Bab as a roommate, figuring he'd need more watching than the other two.

The man who carried up our bags unpacked them as we lolled around watching him work, and then he told us that there would be tea in the drawing-room at 5:30, with dinner at eight. Both propositions made a hit with Bab, who hadn't had any heart for lunch.

"This is a fine country," said Schnitzler as we came up from tea about 6:30 and began to climb into our soup-and-fish suits for the dinner. "They feed the way a man likes to be fed. Say, what was them little fishes they had on toast down there?"

"The way they went down your throat," I says, "I think you'd call 'em disappearing smelts. And say, did you have any idea that when that plush-pants fellow passed you the dish of cakes he wanted it back again?"

"Did he?" grinned Bab. "Well, he got it back, didn't he?"

"Yes, he got the dish. But I wanted one of those cakes myself; so did the rest. If you don't want to be called a baboon don't act like one."

Bab only grinned. He was feeling fine about being off the ocean and living in a castle, with all the food and drink he could stow away. In fact the way he strutted about made me think he had had something stronger than tea. But no.

"Did you see that blond pippin?" he asked when I put my suspicions up to him and demanded to know the cause of his good humor.

"You mean the one that had you off in the corner, laughing at everything you said?" I asked. "Where do you get the pippin? She's a dame of forty."

The Baboon looked at me big eyed.

"I forgot to ask her how old she was. It didn't make no difference, anyway. Did you get the color in her face?"

"The point is, where did she get it?" I laughs, but Schnitzler missed that one.

"And," he goes on, "her yellow hair. I always liked the yellow-haired ones. She's a regular lady, believe me, bo! She's more than that; she's a duchess—the Duchess of Bonnicastle. I don't know what that means, but I know it goes big in this country—just like a queen."

"Bab!"

"That's straight, chief; the absolute goods. I knew she was something as soon as I gave her the eye and she batted right back at me. I guess I wasn't the baby doll of that party, no?"

I couldn't come back on that. Sir Mike had had quite a party of men and women sitting in on that tea, and before five minutes Bab Schnitzler was the center of attraction. He was so American, they said, but beyond that he was such a great, powerful-looking block of humanity that the women especially couldn't seem to take their eyes off him. He was just what a great athlete ought to look like, they said. And laugh? He got a hand every time he opened his mouth for food or to say something. That was before this duchess carried him off to a corner. They stayed there until Sir Mike pried them loose and set Schnitzler up for everyone to bowl at again.

"Say, chief"—the Baboon strutted and stretched—"I guess I didn't make no hit, what? Why, just as I was coming upstairs I made the duchess along in the back hall. She received me fine, chief. Everything is certainly jake between me and that dame. She says the only thing in life for her is men of action. I got a date to walk with her by moonlight tonight over the downs." Schnitzler grinned. "Say, chief, what is the downs?"

"You'll find out if you go monkeying with Sir Mike's friends," I said. "It will be over the down-and-outs for yours."

"Is that so?" says Bab.

I let him get away with his come-back because, since dinner was to be at eight, I figured on an hour and a half to get Bab into his banquet clothes, let alone mine.

Bab's suit being ready-made was just a little tight for him, and brought out his Sandow build like a bathing suit. He was as much a hit when he came into the dining room as he was at the tea. Sir Mike put him next to the duchess at the head of the table, and me and Judge Connolly way on the other side, where we couldn't help him none. In fact, looking at the eating tools, I figured I'd have all I could do to help myself. There they lay beside the plate like bats in front of a dugout. The judge whispers for me to work from the outside in, and whether he knew what he was talking about, or guessed, I don't know. Anyway he was right.

As for the Baboon, he grabbed one fork and never let go of it no matter what came and went. Once when it looked as [illegible] one of the short-pants guys was going [illegible] sist Bab gave him a look and told him to beat it. I suppose he figured if he [illegible] one he couldn't make as many mistakes as if he tried all the possibilities. And [illegible] believe, he got away with it!

Otherwise, aside from his fork specialty, Bab surprised me. I mean the way he [illegible] onto himself. He had got the fact [illegible] bean that he was in with real people [illegible] he had sense enough to do what [illegible] and I was doing—that is, watching [illegible] someone else did before we performed [illegible] then give a correct imitation.

That showed the stuff that was in [illegible] farmer. Why, back in the States he could do everything but make music with a [illegible] of peas, an ear of corn or a plate of [illegible] Asparagus? Say, they were always [illegible] grappled with them! As for the [illegible] chestra and his sword swallowing [illegible] had kidded him out of them before he [illegible] been with the Grays a week.

The duchess—she was really a [illegible] all right; I found that out from Sir Mike [illegible] had the time of her life. She just [illegible] eyes on the Baboon, waiting for him [illegible] make a crack, and then she'd laugh [illegible] blush and put a flower in his button [illegible] and act like an old cat that's given [illegible] and thinks she's a kitten again.

There was about twenty at the table, and they were a nice crowd. They [illegible] what Sir Mike called the hunting set [illegible] county, rosy-cheeked women with [illegible] and ankles, and fine big men. Later [illegible] Holliday, who wouldn't come to [illegible] and ate out with Jaggers, the butler told me that the butler had told him Sir Mike was a bachelor. He said this duchess Bab's was known as the sporting [illegible] a widow with a pile of jack, both of which Sir Mike was looking to annex.

This made clear to me what I had [illegible] cioned at dinner; that Finucane was relishing the comedy between Bab and the duchess. Of course he played the game laughing at the right time and taking marks around the table and from time time butting in on the merry chat going at his side. But all he got was a [illegible] the shoulder, while Bab never paid attention to him at all.

Even at the time, I decided Bab was acting in a way to earn Finucane's gratitude. Well, anyway, Bab and the gray-haired old dame went off for their [illegible] over the ups and downs, and me and the rest sat in at games of bridge. I won [illegible] pounds, but Judge Connolly was [illegible] proper. I'd have enjoyed the game [illegible] and slept better if I hadn't been [illegible] over the Baboon and his butting in on a love affair of a 100-per-cent good fellow like Sir Mike. Bab came in long after I was asleep, and in the morning there was [illegible] pounding his ear, with a bunch of [illegible] clinched in his big right paw.

"What's the idea of the weeds?" I asked, shaking him awake.

"Weeds? This is heather bloom. Gwendolyn picked it for me."

"Gwendolyn?"

"Why, the duchess!"

I wouldn't flatter him by telling him the thought. But I hadn't any sooner come downstairs than I found out that besides Bab and his duchess [illegible] Pratt had showed up bright and early in plug hat, gardenia and all.

"Well," he says, rubbing his hands, "everything's set. You've seen the papers. You're to play at the Lords' Ground tomorrow."

"Sure!" I says. "But you won't play baseball. We're over here to give [illegible] we've got and we'll do it. But we're shaking up these boys have had for [illegible] past there wouldn't be a sandlot [illegible] the U. S. couldn't beat us."

"I understand," says he. "You are referring to baseball. Now, as you are not going to play baseball [illegible] going to play cricket against an all-England eleven. It is ——"

He hesitated.

"Go on," says I; "your mouth is open but you're not saying anything."

He went on, all right. Do you know that little, fat, four-flushing pest had done? He had subordinated the baseball angle of our visit to the zero mark, had got all England roaring over a cricket match between the best ball players

for your furniture

Furniture and woodwork take on new beauties when O-Cedar Polish is used.

First all the dust, grime and scum is removed, finger marks and the like disappear.

Then a hard, dry and lasting lustre is given, the beauty of the grain of the wood is brought out. Your furniture is really beautified.

It is simple and easy to use O-Cedar Polish. Just follow the directions as pictured on the right:

(1) Wet a piece of cheesecloth with water.
(2) Wring it almost dry.
(3) Pour on a few drops of O-Cedar.
(4) Go over the surface to be cleaned.
(5) Polish with a clean, dry cloth.

This produces the O-Cedar Result. This result is guaranteed to please and delight you. If it does not, your dealer will return your purchase price of O-Cedar.

30c to $3.00 sizes—All Dealers

Use O-Cedar Polish
The O-Cedar Polish Way

for your floors

When you use an O-Cedar Polish Mop the hard work of cleaning, dusting and polishing floor vanishes. Work becomes a pleasure.

For with the O-Cedar Polish Mop you do these three things at one and the same time

(1) You Dust.
(2) You Clean.
(3) You Polish.

In addition you save getting down on your hands and knees or back breaking stooping. You save time, work and money and have cleaner, brighter and prettier floors.

Six decided improvements make O-Cedar Mops bigger and better than ever before. And the prices have been reduced. More value for less money.

O-Cedar Polish Mops are sold by all dealers with this understanding: if you are not delighted with the work, time and money saved, your money will be returned without a question.

$1 and $1.50 sizes.
($1.50 and $2 in Canada)

'lease note the ease and convenience vashing, cleaning and renewing the 'edar Polish Mop.

lo tricks to learn. No taking apart. No tugging and pulling to put together.

When your O-Cedar Polish Mop becomes dirty and filled with dust, simply wash it in boiling water. Add soap or borax to help cut the dirt.

Use several changes of water if very dirty. Or boil the mop if you prefer. Let it become almost dry.

ur 3 or 4 ounces of O-Cedar h in a pan and let the mop stand over night.

next morning your ar Mop will be prac- as good as new.

PALM

What is the ma

Falling?

Dandruff?

All largely due to a single cause.

This is to men and women who wish to care for their hair in a more scientific way. To keep or restore its beauty, its health, by methods right and modern.

There is now an ideal method. It deals effectively with the cause of hair troubles, present or impending. It embodies the best that men know.

THERE is an oil in the scalp called Sebum, secreted by the glands of the hair. It lubricates the hair—gives it luster and softness. It keeps the scalp flexible, or should. It is the hair's chief friend.

But, like all skin secretions, there is often an excess. Then the hair becomes too oily. The surplus Sebum decomposes on the scalp. It forms fatty acids which inflame the scalp.

Scales and dandruff often follow. The scalp outlets are choked, the oil is suppressed. Dryness and scale may kill the hair roots, so the hair falls out. Then Sebum becomes the hair's great foe—the cause of most hair troubles.

Cleanliness the first essential

The first rule is the same as with any skin surface. Remove the excess, cleanse the pores. Think what would happen [illegible] do that.

But you must [illegible] Dissolve it, [illegible] this in the right methods.

Our experts have [illegible] best ways known [illegible] Sebum only—[illegible]

That is the [illegible] on ignorance, [illegible] important.

Beauty—

The next thing [illegible] your cheeks. [illegible] oils. Do what [illegible] fine complexion.

Palmolive Soap [illegible] blend which [illegible] The purpose [illegible] And to at the [illegible]

Those are [illegible] The other [illegible]

New Booklet Free

(Continued from Page 60)

United States and the best cricketers in England. He had filled the papers after we boarded the steamship with speculations as to how we would make out, and every Britisher had swallowed the stuff whole. Their experts had got off a ton of leather-headed opinions in their serious British way; and, as I learned later, even the American papers had fallen for the slant.

Why, the morning papers I had in my hand—I hadn't looked at them before I talked with Pratt—was full of our arrival, saying not more than a paragraph about baseball and a mile of type about cricket. The interviews that Bab and the rest had given out hadn't helped the cause of baseball any either.

All Bab knew about cricket was what I had told him, and he had to get that off, of course. The papers quoted him just the way he talked.

"All I want," he said, "is to stand up there against them stiff-elbow tossers of yourn and lean against a few of their dewdrops. I don't know how many balls they bring to a game, but they'd better fetch a motor truck full the day we play."

And more of the same stuff from Rats Finnegan, Trott, Pitt and the rest. Of course, a lot of it was kidding—not from Bab, but from the rest—but did the British squills get it? Ask me!

But getting back to Pratt.

"We'll play no cricket," I says. "We came here principally to play baseball, and if baseball ain't what they want we'll go home."

Pratt came close to me.

"You're in pretty soft here, ain't you?" he asked. "You're at the prize country house in England, with all the food in the world and a cellar where, if you stood in it and saw all the bottles, you'd think you was in heaven. The rest of the boys are living high at the Royal and Ancient Cricket Club."

"They'll be hanging high after they try to play cricket," says I.

"Hangin' nothing!" smiled Pratt. "Do you know anything about cricket?"

"I can spell it."

"Well," Pratt laughed, "it will be as much of a cinch for you big leaguers as one old cat. All you have to do is to learn the fundamental rules."

"Do you mean to say they think we are cricket players?" I drew back my hand waiting for his reply.

"No, but they got the idea somewhere that you play it on the side, and that baseball is closely related to it anyway. As a matter of fact, your men at the cricket club went out last night and did a little practicing. Lord McQuarrie, who was present, said their form was awfully American, but they certainly could hit and field, especially considering they had drunk as much as they had."

"Is that so?"

"Yes, it's so." Pratt backed away. "You play the game, McGann, and you'll be on velvet. As for me, my services have ended. I've closed the Anglo-American Sports office, drawn my remuneration and am leaving for Paris this afternoon. All sorts of luck, old top."

He ducked out the door just in time to miss a right-hand wallop. I'd have followed it up, but Sir Mike appeared at the time, and so I had to turn the final stages of the punch into a good-by wave to the fat-faced little shrimp. It hadn't taken me a minute to see that whatever bed Pratt had made for us we had to lie in it. There was no chance for crawfishing now. All we had to do was play cricket and then look up the next steamer home.

I returned Sir Mike's good morning cheerful as I could register, and while it may not have sounded as cheerful as it might, yet it was like a thousand laughs compared to the tone of his greeting.

"Mr. McGann," he said, coming to the point at once, "your friend Mr. Schnitzler, you know ——"

He paused and I filled in with a low-comedy laugh.

"Yes, Schnitzler. I been meaning to speak to you about the Baboon, Sir Michael. He's harmless. He's just a big what we call busher, who doesn't know anything but how to play baseball—and cricket. Don't worry about him at all. Him and the duchess, that's nix, understand."

"Quite so, quite so," he comes back, forcing a laugh. "I am not worried about my dear friend the Duchess of Bonnicastle. She patronizes freaks as a fad. In fact, just at present one of her protégés, the heavyweight champion prizefighter of England, Joe Plunkett, is training at a cottage on her estate, which adjoins mine, for his next month's fight with Australian Jack Timms."

I nods and he goes on:

"I am speaking because I don't want Mr. Schnitzler's head turned or anything like that. The duchess is a very intriguing woman—what we call a madcap. And your friend, I judge, has not a keen brain, what?"

"I get you."

When I dealt that card I was holding back a lot. In other words, I would 'a' had to be thicker than I was to miss the fact that Finucane was jealous and scared. The thing that rocked me was why he should turn a hair over that big orang-utan that was providing a quick-witted, temperamental woman with a little amusement. Then a big thought landed square in my mitt. Even before he left the United States, the Baboon had been getting jake with himself, what with the adulation of the fans, the janes running after him, and so forth. There wasn't anything I could think of that would do him more good than the well-known sock about four inches below the ear on either side. In other words, I saw a way to put myself jerry with the great distiller and at the same time get Schnitzler down to a point where he'd accept something less than a seventy-five-thousand-dollar contract for his next season's play.

"Don't you suppose, Sir Michael," says I, "that you could arrange so's Bab could walk over the ups and downs with the duchess while this fighter, Plunkett, was sitting on his front steps?"

Finucane started as though I had hit him and then grinned a little.

"It might be arranged," says he, scratching his beard, "unless, ye mind, something better doesn't offer."

With that he choked off short, but he didn't have to tell me that something better had offered already.

By this time, feeling hungry, I went into the breakfast room. While Sir Michael and I had been talking the duchess' big blue car with its coat of arms had swung into the drive and gone around to the side of the house. And there was the duchess in the room, having the time of her life, watching Bab eat!

You see, over in England they straggle in to breakfast any old time, at least out in the country where the castles are. And there is the food on the sideboard, resting on little heaters, keeping warm. Ordinarily I would be strong for the idea. But let a hornpout like Schnitzler get into the room first after a good night's sleep and it was the poorest dopé in the world. For all the breakfast the rest of the household would get would be only something that didn't happen to appeal to his taste.

"What do you think of my cave man, Michael?" says the duchess. "I love to see little chaps turn up bright-eyed with an appetite in the morning."

Sir Michael grunted, while I lifted up the cover of a silver dish that looked as though it once might have held sausages. All I can say about it is that it wasn't any emptier than the rest.

"Anyway, Sir Michael," I grinned, "you had ought to be thankful he left the dishes."

Finucane grunted again, then called the butler and ordered him to tell the chef to bring up his reserves.

The duchess laughed, casting an admiring glance at the Baboon, who sat there up-ending the coffeepot and looking like a million dollars in his light belted Norfolk suit, red tie and soft collar.

"Bab and I," she announced, "are going off on a little motor trip into Surrey unless you have some plans for him today, Mr. McGann."

"Of course I have plans," said I. "The last thing I did last night was to telephone over to the cricket club ordering the boys to practice cricket today. If I don't guess wrong Bab will need it more than anyone."

"Oh, dear!" The duchess wrinkled her brows and glanced at the Baboon, whose face told me without words that there was going to be insubordination in a minute. "Bab and I had planned a little motor trip. Must he really practice, Mr. McGann?"

As a matter of fact, I didn't care much whether he practiced or not, figuring that he had better have all his beginner's luck the day of the match. So I said it was up to him. If he wanted to make a monkey of himself on the field, all right.

They went on the trip. After they [illegible] gone Sir Michael took me and Tim [illegible] Connolly up to the Lord's Grounds, [illegible] the cricket game was going to be play[illegible] There we met a bunch of dukes and [illegible] who were running the show. It didn't [illegible] me two minutes to wisen up to the [illegible] that cricket and baseball had some p[illegible] in common and a lot that wasn't. Connol[illegible] who had been named as one of the [illegible] for the morrow's game, didn't want to [illegible] minutes in resigning the job. He had [illegible] touch of lumbago, he said, and might [illegible] compelled to remain away from the g[illegible] altogether.

As for me, there's something [illegible] system that has worked me harm, [illegible] guess in the long run has done me [illegible] good. I mean being game to take a chan[illegible] I could see that so far as hitting the [illegible] was concerned we might get by, and [illegible] fielding looked to be a cinch; so much [illegible] that I didn't even worry about having [illegible] bowlers. I would stick Norcross and [illegible] in what they called the creases and [illegible] them bounce the ball up to the wicket[illegible] whatever they could put on it.

I felt even better when I ran down to [illegible] cricket club with Holliday and C[illegible] The boys was waiting, and I could see [illegible] once that cricket didn't mean anything [illegible] of the way to this bunch of Indians. They didn't care what they played as long as they could go on living at the club where there was individual bottles of Seagram's rye at every meal, and plenty of meat with that.

"Boys," I says, "you've read the papers and know what you've got to do. We didn't look for what we was going to get ——"

"So far as that goes," interrupted [illegible] Trott, captain of the Grays, "the Indians will feel the same way tomorrow morning. We had practice yesterday, and I guess we would all be on our way home now except that the club members who watched never got onto the fact we were practicing cricket."

"I guessed as much," says I, "from what I read in the papers. The reports said you were warming up by playing the South American game of hoppo. Didn't I told 'em that?"

"We all did," Trott grinned. "We had to tell them something."

"All right. I knew I made no mistake in leaving you in charge, Baldy. Well, get out there and practice to your heart's content. I've given orders to the manager here that it's secret practice, outsiders excluded."

Sir Michael, who watched the workout with me and walked around giving the boys helpful pointers, admitted later that it was just as well I had decided to have practice secret. I agreed with him.

"So far as I'm concerned," he said as we left the club, "tomorrow's going to be rich. I wouldn't miss it for the world. It's your Volstead Act."

I let that remark go for a strike. But it turned out, the proceedings [illegible] were rich in a way old Finucane had not expected. However, I didn't want to get a base on this story, so I'll go back [illegible]

When we got back to Farnham [illegible] after the practice Bab hadn't turned up yet; and Connolly, who was a most tiring little guy, went upstairs and [illegible] saying he had an old aunt in Ireland who would die if she didn't see him. [illegible] me to wire him in Dublin after the [illegible] had stopped and we was ready to talk baseball. But from the way he [illegible] knew he never expected to get [illegible] not about baseball anyway. What he looked for was a telegram asking [illegible] use his influence with the American ambassador to get us out of jail.

Bab blew in just before dinner. The duchess stayed in the car and went [illegible] with it.

"Hello, McGann!" he said. "Is it time for us to go up and get into evening things? My word, old [illegible] late!"

I looked at him hard. But he was not kidding; he was serious. His [illegible] in the air and he was tapping a cigarette on his wrist like Fatty [illegible] voice sounded as though he had [illegible] pack of eating tobacco in his mouth [illegible] of the usual amount.

"So it's time to get into our evening things is it, you big hick?" I says. "Well, tomorrow you'll get into your [illegible] things and play cricket, and every time you make you'll get a fine [illegible]

$1,000 IN CASH PRIZES

for Best Photographs Showing

Durability of Copper, Brass and Bronze

$500 in Cash Prizes for

OBJECT LESSONS IN WASTEFULNESS

of using substitute metals where one of the non-rusting metals, Copper, Brass or Bronze, should be used.

First prize, $150 Second prize, $125
Third prize, $ 75 Fourth Prize, $ 50
Ten prizes of each, $10

$500 in Cash Prizes for

OBJECT LESSONS IN ECONOMY

of using Copper, Brass and Bronze, which will not rust, and are practically everlasting.

First prize, $150 Second prize, $125
Third prize, $ 75 Fourth prize, $ 50
Ten prizes of each, $10

Rules of the Contest

Photograph must have been taken by person entering it in the contest. A contestant may enter one or more photographs.

Name and address of contestant and all descriptive matter to be written on the back of the photograph.

Statements as to age and condition of object photographed will be verified before prizes are awarded and contestant should furnish with his or her entry information that will facilitate verification.

The subject need not be the contestant's property, but contestant must have the owner's permission to photograph it for entry in the contest unless the subject be public property.

By "best" photograph in the metals-that-rust class is meant the photograph of a subject which by reason of its condition, short life and interest is believed by the judges to furnish the most interesting object lesson in the error of using other metals where Copper, Brass or Bronze should be used.

By "best" photograph in the Copper-Brass-and-Bronze class is meant the photograph of a subject which by reason of its condition, long life and interest is believed by the judges to furnish the most interesting object lesson in the economy of using Copper, Brass and Bronze, which do not rust.

Where the subject is a part of a building or other structure the contestant may send also a photograph of the structure in which the subject is or was installed if the contestant feels such a photograph, in combination with the subject itself, will lend additional interest to the subject. Every such photograph should carry on its back information identifying it with the item entered.

Contest closes Sept. 1, and all entries must reach the address given below on or before that date. Every photograph received will be promptly acknowledged. Prizes will be awarded within sixty days after closing date.

Prize-winning pictures will be used in a publicity campaign to inform the public on the economy of using Copper, Brass and Bronze, and in entering a photograph the contestant agrees to such use of his entry.

Wrap your photographs carefully, protecting with cardboard, and send to Contest Committee, Copper and Brass Research Association, 25 Broadway, New York.

SUGGESTIONS FOR SUBJECTS

FAILURE OF SUBSTITUTES—

In Roof Drainage—Close-up photographs of rusted leaders and gutters. Take in portion of wall, showing paint spoiled, if any, by rust water from leaking leader or gutter. State kind of metal and how long gutter or leader in use before rust caused it to leak.

In Plumbing—Close-up photograph of section of rusted pipe removed from a plumbing system, showing hole or holes eaten by rust. Photograph showing a pipe closed, or nearly closed, by rust accumulation inside it. Close-up of bathtub, washbowl or sink stained by rust in water from rusty pipes.

Interior Damage—Photographs of wall paper, painted or kalsomined wall or ceiling or other decorations, badly stained, or perhaps of plaster destroyed, by rust leaks resulting from failure to use Copper gutters, flashings, etc., on roof, or Brass pipe and Brass fittings in plumbing system; photograph of a wall, partition, floor or ceiling torn open to get at rusty, leaking pipes, or a similar operation made necessary by failure to use Copper or Brass, which do not rust.

In Building Hardware—Close-up photograph of a door hanging on rusted fragment of a hinge, or a door pried open because a lock rusted shut; a rusted door-knob, rusted letter drop, rusted mail box, rusted hinge, rusted screw, or a rusted example of one of the many other items of merely plated hardware which rust as soon as the thin plating has worn off, become unsightly and perhaps mar paint and injure woodwork with their rust—a condition that is avoided by the use of all-Brass or Bronze hardware instead of the dipped, short-lived article.

DURABILITY OF COPPER AND BRASS—

In Drainage—Photograph of an old Copper leader still in place or an old Copper gutter still doing duty after many years of service without upkeep or repairs. Do not fail to give date the Copper leader or gutter was put up. Must be at least 35 years old to qualify.

In Roofing—Photograph showing example of the everlasting life of the Copper roof. State number of years the Copper has been in service without upkeep or repairs. Photograph must of course show the roof clearly and cannot qualify unless the Copper has been in place 35 years or more.

In Plumbing, etc.—Photograph of a section of Brass pipe or a brass fitting *still in place* that has been in service 35 years or more without upkeep or repairs.

In Other Uses—Photograph of an item of Brass or Bronze hardware with a long service record, a Brass or Bronze plate, a building ornament of Brass or Bronze, a Copper or Bronze window screen, a Copper cooking utensil, or other Copper, Brass or Bronze article of utility or ornamentation. Must be at least 35 years old.

Get out your camera and look about you for subjects. You will find them everywhere.

Copper, Brass and Bronze are cheaper because you pay for them only ONCE.

The attractive Blabon floor of genuine inlaid Linoleum in this Atlantic City Drug Store resists the wear of thousands of feet season after season at the popular seashore resort.

Why not a durable floor that's beautiful?

In Blabon Art Linoleum you not only have material that lasts, but a floor whose bright, cheery, harmonious appearance makes it a big asset to a store, office, hotel, club, theatre, or home. Its pleasing colors make an office, especially, a more "liveable," restful place for the workers. Customers also are drawn more readily to a store that radiates hospitality, comfort, and neatness with an attractive Blabon floor.

The beautiful inlaid patterns and plain colors in a Blabon floor go through to the burlap back, and continue to look bright and colorful during the entire life of the linoleum.

A Blabon floor is sanitary; it is easy to keep clean. Its resiliency makes it quiet, and comfortable to walk or stand upon. Waxing and polishing once in a while keeps it in splendid condition. A Blabon floor has a cool, refreshing appearance in summer. Fabric rugs may be thrown over it in winter.

When cemented down, Blabon plain or inlaid linoleum becomes a permanent floor. Any Blabon dealer can send or recommend an experienced man to lay Blabon Art Linoleum.

For genuine linoleum, look for the name Blabon. Write for illustrated booklet.

Have you seen Blabon Rugs?

They are genuine linoleum. Beautiful, long-lasting, mothproof, and sanitary. Moderately priced. Ask your dealer for them.

The George W. Blabon Co., Philadelphia

Established 71 years

Important Notice

Floor coverings (including rugs) made upon a felt paper base are not linoleum, and to describe, advertise, or sell them as linoleum is a violation of the law. Felt paper floor coverings have a black interior which is easily detected upon examining the edge.

BLABON ART Linoleums Guaranteed

(Continued from Page 64)

that'll make your salary look like a hole in the wall."

"Really!" he says, raising his eyebrows and walking out of the room.

Really! I could see what had been happening. The duchess had been working on the rough edges of her cave man. And, as has already been noted, give Bab one thing at a time and he could learn anything. If you could only have sat there with me and heard that cactus crusher talk that afternoon you'd have been willing to hand that merry, yellow-haired, painted-up buzzard even as much as I did.

That night Sir Michael didn't have any company in at dinner; that is, outside of me and Bab and Tim Holliday. The old man was in a great mood.

"Mr. Schnitzler," he opens, "have you ever met Joe Plunkett the prize fighter?"

"Yes," replied Bab, "I seen—sawn—him on the road this morning. Gwendolyn pointed him out."

"Gwendolyn!" I could see Sir Mike chewing his under lip.

"The duchess, you know."

"Of course!" Finucane nodded. "What do you think of him?" As he spoke he tipped the wink at me.

"I never seen—sawn—him work. Looks kind of heavy-footed."

"He can hit," frowns Sir Michael.

"What's the use of being able to hit if you can't find nothing in front of you to wallop?" the Baboon grins. "In the States they'd be hitting that bird from behind."

"Oh, you're a fighter yourself?" asks Finucane.

"Not a professional," says I, climbing aboard. "He's beaten all the members of the Grays, one and two at a time."

"I could 'a' been a pro at that if I hadn't liked ball playin' better," announces Bab, sticking out his chest, and doing the thing he could next best to bat, which was throwing the bull.

"I see." Finucane bats his eyes. "I been wondering, Mr. Schnitzler. Perhaps if I arranged a ring in the ballroom Sunday night and invited a lot of friends you might be willing to go through a little bout with Mr. Plunkett—just scientific, you know. The duchess would enjoy seeing you, I am sure."

At the minute a pickled peach had skidded from under Bab's fork. He caught it with his left hand just before it reached my shirt front and then nodded to Sir Michael.

"Anything that suits you I'd be plumb crazy to do. You certainly been giving me a jake time."

Knowing the Baboon, and being as anxious as was Finucane to cinch the bout, I pulled a serious face.

"Is Plunkett going to have one hand tied behind him, Sir Michael?"

Finucane laughed.

"Plunkett suggested it. Said he wanted to be sure not to hurt the American. I said I'd speak to Mr. Schnitzler."

The Baboon's face was red. He was thick-skinned, but at that he was no rhinoceros.

"Is that so? Who is this guy Plunkett? He's only the champion of England. What's England? Why, I went clean across it in the automobile to-day. It's like the champion of New Jersey. You tell this hombrey Plunkett that he'll need all the hands he's got Sunday night."

And, as the duchess used to say, that was that.

Then next day came the cricket match. The newspaper guys, who were not so thick as I had sized them, had tumbled to the affair, but had decided to be cagy. They said that everyone who missed this great international test would be sorry. There was columns about it, and all of it done in a serio-comic way that made me want to lick the persons who had ever told me that Englishmen had no humor. Of course among the real cricketers the fact had leaked around that what we didn't know about the pastime would fill one of those eight-volume dictionary sets. But that didn't hurt the attendance. The whole idea was to show us up good and proper and give us such a trimming that whenever baseball was mentioned in England thereafter it would draw a horse-laugh.

There was no World's Series crowd, but that was only because the grounds wouldn't hold that many. An hour before the game the fence was bulging out and they were turning them away at the gate in droves. There were members of the royal family the Prince of Wales was there and dukes and earls and marquises and marks and counts and no-accounts until you could rest. The Duchess of Bonnecastle was a prominent place, Sir Michael at her side. So was Joe Plunkett, the prize fighter. You could see the duchess was all for the pug which didn't seem to bother Finucane at all. It bothered the Baboon all right.

"For two cents," he said to me, "I'd walk over there and bust that three-cent right now. Do you know what he said when the duchess tried to introduce us? He wrinkled up his pig eyes and said it—meaning me—was alive."

I didn't have time to laugh. I was nervous and had been spending most my time looking for a hole in the fence. I told Bab he could show whether he was alive in the cricket game, and then went over to Lord Abercrombie, who was beckoning to me. He asked how many innings we should play.

When I says "Oh, the usual number—nine" he gave me a look.

"Are you aware," he says stiffly, "that an inning in cricket is likely to last an entire afternoon, if not longer?"

Seeing I had booted one, I bowed and told him to pick the number, and he said he thought one each would do. I told him I thought so too. All right, out of courtesy he would let us take first at bat. I thanked him, and then when he placed his men I watched and drew down a diagram, which I gave to Trott to use in the field.

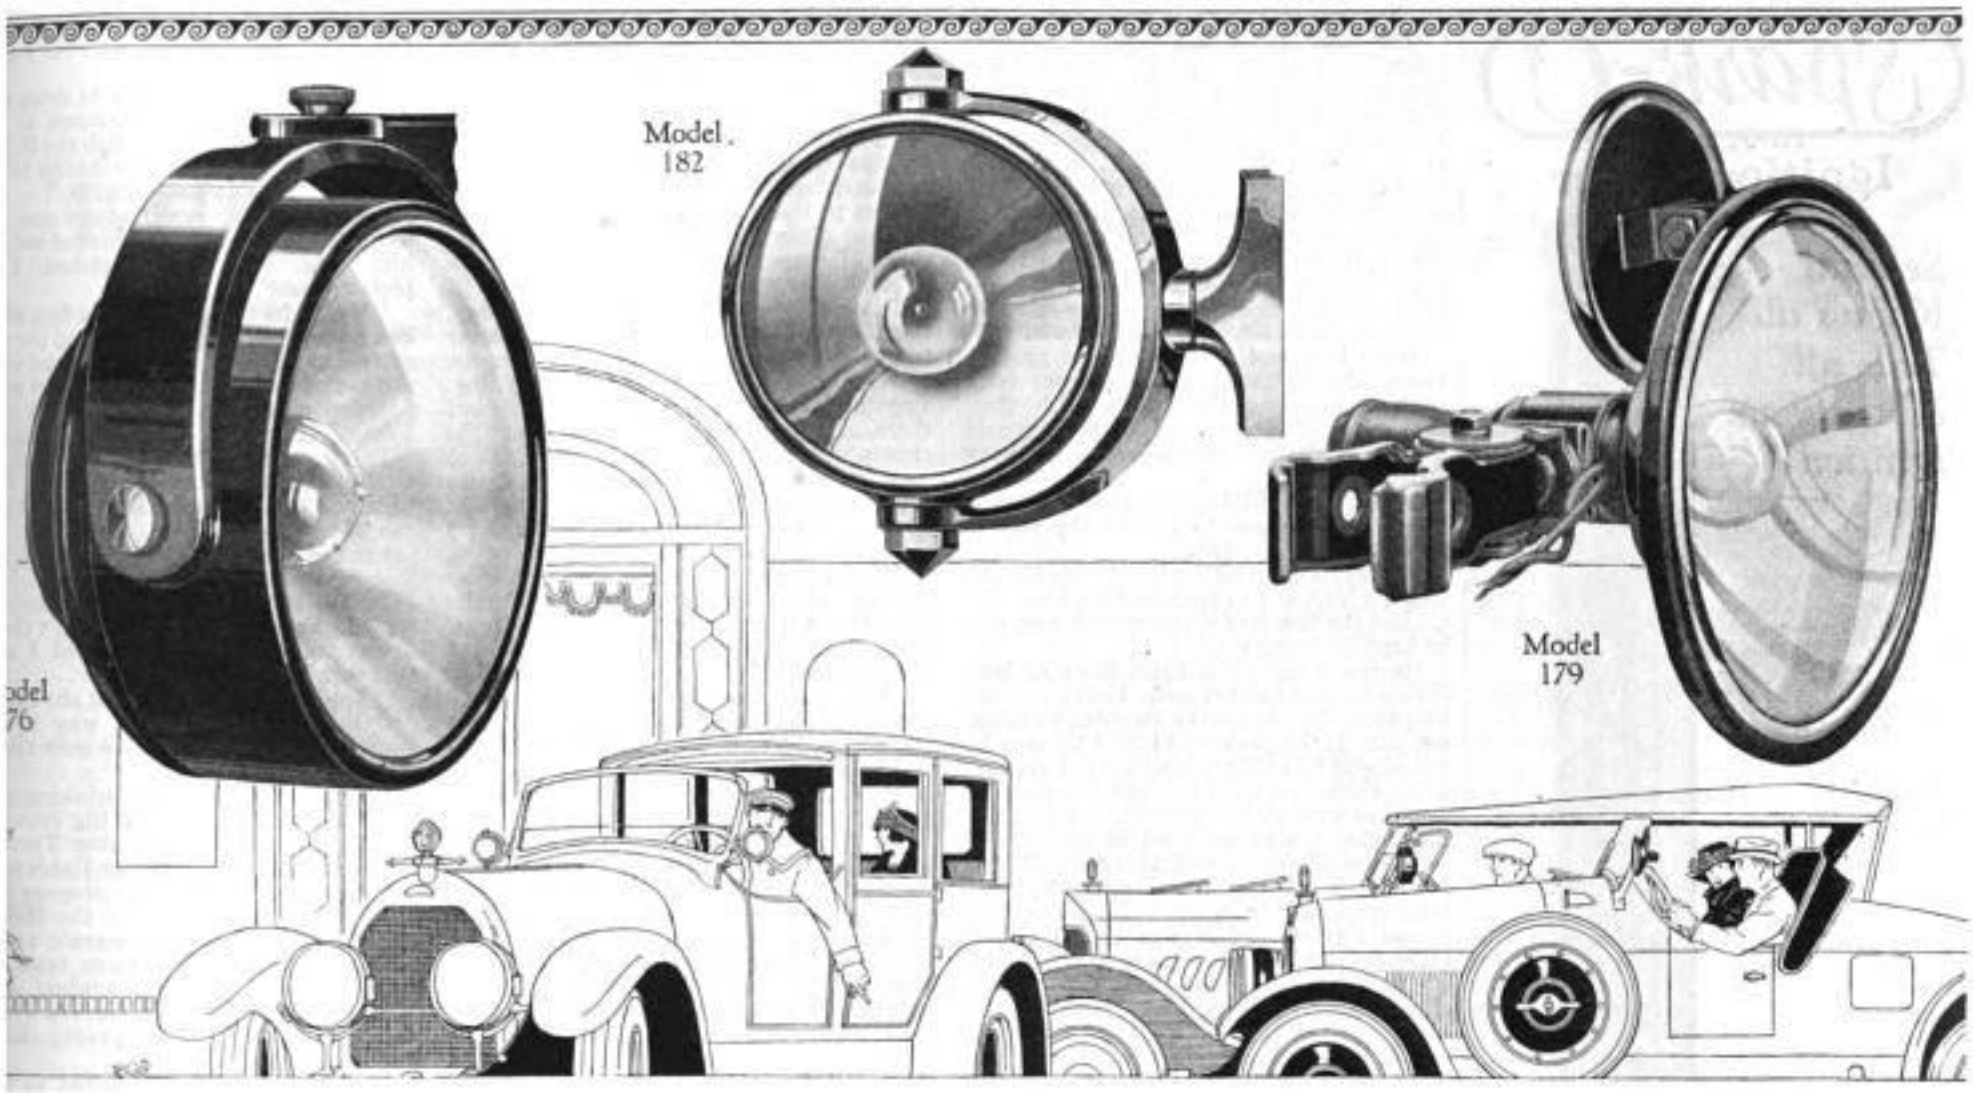
There came a silence just like when the ump steps out with his hat off to announce the batteries. Two pitchers—or bowlers, as they called them—Lord Umpty-Something and someone whose name sounded like Sir Rollover Bunn, went to the wickets. Not knowing what else to do, I decided to start our regular batting order, Finnegan up. Now Rats had disappeared a few hours after we landed. I think he was made temporarily insane by the shock of the discovery that all one had to do to get a drink in London was to turn right or left from the sidewalk, according to the direction you were going. The shock was the harder because Rats had had the idea that prohibition was world-wide. They say good news never kills, and Finnegan proved it, but only by a squeak. He came to the grounds straight from the hospital.

Finnegan went to one wicket first and Bill Pitt to the other. Finnegan batted first. As the bowler raised his arm and twisted himself and let go the ball Rats just stood looking at it as it struck the ground, and then bouncing up knocked the tops of the wicket behind him.

Knocking the wickets is the great bowling stunt. It was like striking out a batter in baseball.

"Why, the ball was on the ground!" yelled Finnegan when they told him he was out. He went over and interviewed the ump while the crowd booed. When the ump explained, Rats dashed his cap to the ground and stamped on it. This seemed to hit the crowd as funnier than Charlie Chaplin. One fat man was carried out in an ambulance.

Trott replaced him at the wicket. He stepped out to meet the ball and before he could get back the wicket-keeper took the ball and knocked the wickets down. "Stumped!" yelled the crowd with delight. So he was out and there was another argument. Then Boyle went in. The first ball struck him below the knee. He turned to the ump, asking what he got out of that. The ump said he got an out because he was standing in front of the wicket when the ball hit him. It took half our team to get Larry away from the umpire.



Now it was the Baboon's turn. I leaned forward, hands upon my knees, and gave him a line of Cincinnati-coaching talk. Even if he and Bill Pitt flivvered, this game was going to be more of a joke even than I had thought. Three of our most consistent batters had already gone down on three pitched balls, and while we had seven more outs to go, ten in all, I couldn't see many runs in the offing.

I must say Bab looked like a million dollars as he stood there in baseball pose. There never was a finer picture than the big fellow in action. His bowler let go wide of the wicket. Bab never blinked at it. Now, in cricket the good form is to bat at the wide ones and merely block off the ones that are coming straight for the wicket, just the opposite to baseball.

"What's the matter? Are you yella?" Bab asks the bowler, who, I think, was a duke. "Put one over!"

Tired after night driving?

Eye-strain from trying to keep out of the ditch and avoid spring-breaking holes?

Aching muscles from gripping the wheel? Where's the pleasure in that?

You can make it a pleasure, though. Direct the brilliant light-ray from a Stewart Searchlight on the side of the road. Then relax and enjoy the cool evening breeze. There's darkness around you—but there's daylight on the road ahead.

Model 176 is given a beautiful black enamel finish.

Model 176-C, for open cars.
Model 176-A, for closed cars.

All Models are priced at.....$7.50

Switch on instrument board.
A large mirror in the back of Searchlight.

A little beauty is this Miniature De Luxe Light. A lustrous nickel finish that reflects the highest quality of workmanship.

Many drivers prefer the miniature model not only because of its attractiveness but they find it does not interfere with their vision when installed on the windshield.

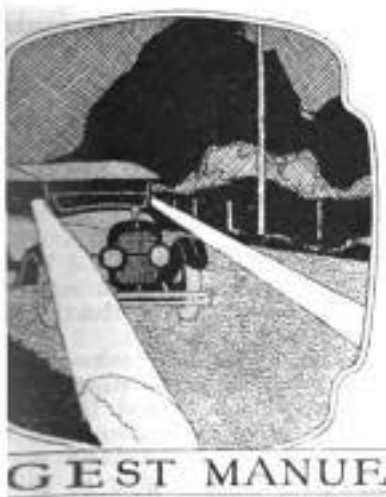
Two of these lights give the car a nicely balanced appearance and enable the driver to direct one light-ray on the side of the road, the other straight ahead, dispensing with headlights.

For open or closed cars. One pair Model 182 Stewart Searchlights, $24. $12 for one. Separate switch for instrument board. A mirror in the back for watching rear traffic.

For the driver who wants an efficient Searchlight that is light in weight and easily handled, Model 179 is admirable.

The handle in the back makes it easy to grasp and turn the light in any direction. Can be used to light the road, read road signs, house numbers or for roadside repairs.

Model 179 is given a rust-proof black enamel finish. The reflector is nickel plated.



Switch is in end of the handle.

The rear vision mirror which clamps onto the Searchlight is extra equipment and sells at $1.00. The Searchlight without mirror is $5.

Model 179-A, for open cars.
Model 179-B, for closed cars.

(Continued from Page 66)

The duke smiles in a superior way and pours one straight down the groove. If it had got past Bab it would have made those wickets look like an explosion in a bale of toothpicks. But the Baboon didn't let it go by, and he didn't block it. He took a toe hold and swung like a windmill. With the flat paddle he had in his hand he couldn't have missed the pill with his eyes shut. While the crowd gave a flutter of anguish that ball began to travel. If it ain't floating somewhere in the English Channel today I'll eat the mate to it.

Well, Bab and Pitt started to run between the wickets, as the custom is in cricket, touching the stakes with their bats to count the runs, when the ump said they needn't tire themselves. He gave Bab six runs.

"All right, old boy!" yells Pitt, who now got a chance to bat in the second 'over.' "Slip it to me!"

Pitt was a chop hitter, like Willie Keeler. Cricket hitting was patented for him. He choked the first ball where no one was, and he kept on doing it.

He made eight-five runs, more or less, before he was bowled out. Harrigan took his place. But as for the Baboon, he never got out. If the game had lasted till now he would still be in there walloping, I reckon. After each five balls pitched the bowlers would reverse their stations and try again. The fielders, who were set in all sorts of ridiculous places, would reverse with the bowlers; but it wasn't any use. Anything that came within reaching distance Bab leaned against and it was good-by ball. Harrigan hit for sixty runs, and then he was called out on some technicality. But they weren't catching Bab. Evidently he had learned all there was to learn about the hitting rules from the duchess. In fact she had taken him down to Oxford to practice.

His hundred-and-ninth run came when he hit a liner straight at a guy they call the long-off. This fellow was game, but foolish. He tried to catch it. It went through his hands and hit him in the stomach. Everybody stopped for tea, and they changed bowlers while the ambulance was taking him away.

This gave the duchess a chance to summon Bab to her box. The Prince of Wales was passing at the time, and the duchess, putting one hand on the Baboon's shoulder and the other on Plunkett's, smiled her two-reel-movie-vamp smile at His Highness.

"My two champions!" she simpered.

The Prince smiled then, acting like he could just recall Gwendolyn, while Bab gave the English champ a scowl.

"Sunday night," he says, as though to himself, "there'll be only one champ. And it'll be alive, all right," showing how little it took to get my star batter all chested up. Because he was busting cricket balls he'd got the idea he could bust anything, even a champion box fighter.

Well, anyway, when the umpire called it a day they had eight outs on us, and Bab was still filling England with lop-sided cricket balls. The scorer had got cramps counting what we'd made, but it was something over three hundred-odd runs, if I recall; anyway it was something record-breaking.

The all-English team had used up all its bowlers and a lot that had no pretense to being such, while the fielders had run themselves ragged, their tongues hanging out, trying to shag such balls as remained within the grounds. So they requested that the rest of the inning, as well as their inning, be put over until Monday. I agreed. In fact I'd have agreed to putting it over until next week, and you won't blame me when I ask you how you'd like to sit at a ball game lasting five hours, with nothing but home runs by one side.

The hero of course was the Baboon. The Prince of Wales finally remembered he had known the duchess and let her present the big fellow, and the two kidded each other like a couple of pals. In fact Bab and he had their picture took standing together, with the duchess between. And you could see that Joe Plunkett, sitting alone with Sir Michael, liked the incident just as well as he would like a wooden leg.

That night there was a dinner at the Royal and Honorable, with the American ambassador, who for some reason or other had been off us up till then, making a speech, and then a British cabinet member, and then a lot of other guys, who told us that while our form was rotten we were 100 per cent efficient. It was large, that evening.

I don't know when I got home, or how. All I know is that when my head ached me back to consciousness next morning and I lamped Bab there in the next bed his appearance didn't tout him as an odds-on bet that he would stick four rounds with the champion of England that night.

About ten o'clock up come a bunch of flowers to Bab from the duchess' own hothouses. They might as well have been a stack of carrots for all the Baboon knew or cared. He was in, that bird.

Toward noon Sir Michael, Tim Holliday, myself and a couple of guys walked over to the duchess' place, or at least to the cottage where Joe Plunkett was training. The dame herself showed up just as we got there, and we all went in and watched the champ punch the bag. He looked O.K. to me. Of course, he had shown he didn't class with, say, Dempsey; but he worked good, and was about as well built for his trade as any man in the world.

The duchess treated him different from the way she handled Bab. She was the great lady all the time down in the cottage, and Plunkett was as polite to her as one of her servants.

"You understand, of course, Plunkett," she said, "that this bout tonight is merely friendly and for the pleasure of Sir Michael and his guests."

"Certainly, yer gryce," says Plunkett, and hits the bag an extra hard wallop.

Sir Michael tips the wink to me and I tips it back. Then he leaves us watching the fighter while he and the duchess strolls off through the deer park, she leaning on his arm and Finucane with his chest out and head up as though he was keeping a date with the Queen of England.

When we arrive back at the house, there is the Baboon up for air.

"For a man," I says, "that's aiming to box with the champion of England tonight, you look like a sardine."

"That's so; I have got to box tonight, ain't—haven't I?" Bab looks thoughtful. "Well, it's only four rounds, and this bird Plunkett won't last one."

I gave the hick a long look.

"Bab," says I, "are you only kidding or do you mean what you say? This guy, Plunkett, is a champion."

"Of England—sure! Say, chief, I want to put you wise to something. I've got the rep of being the best scrapper in the big leagues, ain't—haven't I?" I admitted it, and he went on: "Well, you don't know it, but when Jack Dempsey was touring with the burlesque last winter I went on with him for three rounds out in Peoria under a fake name—of course the champion knew who I was—and he said I gave him the best workout he had had in a year. He said I could be as big a fighter as a ball player. I told him sure I could, but I liked to hit something as a regular business that couldn't hit back—meaning of course the old apple. Well, this leather pusher, Plunkett, would drop dead if he sat in the same ring with Dempsey."

"He promised the duchess," I says, "he would make it a friendly bout."

"So will I," laughs Schnitzler. "I'll knock him for the circuit right off quick, and not carry him along, punishing him until I get ready to put on the crusher the way a lot of mean-natured champs do."

I saw it was no use to talk to him. Anyway, there was a lot of newspaper men, American correspondents, waiting to get his views on cricket and Lloyd George and the King and everything, so Tim and I walked away and let him rave.

The duchess sat in at lunch. She kept looking at Bab the way a woman looks at a man that is going to the electric chair. But when she talked she was sprightly enough, evidently figuring to keep up the Bab's confidence.

"But there is one thing I don't quite understand," she says. "Did you challenge Plunkett to this bout, Bab, or did he challenge you? Just what did happen? I am really curious."

The Baboon grinned.

"Oh, Sir Michael asked me would I go on if he could arrange the entertainment, and I says, 'Sure! Always ready to oblige, you know.'"

The duchess didn't say anything, but she shot a glance at Finucane that I didn't get the meaning of; nor did Finucane, I guess. Anyway he looked thoughtful the rest of the meal.

She asked Bab what he was up to that afternoon, and he said a little training. He was in good condition, barring last night's shindig, and he thought he would run that out of his system and then step a [illegible] two with Tim Holliday, who was a [illegible] hefty lad himself.

Sir Michael had a date to drive somewhere for a musical afternoon at some place, so that left me and Bab and [illegible] alone. We got in a roadster that Sir Michael had left for us to use—that is, Tim and I got in and let Bab run after us a mile. Then we picked him up out of the road and [illegible] him home. When I say "picked" I mean picked.

"Well," he says later in the day, after he had punched Holliday all around the [illegible] done some shadow stuff and wound up with a hot-and-cold bath, "I'm fit and ready."

"You mean you're ready to be [illegible]," I says. He swings at me, then laughs.

"Quit your kidding, chief. Honest, when Gwendolyn sees me step tonight there'll be a new duke running her castle, and you can take that from me. The janes are [illegible] for me in the U. S. A., didn't they? But you never seen me fall for them, chief. I'll hand it to the Bab that I never [illegible]."

"Well, that's because they wasn't the right one. I was waiting for royalty and I always told her so."

"The helyadid! What did she say?"

"Oh, she laughed—the way a woman would, you know, when she gets the genuine up-and-up."

"Sure I know!" I says, winking at Tim.

That night there was a big crowd at the dinner, and after it was over Tim and I, who had been nominated as Bab's seconds, went upstairs with him to prepare him for the funeral. I'll hand it to the Baboon to the extent of saying he wasn't any more nervous than he would have been when getting ready to go up against a major league pitcher. But then, nerves was something you'd have to dig pretty deep to find the Bab to find.

He had bought a ring outfit in London the previous day, before the cricket game, and when he was rigged up you can bet [illegible] down he looked like a fighter, even to Tim and I didn't take him to be one. Above a pair of white running pants he was stripped to the buff, and I'll hand it to him that he had about as fine a body as Nature ever built onto a pair of legs. And, speaking of legs, the Baboon was there, also. In fact looking him over, I began to lose my original idea of wanting to see him beat it.

"Bab," I says, "you've got a chance against that English stiff, darned if I don't think you have!" Then a bright thought came. "Bab, you boxed right-handed against Tim. Can you box from the port side?"

"No; why?"

"Nothing, only it's too bad."

"Leave it to me, bo!"

"All right, I'll have to. Remember you represent the good old U. S. A., and knock this guy for a string of Wienerwurst."

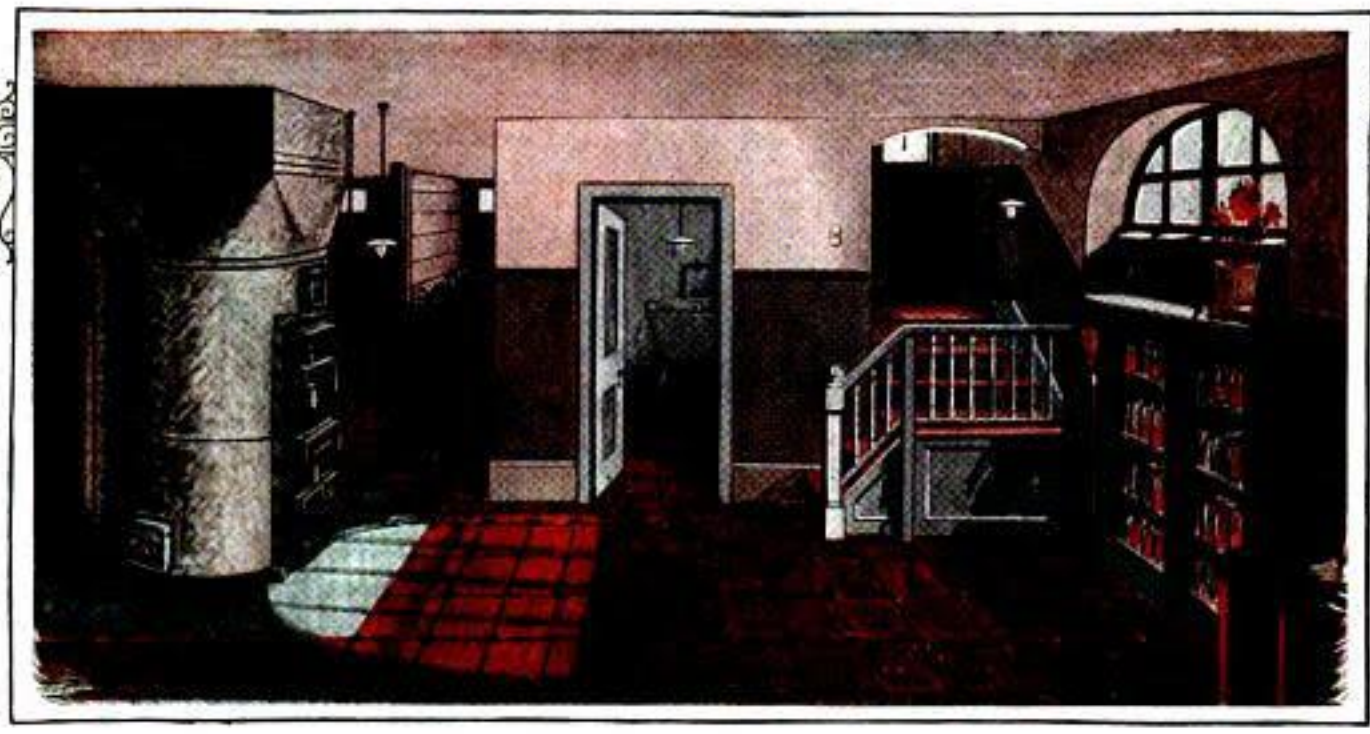
"Watch me!" grins Bab.

"Well, come on then."

Down we went. The bout was to be pulled on in the ballroom. It was an epochal [illegible] place. In fact it hit me so sudden and hard that I pulled up in the doorway, stepping on the Bab's foot and getting a jolt and a growl from him. I had seen lots of fights; in fact occasionally I had officiated as third man in winter out here, but never had I seen a sight like this.

There was a ring with brass posts and silk ropes, surrounding a stretch of canvas, a big chandelier overhead. And all around in gilt chairs were about fifty top-hatted the men in full dress and the women in [illegible] necks and no sleeves. The duchess was right back of Bab's corner, with Sir Michael at her side. And flunkies in plush and [illegible] were passing cigarettes and cigars.

There was handclapping as Bab and Tim and I stepped through the ropes, and a regular uproar a minute later when Plunkett and his handlers appeared. Some guy with one eyeglass and a lisp was the referee and Sir Michael held the watch.



Plunkett peeled off his bath robe [illegible] and appeared in a blue jersey and long tights. Evidently he wasn't figuring on a hard work. Right after, Bab shucked his robe. Then there was a roar, I can tell you. Even Plunkett started back as he saw the moving-picture build of that guy he intended to walk over.

Take it from me, Bab looked the part he was playing. His big rugged face was set on top of a body and limbs that the birds who carve statues would have to money to copy. I took a slant at the duchess, and if she didn't give a picture [illegible]

What other method of heating will give you all these advantages?

LOW in price, quickly installed, easily operated and remarkable for fuel economy, the Mueller Convector offers advantages not obtained by other methods of heating, no matter what their cost.

You see all of this compact, efficient system in the basement illustrated. Note the absence of unsightly, heat-wasting pipes. The entire house is heated, upstairs and down, through one register. Living rooms are wholly free of heating apparatus.

Can any home owner afford to overlook the following Convector advantages?

The Convector Ventilates Your Home While Heating It

Ventilates it—just as modern hospitals are ventilated—their great ventilating systems. They use exactly the same principle as the Convector, excepting that they must have pipes and fans to circulate the warmed air because of the size of the buildings.

Without a single pipe or fan, the Convector gives you the same practical results. Fresh, warmed air is constantly circulated to every room in your house. There can be no spotty heat, no corners filled with stagnant, stuffy air.

How can you have healthful ventilation in winter, unless it is provided by your heating system? Open windows cause uneven, haphazard ventilation that wastes fuel and causes cold drafts. Demand a heating system that furnishes positive, **natural** circulation of air with even heat—and the Convector.

The Convector Provides Healthfully Moistened Air

All air that is warmed in your rooms in winter should be immediately moistened. The drying effect of warmed, unmoistened air is harmful to almost every object in your home. Natural moisture is removed from floors, woodwork and furniture, causing them to warp and creak. Fine finishes are marred, wall-paper is loosened, musical instruments and even fabrics may be harmed.

Unmoistened, heated air dries the lining of nose and throat, throat and lungs; makes you susceptible to colds, bronchitis and headaches; causes you to be nervous and irritable. Ask your physician.

The Convector automatically moistens all the warmed air in your home. The amount of moisture is self-regulating—the air naturally taking the proper amount.

The Convector Keeps All Radiant Heat Out of Your Living Rooms

Two forms of heat are used in heating homes and buildings—**radiant heat and heat of convection.** Radiant heat is that thrown off by an open fire and, in great degree, by the hot metal of stoves. **Heat of convection** is heat absorbed by air moving over a hot metal surface. Every home should be warmed by **heat of convection.** Radiant heat always makes the temperature uneven. It is painful, for it passes readily through windows and is readily absorbed by walls.

From 40% to 60% of the heat from some systems is radiant heat. In the Convector, all radiant heat is changed to heat of convection, used to warm the air, and sent to every room in the house. This is one of several reasons the Convector saves ⅓ to ½ on fuel. It is also the reason for the name, CONVECTOR.

The Convector Operates in Any Weather Without Fuel Waste

In fall and spring, when many systems waste fuel and are hard to regulate, the Convector never falters in its economy. A quick fire, a little fuel, and the chill and damp are gone from a cool October day. No waiting for the Convector to "warm up"—it responds at once.

You regulate the temperature **directly by the amount of fuel you burn.** What satisfaction on mild days to know that you are trimming your fuel bills—that you are not burning more than is necessary.

This direct fuel burning regulation makes the Convector the universal system. Alaska to Mexico, fall to spring, it will keep you comfortable every day, without trouble, without fuel waste.

"Our home is just like summer everywhere, at all times, day or night. Any cold evening in summer or fall we can carry a little fire without trouble and be comfortable. We never bought anything and got as much for our money as when we bought the Convector."

MR. HENRY KORPORAL, Van Buren, Ind.

The Convector Burns Any Fuel With Greatest Economy

The Convector burns hard or soft coal, screenings, lignite, oil, wood or gas. Thousands of practical tests have proved that it saves ⅓ to ½ on fuel. However, not all this saving is due to the efficient way the Convector burns fuel. Much of it is the result of correct ventilation and proper moisture in the air, and the way the Convector changes wasteful, uneven radiant heat into useful **heat of convection,** using it to warm the air throughout the home.

The Convector Frees All Your Living Rooms of Unsightly Heating Apparatus

The Convector is a simple, self-contained, easily operated system, installed in the basement where a heating system belongs. It heats every room upstairs and down through **one** register on the first floor.

It leaves all your rooms perfectly free of stoves and pipes, valves and radiators. No fuel dust, gas or ashes need ever get into your living rooms.

The finer your home, the more it demands this unobtrusive method of heating—a system that is silent, that cannot freeze, that cannot leak, that can never streak walls and furnishings with dust and dirt.

Positively Guaranteed

The Convector is positively guaranteed to heat all your home comfortably in any weather.

It can be installed in any home, new or old, usually in less than one day's time.

Sizes for homes of four to eighteen rooms. Will heat store buildings, theaters, churches, etc. Takes small space in basement. Never heats basement. Not necessary to have full-size basement for installation.

Heats ample supply of water for kitchen and bath.

Lasts a lifetime.

You can secure the correct size for your needs, ON EASY TERMS IF DESIRED, from a dealer near you. Send now for complete information about an installation, whether your home is old or new—whether or not you have another system. Use the request form below.

Send for Your Copy of "HEAT"

This book is an interesting discussion of **scientific facts** about heat and its use in homes and buildings. It is of especial value to architects, builders, home owners and those who are about to buy or build a home.

The information in this book will be of great value to you. It will enable you to save fuel and get greater comfort and efficiency from your present method of heating.

Send for it. No obligation. It's worth having.

n who approved of Bab's build I'll again try to outguess a rival manager. s about fifteen pounds heavier than nglishman and an inch or so taller. ady would have bet five to one on chances; but I—not being a lady, owing what the English bird's heavy shoulders with the big back muscles not to mention his thick neck, long, ilk arms and strong if not particu- andsome legs—knew better.

ad one of these square, high-cheeked with stone-blue eyes and a head ald, but neither from age nor from . He wasn't paying much atten- anybody, just businesslike, whereas osing the admiration of the women, ly of the duchess, was grinning and, in a way of speaking, shaking with himself the way Carpentier re Dempsey handed him his fade-

eferee made a little spiel, saying was a friendly exhibition designed the progress of Mr. Plunkett in ions for his great coming battle ms at the London Sporting Club, referred to the Baboon as a great athlete who had had the choice ess in two sports, and chose one— baseball.

not have to add," says he, "that itzler's name is a household word d today, after his 'stronery exhi- the wickets yesterday afternoon."

e told the two fighters to go to it. uld see at once that Bab wasn't waste any time boxing. What he ing for was an opening for one t right wallop, and not knowing bout the game to know how to s open with his left he just waited s you may say.

Plunkett, he was just a little . He wasn't any too sure that big ont of him wasn't Dempsey in His aim was to feel the Baboon ng at last that Bab wasn't going ything in the way of a lead, the n started a light left, then pulled and jumped back. He wanted at Bab would have done had he shed the lead. He saw. Bab's over in what would have been a ter had Plunkett stayed within istance.

hard all right, but it came slow. at you might call a ponderous lunkett's eyes lightened. He with his left, catching Bab on d, ducked Bab's right hook and is own right into the place that een treating so well ever since een in England—namely, his

boon's grunt was the kind of bear at the zoo at feeding time, d it to him enough to say that otherwise like a man. In fact expecting Bab to drop, didn't quick as he should have. This he chance to raise his right a d bring it down on the English- in a hundred per cent pure rab- hile Plunk was still stooping. ve thought the chandelier had e Englishman when that Gun- landed. The first thing that hit s his nose, quickly followed by im. The referee began to count. tt wasn't out by any means. I ve his head to make sure it was d on all right, and then he jumped to his feet. Bab rushed him like a bull. Plunkett ducked and the Bab did a dive right over his head and under the ropes. He slid back into the ring, climbed to his feet and rushed in with windmill wallops, Plunkett backing up and straightening up his man at every rush with as nifty a left as you ever saw. Talk about noise! No fight club in the States, in a last-round mix-up, ever did any better than this gang of high-lifes was doing. The round ended in a clinch.

Bab came back to his corner, fighting for wind and mad clear through.

"Bab, you're doing great!" I said. "Play him more with your left. I mean hook him as he leads. Don't you lead. Let him force it. He's the champ!"

"Champ!" Bab glared at me. "I'm going to make that guy jump out the ring next round, and when he gets out there I'm going to chase him out the window. I'll show him who's alive!"

"Be careful, Bab," I warns. Tim Holliday chimes in in the same vein.

"Oh, I'll be careful, sure! Say," he says, suddenly, grinning, "did you see Gwendolyn's face when I had the sparrow on the floor. She was beating Sir Mike on the back like he was a cab horse."

"All right; you watch your man, not Gwendolyn," I says.

The bell rung. As they squared off I could see that Plunkett had learned what he wanted to know about his man. He advances, feinting with two hands, but not hitting, until he had the Baboon tied up all in knots in his own corner. Then with a cold grin he slips back to the middle of the court. He had been finding it hard to get in with his right because Bab was using the Jeffries crouch, his jaw well covered up by his shoulder.

The answer of course was to get him out of it. He fiddles around for about thirty seconds, everyone holding his breath, and then after some beautiful feinting he opens Bab up and comes in with the well-known one-two. Both blows landed, landed hard—left to chin and right to ribs. Bab windmilled with both hands and then clinched.

"A couple more wallops like that and it will be lights for our hopeful," I whispers to Tim.

Tim nods just as the ref rushes in to break the clinch, Bab doing the hanging on. He had no more than got there when Bab releases his right from around Plunkett's neck, jumps away and starts a roundhouse wallop. Then, as the English would say, a 'stronery thing happened. As Bab starts his haymaker Plunkett steps in with an awful right hook and lands it square an instant after Bab's windmill cops the referee square on the jaw. Just blim! Blam!

Honest, I grabbed Tim's shoulder to see if I was awake. There on the floor lay the referee, the rim of his broken monocle over his nose, his shirt front busted out and mouth open. Otherwise he looked almost as natural as life. Then, draped across him, the champion batter of the universe—at peace; absolutely at peace. In fact there was a smile on Bab's face, as though the prize canary of the world was singing a duet with the champion nightingale.

The ballroom was a riot—of laughter. Men were slapping each other on the back and the women was pawing at them. Sir Michael was standing up, holding onto his sides and hee-hawing like a Georgia mule. The referee, Sir Thomas Somebody, was coming to as I lifted Bab off him and me and Tim pulled him to his corner.

Slowly the ref got to his feet and then tottered up to Plunkett, who had been standing in a daze.

"Plunkett, did you strike me?"

At that the roof came down again, while the English bird tried to explain just what happened to his lordship. In the meantime we was doing the smelling-salt act to Bab. Suddenly his eyes open.

"What's the matter?" he asks.

"Nothing," says I, "except it's all over."

"What's all over?"

"The fight," says Tim.

"The fight!" Bab struggled to his feet. "It ain't begun yet."

With that he starts for Plunkett, and we tackle him and force him down to his seat. More laughter.

Then something happened. I saw Sir Michael, fighting for breath, grab the duchess' shoulder. Like a flash she pushes him away, then rises and comes to the ropes. Reaching through, she grabs Bab's heaving shoulders.

"You poor boy!" she shrieks. "You poor dear boy! So they've been making a fool of you, eh? And of me! Of course, you thought that great brute was only going to box with you!"

With that, like an empress, she turns to me.

"Will you be so good as to take Mr. Schnitzler out of here? Have him dress. I shall be waiting in my car for him. Hurry, my good men—at once!"

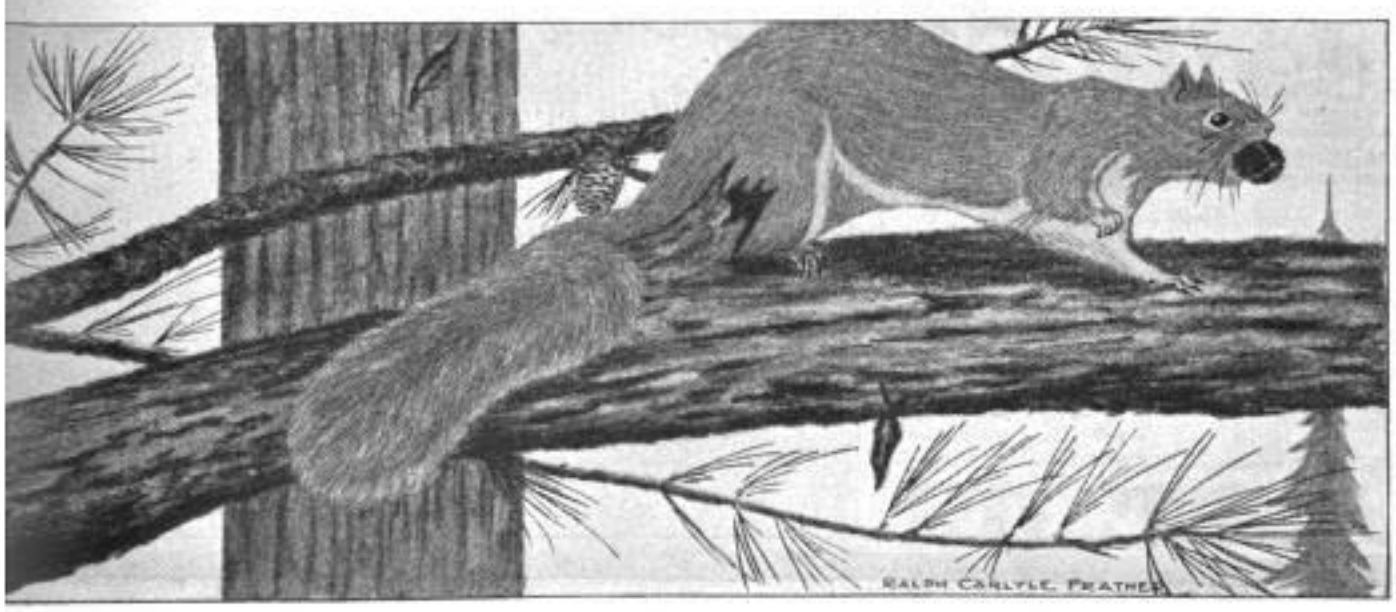
There was a silence as we led out the Baboon, and no one spoke upstairs as Tim and I patched him up and got him dressed. He was punished pretty bad, especially about the body, and was sort of dazed.

Then down we came, bored through Sir Michael's guests and delivered him over to the duchess. That was the last I saw of my circuit clouter for a long time.

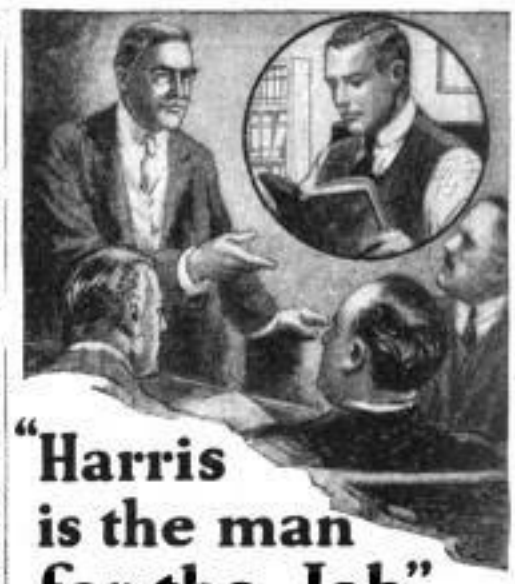
Later that week, after we had played a ball game at Marylebone in the rain before about a hundred and fifty spectators, we got word that Bab and the duchess had been married at high noon that day, very quietly, at St. Martin's-in-the-Fields, and had gone to Switzerland.

Last month, after the Plaid Sox had beat us in a Saturday game, a peanut seller called me into the stand. There sat a faded-out blond lady, rigged out like a movie queen's bus, and a great big fellow in a light suit that needed a haircut, purple necktie, spats and a plumber's kelly. He had three chins, sleepy eyes and a paunch like a grizzly.

"Surely, Mr. McGann, you remember me, the Duchess of Bonnicastle? And my husband, your old friend, Bab?"



"Bab!" I was so paralyzed I didn't have the sense to be polite. "Bab Schnitzler!"



"Harya, McGann?" he yawned, and reached out a pudgy hand. "Thought I'd sort of look in on the place, doncher know. Bally well had to. Couldn't be in the States without a dip into the old grounds. Team punting a bit badly? Rawther! Going's just a bit thick, eh? What? What? Look us up some time when you're in London, dear boy." He rose slowly. "Now, dearest," he says to the duchess, "we mustn't keep the motor waiting, you know."

Away they went. A fan standing by taps me on the arm.

"Wasn't that Bab Schnitzler?" he asks.

"It was," says I.

"Harris is the man for the Job"

"He thinks ahead. He puts in his spare time studying."

A group of executives were conferring about the filling of an important position.

It wasn't strange that they picked for the place an employe who had the foresight to prepare for bigger responsibility. The vote was unanimous. And yet they did only what employers usually and gladly do for the man who gets ready for opportunity.

Be a man like Harris! If you have the ambition, the United Y. M. C. A. Schools will furnish the way, no matter where you live or what your working hours are. Let us tell you about the new type of correspondence instruction that brings the student the most up-to-date courses and the most personal kind of service at a very reasonable cost.

Marking and mailing the coupon below will not obligate you but will bring a copy of a stimulating booklet, "Head and Shoulders Above the Crowd—How to Get There," and our friendly counsel.

Scattered

PAT was employed on an engineering job a few miles out of Los Angeles, and was carried to his work by an express train, which accommodatingly slowed up near the scene of his labors.

One morning, however, the train rushed through the cut without reducing speed, and the superintendent of the job looked in vain for Pat. At last he saw a much-battered Irishman limping back down the ties.

"Hello, Pat!" he cried. "Where did you get off?"

Pat turned stiffly, and waving his hand toward the steep embankment sighed, "Oh—all along here!"

Familiarity Breeds Contempt

EVERYBODY in the movie world knows that Cecil and William De Mille, the prominent directors, are brothers.

Cecil has a charming young daughter. At a Hollywood tea recently she was introduced to a lady who asked if she were related to the "great De Mille."

"And did you say he was your father?" asked Cecil proudly, when she told him of the incident.

"No," replied his daughter; "I said he was my uncle."

Not Passed at the Time

A NEW YORK salesman was staying at a Texas hotel where he observed an old-fashioned roller towel.

"Say," he asked of a man in the washroom, "doesn't the owner of this hotel know that it's against the law of the state of Texas to use roller towels now?"

"He knows it all right enough," said the man addressed, "but I reckon that law wasn't passed when this towel was put up."

Cheering the Patient

TWO eminent physicians who had been called in consultation retired to another room to discuss the sick one's condition. In the closet of that room a small boy had been concealed by the patient's directions, to listen.

"Well, Jimmy," asked the patient eagerly after the physicians had gone, "what did they say?"

"I couldn't tell you that," said the boy. "They used such big words I didn't understand 'em.

"All I remember was that one doctor says to the other, 'Well, we'll soon find that out at the autopsy.'"

Summer In China 3,844 Years Ago

HISTORY doesn't state that the summer of 1922 B. C. in China was unusually hot. However, we do know that the Chinese at that time used huge sun shades to shut out the glare of the sun and keep them cool.

These shades were often large enough to protect and shield entire family groups.

Through all ages man has sought protection from the blazing orb.

Now in 1922 A. D.—he has found the last word in shades—

COOLMOR
Trade Mark

Self-Hanging, Wind-Safe Porch Shade

Take comfort this summer in the cool breezy seclusion of a COOLMOR shaded porch. Enjoy the long summer days and quiet nights in utmost privacy.

Coolmor Porch Shades are made of selected wood strips. Finished in beautiful permanent colors. Can be recognized from across the street because of their exclusive wide and narrow slat weave—a patented feature. They roll up easily and are **wind-safe.** Write today for full information and name of nearest dealer.

A COOLMOR Shade 6 ft. wide with a drop of 7 ft. 6 inches costs only . . . **$6.40** north of Alabama and east of Colorado.

THE EAGLE AND THE WREN

(Continued from Page 28)

"Poor men must look to their own needs. Give me the plates and the negative. The dark room is ——"

"There. Chemicals are all ready. Be quick. I have much to do. This"—he held up the tracing—"must be prepared for dispatch."

"How will it travel—a single messenger?"

"By relays. Tomorrow by myself, as far as Dover. At the quay it is passed to another who will carry it across the Channel. A third conveys it to Nice."

"Nice!" George repeated.

"There it will be retained until the important one ——"

"From the Thirteenth Communal?"

"Exactly—comes to claim it."

"And how will the messengers recognize each other?"

"By signs and numbers. Each will receive his own instructions."

George nodded approval and picked up the negative and the packet of plates.

"Thorough," said he. "In what form will the tracing be carried?"

A mean distrusting look came into Mossi's eyes.

"You question too much. That is outside your concern. Do what we have decided and get to the dark room quickly."

"Very well," George grumbled, and turned sharply on his heel.

It is almost impossible to believe a man of George's intelligence would have failed to look where he was putting his feet in that ill-lit cellar. On the other hand, Mossi was equally to blame for carelessly throwing down his coat.

The fact remains that George tripped over the obstacle and measured his length on the stone floor, smashing the precious negative to smithereens and destroying all hope of securing a duplicate.

"*Basta!*" roared the little Italian. "Fool, pig, ass! Shall I work with such as you!"

Clearly it was up to George to apologize, and that fully, but he did no such thing. For the two minutes that followed there was not one single opprobrious epithet known to the peoples of Northern Italy or familiar to the inhabitants of suffering Poland that he did not level at and exchange with his enraged partner.

To the observer unacquainted with the Continental method of adjusting differences it must have seemed inevitable that the discussion would proceed beyond mere words; but George knew the type he was dealing with and knew the type he was portraying. Had he behaved differently it is certain that the Italian's suspicions would have been aroused.

They were spared the necessity of drawing a conclusion from the argument by a knock at the door and a voice outside which announced imperatively, "He is here."

It was Mossi who shot back the bolt and admitted the visitor, a small dark man with black eyes that glittered. He came in like a rabbit ducking into its burrow. In the brief space while the door stood open the distant chimes of the Town Hall clock could be heard striking six.

"The negative," said he, "it has been destroyed?"

Mossi pointed at the broken glass upon the floor and nodded.

"And there is no duplicate?"

"None."

"On the badge of the soviet you will swear to that."

Mossi pulled out a small nickel badge and held it aloft in his right hand.

The visitor turned to George.

"And you too," said he.

Unhappily George was not in possession of the soviet badge, but he deemed it unwise to mention the fact. After all, Butterwick's silver authority would do just as well. He took it from his pocket and repeated the Italian's action with all solemnity.

"I have the authority to pay," said the visitor, and opened a small black bag brimful of Bank of England notes.

XIV

IT WAS a little after 4 A.M. when Butterwick made his sensational appearance at Charlie Pearson's and found the entire household in a state of turmoil. It would be impossible, he was told by an agitated butler in a dressing gown, for him to see anyone. A burglary had been committed, several guests murdered, and it was probable that the house was on fire. But Butterwick did not allow these small considerations to weigh with him. Sweeping the man aside he rushed up the staircase in the wake of little Miss Phyllis, who had pelted round from the back of the house at the sound of the shot. She easily outstripped him along the bedroom corridor and flung herself into her uncle's room.

Martyn Saville was sitting on the floor grinning sheepishly and assuring Charlie Pearson and a semicircle of servants and guests that it really didn't matter at all.

"My own damn fault. Didn't know you were so good a shot, old fellar."

"You ass—you blazing, blasted fool!" roared Charlie, his face purpled by conflicting emotions. "I might have killed you."

And then Miss Phyllis, crying aloud that she was to blame, hurled herself like a projectile into Martyn's arms as though by sheer violence she would restore him to health.

"My darling kid," he implored, "if you must do this, stick your head in the other shoulder. It's in better condition."

And then came the voice of Butterwick rising high above the rest:

"Mr. Saville, you are warned at once. A very terrible thing has occurred."

Martyn turned and blinked at the intruder.

"I say, good people," he asked sweetly, "can you see anyone in that doorway or have I been plugged through the head?"

Charlie Pearson was first to demand, "Who the devil are you?"

"My name is Butterwick. Saville, get up and come with me."

So imperative was the tone that Martyn struggled to his feet.

"Then it is you," he said. "What's wrong?"

Butterwick stepped forward and whispered a few hurried words in his ear.

"My Lord!" Martyn passed a hand across his forehead. "Photographed, eh? I'll come at once. Got a car?"

"Downstairs."

"Right. Awfully sorry I can't explain—but something —— You must just take my word I've got to get."

But Miss Phyllis barred the way.

"He's been shot," she cried, "and he doesn't move till I've seen the wound. He doesn't move—he doesn't move!"

Nor would she let him move until the coat had been taken off, the left shirt sleeve rolled up, and a thin scarlet lane that bisected his deltoid had been sponged with disinfectant and bandaged with affection. Even then she was not satisfied until Charlie Pearson, in most matters the most generous of men, who would lend you everything he possessed in the world except articles of personal apparel, was compelled to disgorge a recently purchased silk scarf which he prized out of all proportion to its virtue.

Meanwhile Mr. Butterwick stood first on one leg, then on the other, and irritably ejaculated entreaties for haste that were ignored.

Ten minutes were occupied over these demonstrations of devotion and the quarter had struck before at last Martyn was bundled into the car and borne away.

Miss Phyllis openly wept upon the steps. The small shortsighted man with the taste for deductions frankly admitted that he considered the whole matter very fishy indeed, and would never have allowed a soul to leave the house until it had been properly cleared up. Charlie Pearson, who happened to overhear these observations and whose nerves were distinctly jangled by recent events, so far forgot himself as to round on his guest and tell him to go to blazes.

Someone else suggested he should keep his temper, and two of the female servants went into hysterics.

Witness therefore the ill-fortune and discord pursuant upon an act inspired by light-heartedness and a taste for adventure. Thus was it ever so, and thus always did the wise Fates conspire, and conspire in vain, to discourage Martyn Saville from foolhardy exploits.

Mr. Butterwick's car streaked along the moonlit country roads at a reckless forty-seven. He had taken an hour over the outward journey and designed to accomplish the homeward in less.

Meanwhile he talked very bitterly [illegible] very much to the point. He execrated George Wedderton, who had disappeared, and in no less measure he execrated himself.

Martyn lay back on the cushions, [illegible] dizzy and sick from the wound he had received and the news to which he listened. It was characteristic, however, that he blamed no one and accepted the situation in the same spirit as he would have accepted defeat in a game of chance.

"It's bad luck," he repeated. "Just bad luck. Always thought this [illegible] theft was a kind of bogy."

But inside he felt very sore indeed.

"Suspect anyone in particular?"

A reversal of his own preconceived idea was as painful to Butterwick as having a tooth out. However, he had the [illegible] to reply, "Bolshies."

Martyn whistled.

"The deuce! Awkward beggars to make a present to of a weapon like that. Have a thing, eh? And I was hoping to marry and settle down."

"Was that plan sufficient to [illegible] work from?"

"Lord, yes! Rather! Should think so."

"And this man Wedderton, you'll [illegible] 'im?"

"From here to Styx and back."

"You would? Yes, yes, yes. I do know so much."

"Is there a big Bolshie element in [illegible] town?"

"The town! Whole world stinks of it."

Martyn shook himself.

"Then somehow, old bean, we've got to get hold of that negative and any [illegible] they've taken. Can't quite see what [illegible] came and fetched me for."

"I came," replied Butterwick [illegible] "in the hope that unknown to us you [illegible] have protected those plans in some way."

Martyn shook his head.

"Matter of fact, I did work [illegible] stunt, but I'm afraid it's a wasted [illegible] cause, as you say, both drawings were in the safe and they're sure to have photographed the pair of 'em. It's bad luck."

A moment later they passed through the main workshop gates and drew up at Butterwick's office.

There were a number of men [illegible] and out who saluted their chief as he [illegible] from the car.

The man, Palmer, was seated at the [illegible] a crowd of paper slips before him. In a corner near the anthracite stove two bloodhounds stretched at ease.

"News?" Butterwick rapped out.

"Nothing satisfactory, chief. [illegible] heap of reports here, but ——"

"Never mind them. Who thought of dogs?"

"I did, chief."

"Yes, yes, but what are they doing here? Why aren't they out?"

"I was waiting for a bit of cloth to give 'em a scent."

"Whose clothing?"

"John Slave's, chief."

Butterwick's mouth opened [illegible] as though to discharge a torrent of abuse, as suddenly closed again. He [illegible] glance at Martyn, but there was [illegible] in that young man's expression to [illegible] familiarity with the name John Slave.

"H'm!" he ejaculated. "You're such a fool, Palmer."

At that moment a man came in [illegible] a parcel.

"Had some trouble getting at [illegible]"

"Got the blanket from his bed [illegible] of boots."

"Slave's?" from Butterwick.

"Yes, chief."

"Come on, then."

It was 5:35 when Butterwick, [illegible] Saville, Palmer, the bloodhounds [illegible] and a dozen other men arrived at the [illegible] of Martyn's office. Here the [illegible] undone and its contents placed [illegible] dogs. Having poked it about with their noses they signified appreciation by howling dismally.

"Take 'em inside," ordered Butterwick.

The dogs were delighted at the entertainment offered within. They turned the little office into a first-class circus, and baying and finally darting at the doorway with such unexpected [illegible] that Palmer lost his balance and was towed across the cinder track in such wise as must have been the delight of the clown. (Continued on Page [illegible])

Cooler Cookery! —fresh flowers on top of this oven don't wilt while bread is baking inside.

Cleaner Cookery! —no flame touches cooking utensils, so aluminum ware stays bright and shining, its newness not burned and scoured.

Simpler Cookery! —note text below for the Way of Today.

Scientific Cookery! —no guesswork, no uncertainty. Perfect results every time.

ome out of the kitchen, ladies!
–after your day's cookery–with frocks as dainty and fresh as the morning

NTY, fresh frocks and tchen work! —who would the day would ever come?

re is a range that doesn't it the kitchen; that keeps id pans *clean*; that cooks he precision of an adding e; a range that takes the intments and the drudgery ookery.

us tell you about it—this cooler way.

Flowers On The Oven!

led the Estate Electric Range. rever there are modern kitchens, re relating the wonderful things

designed this range, we wanted rly to satisfy the longing for the ns.

rfected a cooking top and oven entrate the heat directly upon g.

Results are astonishing:

Scarcely any heat radiates into the room. So little escapes, in fact, that in our demonstrations we keep fresh flowers on top of the oven while baking bread!

A comfortable kitchen on a Summer's day is now a joyous reality.

How We Simplified Cookery

But we knew, too, from investigations, that what women wanted most was a range that would give perfect cooking results without constant "pot-watching."

So we evolved the Estate Method of Time and Temperature Cookery—*a method that eliminates all guesswork.*

Time and Temperature Cookery —the Way of Today

This new way embodies a chart and a thermometer.

Note the chart illustrated above. It lists every sort of food, from a Roast of Beef to an Angel Food Cake. Tells what temperature and how much time in the oven each food must have. And an accurate mercury thermometer on the oven door plainly registers those temperatures.

You simply follow the chart and the thermometer. Between the two, you can't go wrong. *Results are certain.* Foods are uniformly done—just so; they taste better, *look better,* are more delicious and nutritious.

Mail the coupon below for booklet which explains the how and why of this Simplified Way. Shows how to cook with the skill of a chef, yet save 25% of your time in the kitchen.

Where To See An Estate

At your Local Electric Lighting Company's —or your dealer's. Made in a style and size to meet your own requirements; eight models, including a combination coal and electric range, which affords a plentiful supply of hot water at all times, and keeps your kitchen warm in winter.

But first—mail the coupon. *Get the facts about Time and Temperature Cookery. Then inspect the ranges. The book is FREE.*

For Small Kitchens

Estate
KITCHENETTE

COMPACTNESS added to the other good qualities of Estate Electric Ranges. This clever appliance does everything that the larger ranges do; has a roomy cooking top, bake oven of ample capacity for ordinary requirements, and broiling device in the oven. Can be placed on a kitchen table or on a metal stand which we furnish.

Here's a treat for you: Try these cooling summer drinks and discover new, delicious uses for Pet Milk.

Black Cow Into glass of cracked ice pour Pet Milk until glass is one-fifth full. Then fill to top with sarsaparilla soda. Stir thoroughly and serve. Proportions may be varied to suit taste.

Iced Chocolate Melt one and one-half squares Baker's Chocolate in pan over hot water; add one-quarter cup of sugar and a few grains of salt, and gradually add to this one cup of boiling water. Stir until smooth, then place pan directly over fire and boil one minute—then add one cup of Pet Milk and two cups of boiling water. Cool and serve with cracked ice in tall glasses.

Iced Coffee Make your coffee as you always do—then fill tall glass with broken ice, and pour the hot coffee over the ice. Add Pet Milk as you would cream and sweeten to taste.

Pet Milk is a great luxury and a great economy. It perfectly meets the daily need for both milk and cream. You will find it so rich, pure, convenient and economical that you will prefer it to milk in any other form. Get the Pet Recipe Book—*free*—and test a few of the hundred practical recipes it contains. They are fine. ered hand appeared, encircling
f a bird—a pigeon—to the leg
as attached what looked like a
n. It was not a yard distant from the spot where Butterwick was standing, and realizing the appalling import of what was occurring Martyn raised a yell and pointed. Butterwick was just a second too late in grasping the situation. The shots he fired splashed harmlessly into the paving as the bird rose on the wing and circled upward into the sky.

XV

AT THE precise moment George Wedderton was bestowing the two thousand pounds, payment for his share of the work done, in various parts of his apparel, the first cry of alarm was raised. The last thing George had either looked for or desired was the appearance of Butterwick's gang at this particular juncture. A moment before he had been enjoying himself beyond bounds. On many previous occasions in his career he had resorted to the measure of bluffing his opponents, but never before had his left-handed services been so generously rewarded. Two thousand pounds is an attractive sum, and doubly attractive when it has been wrung from the funds of a society one has dedicated one's life to oppose. The irony of the situation appealed to his sense of humor and he desired very earnestly to withdraw and bury all record of Johann Slavenski alias John Slave, and in the privacy of his own apartment indulge his stored-up hilarity at will.

Moreover, he had other plans of greater moment. The passage of spies carrying stolen documents from one country to another is ever attended with risk. Having taken such infinite pains that the wrong drawing should have been photographed he wished to assure himself that it should arrive safely at its ultimate destination. In short, he proposed to revert to the character of George Wedderton and in that unsuspicious guise to mother the chain of relays who would carry the tracing, and guard them from mishap. Paolo Mossi had obligingly supplied the order of travel and the actual itinerary, a confidence that would aid him in carrying out his task. And now, despite his meticulous care, the whole program was to be wrecked by the untimely arrival of this meddlesome walnut eater.

George Wedderton swore very volubly in the Polish tongue, which, if you know how to use it, is admirably adapted to the purpose.

The cashier had backed against the cambered wall of the cellar and was shivering in every limb. The guard outside the door was screaming for orders, and the sound of benches being overturned in the larger cellar mingled with shots and shouts of the fight above.

The only man who kept his head was Mossi. Leaping to the door he shot a second bolt and shouting through the panel called for five men to guard it with their lives. Then seizing a box with perforated sides he opened it and took out a pigeon, which he thrust into George's hand.

"Quick, take it!"

Another moment and he had twisted the tracing round the bird's leg and secured it in place with a tiny bandage.

"Those packing cases."

They made a pile of the cases and the Italian sprang to the top, fumbling at the roof above his head.

"I have it. Give me the bird."

A faint square of light was revealed, through which the bird was thrust. From above sounded three shots fired in rapid succession and a volley of curses from Butterwick.

"Missed!" cried the Italian, and leaping to the floor made a dive for the second door. And so enchanted was George at the whole proceeding that he scarcely noticed that the door banged behind Mossi's retreating form and the bolts shot home on the far side. He was too late to prevent that or to follow his partner's lead through the second exit. As he rattled hopelessly at the latch he could hear footsteps scuttling along a tunnel beyond.

But there was little time for regrets, for in another instant a rain of blows sounded at the main door. There was a scream, a rending of wood, and the whole structure fell inward, revealing in the aperture Martyn Saville, Butterwick and two other men.

"Put up your hands!" cried Butterwick. "If you move I shoot!"

The little cashier was whimpering in the shadows, but he obeyed the order readily enough.

"Clear 'em out of this. I want to examine the place alone."

It was Martyn Saville whose right hand shut like a vise on George's collar.

"No funny business," he advised, "or I'll break your neck."

George, keeping his head low, was jerked into the darkness of the cellar beyond, where the main body of Butterwick's men had gathered.

At this stage of the game it was no part of George's scheme to be handed over to the authorities and caused to reveal the reason of his presence in this particular situation. To do so would probably result in his late companions' discovery of the manner in which they had been tricked, and possibly of his true identity. Also, he did not want to give a public explanation. He did not want to set Butterwick's mind at rest. He ardently desired that Butterwick, and perhaps Saville, and certainly everyone else concerned, should go about the works wearing long faces and draped in the colors of melancholy. By doing this they would warm the hearts of the revolutionaries with false fires and convince them of success.

In the rush of recent events George had failed to notice Martyn had one arm out of commission. Had he been aware of this he might have tried to extricate himself from the grasp upon his collar, but a lively appreciation of Martyn's prowess as a man of muscle discouraged any such effort and he fell back on methods nearer and dearer to his heart.

The tunnel at the foot of the steps was pitch dark, with only a faint gray square to reveal where the trap opened under the arch. George had been swearing fluently in a foreign tongue, and Martyn, who dearly loved the sound of his own voice, had kept up a running fire of amiable advice. The result sounded like a duet between a soda-water factory and a rowing cox.

"Steady does it—good lad. Who-ah there."

"*Splitzen-sprotzen pujemsyl!*"

"That's the stuff."

Then suddenly out of the darkness: "Martyn, you ass! Drop that fellar, quick."

Martyn stopped with a jerk.

"George? George Wedderton?" he cried.

"Who else, you idiot? Here, give 'im to me. Get back inside. You're wanted."

Martyn felt a tug on the hand that held his captive and heard a fresh stream of heathenish invective.

"I've got you, my beauty," said the voice of George. "Back to the farther cellar, Martyn. Pronto!"

Martyn released his grip, turned about and dived back along the tunnel, while George shot up the steps three at a time. The man on guard above, unprepared for emergency, found his legs swept from beneath him and did not recover from his surprise in time to fire a single shot at the running mark that disappeared into the morning mist.

Meanwhile Martyn had returned post-haste to the smaller cellar.

"Halloo, yes?" he cried.

Butterwick was on his knees before the powdered glass on the floor.

"A single negative—smashed," he jerked out. "They took a tracing—India ink and frame on table there, light beyond—only one tracing. New pad of paper there with a single sheet missing. Gone, pigeon post. Where's the prisoner, John Slave?"

"Handed him over to Wedderton."

Butterwick rose slowly to his feet.

"You what?" he cried.

Martyn repeated what he had said, adding, "George has him all right."

Butterwick threw up his hands wildly

"Heaven protect me from fools!" he cried. "John Slave and George Wedderton are the same man."

XVI

IN A REMOTE part of the garden of the Hôtel La Rhone at Nice, lying in a hammock beneath the shade of syringas, disposed with a grace that could be defined only as studied, lay Madame Alma Ferraros.

You are familiar with the name? To be sure. It is a household word to all who yield to the lure of vaudeville. London, Paris, Vienna, New York, it would be impossible to think of a city in this little world of ours upon which Alma—Alma of the butterfly toes, Alma of the flickering hands—had not shed her light. A very famous *ballerina*, gentlemen, La Grande Petite Brésilienne. In such wise, agent and poster proclaimed her. Flashing electric signs begemmed the sky with

Corns?

Blue-jay
to your druggist
Stops Pain Instantly

The simplest way to end a corn is Blue-jay. A touch stops the pain instantly. Then the corn loosens and comes out. Made in two forms—a colorless, clear liquid (one drop does it!) and in extra thin plasters. Use whichever form you prefer, plasters or the liquid—the action is the same. Safe, gentle. Made in a world-famed laboratory. Sold by all druggists.

Organizing ability required

IT seems a simple matter to deliver ice at your doorstep at a given hour each day. And still that simple act, multiplied by hundreds or thousands like it, performed on time, in all kinds of weather, would be impossible without organizing ability behind it.

In the first place, the ice dealer must make or store enough ice. Then he must provide extra wagons and men during a hot spell. In the fall and winter months he must route and re-route wagons to save expense.

A never normal business

Ice consumption varies. In January, for instance, ice delivery is likely to be one-twelfth of what it is in August and the cost three or four times as much.

In hot weather demand may treble in a single day. People are not prepared. They need ice all at once, and they need it badly.

A big responsibility rests upon the ice dealer.

Just think what would happen on a hot day if the ice delivery failed; what a food loss would result, what discomfort in homes and hospitals, what a menace to health.

And still, failure could easily happen—through a shortage of ice, a breakdown of equipment; horses or men overcome.

The fact that failure occurs so seldom is due entirely to the organizing ability and foresight of the average ice company. *It is indeed a responsible servant of its community.*

DEPEND ON ICE IN ALL WEATHER

Ferraros—Ferraros. And on her premières—those rapturous return visits after unendurable absences—the flowers that poured over the orchestra rail and flooded the passages to her dressing room would have done honor to the burial of kings.

She lay in the hammock lit by slanting rays of the sun, her raven hair stirred by an attentive breeze. One felt that a goddess was asleep. The blue of her eyes shone through half-closed lids. Scarlet hibiscus could not have incarmined her pouting lips, nor the glow of evening have sweetened the peach bloom of her rounded cheeks. Whiter than lilies was her skin.

M. Foussereau, of the Rue de la Paix, prince of coiffeurs and *grand maître de toilette des dames*, a man to whom queens had confided the tragedy of their complexions, frankly admitted that in Alma Ferraros he had touched the pinnacle of his skill. "A *chef d'œuvre*, messieurs," he would say. "Behold—a masterpiece."

It is not very clear why La Petite Brésilienne claimed Brazil as the land of her origin. Waggishly it had been put forward that a fondness for nuts was the cause, color being lent to the suggestion by the association of her name with that of a well-known captain in the guards. The registrar of births and deaths for the parish of Houndsditch has a record in his books which abolishes the Brazilian myth at a mere glance. Alma's father was a Pole with a perfect genius for cutting dress coats. Her mother was of Spanish descent, who married out of the Fried Fish into Tailoring. Alma's first introduction to Terpsichore was at the corner of Middlesex Street, when she danced to a barrel organ and was occasionally rewarded with ha'-penny by admiring onlookers. By natural stages she gravitated to a Drury Lane ballet, thereafter joining a traveling troupe, in whose company she learned her craft and saw the world. An attractive offer from the proprietor of a cabaret in Rio detached her from this gallant little band of dancers, placed a budding crown of laurels upon her brow, introduced her to a society of male and female libertines, and altered the tide of her entire existence. From her former companions she had learned fellowship, courage, generosity; from her new she learned extravagance, caprice and avarice.

At a year's end she left Rio for Petrograd—then St. Petersburg—bearing with her a measure of fame and ill-fame equally distributed. An insensate and insatiable desire for jewelry and excitement drove her into a morass of excesses. Money and adventure—these were the gods who decontrolled her with a rod of platinum, diamond set. But Alma had fallen upon evil days. Fresh stars had risen in the dramatic firmament, and her glory was beginning to wane.

Soothed by the hum of insects she had fallen into a drowse and it was with no good nature she awoke to the touch of a rude hand upon her shoulder.

"Sh! Don't maka de noise!" said a voice imperatively.

Opening her eyes she looked up at a man in a deplorable soup-spotted dress suit and frayed and dirty linen.

His hair was black, *coupé en brosse*, and came to a hideous peak on his low forehead. His chin was illshaven and blue, and a toothbrush mustache projected fiercely from a short upper lip. In his hand, half hidden by a soiled napkin, was a leather-bound book.

He threw a furtive glance over his shoulder and, satisfying himself no one was about, abruptly thrust the book into Alma's hand.

"Taka de book. Just arrifed. Lie down."

"I'd like to know what the devil you're talking about," said Alma. "I asked for no book."

Andrea Negretti gave an angry gesture, but his voice dropped as he replied, "Don'ta be fool. Taka de book, Thirty-three."

Alma started and her eyes lit up with excitement.

"Then this is ——"

"What wasa expected."

"From England—the plans—the ——"

"Sh! Sh-h!"

Alma nodded and turned the book slowly in her hand.

"But this is a book. Browning's Men and Women."

"Stucka between de pages halfa way droo."

"I see. H'm! Good idea. And I am to take this to the Thirteenth Communal?"

Andrea shook his head.

"No, anuder. He arrife soon. He mak the introducks to you."

"What—today?"

"Today, tomorrow—I don'ta know. You listen to what I tella, don't it?"

"Go on."

"He introducks himselves. He will wearа a white carnaish."

"A white carnation?"

"Ah! He spika dese words—'What are your plans?' He say 'What are your plans?' Den you giva de book. Finish."

"H'm!" said Alma. "That's all right as far as it goes, but what's his number?"

Andrea Negretti fidgeted with his hands and moved his shoulders uneasily.

"No number. Nota have one."

"What? But all of us have numbers."

"I giva the instrucksh. It's finish."

"Oh, no, it isn't, my beauty," said Alma, rising. "It's far from being finished. Where did you get these orders?"

"Dey was writ on a slippa de pape I finda in der book. After I read I putta de pape in fire."

"And how did you get the book?" Alma's eyes were piercing and her tone granitic. "Who brought it?"

"Forty-seven. I come now from de station."

"He gave it you there?"

"*Si, si, si.*"

"No one saw?"

"No. He slippa de book in my pock. Wasa only out of de train a minute."

"And that was all the paper said?"

"*Si.*"

"You're lying, aren't you? There was a number and you've forgotten."

Andrea clenched his hands savagely.

"If I haffa forgot it was all one, don't it? De carnaish he wear—'What are your plans?'"

"You needn't repeat it. My memory is sound. But look here, if anything goes wrong you'll get the blame, my boy—all of it. That'll do. Clear out. I've no time for fools, and I'm going to sleep."

And once again she settled herself in the hammock and arranged the skirt over her knees.

Andrea waved his arms in the air, then dragged a string of protest out of his mouth with both hands.

"Is it you go mad, it is? I don'ta know what for dey use dese women. You got no more sense than to sleepa in de sun with de book?"

"I can look after myself—and the book," Alma retorted.

"But if ——"

Alma's parasol opened with a click final as the fall of a curtain on a play.

With a muttered imprecation Andrea Negretti swung on his heel and marched off toward the hotel.

XVII

CYRIL CONYNGHAM'S campaign to besiege the heart of Leslie Kingston did not prosper in ratio to expectations. No one could have been nicer to him than she, but her general bearing did not betray the characteristics of new-born love. She did not droop at his approach, nor her cheeks assume a deeper color, nor tremble was absent from her manner. It was all most disappointing. Cyril, to the best of his ability had blandished, he had pined, he had looked upon the harbor, sighed deeply, he had framed many sentences to leave them in mid-air with a lingering breath. But all to no avail. And worst of it was that his debts instead of creased rather than diminished. The payments of unrequited love claimed their victim; Cupid's arrow was twisted in his heart.

Armed with a cushion, a copy of La Parisienne, a box of Kingtoke cheroots and some cigarettes, Cyril betook himself to a remote part of the hotel grounds where hung a hammock in the shade of trees. The Honorable Mrs. Conyngham with characteristic thoughtlessness had gathered in Leslie for a shopping excursion, leaving the unhappy Cyril to his own devices.

He had done his best to discourage the shopping movement and had earned for his pains a rebuke and some small animosity. Wherefore he decided to seek oblivion—not unattended with a few creature comforts—and philosophically ponder the problem of how to set his affairs in order.

It was a day for lovers: the sun shone bravely, sea and sky were rivals in turquoise and sapphire, birds sang and

TO-DAY – *for public records – the Russell system of indexing*

TO-DAY – *for general business – L.B. Automatic Index*

Spindle bills 1876 File profits 1922 Library Bureau 46 years

IN 1876 spindle methods of filing were standard. Essentially, filing had not advanced in centuries. In 1876 Library Bureau was founded. A short time later the constructive energy of this organization began to revitalize filing practice.

1892—Vertical Filing—Box files were in general use. Papers were laid flat—horizontal filing. Library Bureau conceived the then revolutionary idea of filing papers on edge—vertical filing.

At one stroke, Library Bureau coffined the filing achievements of all previous history. The world began to file vertically, thanks to Library Bureau.

The years passed. Numerous developments in vertical filing sprang from the primary idea. More efficient alphabetic, numeric, subject and other systems came into being, most of them created by Library Bureau. And then—

1912—L. B. Automatic Index—Admittedly the one notable correspondence filing invention of the present century. This L. B. System eliminates 90% of common alphabetical divisions and by an ingenious double check actually prevents the file clerk from making errors.

Library Bureau's ever-widening service has recently embraced that most difficult of fields—the systematizing of public records.

1922—Russell System of Indexing—This system makes the usual tedious and often faulty searching of public records a matter of certainty and minutes. Already the astounding benefits resulting from its use have won the acclaim of the legal profession, title companies and the general public.

In the panel at the right are crystallized the full scope and extent of L. B. service that can lower overhead and increase profits in every kind of business—***your*** business.

The Six Big Divisions of Library Bureau Service

1. Special Service

Analysis Service: Trained experts analyze your file and record needs and furnish full recommendations. Send for folder No. 612.

Indexing Service: Prepares and writes card records. Transfers accounts from books to card ledgers. Relieves you of the clerical burden of installing new card and filing systems. Send for booklet No. 822.

Statistical Service: A unique service to business executives. Prepares confidential statistics from figures supplied by any business. Send for folder No. 919.

2. Specialized Departments

Bank Department
Send for booklet No. 805.

Government Department
Send for booklet No. 818.

Insurance Department
Send for booklet No. 704.

Library Department
Send for catalog No. 812.

Schools of Filing
Send for booklet No. 503.

L. B. Service includes the planning of new systems, special and stock equipment, laying out filing and record departments, the preparation of confidential information.

3. Filing Systems

Geographic
Numeric
Subject
L. B. Automatic Index
The Russell Index

Library Bureau installs the filing system that best suits the needs of any business. Send for book No. 709 or Russell folder.

4. Card Record Systems

L. B. Sales record—sales information at the sales manager's finger-tips. Send for folder No. 615.

L. B. Stock record—eliminates over-stocking or under-stocking. Send for folder No. 605.

L. B. Card ledger—saves space, time and money, over bound or loose-leaf ledgers. Send for booklet No. 711.

L. B. Visible record file—combines unit feature of cards with visible feature of the book index. Send for folder No. 713.

5. Cabinets—*Wood and Steel*

They are used by 125,000 businesses. L. B. quality is standard.

L. B. has originated many labor-saving devices:

Vertical units.
Card record desks.
Counter-hight units.
Card ledger trays.

Send for catalogs Nos. 707 and 708.

L. B. Record Safe. Send for folder No. 712.

6. Supplies

L. B. Cards—Over 2,500,000 a day. More than 1,000 stock forms. Known for their uniform quality, accurate size and smooth edges.

L. B. Folders include every kind; notably the famous L. B. Reinforced folder which saves valuable space in file drawers.

L. B. Guides include plain, printed, celluloided, removable label and metal tip.

Send for catalog No. 702.

"Who's the pretty girl at your table? Sister?"

Cyril shot an antagonistic glance, but George looked so guileless and inoffensive that he let the question go unchallenged.

"No; she's a Miss Leslie Kavanagh."

"Engaged to her?"

Really the fellow was rather naïve. One couldn't help being frank with him.

"Not yet. Why?"

George shrugged his shoulders.

"You asked me to talk."

Cyril smiled.

"Of course it's all on the q. t. at present."

"Just so." George rose and stretched himself.

"You on your own down here?"

"Don't know a soul. Expectin' a friend this evenin', though. Just had a wire to say so. Fellar named Saville."

"By Jove! You know Martyn Saville?"

"Intimately."

"Funny. Matter of fact he's joining our party, but we weren't looking for him till the day after tomorrow. You sure he's coming today?"

"Had a wire to say so. Think I'll try and find a chair somewhere. This stump ain't overcomfortable. See you again, perhaps."

"Sure to."

George moved away a half dozen paces, then turned.

"Know anything about that new arrival?" he asked.

"No. Who d'you mean?"

"The Brazilian dancing woman—Alma Ferraros."

Cyril started and sat up abruptly as though he had been stung—a not altogether surprising circumstance.

"Lord! You don't say she's here!"

"Told so."

"My stars!"

"Know her, then?"

Cyril hesitated and half shook his head.

"I've an idea I met her at the embassy in Paris."

"Hardly at the embassy," suggested George.

"Well, I was there at the time."

"I see. From the embassy. Was there any talk about her—ever hear—apart from her dancin'?"

"A good deal, I believe," Cyril replied with a touch of pathos.

"I meant, was she mixed up in politics and things of that kind?"

"Not to my knowledge."

"Ah, well; just wondered."

With a smile and a wave of the hand he turned away, choosing a path that led to the back entrance of the hotel, where newly arrived guests' luggage was piled awaiting conveyance to the bedroom corridors. George had a positive passion for reading luggage labels; it interested him to know where people had come from, and relieved him of the necessity of asking questions.

Nothing in the world is more characteristic of its owner than a hat box or Gladstone bag. It is a passport that all who have eyes may read, an open book whose pages are crowded with personal revelations.

The sound of George's retreating footsteps had barely died away when Cyril sprang to his feet and exclaimed "Damn!"

He said it three times, and at the third repetition added the words, "Of all infernal luck!"

And he had every excuse. What could be more disastrous to the cause of new love than the presence of an old?

Alma Ferraros! The very name was enough to wreck ambition. Alma, the most flagrant of all his wild associates! Alma, whose interment three years before had cost as much as all his other follies put together. And she was just the sort of woman who, if the caprice suggested itself, would not admit she had ever been given decent burial. She would rise again and think nothing of it. Like Hamlet's father she would burst her cerements, and with him for partner insist on revisiting the glimpses of the moon. It was damnable.

In his agitation Cyril stamped on the box of chocolates, which broke beneath his foot with a loud report.

The sleeper in the hammock started, stretched her arms with the parasol at full length, opened her eyes, swung her feet to the ground, smiled amazedly, and said in a voice that sounded like one very expensive orchid addressing another: "Cyreel! It's my Cyreel. But how lovely! And to stand there so quiet till I wake."

With hands outstretched she rose and came toward him.

"A laundress and a valet taught me the way to buy my shirts," says Tom Bruce

"Be sure they have this label and you'll have no complaint of my laundry work," said Sarah Kernan.

TOM BRUCE is a bachelor. He has apartments in Philadelphia's most exclusive hotel.

"Harry," he said one day to the hotel valet, "your laundress is a jewel; but she's a little rough on my shirts. Here's one with the buttons off, and another has shrunk in the neck-band."

"Beggin' your pardon, sir," said the valet, "I noticed last week that some of your shirts were not wearing well and I spoke to Mrs. Kernan. She said—

"'Tell Mr. Bruce to buy all his shirts with this label and he'll have no complaint of my laundry work.'"

And the valet held up a shirt, pointing to the Emery label.

"I looked over your shirts, Mr. Bruce. It's just as Mrs. Kernan says. The ones with the Emery label look just as good as new. The colors haven't faded. The buttons are on tight. The materials are wearing fine, and they haven't shrunk a bit."

• • •

Emery Shirts fully live up to their reputation of "equal to custom-made." They fit comfortably. The patterns are distinctive. Emery refinements of finish are found only under the Emery label.

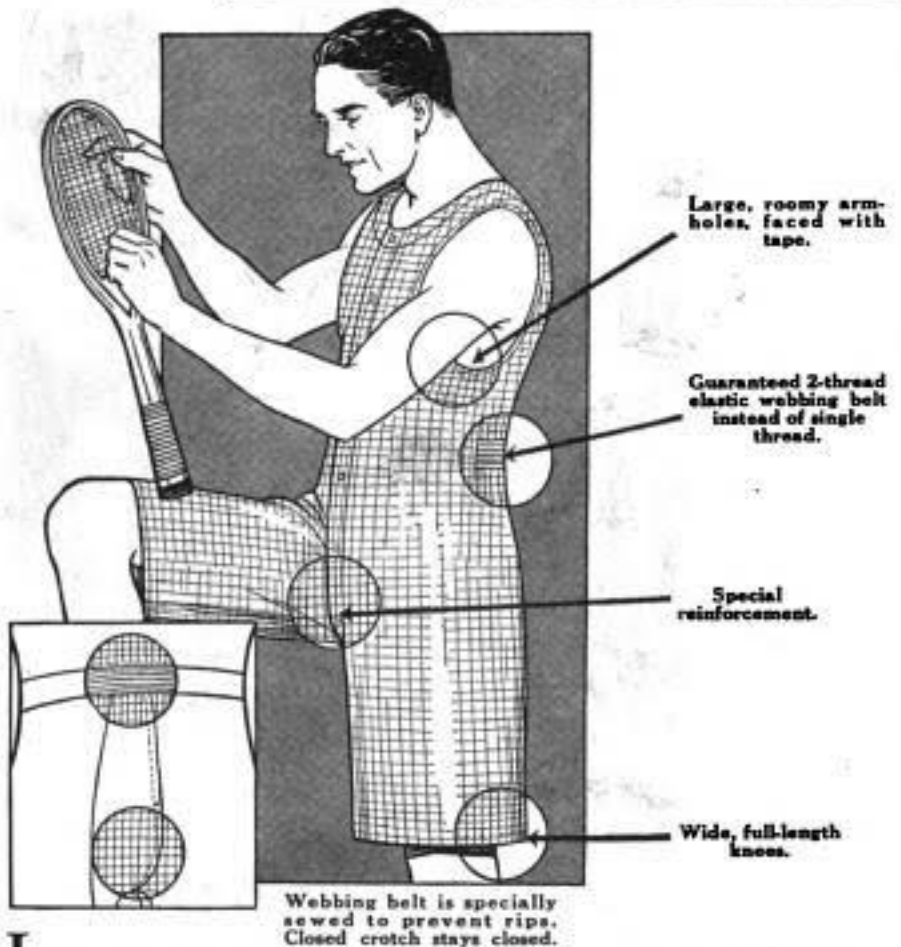
Yet Emery Shirts cost no more than ordinary shirts—$2, $2.50, $3 and up.

If there is no Emery dealer near you, we will see that you are served, on receipt of money-order and name of your dealer. Mention neck-band size, sleeve-length and color preferences. W. M. Steppacher & Bro., Inc., Makers of Emery Shirts, Philadelphia.

Why Emery Shirts are equal to custom-made

Patterns in each shirt perfectly balanced—stripes match in cuffs, front, etc.

Different sleeve lengths. Sleeve plaquettes (buttoning above cuff) to prevent gaping sleeves and make cuffs set right.



Pre-shrunk neck-bands. Nek-ban-tab for inserting collar button in back.

Closely stitched seams. Clear pearl buttons. Unbreakable buttonholes. And so on.

"As an honest fact," he replied, backing a step, "didn't know it was you—and—thought I was making rather a shine."

Alma shook a finger and frowned.

"Trying to wake a strange lady. I am ashamed. Cyreel, you are worse than ever."

It was no time for beating about the bush. She must be made to understand straightaway that her reign was over and there could be no question of reinstatement to the throne. His only hope lay in firmness, immediate and uncompromising. A false move now and all would be lost. Already he could feel the spell of those blue and lustrous eyes, hard eyes, that softened only to a string of pearls or a human frailty. Already he could feel her net enmeshing his unwilling limbs, the subtle enveloping quality of her voice which wrapped a man up as neatly as a chemist's parcel. He moved uneasily from one foot to the other. Her next sentence gave him the cue he desired.

"But you do not seem half so pleased to see me as I you. *Oh, ld!* I was afraid I should be so bored."

"Ah!" said Cyril. "You ought to have gone to another hotel. This one is too respectable."

Alma broke into a smile that was like a Bond Street jeweler's taking down its shutters.

"But you will alter that, Cyreel. It will be like old Paris days over again."

And she clapped her hands ecstatically.

Cyril planted his feet firmly and filled his lungs.

"I'm sorry to disappoint you, old girl," he said, "but I'm down here with the aunt."

Alma nodded her head wisely.

"We shall arrange, my Cyreel, you and I; we are very wise people, oh, yes."

"My dear good girl, we shall arrange nothing."

"You don't want me?"

"I do not. Now look here, I was thundering decent after that Paris affair. Did all I could, and more. Now be a sport and give me a miss."

"I give you Miss Alma Ferraros, and all will say, 'How lucky is this young man.'"

"A miss," Cyril repeated. "I mean, don't know me. The aunt is a bit of a stickler and ——"

"Oh, it's very well, it's very well. But I am much too hard up to part with a readymade friend."

"Knowing me won't help you. broke to the wide."

"No money?"

"Not a cent."

"Nothing?"

"Absolutely on the beach."

"Oh, the poor! Very well then, shall be banker for her little Cyreel. will return his—what you say!—trap ity. She will be pleased."

Things were getting desperate. Th was no alternative but to speak the tr After all, Cyril reasoned to himself was a thing she could hardly fail to e pathize with.

"Jolly ripping of you, and all that," he, "but it won't work. There's a staying with us here that I'm keen want to marry—and ——"

"I am *de trop*."

"I hate to say so."

"But it's true."

"Well, I would be grateful if you see a way to leaving me alone."

Alma pouted substantially.

"'S difficult. 'S very hard."

"Be a sport and promise."

Alma assumed the look of A Awakening.

"I'll think about it."

"Couldn't you be a bit more com It's a serious thing with me."

She looked at him critically, and gravity of her expression broke up trayful of diamonds.

"I promise anything," she cried, give me a kiss."

"A kiss?"

"Yes, a kiss."

"I say! Think that necessary?"

"Anything if you do that; if nothing."

"Oh, very well. I suppose it don't ter much."

But he was wrong, for the H Mrs. Conyngham, who was gifted extraordinary nose for finding pe awkward situations, came throu cleft in the bushes at the very mom Alma slid an arm round Cyril's drew his lips down to hers.

Mrs. Conyngham paused in h the kiss pursued its course unabated she retreated rapidly to the narro which had brought her into the p of this appalling spectacle.

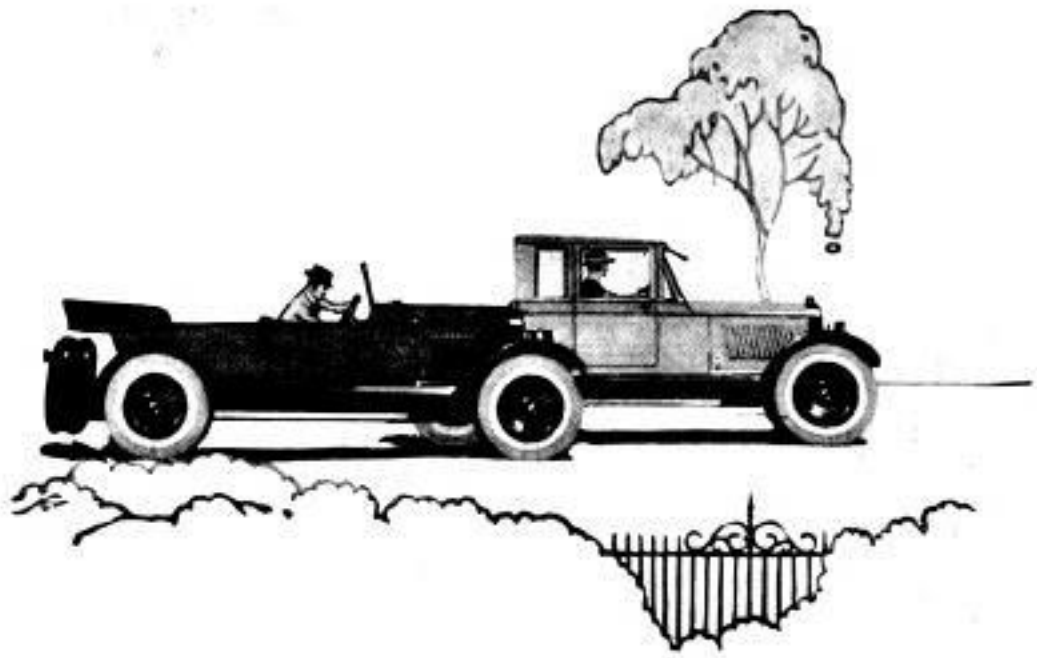
WHAT WOULD THE BOYS W WERE THINK OF US NOW?

(Continued from Page 9)

at the camera—and at J. P. Phelps, Artistic Photographer, Muscatine, Iowa—and not let on that his little heart was almost broken by the thought of the fringe on his pants—the boy's pants, not J. P. Phelps' pants—and I could make gentle mothers and strong harsh men hide their faces in their hands and sob until they all rushed down to the post office to send the little boy pairs of pants; but, for one thing, the pants would not fit me now; and, for another thing, that little 1876 boy never felt any feelings of the sort. The only Sunday-pants thoughts that boy ever had were that it was a dog-gone shame he had to wear them on a week day. No; the only way to get pathos out of the photographs of those seven-year-old boys we were is to wonder what they would think of the way we have lived up to their expectations.



Looking at it that way I do feel rather sorry for all those nice little boys we were. They were such hopeful little fellows. When he is seven years old, or about then, a fellow begins to speculate quite a lot on what he will be when he is a man. He does not think of the man he will be as exactly the same person as himself. He is only a boy, but this other fellow is going to be a man. He begins to look around among the gods and heroes to pick out the sort of men he hopes to be. He takes a look at father and decides that father is a fine man, far and away the finest man he knows—you can't beat the loyalty of a seven-year-old boy—but he has to admit that father is not absolutely perfect. He has to admit that in one or two little matters George Washington probably did surpass father a wee mite. Father is father of course; but it cannot be denied that John L. Sullivan had a wonderful right arm. There is usually, it is true, a spare half dollar in father's pocket when the circus comes to town, bu the utmost loyalty to father—one admit that in finance Rothschild and and the Count of Monte Cristo e had the goods. Father is father, b a young fellow is daydreaming of h he is compelled to remember that t such men as Christopher Colum falo Bill, Abraham Lincoln, Leon ing, Robert Fulton, Ole Bull, Parn and Cal Towers, the champion swi mer of the United States.

A young man of seven, looking the future, has a right to expe things of the man he is to become a right to expect the man to be a him. Of course the boy's perspect be a little faulty at the moment used to be, after questioning wh would prefer to have the man be George Washington or the Wond valed Premier Bareback Rider that properly to fulfill his destin the approval of his soul he must be smith.

I am ashamed to say it, but I have failed the young man there a blacksmith. The sort of blacksm young man had in mind was one large quantity of black hair on his a complete jungle of it on his exp His main occupation would be w piece of white-hot iron with a ha mer while he let the sparks fall no more concern than if they we flakes. Now and then he would the water tub and shift his quid cheek. To vary the monotony occasionally straddle the l horse, holding its hock betwe while he pressed a red-hot harness sole of the hoof. A whiff of

ARE WOMEN BETTER DRIVERS THAN MEN?

A good automobile driver is, first, the driver whose mind is free from all worries and anxieties—whose first thought is upon driving the car.

A good automobile driver is, second, one who has confidence in the car which is being driven.

And confidence comes only from a thorough knowledge—a tested understanding—of how the car operates.

She, who knows just what happens when the clutch pedal comes back and the accelerator pedal is depressed—and tons are moved smoothly, swiftly, and majestically away—is a better driver than is she who does not know these important things.

She, who understands the generation of the power in the motor and its noiseless delivery through the transmission (or gear box); through the propeller shaft protected by its universal joints; how it is reduced at the pinion; and how it turns the corners at the differential, to be transmitted to the rear or driving wheels; she will be best able to handle that car in every circumstance which arises.

A good automobile driver must have confidence in the vital parts of the machine, with a mind free to meet every road exigency. As a confidence-building knowledge of the car increases, so will increase the faith in Timken Tapered Roller Bearings to protect every horse-power, to eliminate every possibility of delay, bringing that assurance and peace of mind that good drivers must have.

That is why the driver of the Timken-equipped automobile is a more confident driver—and a better driver—than is the other.

And that, in turn, is why more and more women are asking him—the car salesman, the husband, the brother—"Has it Timken Tapered Roller Bearings, and where?"

For women today are just as much automobile drivers and automobile buyers as are men.

The Timken Roller Bearing Company
CANTON, OHIO

Ten miles and more of silken strands go into the making of a pair of Phoenix hose. While other natural fibers are at best only a few inches long before they are twisted into thread, the filament of silk as it comes from the cocoon is practically endless. And that is why silk makes the strongest of all thread. The Phoenix method of converting the finest of silk into the finest of hosiery has, for a full decade, insured to the men, women and children of America longer hosiery mileage and greater elegance at low cost.

n has a seven-year-old son he ive that son think he is a failure, ll stoop to a lot of subterfuges estroying that boy's belief that o; but hardly any of us give a the boy we were and what he k of us. We owe something to we owe something to the faith ts.

how we would feel if all those we once were, who so trusted us est we possibly could be, should r somewhere and look us over. ey were all lined up along the housands of those seven-year- it was circus day and the big expected to heave into sight . Little Ellis Butler would be ittle Warren Harding, and little ver, and little you, and little ith, and little Johnny Jones, little seven-year-olds we once

would all be, eating double- nuts and pink-and-white pop sly, and leaning out as far as raning our necks and now and g to the middle of the street to ld catch the first glimpse of us marching down the street in the

from far up the street would rst weird tootle of the steam d then, nearer, the first blare of the brass band at the head of the parade; and one little boy would jump up and down and shout, "Here they come! Here they come! I see 'em!"

Then the head of the procession would come in sight, and every little boy would be ten times as excited as before. Imagine not having seen yourself for years and years! I would turn to you and say:

"You just wait until you see the man I've become! You'll see something worth while, I bet you! I'll bet I'm splendid—just awfully noble and rich and kind and famous and honest and everything!"

"Yes, but you just wait until you see me!" you would cry. "You'll know me the minute you see me! I'll be the governor or a millionaire or the head of a big corporation, or something elegant."

We boys on the sidewalk would not have the least doubt about some things. The men we had become would all be fine, strong men with our heads held high—brave and rich and successful. It could not be otherwise.

So along comes the brass band, tooting and thumping, and all the little boys that we were stand on tiptoe and dance with eagerness and excitement. We're going to be a proud lot of boys, I bet you!

Brass band at the head of the procession goes by. And who is this in a big automobile, with a silk hat? Little Warren Harding on the sidewalk gives a loud cry of joy and rushes into the street. He's happy! It is true that the man he has become has no red-white-and-blue sash around his chest, and he does not wear a gilded sword, and he has no cocked hat with a Knights of Pythias plume; but he is President of the United States, and that is something. So little Warren runs along beside the automobile and big Warren sees him and opens the door of the automobile and helps him in and they hold each other's hands and the parade moves on.

Giving Little Ellis the Slip

And now the rest of us on the sidewalk are eager! These are the big men, at the head of the parade, and we scan each face eagerly, hoping one of these men is the man we have become. And here and there, up and down the sidewalk, a boy exclaims joyfully and runs into the street and grasps a man's hand—he has found himself. And they go marching by. All the successful men march by—the men who are thoroughly worth while. That part of the parade comes to an end.

And the rest of us now? We are so anxious we grow tense and stand in utter silence and just stare and wait. You—well, I don't know about you—but I am there in my broadcloth suit, with my shoes all polished except the heels, and I have on my striped stockings and my beautiful Roman-stripe tie; but I do not give them a thought. I'm looking.

It is a rather mixed lot, this remainder of the paraders. Here is one man with a bloated face and a blackened eye and mud on his ragged clothes, and a little boy in a neat blue seersucker suit and a chip hat with a blue sailor ribbon—a sweet little boy if ever there was one—sees the man and recognizes him and begins to cry. He puts his hands over his face and backs away from the edge of the sidewalk and turns and runs.

His heart is broken, all right, and he is going around back of the woodshed to eat a green apple and die. And the man he has become does not look at him; he is ashamed to.

And presently I begin to be nervous as I stand on the edge of the sidewalk. So few of the boys are running into the street to take the hands of the men they have become; so many of them do not recognize the men they have become; so many of them are hiding their faces and hurrying away to find woodsheds and green apples.

And, marching down the street, I see from far off the wistful small boy in the broadcloth suit with the brass buttons and the striped stockings and the lovely Roman-stripe tie standing on the edge of the sidewalk and waiting for me. I don't know what you do, but I edge over toward the other side of the street and slip out of the parade and down Sycamore Street and through the alley and take the first train out of town.

I should hate to meet that boy. It would be mighty hard to explain the why of a lot of things.

Here and there in America a man suffers from what Mr. Freud calls an inferiority

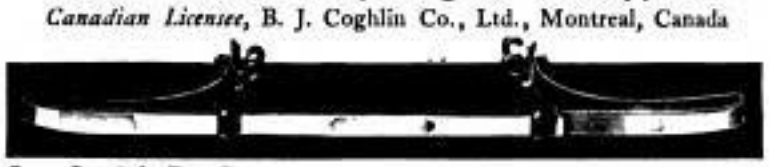
Just stopped in time -then SMASH!

CHILD darts into path of oncoming car. Driver stops just in time. Then, *smash* comes the impact of the car in the rear. But they're safe all 'round! Both cars were protected by Lyon Spring Bumpers, front and rear.

With Lyon Spring Bumpers on your car, you can drive with peace of mind and meet the emergency when it arises. The Lyon-patented two-piece overlapping front bar and the open "looped-ends" yield to the blow and absorb the impact.



Lyon Spring Bumpers are guaranteed to take the full force of any blow at the rate of 15 miles an hour without injury to the car or its occupants. Insurance companies grant reduced rates on Lyon-protected cars. These reductions will more than pay for the bumpers. So why take the chance of being smashed up?

All Lyon Spring Bumpers are artistically designed, strong and perfectly balanced. They not only protect, but add a finishing touch to the beauty of your car. A special Lyon-patented hook-bolt attaches them securely without altering or drilling the frame.

The Lyon trade-mark is on every genuine Lyon Spring Bumper. Accept no substitute.

Over a million in use. $10 to $23.

complex. As I understand this, it is something like a bilious bullfrog that gets into your cranium and keeps croaking away, night and day, "I'm no good! I can't do it! What's the use trying?" until you believe the little liar. That is a bad sort of amphibian to have in a cranium. It would be better for a man to fill his cranium with water and put goldfish in it. Whatever may be said against the goldfish's lack of conversational ability, one has to admit that it doesn't croak discouragement all day. The goldfish sings no songs of despair. If I had a goldfish that sang songs of despair I would wring its neck—if it had a neck.

The trouble with most Americans—if we have any troubles—is not an inferiority complex, but inferiority satisfaction. This is a new term, and I invented it myself; but it is a good one, and will probably be used in all the new textbooks.

It is a little difficult to explain, like Mr. Einstein's theory of relativity and why it is that your collars always come back from the laundry with saw edges; but in a general way, when a man has an inferiority satisfaction it means he is content to sit in the sun in the bleachers all his life, when he might, if he hustled a little more, have a box just back of the home plate, and a season ticket.

In the book I am writing, entitled "The Inferiority Satisfaction, or Sticking in the Mud While the Other Fellow Goes by on Horseback," the whole business is explained, with diagrams and maps and dotted lines, and the formula on Page 87 shows the thing at a glance. The formula is to this effect, if no worse:

$$\sqrt{\frac{4(O+2EZ)-21(Z-3H)}{(\$1{,}000{,}000-L)-y(A.\ D.\ 1876.)}}$$

This, you will see at a glance, gives the whole matter in a nutshell, because if y(A. D. 1876) represents a young-feller-me-lad sitting on a doorstep in 1876, it must be perfectly clear that he will never get very far if he loafs on the job too much after he is old enough to shave. If, then, we let O represent the seat of his trousers, and Z an honest day's work, and H an hour, the formula shows that if a man is satisfied to sit around three hours a day on O, loafing or daydreaming, Hades—represented by L—will be frozen over long before he has one million dollars—represented by $1,000,000—or anywhere near it.

Why a Ship Rocks

Mr. Sperry has invented a gyroscope to put in the bow of a ship to stop the ship from rolling during storms at sea. For some time people have considered the sideways rolling of a ship more or less of a nuisance, especially after meals. When a man is on a ship and the ocean comes up and tilts the ship over to port until the tip of the mainmast hits a porpoise on the dorsal fin and another section of ocean comes up on the other side and rolls the ship over to starboard until the tip of the mainmast can pick up a jelly fish, even a sailor is apt to feel perfectly disgusted. It is also disheartening for a gunner on a battleship to aim at an enemy and have his vessel roll over until the muzzle of his cannon points at the bottom of the sea and he shoots a very expensive shell at an entirely neutral mermaid, and—next shot—have the ship roll back so that the next shell plugs a hole in the Milky Way.

The difficulty in stopping the rolling of a ship has always been the water. If a ship would stay on dry land it could be braced up and it would not roll; but quite often thoughtless persons take ships out on the ocean, and there is an awful lot of ocean almost more than is needed. The worst is that when the waves begin to roll there are an awful lot of waves, and when wave after wave—each with thousands of tons of water in it—comes rolling up against the ship, tipping her over and tipping her back again, it would seem that she just had to roll.

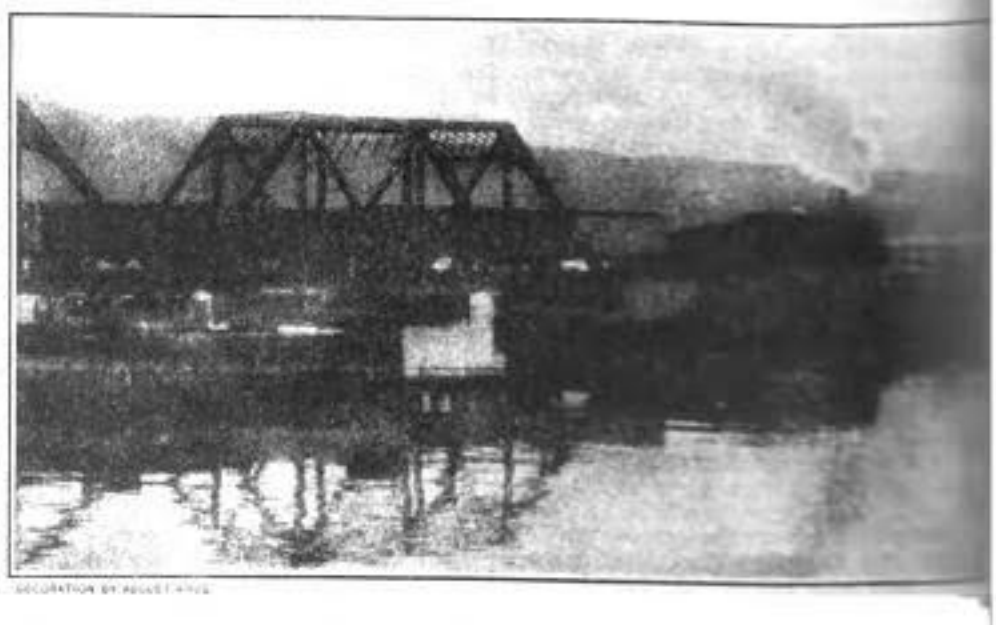
A man would think that with a huge ship rolling from side to side, and thousands of huge waves giving her a push, nothing on earth could steady her; that a gyroscope big enough to steady her would have to be bigger than the ship.

That is not so; not at all! The gyroscope Mr. Sperry uses to keep a ship steady, with her masts straight up in the air in the rollingest kind of sea, is—in proportion—no bigger than an apple in a barrel. He fools the ocean.

Living Inch by Inch

The trick is easy when you know it. It does not let the ship begin to roll. Mr. Sperry's gyroscope could no more stop a ship from rolling when it was rolling made under than a consumptive cowboy with a lasso could stop the Transcontinental Express. That is not the idea at all. He puts the gyroscope in the ship and waits for the first wave. One wave can hardly roll the ship at all; it can only start the rolling. The rolling has to be worked up as a child works up a swing. The gyroscope can handle that first wave easily, so it does just that.

The first wave slides harmlessly under the ship and the ship is still steady. Then along comes the second wave, but the first wave had not budged the ship, so the second wave is only another first wave, and the gyroscope can handle that all right.



That is how the gyroscope works. It does not have to fight all the waves of the ocean at once.

It takes the waves one at a time, kills the effect of the first one, and waits for the next and kills that, too. It never allows the ship to begin to roll.

The failure or near-failure who sits down to look back over his years often can see how his life could have been a success. The successful man, looking back, sees his life as a clean, taut white cord reaching from the seven-year-old boy he was to the man he is now; the other man sees his life as a loose and knotted yarn, all kinds of ravelings and tangles—an awful mess of things—and he does not see how he could have kept all that length of yarn taut and white and clean.

My notion, after having studied gyroscopes, bullfrogs and silent goldfish and grouches and inferiority satisfactions, is that the right way to live is inch by inch and day by day. One inch at a time we can handle, and one wave at a time, and one day at a time.

The lazy man is never lazy by the year; he is lazy by the day. Tomorrow he is going to get busy and hustle, but today there is no hurry; he'll just take things a little easy today. And that is one day. Before he knows it the days are a life. And there he is! The first thing he knows he runs across a photograph of the boy he was when he was seven, and then is ashamed of himself.

DECORATION BY ARTHUR I. KELLER

Mother's place is at the table

IT'S all well enough for the family to say "Do sit down, Mother, and enjoy your meal." But she can't be in two places at once.

Obviously, if Mother is to be at the table, the thing to do is to give Mother *facilities at the table* to do her work.

So easily done, now, with Hotpoint Servants for the *Table!* For here are electric cooking appliances made for *practical day after day use.*

Made with an understanding of actual cooking requirements. And full knowledge of what electric tableware must do if it is to be more than a novelty—pretty enough to look at, perhaps, but . . . .

These are *Hotpoint Servants* —designed by housekeeping *engineers* to broaden the service of electricity to the American woman.

Hotpoint Servants for the Table

1. The Hotpoint *Percolator* —knows more about making uniformly good coffee day after day than any other percolator in the world.

2. The Hotpoint *Waffle Iron*—looks like a waffle iron, works like a waffle iron and really bakes waffles as a waffle iron should.

3. The Hotpoint *Turn-over Toaster*—you do not have to touch the toast to turn it; the toaster does that for you.

4. The Hotpoint *Radiant Grill*—boils, broils, fries and toasts, any two operations at the same time.

The Hotpoint *Ovenette* (not illustrated) is a baking or roasting oven which fits on the *Grill*. Bakes biscuits, pies, cakes, etc. Roasts meats, poultry and small game of all kinds.

5. The Hotpoint *Teapot*—continuous heat. Tea is served without jumping up to reheat the water.

Is This The World's Longest-Mileage Tire?

We believe it is. We have sincerely and persistently tried to make it so, and comparative tests and mileage records prove we have succeeded.

Mohawk dealers believe it is—judging from the reports from these dealers all over the country.

Mohawk users believe it is—and they know from actual experience. Ask any one of them.

If this is the longest-mileage tire on the market, it will be worth a great deal for every motor car owner to try one in competition with other makes and prove it for himself.

The remarkably high mileage which the Mohawk Flat Tread Cord is giving is not the result of any mysterious method or secret process. It comes simply from the firm determination on the part of The Mohawk Rubber Company to operate its plant and its organization so efficiently and economically that it will be able to put more rubber, better rubber, and finer workmanship into its tires than are used by the average tire manufacturer.

In the present era of drastic price-cutting, which is invariably accompanied by an era of cost-cutting and quality-cutting, it is important to know a tire manufacturer who is strictly adhering to high-quality manufacturing principles.

The first is compara- but the second is more difficult erse elements, developing from between liberalism and reac- seeking control. Japan is in rment. If liberalism triumphs, y will be easy. The conference the hands of sincere liberals who had urged disarmament in the face of discouraging opposition.

Washington showed Japan what she could do and what she could not do. The truth of the matter is that prior to the conference Japan faced a situation similar to that which confronted Germany in the fateful summer of 1914. It was almost a case of revolution or war. In each country the burden of taxation for militarism made it imperative to get action on the overhead that the people were paying for a spectacular show.

Happily for Japan she learned without serious expenditure of blood and treasure—her part in the Great War was comparatively insignificant—the tragic lesson that Germany learned at the price of her power and prestige. This lesson is that national progress can no longer be achieved through force. It means that in the East as in the West, economic imperialism, like its full brother, political imperialism, has gone into eclipse. Japan must henceforth depend upon peaceful penetration without special privileges.

Any appraisal of conference results must include at the outset a consideration of the Japanese diplomatic attitude. Later on in this article her leading spokesmen will officially declare her position. Unfortunately Japan's diplomatic record during the last twenty years, and especially its relation to China, has exhibited at times a considerable variation between promise and performance. Though it is unfair to assume that her diplomacy will continue as of old, at the same time it is hard to conclude that a change of heart will be sudden. Honesty and sincerity of purpose are absolutely essential in making the conference a permanent success.

The important phase for speculation is Japan's new attitude towards the mainland of Asia. How have the resolutions adopted at Washington helped or hindered her aspirations there?

What Japan Gained

Japan's new policy towards China proper seems to contemplate an amount of economic and if possible a sufficient political control to insure an uninterrupted supply of raw materials. There is no disguising the fact that the disposition towards Manchuria involves a much larger degree of domination both politically and economically. Manchuria is a vast treasure house of raw materials, and through the acquisition of the leased territory there as a prize of the war with Russia, Japan has already a strong foothold.

Japan hopes to see Siberia develop into a weak state, noncommunistic in character, where she can obtain commercial privileges which, if not entirely preferential, will give her nationals the advantage in competition with other foreigners. Japan already has her hooks deep into the Siberian coast, and is intrenched economically in Vladivostok. Following her seizure of the northern section of the island of Saghalin, as a result of the massacre of Japanese soldiers and citizens at Nikolaievsk, Japanese big business fastened on the valuable coal and oil deposits there. Japan today holds the key to the vast valley of the Amur with its rich stores of fur and grain.

Although pride fostered much of the Japanese objection to the naval-limitation agreement there seems to be no doubt that the idea behind fleet expansion was to make the navy so strong that no country would dare attack her, no matter what she might do on the Asiatic mainland. I have already pointed out the almost crushing financial burden that the naval program would have imposed. Though Japan loses some of her naval prestige, she gets at the same time almost complete immunity from assault. The restriction in capital ships, together with the nonfortification of Guam and the Philippines, removes any physical menace from the United States, and affords Japan much better protection than her 8-8 fleet would have done, and at a greatly reduced cost. It is now well-nigh impossible for the United States to use force or even threaten Japan in the Far East.

At the time I write this article, which is towards the end of April, the indications are that the greater part of the money saved on capital ships will be devoted to other construction, such as smaller ships, auxiliaries and submarines, while there is

This is Jantzen Week
from Maine to Waikiki

FROM where the tide comes booming in on the Maine coast to the sunwarm sands of Waikiki, 5,000 miles away, Jantzen is the popular suit.

Swimming is now recognized as one of the most healthful of American sports. It is a body-building exercise that has no equal. The Jantzen gives a perfect and permanent fit. Its elasticity allows complete freedom of action. Jantzens are worn by national and Olympic diving and swimming champions.

This week leading department stores, athletic stores, men's furnishings (wherever swimming apparel is sold) are displaying Jantzen suits for Men, Women and Children. All are pure wool. Ask your dealer to explain the non-rip crotch, bow trunk pattern, non-breakable rubber button, and other EXCLUSIVE Jantzen features.

Be sure to get the original Jantzen. If you do not find them, write us for the 1922 Style Book and name of nearest dealer.

2100 degrees Outside; Only 300 degrees Inside!

THAT a new standard of excellence has been attained in safes is shown by the fact that it required five and one-quarter hours, with a heat ranging up to 2100 degrees Fahrenheit, to cause a temperature of 300 degrees inside the New Herring-Hall-Marvin Safe.

This great capacity to withstand heat surpasses by 30 per cent the requirements of the Underwriters' Laboratories, Inc., for their "A" Label. The extra one and one-quarter hours of protection when the fire is hottest is why this safe takes its contents *clear through* the worst fire to be expected. In addition to this great fire resistance

THE NEW
Herring-Hall-Marvin
SAFE

is especially designed to stand shocks from falls, explosions, crashing debris, and sudden cooling when at white heat. As in its capacity to resist heat there is likewise a margin of safety in its structural strength.

A new standard of excellence in a safe; a new measure of protection for your records; the adequate protection you should have!

The sixteen large sizes bear the "A" Label of the Underwriters' Laboratories, Inc.; the six small sizes bear the "B" Label.

Interchangeable filing equipment for the interior to suit your requirements. The safe may be equipped with a burglar-proof chest if needed. Sold by representative dealers.

Write for folder, "The Most Complete Fire Protection Ever Built," and name of dealer in your city.

HERRING-HALL-MARVIN SAFE CO., Hamilton, Ohio

every prospect of a substantial increase in naval aviation. Thus the benefits to the taxpayers are deferred. It is worth while to mention in passing that the budget for 1922-23, passed on February fourteenth last, contains no reduction of importance in the army appropriation, and only a limited cutting down in the naval appropriation. It is likely, however, that a special session of the Diet will be held this summer to revise the budget.

The four-power agreement has not been received very seriously by the Japanese newspapers and people in general. It is generally considered to be a subterfuge engineered by England and the United States to do away with the Anglo-Japanese Alliance.

The scrapping of the alliance with Britain was a severe blow to Nippon, because it was one of the old-style offensive-and-defensive kind. Moreover, it had originally given Japan a grand-stand seat in the concert of powers and had strongly stimulated her spirit of race pride.

The Four-Power Treaty presupposes honesty, justice and fairness on the part of the nations involved. Economic necessity alone will probably aid and abet an honorable interpretation of its principles on the part of Japan, but it is well to remember that the so-called liberal Okuma Government, though bound by the terms of the alliance to acquaint England with all diplomatic engagements with other countries, signally failed to do so in the case of the Twenty-One Demands on China, the Sino-Japanese Military Agreement, and the secret treaty with Kerensky in 1916. Will the new spirit of diplomacy prevent such double dealing in the future? My observations in Japan lead me to say that I believe Japan intends to follow the letter and the spirit.

The Shan-tung settlement was really a master stroke by Japan because it relieved her of a question that was causing increasing enmity both in the United States and in China. As in Siberia, her nationals have bagged valuable economic privileges, and, as I have intimated, troop retirement and a relinquishment of the control of the Tsing-tao-Tsi-nan railway will not seriously impair Japanese vital interests in the Kiao-chau Peninsula.

The Japanese people in general consider China as peculiarly their own field for exploitation because her domain is the most convenient source of their sorely needed raw materials. Everywhere in China I have found the attitude towards Japan summed up in this sentiment: "We still distrust Japan. She must first prove her friendship for China. This means a forfeiture of the Twenty-One Demands. If Japan does this she can get preferential rights in Manchuria and Mongolia." Peace and prosperity in the East largely depend upon good will between China and Japan. The Washington conference put the spotlight so searchingly upon the Japanese procedure in China that she can take no other course than that of respect for her neighbor's territorial and political integrity.

Commercial Stabilization

Only a word is necessary about Japan in Siberia, because there are other vital matters to be dealt with. The Siberian venture has never been popular with the mass of the Japanese people or with the majority of civil members of the cabinet. It has been almost entirely an army project, in which the prestige and political power of the army were closely interwoven. If the army crowd continues strong in its influence, then the retirement from Siberia will be considerably delayed. But in Siberia, as in Shan-tung, the real Japanese job is already accomplished because economic penetration has done its work.

More permanently important is the new Far Eastern economic line-up growing out of the conference. Political conflicts, like wars, are passing phases, but business goes on forever.

Taking the broad commercial view there is no doubt that the conference has stimulated all economic development. Business interests in the East feel that at any rate Washington got at the root of the evil that has hampered the movement of trade and development. Anything that reduces the hazard of war makes for confidence, and this confidence in turn makes for long-term employment of money. Abolishing spheres of influence and monopolistic concessions, sterilizing the hate and suspicions of nations and breaking up the great game of grab will mean stabilization even in China, where political disintegration has reached the lowest ebb.

Just as Japan stood at the crossroads of her political destiny in 1919, so does she stand today at a significant turn in the road of her industrial life. She is menaced from many quarters. For one thing, the Chinese worm has turned. China is now underselling Japan with Chinese goods in the Japanese markets. There are many reasons for this. One is that though the Japanese work and live for less than the white man, the Chinese can overwork and underlive the Japanese. Another grows out of the excessive overhead cost of production in Japan.

In her new trade relationship with China, Japan must hereafter depend mainly on her geographical advantage. With special privileges out of the question, she must enter frank and open competition. In this competition Japan will not fare so well because she is in the throes of a severe depression due to inflation and speculation. Her wages are 300 to 400 per cent higher than before the war, extravagance continues unabated, and the average Japanese man has not written off his losses. The balance of trade is strongly against her and she is losing her gold reserve at the rate of one million yen—approximately five hundred thousand dollars—a day. She must further undergo a drastic economic readjustment due to the Washington conference, for tens of thousands of employees in shipyards, arsenals and elsewhere will lose their jobs. In Japan the family system dictates that no workman can be discharged without what is known as a retirement allowance. It is more costly than a bonus because it sometimes implies a premium on inefficiency. You can readily understand what Viscount Kato—in addition to the Baron Admiral Kato who headed the Japanese delegation at Washington—who is head of the Kenseikai Opposition Party, meant when he said to me at Tokio, "Japan has purchased peace and confidence abroad at the expense of economic unrest and possible economic disaster at home."

Safeguards for China

I have touched only the high spots of the Japanese economic situation as they are essential to this preliminary survey. A fuller explanation of her vital economic problems, and especially the necessity of changing from a purely agricultural to an industrial mission and of improving the character of her merchandise, together with the story of her feudal banking system, will be made in subsequent articles. One possible innovation must be mentioned here.

Although possibly a sacrilege to Japanese reactionaries, it is not unlikely that what might be called a commercial genro will succeed that other and well-distinct political genro which ruled the country for years. It will develop along the lines of the commercial hierarchy that advanced Germany to her place in the world before the World War. The leader in Japan will probably be a man of the type of J. Inouye, governor of the Bank of Japan, who represents the modern and progressive spirit in Japanese finance. This genro must have and does have the ability to attain political affiliations in order to function. If it comes into being it will be a stabilizer of immense value. It will go much towards divorcing Japanese finance from the more or less baleful influence of the Foreign and War Offices.

When you turn to an analysis of conference results in China you are faced against a well-nigh baffling problem. Practically the whole of the northern part of the republic an armed camp, with national finance bogged in corruption and maladministration, with two separate and distinct governments, a parliament dissolved, most of the members of the Peking cabinet absent, salaries in arrears, a bankrupt treasury, you do not wonder that it is practically impossible for China to capitalize—certainly not at once—the immense moral support and publicity she got at Washington. To add to all her troubles, an anti-Christian movement developed.

Almost against her will and by its moral pressure the Washington conference is automatically safeguarding China. The warning by the Washington Administration that no foreign loans can be

Clicquot Club

Pronounced Klee-Ko

GINGER ALE

For those who dance and those who don't

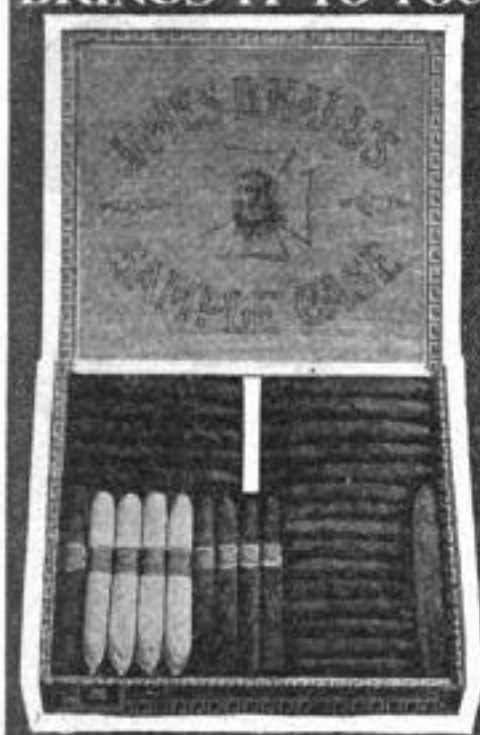
SOME like a fox-trot. To others a waltz is still the best. Even the one-step has its followers—and some don't like to dance at all.

What a difference when it comes to drinking Clicquot Club Ginger Ale. *They all like it.*

There is something bewitching in the sight of tiny bubbles leaping from the bottom and sides of the glass, dancing up through the clear, golden liquid to sparkle and break at your lips. And the taste—who shall describe the taste of it? The only *true* description of Clicquot Club is—a drink of Clicquot Club.

Clicquot is made with water from bed-rock springs. Only real Jamaica ginger is used. The other ingredients—sugar and fruit juices—are just as pure as can be found. The blend never varies, so that every bottle of Clicquot tastes like the one before and the next. It is a most dependable, friendly, happy drink.

But you needn't be limited.



You can give everyone the choice of Clicquot Club Ginger Ale, Sarsaparilla, Birch Beer, or Root Beer. The flavors are as different as their names—the purity of all is the same. Buy Clicquot by the case for home use.

THE CLICQUOT CLUB COMPANY, Millis, Mass., U. S. A.

without the knowledge of the American Government is not only a blow to European militarism but a challenge to mushroom capitalists who have financed with shoestrings in China and elsewhere.

Every now and then you read that China is unified, but it is a unification that only widens the breach. You also hear it stated by parlor uplifters that China's fundamental needs are railways, the improvement of communication, currency reform and education. But what China needs more than anything else is a moratorium on militarism and a drastic control of the tuchun system. Until this is done the country will not only drift on to a more hopeless division but will probably fail utterly to realize on the supreme opportunity afforded by the conference. Take Shan-tung. If the present disruption continues China will not be able adequately to resume her authority there. With the departure of the first Japanese troops an era of banditry began. The Chinese allege that the Japanese instigated it, but whatever its source, it is a menace to order and Chinese restoration. With civil war on, China may be obliged to turn to Japan for adequate policing in Shantung; and Japan is no philanthropist.

These are the plain blunt facts about a country for which we all have a large sentimental interest, coupled with a corresponding amount of ignorance. The marvel is that China is able to function at all.

Despite all the plundering and dislocation that I have described, the ancient Colossus moves on. The people live and have their being. Even new banks are founded. Flood and famine prevention are under way. It is probably due to the fact that China, as someone has said, "is a civilization and not a nation." In kinship with the Balkans she seems to be able to withstand the roughest kind of treatment and survive. Like the proverbial poor, her troubles abide with us always. She will survive the present crisis, which comes unfortunately at a time when the world expects more from her than civil strife.

Optimists maintain that the chaos and confusion that began early this year constitute the travail that means the ultimate birth of a really and truly united China. Even if this is true she is losing the selling point for outside help which would have come hot on the heels of the conference. Thus she will have to fall back on that traditional self-help which has so long been a theory and not a condition with her. The principal self-help in China so far has been among corrupt officials who helped themselves to the public funds.

Living Cheap in China

Though China for the moment seems unable to grasp the opportunity offered by the conference, she is not without some compensations for those who tarry in her midst. So far as my observation is concerned, and I have been a pretty steady traveler these last years, she is the one country where the high cost of living is a stranger. After extortion in London, Paris and New York, Peking, for example, seems like a dream city, because you are constantly afraid that you will wake up and find out that it is all a mistake. You can live more cheaply in China with a greater degree of comfort than you can in any other part of the world today.

The outlook for China is not altogether hopeless. The Chinese are fundamentally democratic, and some day they will bring about a real autonomy in the provinces that will make perhaps for a United States of China. America has always been the ideal of the intelligent Celestial.

I can best sum up the situation as it now shapes by quoting what a man, born of American parents in China and who has lived there all his life, said to me in discussing the plight of the nation.

In commenting on the almost incessant civil war, which is merely a succession of conflicts between the tuchuns for personal power and plunder, he declared: "So far only the intelligence of the Chinese people has been insulted in the struggle between the military governors. The time will come when their persons will be affronted, and when this time arrives they will rise up and make short shrift of the overlords who have regarded the country as a piece of personal property to be juggled with and fought over at will. China, unlike Mexico, does not need a dictator of the Diaz type. She merely requires the exercise of a united will, which, for the moment, seems dormant."

This swift survey of China and Japan after the conference would be incomplete without a reference to Russia. As in Europe, she remains a brooding problem. The ghost of the Bear that Kipling wrote about still stalks through the Far East. He haunts a homeland despoiled by the cancer of Bolshevism and ranges its Siberian outposts seized by his hereditary enemies, the Japanese.

When you see the Russia of the old school these days you also see tragedy. Nowhere is it more poignant than in Asia. Exiled and impoverished, Russians are hangers-on in a domain where once they ruled.

But this sentimental digression is not the point I want to make. In nearly every Russian in the East burns the desire for revenge on Japan, first for the humiliation heaped upon them in the war of 1904, second for what they regard as arrogant usurpation in Siberia in the hour of their helplessness. But there is another reason. Behind the Russian desire for a reckoning is the hope of an ultimate restoration of the ice-free port of Dairen, the same one-time Dalny that was to have been the capital of a commercial and political Asiatic empire dominated by the Slav.

Japan is alive to this remote Russian menace and has undoubtedly sought to perpetuate Russian military and political collapse in the Far East. In her preparedness for eventualities the United States was not the only hypothetical enemy. Whether the Russo-Japanese show-down comes or not, Russia remains an indeterminate factor in the balance of power of Asia.

Premier Takahashi's Message

For the final chapter of this narrative let me reveal three of the chief actors in the drama of the changing East, and let them have their say.

Take first the Viscount Takahashi, who succeeded the lamented Hara as Premier of Japan. I went to see him at his official residence, where, by the way, nobody resides. He is rotund, has an inscrutable face, and looks like a bronze and bearded Buddha.

Unlike Lloyd George he is a man of practical business experience. American bankers know him as former president of the Yokohama Specie Bank; later as governor of the Bank of Japan, which does for Nippon what the Bank of England does for England; and still more recently as Minister of Finance. Most people, however, are not aware of his romantic rise from poverty—his father was a poor samurai—to wealth and political power. Born in Sundai, the Boston of Japan, he went to California in his earlier teens, expecting to be one of the pioneer Japanese students. When he arrived he discovered that he was to be a servant, and not a student, in the home of the American who invited him to come. He worked so faithfully that his master sent him to college.

From that time Viscount Takahashi's life was a series of adventures. He acted as interpreter to Prince Iwakura, the first Japanese envoy to the United States, and was later the dupe of a German get-rich-quick artist who exploited a nonexistent silver mine in Peru. Returning to Japan he was successively teacher of English in a college, founded the Bureau of Patents, and eventually got into banking by way of being superintendent of construction of the new home of the Bank of Japan. Once in finance, his advance was rapid.

Like most Japanese, Viscount Takahashi asks many questions. He was much interested in my experiences with General Smuts. That he has a sense of humor is evidenced by this little episode. I told him that I had met every European Premier since the outbreak of the war, and that Lloyd George was the only one who still held his job. Instantly his almost masklike face relaxed into a smile and he asked, "What is his formula?" At the moment the Opposition Party in Japan was trying to smoke him out of office, and nearly succeeded.

The Premier declined to be interviewed in the usual fashion—this is probably the result of his experience as a banker—but agreed to prepare a statement if I sent him the questions. I did so and included a request for a message to the American people as the result of the Washington conference. His statement in full is as follows:

Peace has now almost completely been assured by the happy conclusion of the Quadruple Agreement.

Selfish nationalism was usually the keynote of the diplomatic dealings of one nation with another. This age of national antagonisms is now passing. A new era of international relations based on the principle of cooperation has dawned upon the world. The Washington conference undoubtedly gave final expression to this spirit of the age.

The Japanese government, prompted by an ardent desire to see an efficient political government established in China, assumes an attitude of absolute impartiality toward the internal discords of that country. No one is more keenly interested than Japan in the unification and peaceful development of China. Japan is ever ready to do her utmost for the welfare of the four hundred millions of Chinese people who are Japan's best neighbors. Their aspirations are fully appreciated by Japan, who walks one step ahead in the path of modern civilization.

The Japanese government has in no occasion interfered with the internal politics of Russia, but has strictly adhered to the principle of absolute neutrality as regards the political strifes of the Russians. Japan will remain faithful to her frequent pledges to withdraw her troops stationed in some parts of the Maritime Province upon the establishment of political stability in Sibera. Japan is deeply concerned over the prevailing situation in Siberia and Russia, and is prepared to render as much assistance as possible for the speedy restoration of the economic and industrial life of the Russians in Siberia.

Now that the problem of naval limitation is definitely solved, we are justified in hoping that this will lead to the reduction of land forces, for these two problems went invariably side by side.

So far as the Pacific and Far Eastern problems, including the Yap and Shan-tung controversies, are concerned, nothing remains to be desired in the American-Japanese situation, and this will serve to knit more closely the bond that unites the two nations.

Critics often labor under misgivings of what is called Japan's militaristic policy. Policies adopted in the past by various powers in China whose independence is of vital importance to the existence of Japan herself, compelled Japan to take measures for her self-defense, and these came to be called militaristic by foreign critics. The history of Japan, however, does not show any of that lust for territory which has caused so many wars. Japan, while is keenly alive to the trend of the times, maintains a policy of peaceful development of commerce and industry. Signs are not lacking to demonstrate that the Japanese people have had enough of the glories of so-called militarism and are seeking with an enthusiasm unprecedented in their history the realization of peace and political liberalism.

I can reiterate without the least hesitation my previous statement that the war cry of that national development is no longer possible through military force. Never in the history of the Japanese people was enthusiasm for peaceful development of their national wealth more keenly felt. Force was never so much hated. Our people were willingly prepared to accept the generous concessions made at the Washington regarding the Shan-tung controversy, because they simply hated the thought of force and everything that force brings in its train. Japan's future foreign policy will be guided by the principles of fair play along the line of peace, which we shall apply to international economic and financial coöperation with her neighbors as well as to her general dealings with foreign countries.

The veil of misunderstanding which clouded the relations of Japan and the United States was completely removed by the Washington conference.

I deem it a great honor to address the American people a message of appreciation of the noble part which the American Government and people played at Washington, resulting in a glorious success for the cause of peace in the Pacific and the Far East.

I am particularly happy to see that all misgivings regarding the Pacific are now effectively dissipated and that a new era of peace and prosperity has dawned not only in the region of the Pacific but on the whole world. May the partnership of interest and sentiment to which we, the two great nations, belong, draw us still closer together in the coming reign of equitable justice and lasting peace.

Takahashi

At the Foreign Office

Next comes the Viscount [illegible], Japanese Minister of Foreign Affairs. With him I found the suave and tactful diplomat attuned to every note of astute diplomacy. Educated in Germany, he was once Ambassador to the United States, and has filled the same capacity at Petrograd.

I had several talks with him in the old brick Foreign Office, which the Japanese call the Gaimusho. As I sat alone in the paper-strewn desk I thought of the diplomatic secrets that it held. Not far from the historic gray structure in the Wilhelmstrasse in Berlin where Bismarck with heavy hand welded an empire is many a picture with international interest than the picture where Japan's world game is

What Happened to This Blade Since it Was Used Last?

It was cutting clean when you finished shaving. You wiped it as usual—but now, only twenty-four hours later, it pulls like a team of mules.

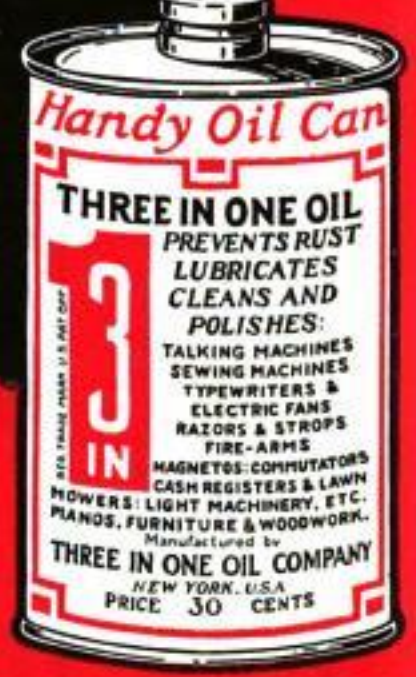
What causes the difference?

Invisible rust on the microscopic teeth of the cutting edge, caused by the moisture and lather your most careful wiping can't remove. Even moisture in the air will affect a razor's cutting ability. This surface rust makes the cutting edge look like a cross-cut saw and dulls the blade.

3-in-One *The Universal High Quality Oil*

prevents that annoying rust—preserves the keen edge—saves your face and temper.

Before putting your razor away, draw the blade between thumb and forefinger moistened with a drop of 3-in-One. Do the same thing again before shaving. 3-in-One on the blade makes it slide over the face more easily and prevents soap from burning or itching.



A little 3-in-One rubbed into your strop regularly will remove that "slickness" and cause the blade to take hold better.

There are hundreds of daily uses for 3-in-One listed in the Dictionary which is wrapped with every bottle and sent with every sample.

FREE—Generous sample and Dictionary. Ask for both on a postal or use the coupon at right.

3-in-One is sold at all stores, in 1-oz., 3-oz. and 8-oz. bottles; also in 3-oz. Handy Oil Cans.

THREE-IN-ONE OIL CO., 165S. Broadway, New York City

Hotels Statler

Buffalo - Cleveland - Detroit - St. Louis

A new Hotel Statler (1100 rooms, 1100 baths) is now building at Buffalo—to open early in 1923; 500 additional rooms will be added later.

It Begins with the Room-Clerk

By E. M. STATLER—being one of a series of ads embodying instructions to Statler employees.

GOOD personal service, in any first-class hotel, begins on the sidewalk—with the carriage man or doorman. But the most important person in the hotel, to an arriving guest, is the room-clerk.

So we insist, in these hotels, that it isn't enough for the room-clerk to be merely "courteous"—courteous as a matter of form. The fact that he is constantly welcoming people, hundreds of them every day, shouldn't make his welcome to you any less real. He's there, really, to be helpful to the people who come to us; if he isn't helpful—and good-natured in his helpfulness—he's a poor room-clerk.

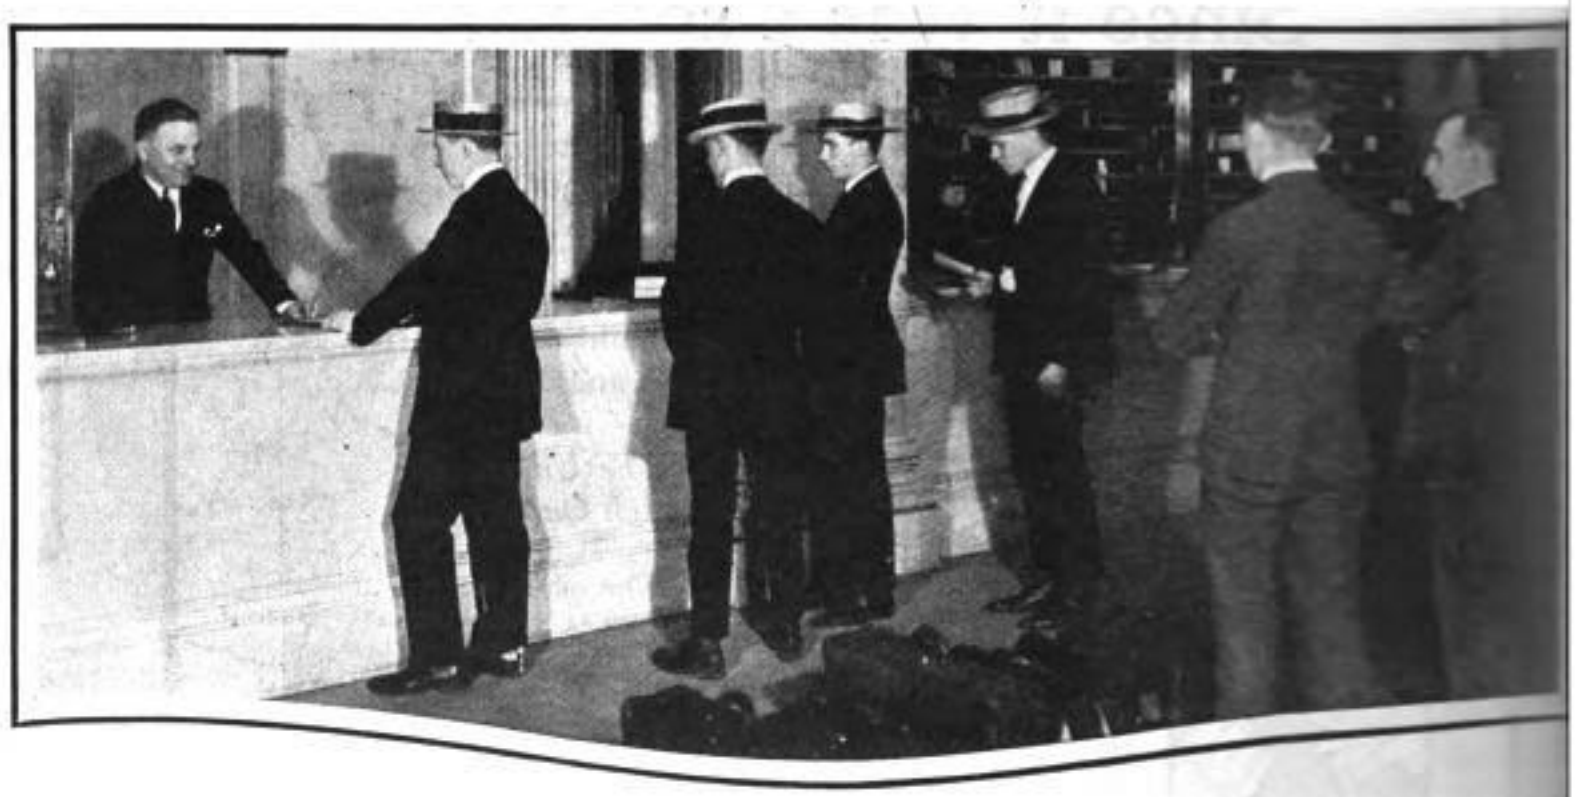
We can't afford to have poor room-clerks or uninterested room-clerks in these good hotels.

You can see, by the attached instructions, that we consider the room-clerk an important man in our organization. And we believe that you will have no trouble in doing business with him, pleasantly and satisfactorily, whenever you come to us.

Instructions to Room-Clerks

"In the first place, you have to take seriously and literally every word of instructions in The Statler Service Codes.

"You have to remember that you are never doing a man a favor in selling him a room. I have seen room-clerks who looked bored, or superior, or patronizing—grunting acknowledgments, dictating terms, working grudgingly. But I want to say that nobody can do that in our hotels and stay on the job.



"You won't always have just what a man asks for at just the moment he asks for it, of course. Those are the very times when it is easy for *the wrong kind of room-clerk* to give a customer the idea that he has what's wanted, but won't sell it because he prefers to sell something else. Watch, particularly and especially, the way you handle people who want the kind of rooms on which you are oversold. I know, and you know, that the traveling public gets a square deal at our room desks; but it is quite easy—*dead easy*—for you to give the customer an idea that he isn't getting a square deal. All he has to judge by, you see, is *your interest in his request*. Watch yourself.

"If people find it difficult or unpleasant to do business at the room desk, that's a sure sign of a poor room-clerk.

"Think of the men and women who come to you as being *your* guests, in *your* house. They're invited to come here, you know, and they have *every right* to expect a courteous and cordial interest in their wants.

"If you can't meet and care for people in this spirit, if you can't or won't be courteous and helpful and gracious and pleasant at every step of your work—and with your fellow employees as well as with our guests—don't try to be a room-clerk here."

Nine Powers Treaties relating to ...id policies concerning China and ...Customs Tariff and several other ...which were concluded or passed at ...ce, fairer treatment of China has ... and relations between the great ...ations that trade with China have ...ized, thereby removing much of ...s arising not only between China ...that power but between all the ...eir common relations to China. ...the case of Japan, by conclusion ...with China relating to the former ...d territory of Kiao-chau, she ...of the most vexatious questions ...n and China.

In all these arrangements or settlements Japan has made to China every possible concession, the extent of which is, I believe, much greater than what any other power could or would make. She does not regret it, for she believes that the sacrifices she has made will not be in vain, in the greater cause of international friendship and good will.

Japan is firmly determined, as other nations are, to carry out most faithfully and assiduously the spirit as well as the terms of these treaties and resolutions. And I believe China is no less earnest in her endeavors to do all that is within herself to reap the fruits of the labors of the conference, which have accomplished so much in her favor. It is true, as was pointed out by Mr. Balfour, that China must work out her own destiny in accordance with the changes of the changing world; that all other powers can do is to help her along her path; that she has little to gain from their advice; and that it is upon sources of strength drawn from within herself and these alone, in the last resort, that she must rely.

Japan has been and is ready to do whatever she can to help China along her path. She has every good wish for China. Not only has she good wishes, but Japan is vitally interested in a speedy establishment of peace and unity in China and in the orderly development of her vast natural resources. Let me tell you briefly why.

Japan and China are close neighbors. But their economic relations are not the same as the economic relations between the United States and Mexico, for example. The great country of America has everything within her own vast territory. In the case of Japan it is different. She finds herself in an extraordinary position of being dependent for so much of her trade on a single country—China. It is to this Asiatic mainland that we must look primarily for our raw materials and food supply, and for the markets for our manufactured goods. The conditions which obtain in China are therefore vital to our existence. Making no claim on this ground to any right of interference in the domestic affairs of China, Japan considers it, at the same time, an obvious fact that she has a special and extraordinary interest in China and its peace and welfare.

This interest is not of Japan's seeking. It is created by the facts of geography. A teeming population inhabiting a few islands situated off the coast of a vast continental country comparable among the states of the world to India alone in respect to numbers, and whose ports command all the avenues to their own shores, cannot but entertain a unique and altogether special interest in its affairs. If the islands of Great Britain were lying off the coast of an independent India it is impossible to conceive that the United Kingdom would not experience a special interest in Indian affairs. The United States has from time to time evinced an especial interest in the West Indian affairs, up to the point of intervening in Cuba, Haiti and San Domingo, merely for the sake of securing good and settled government in those neighboring states.

Such historical facts—and we could easily multiply examples—prove that the attitude of one state to another must in the nature of things depend largely upon the intimacy and importance of their relations.

That the law varies with parallels of latitude is an anarchial position that needs no refutation. But that the application of the law differs according to the circumstances of the case is equally self-evident. Conditions that may cause a momentary uneasiness to a distant and uninterested state may be a matter of life and death to a near neighbor. The relations of Ireland to the United Kingdom are largely determined by considerations of geography. The geographical position of the Suez Canal makes the relations of Britain to Egypt very different from what they would be if Egypt were in Borneo. The proximity of Tunis to Algiers made the attitude of France to Tunis necessarily different from what it would have been had Tunis been in Palestine.

Let us apply these principles to the case of Japan. Sixty years ago Japan was isolated, self-supporting and self-contained. Not by her own seeking, but through the invitation of others, she has now become to a great extent an industrial nation, depending for the life of her population upon the exchange of the products of their industry. The major part of this exchange takes and must take place with China. It is thus evident that a reasonably safe, orderly, prosperous and contented China, with which she can count on an uninterrupted normal intercourse, is for Japan an economic necessity. Without the smallest pretension to interfere in the politics, domestic affairs or administration of China—which would be rightly regarded as an unpardonable intervention in the concerns of a free and independent state—Japan nevertheless feels that it cannot fairly be denied that she and her myriads of people have an interest in the peace and welfare of her great neighbor which is far transcendent of that which can be ascribed to any of the remoter and less deeply concerned nations. To them the orderly development of China means much or means little. To Japan it means everything.

Japan seeks no exclusive economic privileges in China; still less any political advantages. But she regards it as a matter of self-preservation that China shall continually in truth and in fact be independent, orderly and responsible.

UCHIDA.

In hottest weather, no matter how active, Or at all times in crowded gatherings.

Wherever the Dainty Woman is "Mum" is the word!

Out of a world-wide need came this simple answer to Dainty Woman's heartfelt question—how can we avoid the embarrassment of body odors?

"Mum" is the word!

"Mum" takes all odor out of perspiration and prevents other body odors.

No matter how hot the day, how crowded the gathering, or how active you are, "Mum" will keep you free from embarrassing body odors all day and evening.

"Mum" is the word!

Dancing? Yes, dance as much as you want and still be free from perspiration odor.

Tennis? Golf? Walking? Yes, there too you can be free from body odors.

"Mum" is the word!

Crowded gatherings: parties, the theatre, receptions, in church? Intimate contact in the home or in cars? Yes, there too—

"Mum" is the word!

"Mum" is the delicate snow-white cream that prevents not only the odor of perspiration but all body odors. A little "Mum" used each morning assures you that the personal cleanliness the bath imparts will be yours all day and evening.

"Mum" is safe. It will not irritate the tenderest skin nor injure the finest lingerie or gown.

Make up your mind now to try "Mum." Get "Mum" at your store or from us by mail—25c. A pamphlet with each jar discusses this subject more intimately and tells more clearly why "Mum" is particularly the friend of women.

Also try "Amoray"—the new talc—really a powder perfume—with a delightful clinging fragrance that lasts all day long—a fragrance so exotic that you would take it for an imported talc but for the modest price, 35c. At stores or from us by mail.

Get both "Mum" and "Amoray" today.

Special Offer

To introduce "Amoray" (Powder Perfume), the distinctive feminine talc, we make this special offer. Send us 50c and your dealer's name and we'll send you both "Mum" and "Amoray" postpaid. Use coupon.

Mum Mfg. Co. June, 1922
1106 Chestnut St., Philadelphia

I enclose $_____. Please send me the articles checked below.

They are not Keds unless the name Keds is on the shoe

One of the children's Keds—made on a Nature last. Similar models with low heels, with strap and without, for women and young girls.

The world's standard summer shoe—for tennis, canoeing, sailing, and general outdoor wear. High or low, sizes for everyone.

Sturdy sport shoes, with or without heels. Heavy reinforcements and ankle patch. Smooth, corrugated, or suction soles.

One of the most popular all-purpose Keds. For street, home, sport. Comes also in a low model.

Once a novel experiment—today a national habit

This summer you'll see Keds everywhere—from town to city, from seashore to country club

THE pessimists told us it couldn't be done. "People will never wear canvas rubber-soled shoes except for games," they said—"they just won't change their habits." We didn't believe them.

We took the good old comfortable "sneaker" or "tennis shoe" you knew as a boy and modeled a whole line of summer shoes on it. We kept its ease and comfort, its lightness and coolness—we added style, finish, wear—and we made types and styles for every need.

They were just what Americans had been waiting for. Today Keds have become a national summer habit.

Why it will pay you to specify Keds

Light, cool, easy-fitting, Keds let feet cramped by months of hot, stiff shoes return to their natural form and breathe. And then Keds have a snap in their lines and finish which makes them popular even on the verandas of exclusive clubs.

Back of every pair of Keds are the skill and experience of the oldest and largest rubber organization in the world—growers, manufacturers and distributors of rubber and its products.

Uppers of fine white or colored canvas; soles of tough, springy rubber from our own Sumatra plantations. Keds make you proud of their appearance and enthusiastic about their comfort and wear.

There are many different kinds of Keds—high and low, plain and athletic-trimmed—styles for outdoors, for home, for every kind of sport.

You can get the kind you wish at your dealer's. If he hasn't them, he will get them for you. But remember—Keds are made only by the United States Rubber Company. If the name Keds isn't on the shoes, they aren't real Keds.

United States Rubber Company

Keds

Trademark Reg. U. S. Pat. Off.

Keds were originated and are made only by the United States Rubber Company. The name Keds is on every pair. It is your guarantee of quality and value.

m these vital cogs in Japan's well- and functioning governmental ma- to the premiership of China is the rbial far cry. But this is precisely the ve now make. In Mr. Liang Shih-yi hold one of the primary causes of the n between the two war lords, Chang and Wu Pei-fu, which has brought to the verge of a really serious civil

Liang Shih-yi is China's so-called wealth, and is reputed to be one of best men in the republic. Like his e, Viscount Takahashi, he is a financier, for he is the real force the Bank of Communications, and ested in many other profitable en- s. For twenty years he has alter- between public post and private s. When his political position be- untenable he always has a well- ed mattress to fall back on. In his as played many exciting parts. He sely associated with Yüan Shi-Kai at strong-handed gentleman tried himself Emperor of China in 1915, to fly to Hong-Kong for his life. l-organized political movement in ince the overthrow of the Manchus ly been complete without him. As of fact, his occupation of office has varied and hectic that it is often to know when he is in and when he Early in April he was continued as al Premier" while Mr. Chow Tze- of his trusted lieutenants, was d "Acting Premier." Only a the throes of her present almost sorganization could project the of two separate and distinct operating in different places.

rviewed Mr. Liang Shih-yi at where he temporarily resided in blishment occupied by one of the siness concerns that he controls. n a blue brocaded robe, over which black satin jacket, he looked as if epped out of an old Chinese print. epitomizes craft and subtlety, yet at unfailing courtesy which makes bred Chinese almost first among gentlemen of the world. He was erturbed over the crisis that, or unwittingly, he had brought le speaks no English and our long ion was carried on through an r.

nobilization Necessary

the Premier to explain the chaos and his reply was: "Unification prevented for many reasons. In were not strong enough to put Southern revolt. In 1920 both unprepared when the oppor- get together came. The real lack of unity is the pride and the tuchuns, which keeps the continuous disorder. With a arliament and the widespread that prevails today, unity is

st step towards the unification s to disband her armies. Only ops should be maintained to . This demobilization will not spread unemployment as was Europe, because the men could sorbed on the farms.

des must make concessions. I of retiring both presidents, es- temporary provisional unified , calling together the parlia- 7, revising the constitution, and g a president. During this in- ermier could function as tem- l of the republic. China's real hope and salvation lie in federated government with liberal autonomy in all the provinces. In this way a United States of China could be achieved, with Peking as the capital. The American system is my model for this."

"Suppose neither side will make concessions?" I asked.

"Then we must use force," replied the Premier. "Wu Pei-fu is the one stumbling block to the unification of China, and if he refuses to acquiesce he must be put down." I might add that this is exactly what Chang Tso-lin told me at Mukden.

When I asked the Premier what he thought of the results of the Washington conference he answered: "The conference pointed the way to a new moral obligation on the part of China. We are conscious of it and eager to show that we appreciate what is done for us. We cannot do it, however, so long as China remains an armed camp."

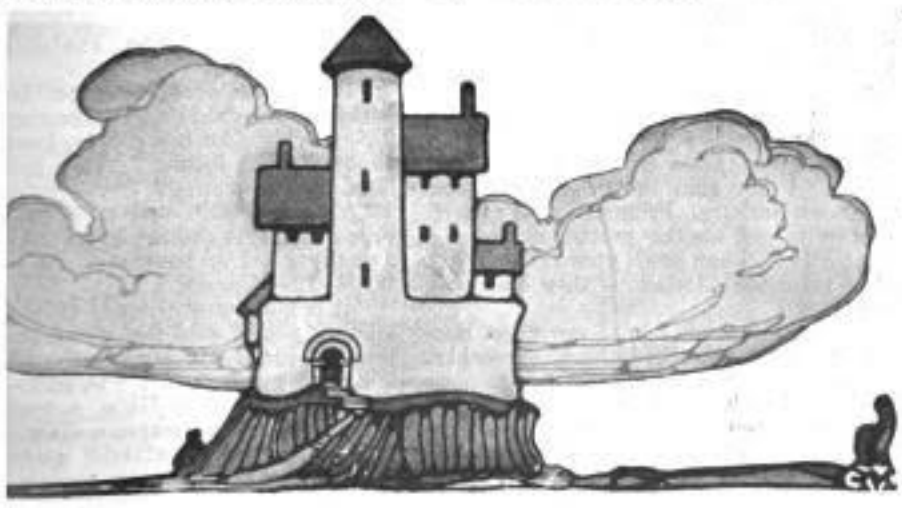
"How about Shan-tung?" I next queried.

"The Shan-tung decision represented the triumph of right over might," was the reply. "It is more than the transfer of a railway. It is a big moral step that proved to China that she had the moral support of a considerable part of the world. But we must do our part in justifying the restoration."

Sino-Japanese Relations

Naturally my next question related to the new attitude of Japan towards China.

To this Mr. Liang Shih-yi made the following spirited retort: "There are two schools in this so-called new Japan. One is composed of diplomats, who profess a change of heart towards us and who talk of helpfulness. The other is the military group, which is unregenerate and which still wants to conquer by force. Japan is eager to get an economic grip on upper Manchuria like the one she now has on South Manchuria. I hope the United States will not permit this.



"Unfortunately there has been a minority in China very friendly to the Japanese. This section is dwindling, I am glad to say. We want to be economically and politically free of Japan, for, as I said before, we still fear her militarists."

"How about the future?" was my final question.

The Premier puffed at his cigar for a few moments and then responded: "With the inevitable unification will come economic order. We Chinese realize the folly of all the disruption that now prevails. We need financial help and we know that unless we agree among ourselves we cannot get loans. China is rich in resource and her instinct is for peace. I believe the present crisis will show the way to ultimate law and order."

Such is the background of the East in transition. Its storied and passionless calm is belied by the political tumult in China and the social and economical upheaval that threatens Japan. Yet all this disorder may perhaps be the natural dislocation due to a gradual break-up of the old orders. The Washington conference stirred the consciousness of Asia to its weaknesses and its possibilities. Likewise it kindled an ideal of reconstruction. Whatever develops in China, one thing seems certain: The likelihood of international war in the Orient has been removed for at least ten years, and by that time peace may have become a habit.

Editor's Note—This is the second of a series of articles by Mr. Marcosson dealing with the economic and political situation in the Far East. The next will be devoted to Japan in transition.

LESS THAN THE DUST

(Continued from Page 7)

"Never!" replied Joan fervently. "The word 'when' isn't included in my vocabulary. Pour till it spills. That's the idea! I hooked a glass for you, Pete, but I'm rather inclined to hang on to it. Cocoa's about your speed. Let me be blasted where I sit if you aren't the rottenest duffer that ever served doubles. You can have your ring back any time you want it—diamonds can't pay me for the years of agony and shame that I see opening up before me."

"Hand it over," replied her late fiancé lightly; but something that was not entirely mirthful touched his flushed young face and friendly hazel eyes. "Can't say I blame you, darlin', and it'll help me out of a filthy hole. I've lost everything, including my shirt, to the gent from California, and it might buck him up to see something sparkle. Heave it over this way."

"I haven't got it," replied Joan blandly, crunching a large piece of ice between her small square teeth. "Lost it at craps last night to Ramon. Gad, that's cold! Hold my hand, Frisco, before it freezes."

"You're joking," said Peter Leeds sternly, the flush dying in his face. "And it's a poor joke, if you ask me."

"And you're a poor judge of jokes, if you ask me. Pulling a chair out when someone starts to sit down is your idea of a really good one. But this is the time you go to the foot of the class; your diagnosis is all wrong. That wasn't a joke—you're up against grim reality, love! If Ramon hasn't presented it to someone else—and while warm-hearted, I don't believe that he'd go that far—he certainly has the ring. Vile luck, children. One thousand dollars and a diamond ring sitting right out in the moonlight, and little Joan, the child wonder, proceeds to crap. Two ones—count 'em—two. I'll never believe in Santa Claus or storks or hell-fire again. Something died in me—but it seemed to give Ramon a good deal of quiet satisfaction. He said it was more than just a ring to him—it was a 'seemboll.'"

"You gave that fellow my ring?" Young Leeds' voice cut the warm heavy air like a knife.

Joan did not even lift her golden head from the tall glass.

"Your ring?" she inquired, coolly insolent. "How d'you get that way? My ring—or was it a loan?"

"By God!" stammered the boy passionately. "I'll ——"

"Steady on," warned Rod swiftly, an arm about his shoulders. "Here's Mendoza now; keep your head, old boy—don't let him see he's got you going. Here, finish this, Joan, someone ought to take a horsewhip to you."

"Oh, Rod, you are so wonder-ful! You'd look perfectly lovely with a horsewhip. This the little curse from Paris with our Ramon? Pretty picture—everything that grandmother wore but mitts and spectacles. Quick worker though. You have to hand her that! Look at Ramon's glorified expression!"

Across the green space of lawn that sloped from the house to the tennis court came two figures, very slowly; so slowly that it was possible to take in certain petrifying details of the smaller figure's costume long before it actually stood before them. Three incredulous pairs of feminine eyes riveted themselves on the floppy parasol with ruffles, the even floppier bag with more ruffles, the pale pink muslin dress with ruffles and ruffles and ruffles, the enormous drooping straw hat with its wreath of roses and long black velvet streamers, the eighteen inches of black velvet ribbon that went around the only small waist that Long Island had seen in fifteen years, the knot of forget-me-nots and rosebuds that held the demure fichu demurely in place, and the long black ribbon from which dangled a small object, swaying slightly before the dazzled gaze of the beholders.

"Joan!" whispered Babbie, clutching frenziedly at that lady. "Joan—look! Do you see what I see? Joan, that thing on the end of the ribbon—that isn't a locket, is it?"

"So help me Moses!" said Joan. "It's dull gold—and it's got a half pearl in it—and it's heart-shaped—and it's a locket!"

"Here, cut it out!" said the gentleman from San Francisco unexpectedly. "She'll hear you. What's the matter with you anyway?" He scrambled hastily to his feet, scowling at the trio of critics, and Babbie's gay laugh wavered.

"No; but look at that parasol," murmured the tragic Paula, galvanized to interest. "She isn't real. She's stopped to pick a flower. Do look! What's the matter, Tolliver? Do they grow them like that in the West?"

"I wish to God they did," replied the late dispenser of cheer violently. "I swear I think the world's gone cuckoo. Just because a girl's got all her clothes on ——"

"Well, she's probably showing excellent judgment in that," remarked Joan amiably. "Modesty's a gift if you've got knock-knees, Galahad. Hurry up, bare your head and stand at attention—the rose in the rosebud garden of girls is fluttering your way. Introduce us to your lady friend, Ramon!"

The superb young animal with the satin hair, heartbroken brown eyes and impudent dimples eyed her gravely.

"Mees Carstairs, you permit me? Mees Claridge, Meesees Grahame, Mees Thorn. Also ——"

"I've met Miss Carstairs," said Babbie briskly. "More than you have, I'll bet, Ramon. Boys, this is Sarah Anne Carstairs, Mrs. Carstairs' very best niece, come all the way from the convent to show us how little girls ought to behave. We're a roughneck gang, Sarah Anne, but we're going to do our best. These here gentlemen are my brother Rodman; Joan's best young man, Peter Leeds, who's got a mad on her; and Mr. La Rue Sinclair Tolliver, who came out of the West and has got a mad on all of us. Sit down and tell us how you picked up Ramon."

"I was so fortunate to meet Mees Carstairs' mother once, in Dinard, though Mees Carstairs was not there," vouchsafed Ramon stiffly. "On what you eggspeck her to seet, if I may ask?"

"I'll try to get a chair from the house," said Rod briefly, but Mr. Tolliver of San Francisco was already under way.

"Oh, please," said Sarah Anne Carstairs—and the small clear voice rang as startlingly lovely as a fairy bell—"please do not bother. You see I found a gentleman by the swimming pool and asked him the way to the tennis court; and he said that he would immediately bring a chair. And then I was so fortunate as to find Señor Mendoza on his way here from the house, so he showed me the way. And here comes the chair now. Thank you so very much—one thousand times. I am afraid I do not know your name."

"My name's Grahame," replied the taciturn Robert in an amazingly cordial tone. "It wasn't any trouble at all. Want a pillow behind you? How about another one? That all right?"

"That is quite entirely perfect," replied Sarah Anne. She did not speak with any marked accent, but something strange and exquisite touched her words, lightly as a flower or a butterfly's wing. "So tired I was, and now to sit with these great soft cushions all about me—it is like heaven. It did not tire you to carry this so enormous chair?"

Grahame laughed indulgently.

"Well, hardly."

"Ah, you are strong," murmured the occupant of the so enormous chair gravely.

She leaned back, surveying the scene about her with wide dove-colored eyes, her small pale face looking at once desolate and brave under the shadow of the great hat. The young person from France was certainly not beautiful.

Her hands, with the little black velvet bows defining the slim wrists, were beautiful; the low voice was beautiful too. Nothing else; Babbie had not been so far wrong, after all.

"But this is a most lovely garden. After that wicked sea it is good to see the trees and the green grass and the kind little flowers. I am glad indeed that we are neighbors, Barbara. From my aunt's porch I can quite well see this prettiness, and if I turn my head I can smell your roses. That is lucky for me. Delicious they are, your roses."

"Smelling roses is one of our great outdoor sports," remarked Joan agreeably. "We go in for it by the hour. Just now, though, I'd rather smell something else for a change. Flask empty, Frisco?"

"No," replied Frisco without enthusiasm. "Want some more?"

"I'll say so. Have some, Sara[h] Carstairs?"

"But what is it?"

"Hooch."

"Hooch?"

"Fire water, my child: the forbi[dden] fruit; the breath of life. Gin, in [other] words."

"You drink it?"

"Well, generally speaking. There some bad hours when we fight along [without] it, but, by and large, it's too exaggeration to say we drink it. I take it [when] leaves you cold?"

"You are kind—but no, I will [not] any. Its smell is strange."

"You're the one that's kind. The fewer the merrier, in this game [of] ing of smells, just what particular brew you using? It's demmed Gallic, [that] stuff I've been pluming myself on [be]ing a cross between tar soap and hair [tonic]. suppose I got most of the kick out [of the] name and the red lacquer bottle. Grand Baiser.' Cheap at twenty-dollars, what? What's yours?"

Sarah Anne curved her fastidious mouth into a deliciously condoling [smile].

"What perfume I use, you mean?"

"That's the big idea, child. Elusive intoxicating—like gin. I'll give you dollars for a square inch."

"How much I wish that I could give that inch for nothing," murmured Sarah Anne, the smile tinged with regret. "I use no perfume."

"You use no what?" demanded the credulous Joan.

"No perfume—none."

"Are you implying that heaven [made] you smell like a Persian garden?" [asked] her inquisitor with ominous calm.

"Ah, but you flatter me! No, to [say] fume has always seemed a little small that cries 'Stop! Look! Listen!' [In] my case, there is so little cause to [cry] look and listen, so I keep that small still. It is a thousand regrets to [me] I can so little assist you; but most [I] use only clear water."

"No soap?" inquired Babbie [faintly]

"Soap? Oh, but yes. Soap from [Cadiz]. It was perhaps that, Miss Claridge?"

"And perhaps it wasn't," replied [Babbie]. She stared fixedly at the advocate [of] water, who returned her gaze with [a] vering and gentle solicitude. "What about a swim, boys and girls?"

"Yea, boy!" Babbie was on [her feet] with all the supple grace of a kitten, [extend]ing her hand to the stately Paula. [Come] on, Polly-with-a-past, here's another [one] to change your clothes."

Sarah Anne raised delicately [arched] eyebrows.

"Polly-with-a-past?"

"Oh, Polly has a simply hellish [past]. Haven't you, precious?"

"Hellish," agreed Polly languidly. [Com]ing, Ramon?"

"I cannot say. You come, Miss [Carstairs]?"

"No, no; I thank you. Do [not wait] me, not any of you. You are most [kind], I am very tired. By and by I will [go] to the house, where my good Mary [will] have prepared all that is cool and [pleas]ant, and then I will have a long [sleep] and in the morning I will see you [once] more."

"But Babs said you were having [tea] at the club," cried Mr. Tolliver [in a] of deepest consternation. "It's a [mile]. You can't ——"

"It is charming of you to want [me a] little that I should come. Some night perhaps."

"No, tonight. Here, Babbie, [make] her come."

"It's up to Sarah Anne to [decide] herself," remarked Babbie somewhat [coldly]. "If she's tired let her go to bed. [Who's] about through jawing? It's getting late. Who's coming?"

"The food isn't bad at the club," urged Grahame suddenly. "And there's a really good orchestra. Why don't try it, Miss Carstairs?"

"It is most tempting—most [kind]; all that you should be so kind to [invite] me, but me, I will have good [time] will have good music. Wait—I [play]." She leaned forward like a comedian sketching a small expansive gesture [with] one lovely hand. Babbie groaned [aloud].

WHAT PROPER SHAMPOOING DOES FOR YOUR HAIR

Keep Mulsified in your traveling bag.

Keep Mulsified in your locker. Use it with your shower.

How to Keep Your Hair Healthy, Fresh-Looking and Luxuriant

HE appearance and healthy condition of your hair depend largely upon the care you give it. If your scalp is allowed to e hard and dry, if dandruff is allowed to ulate, falling hair and baldness are very result.

aring for the hair, proper shampooing is the most important thing.

the shampooing which keeps the hair and healthy; besides, it brings out the real l lustre and makes your hair soft, fresh and luxuriant.

n your hair has been shampooed properly, thoroughly clean, it will be glossy, life- ight and fresh looking.

e your hair must have frequent and regu- hing to keep it in good condition, it can- id the harsh effect of free alkali which is n in ordinary soaps. The free alkali soon e scalp, makes the hair brittle and ruins it. is why discriminating men use Mulsified t oil shampoo. This clear, pure and greaseless product cannot possibly in- d it does not dry the scalp or make the tle, no matter how often you use it.

want to see how well you can make your s, just follow this simple method:

A Simple, Easy Method

, wet the hair and scalp in good warm . Then apply a little Mulsified cocoa- shampoo, rubbing it in thoroughly all scalp and hair.

r three teaspoonfuls will make an abun- rich, creamy lather. This should be thoroughly and briskly with the finger s to loosen the dandruff and small par- dust and dirt that stick to the scalp.

you have done this, rinse the hair and roughly, using clear warm water. Then ier application of Mulsified, applying it before.

he final washing, the hair and scalp rinsed in at least two changes of good er and followed with a rinsing in cold

you have rinsed the hair thoroughly, kly with a turkish towel until it is dry. it a good brushing. After a Mulsified shampoo you will find the hair will dry quickly and have the appearance of being much thicker and heavier than it is.

Make it a rule to set a certain day each week for a Mulsified cocoanut oil shampoo. This regular weekly shampooing will keep the scalp soft and the hair fine and silky, bright and fresh looking, and it will be noticed and admired by everyone. You can get Mulsified at any drug store or toilet goods counter anywhere in the world. A 4-ounce bottle should last for months.

Teach Your Boy To Shampoo His Hair Regularly

IT may be hard to get a boy to shampoo his hair regularly, but it's mighty important that he does so.

Get your boy in the habit of shampooing his hair regularly once each week. A boy's hair being short, it will only take a few minutes' time. Put two or three teaspoonfuls of Mulsified in a cup or glass with a little warm water. Then wet the hair and scalp with clear warm water. Pour the Mulsified evenly over the hair—and rub it in vigorously with the tips of the fingers. This will stimulate the scalp, make an abundance of rich, creamy lather and cleanse the hair thoroughly. It takes only a few seconds to rinse it all out when through.

You will be surprised how this regular weekly shampooing with Mulsified will improve the appearance of his hair, and you will be teaching your boy a habit he will appreciate in after-life, for a luxuriant head of hair is something every man feels mighty proud of.

Nothing so refreshing after a hard day's work as a shampoo with Mulsified.

Use Mulsified after motoring. Don't let dust and dirt remain in your hair.

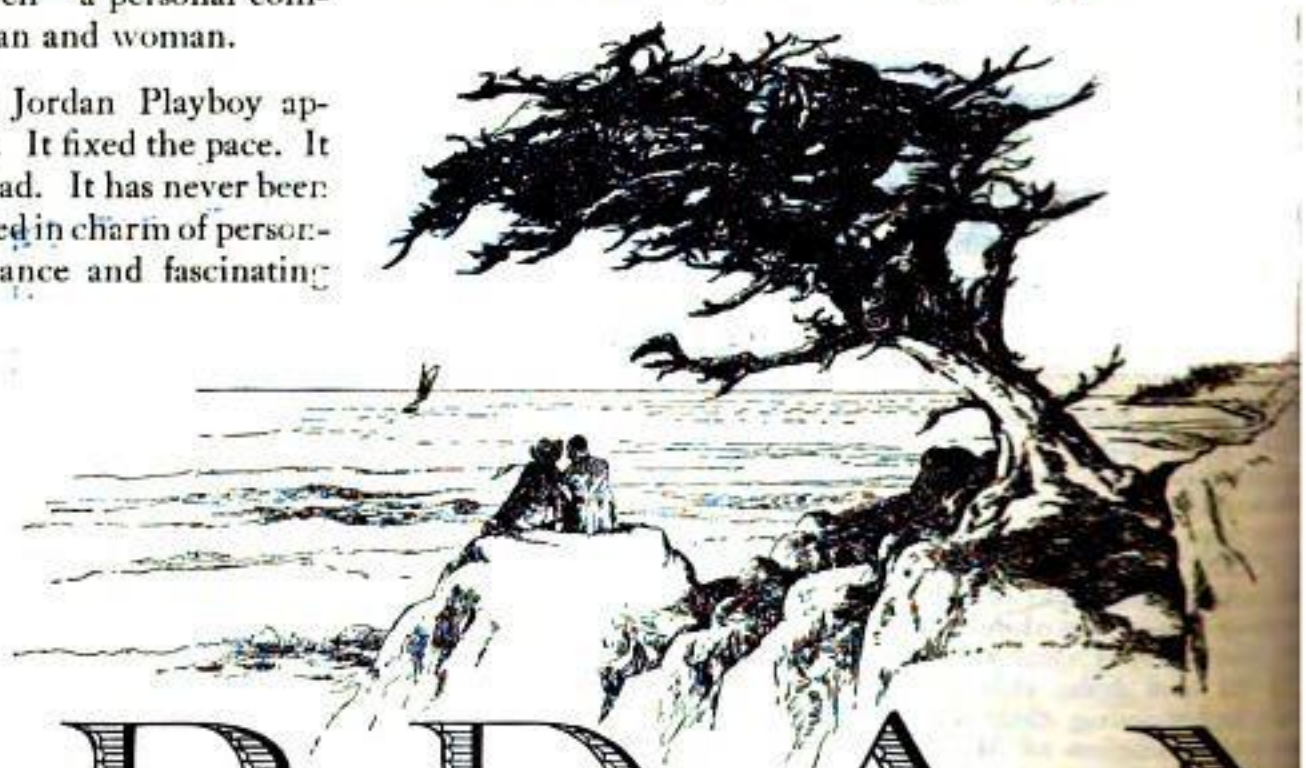
The Playboy—*by Jordan*

A remarkable motor car which caught the fancy of the American people, young and old, and justified its alluring name.

A car for beckoning hills and open roads—a vigorous companion for those who, having traveled, love to travel more.

Full of life and color—sturdy with admirable strength—it thrills that happy man who can throw away dull care, beckon someone for whom he cares, and has the imagination to say, "Come on, let's go somewhere."

It is a practical car as well—a personal companion for the busy man and woman.



Three years ago the Jordan Playboy appeared. It set the style. It fixed the pace. It dominates the open road. It has never been surpassed or even equaled in charm of personality, feats of performance and fascinating appeal.

Lines are low and sweeping. Cushions hug the floor. Wheel is tilted to a position of relaxed ease.

The hood slopes away toward the enticing road. The rear deck gracefully says "good bye" to the people you pass.

The Playboy is the car for the man who knows how to play as hard as he works—for the boy with the roving eye—and the girl who loves the range of the open road.

Step into this brawny car—and make for the land of Somewhere you have longed to go.

Two-thousand-year-old cypress trees—grotesque and massive—wind tossed and rugged; limitless distances; gray rocks bulwarked against the most wonderful surf in the world—and youth, full of the gladness of living. That's the Monterey Drive on the curve of the California Coast.

t my aunt's house, the good Marie who
e with me from France, she has pulled
those green shades in the drawing-room,
hat it will be cool and fresh like a cave.
l by the window to the veranda she has
a little table, and on that little table
has put a great tall pitcher, all frost
ide, and inside all amber-gold tea, and
cracked, and little cold wisps of fresh
: leaves. And three plates, with sand-
es, too—cool and green—cress and cu-
ber and lettuce. And a great silver
of strawberries, and a great silver
et of little white cakes. And me, I
put on a white dress with green ribbons,
I will eat in the deep chair by the
ow, and then I will light the tall candles
sing to the piano until I am sleepy.
then I will take the tallest candle and
to my bed, and I will sleep and sleep
sleep, until the morning comes in
gh my curtains. Now that is not so
s it?"

ad!" said Robert Grahame. "It's
olding out a glass of cold water to a
lying of fever. Wouldn't you let a
have just a sip, Miss Carstairs?"

ut surely, surely," said Miss Car-
gently. "There are many deep chairs
drawing-room of my aunt, and that
r, it is very tall. Mrs. Grahame will
too, perhaps?"

hink not. The patient will probably
better progress without me. Let's
off, Ramon."

lo not shove off," replied Ramon.
Carstairs, if I am more good than
er'aps you let me light those can-
rn that music? Once in Dinard, you
ber, I hear your mother sing."

: how wonderful to remember!"
arah Anne, and the small colorless
as suddenly gay and sparkling.

be hanged!" commented Miss
sively.

r reference was made to the
their midst for the next two hours. They had undressed, bathed and dressed at the pool, and repeated the performance in the seclusion of their respective homes in dignified silence. The silence had been maintained for some fifteen minutes on the moonlit terrace at the Thorns', where they sat grimly listening to the sounds of decent revelry proceeding from the Carstairs drawing-room. Music there was, and lights, and laughter—a murmur of voices, from which the errant breeze detached an occasional sentence, floating it across the intervening space to unwilling ears.

"Sure you aren't tired?" Grahame's voice rang out, rich with solicitude.

"Oh, but not too tired for this! This I love; the tiredness shall wait. Now once more, very soft. Mr. Tolliver, you shall be so kind to do that beautiful second; you, Mendoza, turn the leaves again—never have I seen one so quick and sure—never. Now—

"In the gloaming, oh, my darling,
When the lights are dim and low ——"

"Oh, oh, oh!" cried Babbie violently. "You're a man, Rod—why don't you make them stop that yowling? That's the third time—and it's ten minutes to eight. Why don't you go in there and tell them to shut their mouths and come to the club? I'm starved."

"Better not send me!" advised Rod lightly. "You'd probably never see me again. It's been years and years since anyone has encouraged me to sing. When they started 'Just a song at twilight' it took every ounce of strength I had to keep me in this chair. I'm totally exhausted; that's the only reason I'm still here."

"Well, I thought I knew my fellow man," said Joan grimly. "And then along comes this dowdy little bundle of ruffles and ——"

"Ah, you only thought you knew them, Joan," replied Rod. "Something else came along inside that dowdy bundle of ruffles—something strange and new and old as the hills, something that made them remember that ankles might be elusive and waists small enough to put an arm about, and that hands too fragile to hold a parasol would be soft to touch, and that all these things might be forbidden. A girl came along in that bundle of ruffles—and we remembered what a girl might be like."

"Are you claiming that none of you had ever seen a girl before?"

"Well, not for quite a time, Polly! Not a subdeb or a flapper or a good pal or a cutie or a vamp or a fascinating young married thing or an even more fascinating young de-married thing—but a girl. The kind of girl who used to sit on the porch steps in the moonlight and smile when you brought a bunch of violets or a box of chocolates—and smile again when you left at ten. Nowadays, if you don't supply a roadster and a quart of gin and a hundred cigarettes and a jazz band, you're a piker, and you know it in a hurry. The kind of girl who never ate twenty dollars' worth of stuff at a cabaret in her life. If she wanted a supper party she cooked it for you in a chafing dish at eleven o'clock, and put pink ribbon on her frilly apron to show you that she thought it was a privilege. The kind of ——"

"Oh, shut up!" cried Babbie violently. "Are you going to collect those other asses or am I?"

"The kind of girl who let you pick up the handkerchief and button her gloves," continued Rod unperturbably. "Who ——"

"I should think the helpless little angels would have worn you to the bone."

"Oh, they weren't really helpless. Just helpless enough to make us feel that we were some good in the world! They'd act as though it were a miracle that we should spend two seconds picking up their gloves—but they'd take two hours to darn our socks. They'd ——"

"Hey, how do you get that way?" demanded the indignant Babbie. "Believe me, Methuselah, no girl ever darned your socks. Where'd you know all these girls anyway?"

"Oh, our fathers knew 'em," replied Rod lightly, but there was a curious gleam in his dark eyes. "And our grandfathers and our great-grandfathers. Something deeper than our memory knew them—our blood and our bones and our dreams. And when Sarah Anne Carstairs came across the lawn this afternoon ——"

The silver voice of Sarah Anne Carstairs drifted across the moon-washed space between them.

"Well, then, just one. Just one because you have been so good and kind, each one of you. Let us see, what shall it be? Ah, now I have it!"

There was a brief pause, a little chime of chords, and suddenly a voice was singing—moonlight and starlight and falling water turned to music.

"Less than the dust beneath thy chariot wheels—"

sang Sarah Anne Carstairs.

"Less than the rust that never stained thy sword—
Less than the trust thou hast in me, O Lord—
Even less am I—even less am I!"

"Hold me!" implored Babbie frenziedly. "Someone hold me, quick, before I go mad and froth at the mouth. If they fall for that I'm going into a convent!"

"Less than the weed that grows beside thy door—
Less than the speed of hours spent far from thee—
Less than the need thou hast in life of me—
Even less am I—even—less am—I!"

The fairy voice, the chiming chords trailed slowly off; and then from the silence there rose another voice, stammering in its eagerness, changed so that no one could say whether it belonged to Peter, or to Robert, or to Ramon, or to La Rue. Perhaps it spoke for them all.

"Sing—sing it again!" implored the starved voice.

II

"BUT I do not do these dances of which you speak," said Sarah Anne, with a small pathetic smile.

She was leaning back in a great wicker chair on Mrs. Carstairs' vine-clad veranda, with five green cushions behind her back—Peter Leeds had put them there—and two diminutive slippered feet perched like a pair of white mice on the stool which Robert Grahame had provided. She was presiding over a smaller court than usually gathered about her at five o'clock, as a polo game had lured some of the faithful to another part of the island; still, there were present four gentlemen deeply absorbed in contemplating their hostess, and two ladies equally absorbed in contemplating the gentlemen. Sarah Anne looked the only cool thing in a hot and jaded world, in spite of the fact that her filmy muslin dress swept its snowy lengths down to her slim ankles and up to her slim throat; even the sleeves fell loose and wide over her wrists.

But something about her—possibly only the unshadowed tranquillity of the small colorless face—made Joan Claridge's Dresden-china daintiness look a trifle feverish, for all that her green tennis frock had no sleeves and very little waist and even less skirt, and Babbie's vivid gypsy face rising out of the childish smock of tan linen seemed positively sultry, though the sleeves were rolled high to the shoulder, and the trim stockings were rolled well below the knee.

Sarah Anne's smooth head, with its wreath of pale braids, was bent industriously over a peculiarly hideous piece of embroidery: an elaborate design of roses, shading from blush pink to deep crimson on a snow-white background, with a realistic garnishing of nine distinct shades of green leaves.

She was selecting the innumerable silken strands and turning them into blossoms with a reposeful deftness that Burbank or Cagliostro would have envied.

"Your shimmy, your jazz, your toddle and your wobble—no, no, not one of them. So at these club dances, what should I feel but sadly in the way? On Wednesday I did try, just to go and watch—did I not, Barbara? But to watch—well, I think those dances they are made to do, not to watch. So tonight I will beg to stay at home. What do you need with so small and useless a person as me, at that great party? No, no, you are heavenly kind to me, you and Joan and Peter and every single one, but you will not even know I am not there—you will see."

"We'll know damn well that you aren't there," said Joan Claridge, and her voice shook. "Because the party will be about nine men short, thanks to you. They'll be sitting out here in the moonlight, playing pussy wants a corner and tiddlywinks until you sing 'em to sleep with a Baby's Prayer at Twilight. And maybe you don't know it, angel face!"

Every Radio "Bug" needs a HANDY ANDY SOLDERING SET

Make your outfit RIGHT. Use Handy Andy, the most convenient soldering set you can get. Two high grade copper irons, specially designed, large bar of resin center solder, and liberal supply of Sal Ammoniac. Use the small iron for the most intricate job, the large one for all outside work. Ideal for Radio amateurs and manufacturers, and plumbers, garages, radiator shops, battery service stations and tin shops.

NOTASEME HOSIERY COMPANY, PHILADELPHIA, PA.

Peter Leeds turned on her violently, his pleasant countenance darkly red, but Sarah Anne spoke first, lifting wondering eyes from her roses.

"Ah, Joan! You think that of me? I am sorry—sorry. I have been stupid. I did not understand you cared so greatly. Believe me, I did not understand."

Joan swung off the veranda railing with a loud clatter, planting herself squarely in front of the tranquil enemy, her hands deep in her pockets, her flower-tinted face on fire.

"Well, I don't so greatly care. See? But I'm getting on to you—see? And the stuff you're getting away with gives me a pain that'd turn neuralgia into a treat. And keep any more of that holy stuff until I get off this porch. Lay off it, you hear me—I'm fed up for life!"

She bestowed one inclusive and menacing glare on the assembled company, cleared the railing with a brief flourish of skirt and a neat click of heels and disappeared into the shrubbery before anyone on the veranda had recovered breath.

Ramon Mendoza spoke first, an ugly curl to his fine lips.

"Feeshwife!" he remarked with venomous precision.

"No, no, no, *mon ami*, I will not have you use such words. She is tired and unhappy, that poor little Joan. How often have I told her that all that smoking, all that drinking, all that riding, will do her harm? Now, alas, something breaks in her pretty head—it is a madness. Peter, you shall run after her, you shall bring her back."

Peter disclaimed this program violently.

"Nothing doing! She can drop dead in her tracks for all I care. Handing out that line of talk to you!"

"Me! Of what importance am I, Peter? No, no, it is of little Joan that we must think. She is unhappy. Help me, all of you."

"Well, I must say I think it's jolly decent of you to take it that way, Sarah Anne," commented Babbie, grudgingly honest. "If I were you I'd be thinking of the quickest way to choke the bean out of her. She hasn't got any right to go off her nut like that, no matter what happens. Everyone knows she's got a dirty temper, but it's about time she learned to hang onto it. Let her alone. It'll serve her good and right if no one goes near her. Don't you think so, Rod?"

"I think that Miss Carstairs shows almost superhuman forbearance," said Rod thoughtfully.

Sarah Anne gave him a swift glance through her short thick lashes, sketched a gesture of depreciation with one slim hand, and resumed her tranquil labor with the flowers.

"Now you laugh at me," she murmured. "I think that tall brother of yours likes to mock at me, Barbara. He knows all too well that about me, who am small and weak and of an entire and disgusting uselessness, there is nothing superhuman. I wonder if perhaps there is not in him somewhat of the cynic as well as the critic?"

"Nope," Babbie assured her with a small yawn, "Rod's a blooming idealist—aren't you, darling? He doesn't fall for that cynic stuff either. There was a girl here last month who told him that there was something deliciously sinister about his eyes, and he walked out on her without another word—planked her cold, didn't you, Rod?"

"The young woman was apparently in the last throes of dementia præcox," explained Rod agreeably. "It looked to me as though she needed more professional assistance than I was able to render, so, as Babbie so graphically puts it, I planked her cold. Will anyone be good enough to tell me just what the plans are for this evening? I don't want to waste one precious minute of the princely holiday that has been lavished on me by the press, so if someone will set me straight I'll be everlastingly grateful. Dinner dance at the club?"

"Well, that's what we've done every Wednesday and Saturday night since Noah ran the ark," said Babbie. "But if it's anything like the last one I'm going to smear cold cream over my face and light out for bed at nine o'clock and to-morrow morning I shall up and catch the 7:48 to town and start in on a concentrated course in interpretive solo dancing. Yes, sir, it may be all kinds of sport to do April Dawn all by yourself while the violins make a noise like dear little birds, but the dancing I've learned so far needs a partner to make it come out right. Of course up till last Wednesday the local union of partners hadn't gone in for community singing as a life work, but from now on I'm off dances unless Sarah Anne takes up training or goes back to her convent. Honest to goodness, Sarah Anne, what in the world do you want with ten at a time? When is Mrs. Carstairs coming back? Have you written her yet how lonely you are in the big house?"

"Little darling goose!" murmured Sarah Anne, a small gay smile touching her lips though she did not raise her eyes from the roses blooming beneath her light fingers. "Never in all my life long have I heard so great nonsense. If I did not very truly love you, Babbie *de mon cœur*, I would not like it when you tease. Because these poor men are too tired when they come out from the hot city to jump like jacks to that savage music, you would hold me to blame? Because they would rather sit quite still and feel the moonlight on their faces, and talk a little, very low, and sing a little, very soft, and laugh a little, and be a little sad, you are cross? Ah, but, Babbie, that is not fair. Is that fair, Mr. Grahame?"

"Fair!" echoed Grahame with an ironic laugh. "You don't think for one moment that you're going to get away with anything decent and quiet and lonely in this place without starting a young riot, do you? Every girl on this island, married or single, from fifteen to fifty, is so crazed and glutted with excitement that it's like giving a needle from a drug fiend to try to get one to keep still for half an hour. Isn't that so, Leeds?"

"I'll say it's so," replied Peter Leeds, bitterly laconic.

"Oh, rot!" cried Babbie vigorously. "You were every bit as keen about parties as any of us, Robert Grahame, once you got four cocktails into you! You needn't make faces at me, Rod. I've done all the listening I'm going to do this afternoon; everyone can loll back and listen to me from now on. Bob, have you got the nerve to sit up there and look me in the eye and tell me that you weren't the fellow who was always yelping for just one more rubber, or jackpots at three o'clock in the morning when everyone else was feeling as though their eyelashes weighed a ton and they were going to carry their feet around on cushions for life?"

Grahame met her eyes grimly. "You got me too! I'm not denying it. I've not forgotten what the words 'peace' and 'quiet' meant. I was wound up as tight as any other tin toy in the whole shop—I had to run as far and make as much noise as the rest of you, my dear. But from now on you can count me out."

"The trouble with you is that a swim has taken you about three drinks to recall as a member of the human race," commented Babbie with gloomy impertinence. "And now you aren't getting anything more nourishing than lemonade! For the Lord, Polly'd slip a shot into your breakfast coffee."

"Babbie!"

"Oh, don't bother, Miss Carstairs. I've known this child since she wore long skirts. Paula doesn't get near enough to the breakfast coffee to even put cream in it, Babbie! I leave at half past eight and she generally takes hers clear in a dressing-gown at lunch time. Our schedules don't connect any more; now that I've taken to retiring before 2 A.M. we don't even get a chance to exchange opinions of each other's character!"

"Tough luck!" condoled Babbie sympathetically. "But I notice you manage to keep the trail to the country bright and merry day, old dear. Romps in for his week-end pretty regularly, doesn't he, Sarah Anne?"

"Perhaps he finds it more easy to work through those heavy tasks with eight hours of sleep behind him," replied Sarah Anne tranquilly. "Another glass, Mr. Grahame? Good! For you, Mr. Leeds? You, Peter? But where is our Polly this afternoon? She is neglecting us most shamefully and we who are needing her love and her clothes to make us believe that it is a party that we have! You have not seen her, Babbie?"

"Nope," replied Babbie airily. "Told me to take my rags and tatters off the porch, Sarah Anne, or can you hear me just closing your eyes? I don't want to wreck the scenery as well as the party."

"But, Babbie, you are being a most wicked child!" cried Sarah Anne, raising her brows in humorous despair.

Gier Tuarc Steel Wheels are Standard Equipment on the Packard Sport Model

Better Operation and Appearance

Tuarc beauty exacts no compromise with practicability. On these steel wheels tire changing remains within the capacity of anyone who can handle a demountable rim. Hubs are never exposed, or subject to hasty roadside manipulation.

Inflation, with any air hose, is through direct outside, standard wood wheel valve stems—first made possible for steel wheel use by the original Tuarc design. Spare tires are conveniently carried on the rim alone, involving no excess weight. Essential to permanent quiet, true running, and great strength is the exclusive one-piece, smooth-contour design of the Tuarc wheel proper.

Select a new car with Tuarc wheels, or apply them to your present car, for the same compelling reasons which make them standard factory equipment on so many of the finest automobiles, including the Packard Sport Model.

garding its contents medita-
oment, and then, with a slight
orners of her lips, selected a
e paper, gave a delicate shake
led fountain pen, and with a
y compounded of appeal and
reted the attention of her four
ests.

, I am about to give a party—
e perhaps noted that I am
e the invitations. I ask one
dons for my very great rude-
s most, most important that
hey should be written with
rill forgive me—you will con-
lemonade and eat little cakes
ill for just five minutes? Just
! I am forgiven? Good!"

vered in the air for the brief-
, and then pounced on one of
sheets of paper, flying across
ice with lightning celerity,
erously to the next without
even a slackening of its smooth haste—to the next, to one envelope—two—three—it executed a small discreet flourish, and collapsed gently into well-earned inactivity.

"*Et voilà!*" murmured Sarah Anne softly. "To Joan, to Babbie, to Polly—yes, all there. Now you are going once more to be kindness itself to a small wretched nuisance that will not leave you tranquil! You are going to be so heavenly good as to see that these three ladies receive their invitations within the next half an hour. Oh, but without fail! It is of great importance, because they must have them in plenty of time to dress for dinner, and dinner is at eight. You will have to hurry, but you also will have plenty of time to dress for dinner—you need not bring back the answers."

"Who is going to bring them?" inquired Peter with interest, somewhat dazed by the sudden executive talents of the fragile occupant of the armchair.

Sarah Anne sank back into the cushions with a pathetic smile of relief, picking up her embroidery frame bravely but reluctantly as though she found it heavy.

"Oh, they will bring them themselves. I have asked them to be so kind as to do it at once when they receive these. There may be one or two small little matters to be discussed; I wish everything to be as they would have it, naturally!"

"My dear child," asked Robert Grahame incredulously, "you surely don't believe for one minute that those girls are going to come meekly back here within half an hour to accept your dinner invitation?"

"But I believe it for two minutes," replied Sarah Anne serenely. "For two hours, for a whole long life! You do not?"

"That's understating it. I don't believe it to the extent of being willing to bet a thousand to one that you won't lay eyes on them this evening."

"Alas," breathed Sarah Anne regretfully, but behind her lashes her wistful eyes danced. "Alas, I do not bet."

"But Bob's right, Sarah Anne," Peter assured her earnestly. "For the Lord's sake, don't go making any plans for a party tonight. You don't know Joan."

"Do I not, Peter? And you who know her so well! Still, I think that she will come to my party tonight. You will come too? You, Mendoza? Mr. Grahame? Mr. Thorn? Good! It will be a most beautiful party—you will see!"

Peter's stern young face relaxed suddenly into a boyish grin.

"It will be a most beautiful stag party, you will see! However, we won't need more than one lady, and she's bound to be there, since she's giving it. Where are we to find the guests that we're to serve these notices on?"

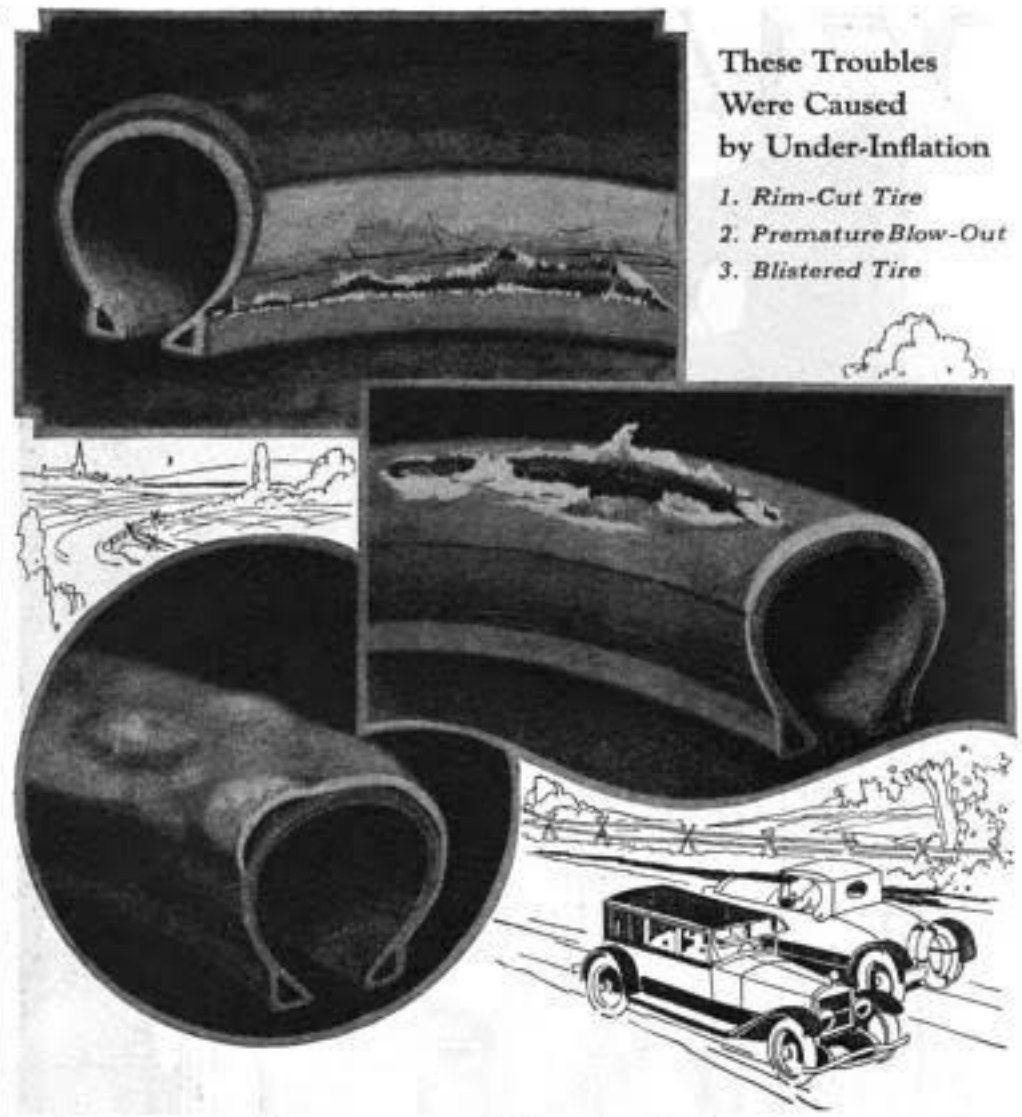
Sarah Anne was once more absorbed in the problems of horticulture.

"Ah, that I leave to you. Look, Mendoza, you do not think that little soft pink exquisite? But the deep red next to it—no, give me scissors, and I snip it out quick. There is no harmony—none—I went blind in my head when I put that in—it is monstrous when they scream together like that. I take ——"

"Hey, lady, listen!" implored Peter. "You don't mean that you just expect us to go out and stagger around the countryside until we run into one of your invited guests, do you?"

Sarah Anne paused long enough to gather up the notes with a faint catch of laughter.

"No, no!" she replied soothingly. "But of course not; there must be method; as always you are right, Peter. Here, you will take this one, and give it to Joan; Mendoza, he will find Babbie; and Mr. Grahame, he will find Polly. That way it will be so simple as good day!"



Grahame rallied first, with a sardonic smile at the stunned faces of the other envoys.

"Perfectly simple, naturally. The only difficulty is as to where to look for them. Where do you suggest, Miss Carstairs?"

The lady's soft confidence would have inspired a group of sightless imbeciles led by broken-down dogs to instant action.

"I? But I suggest nothing, naturally. It is not I, a stranger, who know where they should be; that is why I ask you to find them for me, you who are their husbands and fiancés and friends, and who are also most wise and quick and resourceful. And also I beg you to hurry. Please, please, I beg you to hurry, for there are many things still to do!"

"And may I then een-quire," remarked Mendoza with great ceremony and a somewhat baleful glance at the flannel-clad

These Troubles Were Caused by Under-Inflation

1. Rim-Cut Tire
2. Premature Blow-Out
3. Blistered Tire

Ruined Tires!

Thousands of these could be saved with the Trex Lock

ACTUAL SIZE

All you need are your fingers, pair of pliers, and three minutes to attach a Trex Lock to your tire and stop the repumping nuisance.

Simply take out the ordinary valve insides and throw away. Then attach the Trex Lock onto the regular valve stem.

Fits any tire; any motorist can attach.

Price $1 for each tire

Under-inflation costs the motoring public millions of dollars every year, through the damage of rim-cutting and premature blow-outs—in spite of the average motorist's intention to keep his tires pumped up.

Now this can be prevented. The Trex Lock, a remarkable new invention, positively locks the air in your tires and prevents valve leakage. You only have to pump up once.

Even the finest cord tires are damaged and may be ruined through improper inflation. Running soft, tears the layers of fabric apart, weakens them, starts friction and destruction. The Trex Lock positively overcomes this. It maintains a given pressure *indefinitely*.

In many tests the Trex Lock has added 2,000 miles to the life of the tire. On your own car, taking all four tires, the Trex Lock would give you 8,000 added tire-miles, or more. You'll never buy 8,000 miles any cheaper.

Sold by dealers in all parts of the country. In sets of five—or singly if you desire—only $1.00 for each tire. If your dealer has not yet put in his stock, write direct to us.

The doors to cool shadows and soft summer breezes

ALL through the long summer days these doors stand invitingly open, beckoning one to the fragrant coolness of the porch.

The doors themselves, which open to this delightful place, should be in harmony. They should open and close with ease—without the slightest noise or vibration.

McKinney Hinges and Butts are so carefully designed and made that they hold these doors firmly in place, yet permit them to be opened or closed at a touch.

For more than half a century, McKinney Hinges and Butts have answered the requirements of the most exacting architects, builders and home owners. The McKinney booklet, "Suggestions for the Home Builder," is full of valuable ideas for any one who contemplates building. It will be sent free upon request.

If you are building a garage, let us send you the McKinney Garage Set Booklet, which illustrates complete sets of garage hardware, each set conveniently packed in one box. Write today for these books.

McKINNEY MANUFACTURING COMPANY, PITTSBURGH

Garage hardware, door hangers and track, door bolts and latches, shelf brackets, window and screen hardware, steel door-mats and wrought specialties.

figure still absorbed in lemonade, "why Señor Thorn he does not go to look for hees seestaire?"

"Oh," she cried gayly, "if the very best brother in the world had fifteen most beloved sisters, he would not know where to look for one single one of them—would he, Mr. Thorn?"

"No," replied Mr. Thorn, stirring the lemonade gently, his eyes on the two men disappearing around the corner. "Not one single one of them."

"There, you see! Therefore I send you, who are so deeply her admirer that you should find her in three minutes—quicker than that. It begins to be dark, so it should be easy! Did she not show me a most lovely small poem that began 'When in the night, my little rose of darkness ——'"

"She show you that?" demanded Mendoza fiercely. "Bah, she do not know a jest when she meet one! She ——"

"I'd cut along if I were you," advised Rod pleasantly. "You can tell Babs to cultivate a sense of humor when you find her; she'll be more interested than we are. Though a mere brother with no bump of locality to speak of, I'd suggest the short path to the boathouse. You'll have to hurry; the others have quite a start on you."

Mendoza scrutinized the imperturbable countenance turned towards him with unqualified disapproval, and then, with an extremely Gallic shrug, took the proffered advice and cut along.

Rod's face relaxed into its most disarming smile as he helped himself to two small sandwiches.

"Latin courtesy's a great handicap out these ways," he remarked conversationally. "If that promising youth had poured his soul out ——" He broke off, contemplating Sarah Anne, once more industrious as Penelope, with a pair of meditative dark eyes. "By the way, am I detaining you?"

"No, no; indeed no. I must wait for my answers. It is a pleasure to me, and, with candor, a surprise, that you desire to stay still a little longer. I have noted—oh, reluctantly!—that it is you who are ever the first to go, Mr. Thorn."

The wide gray eyes lifted suddenly to his—lingered for a breath of time, clear and gentle, and swept softly back to their task. Rodman finished the sandwiches, looking a shade more meditative.

"Well, since candor is in order, I can't truthfully say that I regret your powers of observation. What do you say to indulging in a good old-fashioned rousing orgy of candor for the next few minutes, Miss Carstairs?"

She yielded him instantly a grave and exquisite attention.

"Oh, but most willingly—like two good friends! You have something you wish to tell me, perhaps?"

"Well, not precisely; I have some things I wish to ask you. You aren't going to think me impertinent?"

"But surely, surely I shall not have cause?" Her smile begged forgiveness for the mere suggestion of such a fantastic possibility. "Candor and courtesy should be inseparable handmaids. Sœur Marie Veronique was most rigorous in teaching us that; I think perhaps it was her greatest gift to us. I am sure that you will not give me the anguish of seeing them separated at this time!"

Rod grinned appreciatively, looking for a minute more like a mischievous small boy than the savagely brilliant critic of a hundred luckless Thespians.

"That's as graceful a rebuke as I've received in a long career of them, Miss Carstairs, and my heart bleeds for you and the twins—but I'm going to wrench them apart just the same. Would it be too much to ask you to put down that unspeakable atrocity and give me your undivided attention for a few minutes?"

Sarah Anne considered him with lifted brows; then with an adorable gesture of surrender she placed her embroidery carefully in a large pink-taffeta bag and folded her velvet hands in her lap.

"You do not care for roses?" she inquired solicitously.

"Unfortunately, I'm extremely fond of them."

"But these—but these, then, you did not find sufficiently realistic?"

"Realistic? God forgive you, Miss Carstairs, they're photographic! That's not the trouble, however; the trouble is that it's very difficult to rivet anyone absorbed as to whether to use rose pale pink or yellow pale pink down to anything so definite as a plain answer to a plain question. Perhaps you are aware of that?"

Something small and fleeting, that had just escaped being a dimple, flitted across Sarah Anne's demure countenance. "... that the plain question, Mr. Thorn?"

"Lord, no—that was purely rhetorical. However, I'm now about to separate the twin handmaids with a few of the ... questions a lady ever listened to. Now! Well, let's start with this: Just what motive had you in saying that you had to go constantly noted that I was always the first to go?"

"Motive?" The gray eyes widened. "Mr. Thorn, you laugh? Or do you, perhaps, call regret a motive? It has been ... me a very real regret that Babbie's ... of whom Babbie has told me so ... constantly, should seem not to care ... my friend, like all the others—Peter ... Mr. Thorn and Mendoza and ——"

"You have an elastic conception ... friendship," commented Rod dryly. "Would you mind posting me as to just what ... formation my loquacious sister ... parted in these constant recitals that ... touch on?"

"But I must choose from so great ... barrassment of riches!" murmured ... Anne. "With so little time, where ... I start? *Voyons*, the most ... about your heart." She yielded ... catch of laughter, a far-off interlude ... fairy flute, at the sight of his ... countenance, and then relapsed ... mous gravity. "No, no, I put ... wrong; it was about how you ... heart—no, none; no heart—no heart—heart—she told me so one hundred ... sand times. No heart at all."

She shook the small brown ... mixture of awe and pity that caused ... set his teeth.

"That's very interesting ... course—but I'm so obtuse ... pletely fail to see why it should ... you."

"Ah, but, Mr. Thorn, that is ... you have not heard Babbie tell it. ... with so great a wealth of detail, ... esque a touch, so great fire ... ment—yes, truly, I think that ... have interested even Sœur Marie ... ique. How far more deeply ... you each day! If you could hear ... tells about that very pretty ... Morristown who telephoned ... before breakfast and each night ... ner, and how when you went ... phone you would scowl all over ... like this and bark 'Wrong number' ... loud ——"

"I never heard such rot in my life" ... cut in violently, scarlet to the ... hair. "Babbie ought to be ——"

"No, but to hear her tell it: ... it was as though I could hear ... ears! And about that great tragedy ... Miss—Miss—no, I forget—... drive every evening over ... Great Neck and sit outside ... horn and toot the horn until ... the place swore out loud, and ... out to make her stop, and ... est. And about the young ... heiress who went to be a ... she could be in the office next ... about the lady golfer who ——"

"If I had that little ... shouted Rod, "I'd break ... body!"

Sarah Anne's lips parted ... interest.

"That is how Babbie ... felt about them—no heart—... them die—break all their ... Thorn, what had she done, ... golfer—any of them—what ... done but love you, that you ... break all their bones in their ..."

"I'm not talking about any ... golfer!" replied Rod, restraining ... violently from shouting again. ... ing about the imp of Satan ... be my sister. If I had her ... did we get started on this ... anyway?"

"It was one of the plain ... replied Sarah Anne helpfully.

Rod poured himself a ... ing the small cool occupant ... chair with ominous calm.

"I'm as much in the dark ... why Babbie should go to you ... credible farrago."

"Ah, well," murmured Sarah ... is kind-hearted, that little ... wished, perhaps, to spare ...

The Duplex Seal is the *scientific* seal. It seals *and re-seals* the bottle or jar air-tight, germ-proof, dust-proof. It does away with loss of flavor, drying out and spoilage.

Plain Speaking to Users and Packers of

Mustard *Honey* *Salad Dressing* *Jellies*
Ketchup *Peanut Butter* *Pickles* *and*
Olive Oil *Vinegar* *Table Syrup* *Preserved Fruits*

and all other food products packed in glass

NO need to tell you how the housewife appreciates glass packages.

Such ideal containers as these are welcomed in their millions all over America—for their *cleanliness*, their *convenience* in pantry and kitchen.

Hence also the interest of the housewife in the *ideal seal* for glass packages—the DUPLEX SEAL.

* * *

Consider what the seal ought to do.

It must keep the food in perfect condition until it reaches the table—*air-tight—germ-proof—dust-proof.*

It must be easy to remove.

Again—it is seldom that *all* the contents of the package are used at once.

The seal must go back again. *Tight.* Sealed as perfectly as it was in the beginning.

Here is where you find packages sealed with the *Duplex Seal* so much better than any other the packer or housewife has ever known before.

The *Duplex Seal* is the simplest seal known—and the most efficient. Off with a quarter turn of the wrist, on with the same easy motion.

It *re-seals* the bottle or jar quickly, surely and completely *every time.*

It protects the contents down to the last bit—no matter how often the package is opened and closed.

Furthermore—as regards the *flavor* of the food. The *liner* of each Duplex Seal is exactly right for that individual food. One kind of liner for a delicate jelly, for instance, and a totally different kind for sour pickles or mustard.

The Duplex Seal

A PERFECT SEALING & RE-SEALING CAP FOR GLASS BOTTLES & JARS

On All Kinds of Foods

Today almost any kind of glass packaged food one can name comes with the protection of the Duplex Seal.

This modern seal is used on well toward a thousand products. Last year alone it was adopted for 294. In January of this year for 45. In February for 48. In March for 49.

Every day sees the Duplex Seal chosen by at least one more important packer—sometimes by five or six in one day.

More and more packers will use it as they come to realize their responsibility to their customers and the effect of the *closure* on their business.

* * *

A Service Laboratory is maintained at Brooklyn, N. Y., by the National Seal Company, and this Laboratory is ready at all times to help select the proper closure for any product packed in glass. Our experience with well toward a thousand products now packed under the Duplex Seal is at the command of other packers.

Bottles and jars with the Duplex Finish are procurable from all leading glass manufacturers.

The eminent critic swallowed his lemonade the wrong way, choked, strangled, and by a superhuman effort recovered the power of speech just in time to prevent a further analysis of the situation.

"Please let's drop the state of my nonexistent heart, Miss Carstairs, and go back to the plain questions. I wasn't indulging in idle curiosity when I asked what you meant by saying that you had reluctantly noted that I was always the first to go. I wondered whether possibly you'd been looking for an opportunity to clear something up with me?"

"Clear something up?" repeated Sarah Anne blankly. "You call that one of those plain questions, Mr. Thorn? But to me, I assure you, it is black like a cat. What in all the whole world should I have to clear up with you?"

"What, indeed! Did Babbie, by any chance, give you any light, other than amatory, on my past career?"

"No, no, I do not think so; she had so little time, you see, when she had finished telling me how you had no heart—no ——"

"Yes, yes—never mind—for the love of heaven, you've covered that, haven't you? There were some other details that I thought might have conveyed something to you if she'd touched on them. She didn't say anything about the war? No? Honestly, Miss Carstairs, you do overdo it when you look as blank as that. Well, let's try again; here's a very easy question—do try to go to the head of the class. What made you think that Tolly wasn't out driving with Paula?"

"Because his new car is out in the garage of my Aunt Madeline," replied Sarah Anne with commendable docility. "And because at not quite four o'clock he told me that he was going over to the golf club to blow out his brains."

"What?"

"Oh, but I do not think that he will," she assured him soothingly.

"Have you any specific reason for thinking that he won't?"

"Indeed, yes, the best of reasons! You see I told him that if he was still alive he could come to dinner."

She smiled seraphically, and Rod mopped his brow, with no regard for the amenities of civilization.

"He could not take the car with him," continued Sarah Anne serenely. "Because he was in so great a hurry to go that he broke up the self-starter."

"Was that why he was going to blow out his brains?" inquired Rod grimly.

"No. Oh, no, that was not the reason!"

The seraphic smile was suddenly dipped in reminiscence.

"And might I ask just exactly what was the reason?"

"You might ask, Mr. Thorn, and I might tell you that it was because he could not get something that he wanted quite badly—and because he is one of those so very spoiled, so very young, young men who think that if they hold a pistol close to their heads some foolish lady will quickly give them the last pot of jam in the cupboard and the poor heart out of her body. This time he did not get the jam; but I do think that he will come back this evening to see if it is still there."

"Did you know, by any chance, that Tolliver was extremely devoted to my sister before you arrived?" inquired Rod with icy politeness, and an effort.

"No, I did not know it by any chance," replied Sarah Anne, smoothing the snowy folds of her dress a little thoughtfully. "I knew it because I was told so by Joan and Polly and Peter and Mendoza and Mr. Grahame at much length and many, many times.

"They had different reasons, perhaps, for telling it, but they had all the same story. How he met her in Santa Barbara last winter—how he came all the way from San Francisco to see her this summer. That Tolly, he is truly a most romantic young man! They were perhaps secretly engaged?"

"No," replied Rod curtly. "They were not. But I think that for the first time in her life Babbie was actually interested in a man, and he happens to be the kind of a man that I particularly wanted to see her interested in—decent and healthy and good-tempered, with plenty of money and plenty of ambition.

"I want to get Babbie out of this whole crowd anyway; she's too young for it—and too fine, under all that silly cheapness and hardness."

"Babbie I adore—but Babbie did not love this young rescuer, Mr. Thorn. You say yourself they were not engaged."

"Oh, nonsense! Babbie was as [illegible] about him as any girl could be, but she ragged the life out of him because she was afraid of being ragged herself; this crowd is death and damnation on sentiment. They'd rather be caught murdering a baby than exhibiting one atom of human tenderness! Any fellow that comes strolling along can have their hands to hold and their lips to kiss—they collect what they charmingly refer to as thrills the way their grandmothers used to collect flowers—and they'd cheerfully die before they'd admit that what they call love goes any deeper than their finger tips. They regard hearts as annoying little articles that beat too fast if you do too many toddles after too many gin fizzes. It's what men seem to want nowadays. Well, God help them, they're certainly getting it!"

"Yes—well, then, if that is all true" [illegible] you who say it, it is not I, remark. Well, then?"

"Well, then, Babbie—Babbie is a little different, you can see that, can't you?"

"Oh, yes, I can see that." She leaned forward, cupping her chin in two small smooth hands, her dreaming eyes far away. "I can see that they are all a little different, yes, I can see that, too. You cannot? Well, it is no matter; can you see this? Can you see what poor, poor sports they are, every one of them—every woman, every man—can you see that?"

"I should have thought, on the contrary, that that was their one remaining virtue."

"No, they are poor sports, I tell you, even though 'Oh, well, be a good sport' is their battle cry. But they are foolish and reckless and naughty children who have chosen to trade their birthright of [illegible] plain porridge for a mess of bitter pottage—and now they are making [illegible] their suppers, which is not pretty enough. Every one of them—every one! Why, Grahame crying about how he always liked plain porridge best, and Joan screaming and kicking on the nursery floor because she wants back again her old bowl that was threw away, and Polly sulking in a corner because nobody told her how the pottage was going to taste, and Mr. [illegible] Sinclair Tolliver trying to smash his head because he cannot get the cream and [illegible] he wants to smother out the taste. Peter Leeds whimpering around [illegible] that Adam about how he never would have taken it unless the naughty little girl made him—oh, those men, they make more cross than those girls!"

"You amaze me, though I imagine you would amaze those men even more. Have you communicated your discoveries to them, Miss Carstairs?"

Sarah Anne dismissed this crushing information with a light flicker of [illegible] an impatient wave of one expressive [illegible]

"But what have they all done? I ask you—what have they done? Look—I said, 'We are tired and we are sick of good old porridge that people have had for years and years and years. Take away quick and give us something new, strange and different—quick, quick!' and when they find that what they have is sour and bitter and burning they cry like little spoiled children that have been tricked and mistreated, and they are cross with life and with each other, and all the time they fight, fight about whose fault it is."

Rod leaned forward abruptly [illegible] the far-away gray eyes and looked relentlessly.

"You seem to have made quite an analysis of the situation, Miss Carstairs. Do you have any solution to offer?"

"No, no—why a solution? I am so small and insignificant a creature, above all, realize! But there was a lady—an old wise lady—who knew the excellent solution of how to treat children."

"Please go on; you're interesting more than you know."

Sarah Anne contemplated him with cool and limpid eyes.

"You are kind. My old lady is in a book which should be dear to [illegible] a dramatic critic. All drama—all tragedy, farce, satire, romance—you find in that little book. Mother dear to you, undoubtedly, and"

"I confess that I've neglected [illegible] what in the past thirty years."

"Oh—yours is the loss. [illegible] Well, that old lady, she knew

ladies for my dinner, I
wonder? You do not think that it is time that they should be here?"

"I think you win the Prix de Rome and the Prix Goncourt and the Prix des Conservatoires and the brown derby," replied Rodman Thorn with bitter conviction. "I don't know whether you ought to make imaginative fiction or high comedy on the stage your life work, but you'd certainly be a riot in either of them.

"To be able to evolve little dear Amélie under the cherry trees out of a compromising masculine inscription on a more than compromising French novel gets out of the candle light of talent into the arc light of genius. Only it just happens that you're wasting your genius on the desert air. Unfortunately for both of us, Miss Carstairs, I'm on."

"On the contrary," replied his hostess softly, her eyes two lakes of gray ice, "I think that you are off—quite entirely off your head. Be so good as to dispense with what you consider wit, and explain what you mean."

"You're making me talk like a boor and a cad," said Rod wearily. "Let's get through with it; I'm not the one to do the explaining, after all, you know! But don't let's bicker about it! I haven't the remotest idea what your game is, and I'd be inclined to let you play it through if it weren't for Babbie. You're obviously not any common type of adventuress. You're ——"

"Yes—what am I?" She leaned farther into the cushions, her hands clasped lightly before her, her frozen eyes fixed unwaveringly on his dark face.

"Heaven knows!" He rose to his feet and came over to where she sat, small and fragile and undaunted beneath the shadow of his height. "But heaven and I both know that you aren't what you are pretending to be. Can't we clear it up now once and for all? We have plenty of time; your guests aren't going to turn up this evening, obviously."

"You are wrong," said Sarah Anne evenly. "It seems to be a habit with you; a bad habit, I think. My guests will be here in eight—no, in nine minutes, for then the half hour will be up. Now what is it that you wish with such frenzy to clear up? Be quick, I have not much time."

"I want to know who you are." Rod Thorn leaned towards her, looking suddenly young and desperate and eager. "I've gone half mad trying to figure it out ever since that first evening—and I don't know one single thing about you except that you're not any convent niece of Mrs. Carstairs, and that I've been looking for you for seven years."

"This time, Mr. Thorn, you are twice wrong. I am Mrs. Carstairs' convent niece, and it is not half mad you have gone—it is all mad—stark and staring and raving mad. Will you be so good as to tell me why you look for me for seven years?"

"Because it's been seven years since I heard you sing in the railroad canteen in Paris," said Rod.

Sarah Anne spread out her hands with a small sigh of pure pleasure.

"Then it was there!" she cried, softly exultant. "It was there, and I could not, I could not remember where it was. But you wore a blue uniform—a most old, a most dirty, a most beautiful blue uniform—why? Why, *mon lieutenant*, was it blue, that uniform?"

Rod stared at her blankly, incredulous. "I was with the Foreign Legion. You don't deny that it was you?"

"Deny? But why should I deny? Always I knew that somewhere —— No. I had seen your eyes smiling at me, but I had forgotten how tall you had been—how brown, how tired, and how you laughed! How you laughed above all those poor, sad, broken little poilus huddled there waiting to go back into nightmare. I had forgotten how you laughed, *mon lieutenant!* Do you remember how, then, I cried?"

"Yes," he said, "I remember. You climbed up on one of those crazy tin tables, and it was cold as hell and some of the glass was smashed out of one of the windows, and the gray veil on your little fur hat kept blowing out behind you—and you sang—you sang—with the tears running down your face, and your voice as gay and reckless as though there were no tears in the world.

"You sang all their dirty marching songs. *P'tite Tonkinoise* and *Auprès de ma Blonde* and *Le P'tit Bleu*."

"They were their songs!" she cried. "Theirs—theirs—what else should I sing them?"

Patented—Trade Mark Reg. U. S. Pat. Off.

SURE thing—you say—I like a bow tie, but can't tie one, to save me. Fingers seem all thumbs when I try it.

Then meet the Spur Tie, Mr. Man. Chock full of dash and style. And—best of all—comes all tied up for you, slips right on to your collar. Not ready-made—tailor-made, with a careless jaunty effect made possible by an exclusive **patented** feature.

Your dealer will show you the Spur Tie in two attractive sizes, large and small—two styles, elastic neckband or slip-on-grip, guaranteed not to rust or soil the collar. Numerous patterns:—black, polka, fancy and many others. Get your Spur Tie today.

If your dealer won't supply you, send $1.00 for two, 50c for one, specifying size, color preference and whether elastic band or slip-on-grip.

More Money

What Would You Do With It?

Suppose you were earning $100.00 a week instead of—$40.00?—what would you do with the difference?

Suppose you could add even $10.00 a week regularly to your present income—could you spend it pleasantly and profitably?

Think it over. For if you want more money, there is an easy way to get it—a way that is bringing extra dollars to men and women the country over.

Mr. George M. Brigham
Illinois

What Others Have Done

All over the United States are scattered prosperous, contented representatives of *The Saturday Evening Post*, *The Ladies' Home Journal* and *The Country Gentleman*. Many of them are earning $100.00 a week and more—practically all of them receive from us for their spare time from $1.00 to $2.00 an hour. Yet the demand for the three Curtis publications is so great that these subscription workers can't begin to meet it. They have hardly scratched the surface of the opportunities open to live workers in every community. As Mr. Hoefer, one of the representatives pictured at the left, so truly remarks, "Any hustler should easily earn $100.00 to $200.00 extra each month looking after the renewals and new subscriptions for the Curtis publications."

Mrs. I. O. Dodge
Indiana

What You Should Be Able to Do

So here is your chance. If you have even an hour or two a week to spare, you can turn them to pleasant money-making. Age is no barrier to success. Whether you are under twenty or more than fourscore, we have a plan of work that will exactly fit you. Your appointment will be permanent; you need not worry about how long your job will last—every month, every year, will bring bigger profits for easier work.

If you want more money, now is the time to learn all about our offer. It costs you just the two cents you pay for a stamp; it may be the means of your earning hundreds of extra dollars.

Mr. Jack Hoefer
Missouri

"But it was seven years ago, I tell you; and you were standing on a table singing rowdy songs to a lot of half-drunken soldiers. You were so changed when you came across the lawn that I wasn't even sure that it was you. I wasn't sure until I heard you singing that last song by yourself. For God's sake, who are you?"

"But, my poor boy," she told him, laughter welling in her throat like a little spring, "I am ——"

"Gosh, I'm out of breath!" Babbie swung over the veranda railing and dropped at Sarah Anne's side, panting slightly. "Whee-ee! I ran all the way from the boat-house—every durn step. Miss Barbara Thorn accepts with great pleasure the kind invitation of Miss Sarah Anne Carstairs for dinner at eight sharp. That all right, Sarah Anne?"

"That is delightful, my Babbie. Mr. Thorn, be so kind as to ring the bell—the one by the door. . . . Let me see—you, Babbie, Mendoza, Peter, Mr. Grahame, myself—that will make six for dinner, Patterson." She turned a speculative eye from the portly butler to a slim figure coming leisurely across the lawn. "No, seven. Ah, and here is little Joan! It will be eight. I forget no one? No one? Oh, but to be sure—Mr. La Rue Sinclair Tolliver. Nine for dinner tonight, Patterson—at eight o'clock sharp."

"We 'ave just finished unpacking the 'arp, miss. Shall we put it in the large drawing-room?"

"Oh, surely, the large drawing-room. Paula, I am delighted that you come to my party."

"Thanks," drawled Paula. "What shall I wear? Are we going to take turns at the harp?"

"No, no," laughed Sarah Anne. "It is my old little harp from Paris, which *petite mère* sends me so that I shall not be too lonely. Wear your most lovely frock, Paula, and the little green wings in your so beautiful hair. You shall see, it will be a real party. You do not sit down, Joan?"

"No," said Joan curtly. "I do not. I just came to say I'd be here at eight. Coming, Bab?"

"Sure thing," replied Bab cheerfully. "On your way, Polly; it always takes you about two and a half hours to doll yourself up right. How 'bout you, Rod?"

"In a minute," said Rod impatiently. "No, don't wait—I'll be over later. Tell Kato to get out my things—there's a good kid."

"Well, but ——" began Babbie, and at the look on her brother's face broke off, staring blankly. "Oh, all right, old dear; see you later."

"Thanks," said Rod briefly, and turned back to where his hostess stood, swinging the pink-taffeta bag and smiling a little gravely. She held out her free hand to him with a pretty gesture of dismissal.

"Till eight, then? You will forgive me—I must hurry."

"I'll never forgive you! You can't go like this without telling me anything more. You can't."

"Oh, but, believe me, I can." She released her hand swiftly and gently, still with that small grave smile. "It is getting late; there is no more time for mysteries. I have many other things to do than talk to tall stern young men who frown and frown in the twilight—tall young men who have no heart! I will see you at eight, Mr. Thorn."

"I believe that you're a witch," accused Rodman Thorn lightly, but he thrust his hands deep into his pockets, and his voice was not quite steady. "A little pale witch, creeping up out of the darkness on velvet feet, with a spell in either hand and half a hundred of them in her heart. What spell did you cast over Joan and Babbie and Paula to bring them back, beaten, to your feet, little witch?"

"It was a quite simple spell," said the witch, and the grave smile danced. "I told them that if they were here within one half an hour to accept my invitation I would make my party tonight a farewell party. They hurried fast, you see; Babbie had not all her breath."

"A farewell party?" His voice was sharply incredulous. "Where are you going?"

"Where indeed? Where do poor witches go when their spells are discovered, Mr. Thorn? Back into the darkness."

Rod caught at her filmy sleeve as though he were afraid that she would vanish before his eyes; in the fading light her upturned face shone luminous as a pearl.

"You can't go like this. Wait, wait! I have a thousand things to tell you."

"A thousand things? Alas, and I, who have not time to hear one!" The sleeve melted through his fingers as she slipped lightly by him into the deeper shadow of the doorway. "Mr. Thorn, if you do not hurry you will be late for my party."

"No, wait—I tell you I've been waiting seven years to hear you sing again."

"And have you not heard me sing again?"

"Please listen! Please! I've waited seven years to hear you sing for me."

After a moment's pause a very small voice said, "You are so fond of music?"

"Yes," he told her. "I am so fond of music."

"Even the strongest, they have their weakness," murmured the voice from the shadows. "Wait then, just one little minute, Babbie's brother without a heart, until I find where they have put my harp and I will sing for you. I will sing for you, but you will stand quite, quite quietly and not move one finger even. The window is open, big drawing-room is open so you can hear. You will stand quiet?"

"Yes."

After a minute the voice spoke again, smaller than ever and far away.

"You are still there?"

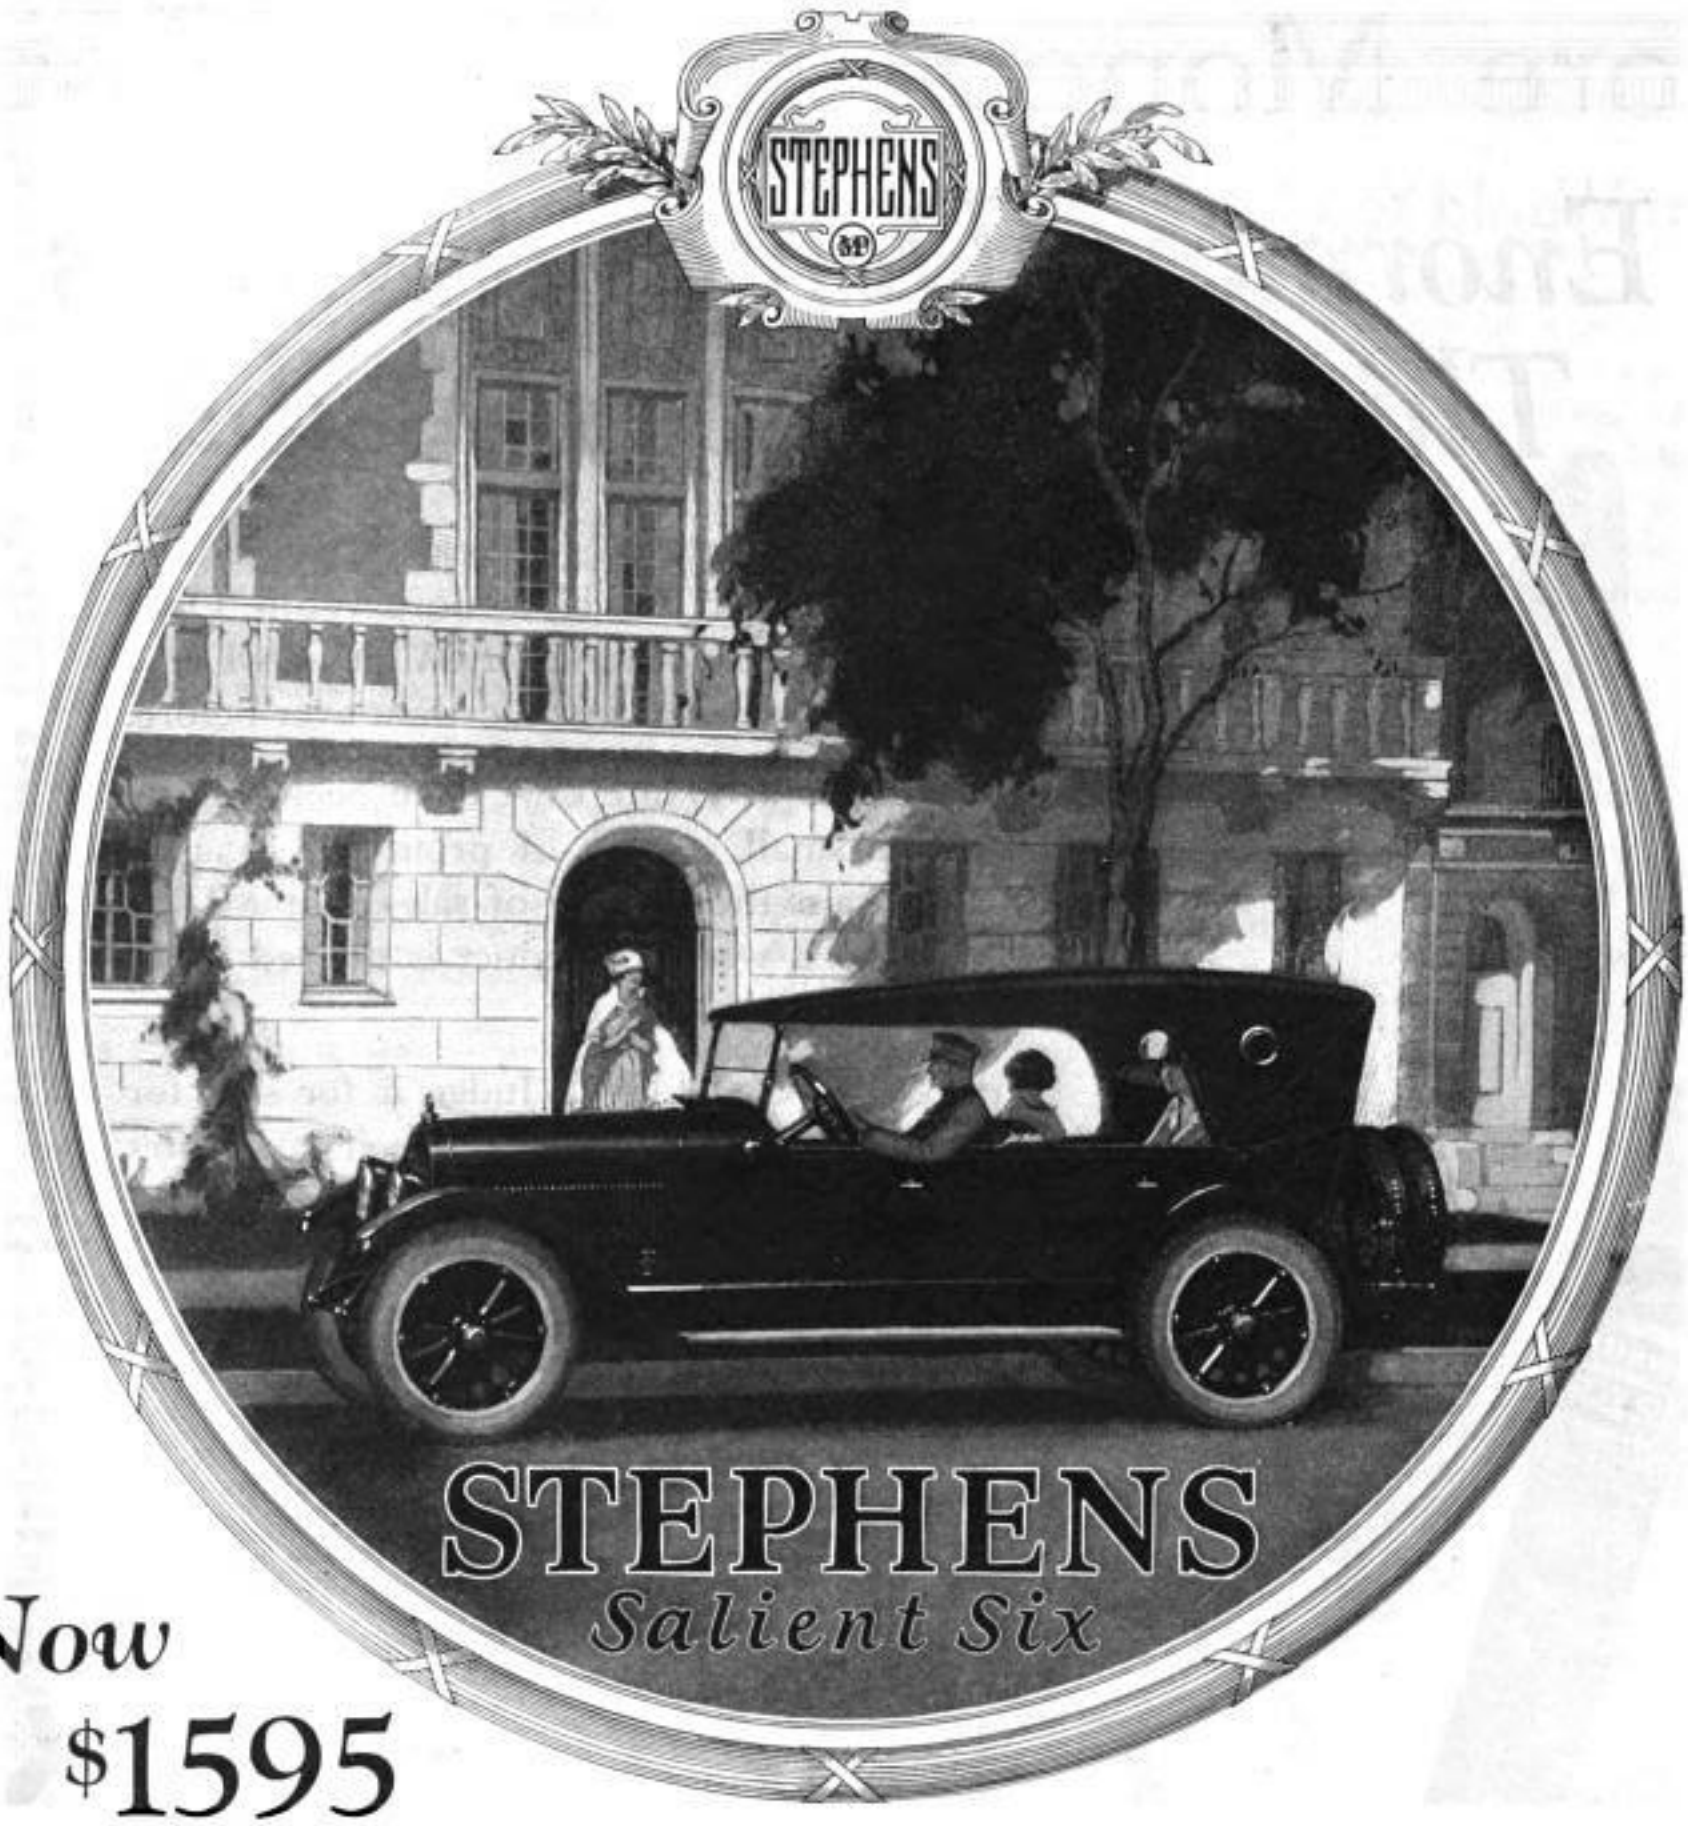
"Yes."

"Then I sing. What shall it be? Something sad? Something gay? I will have it; I will sing to you that air to which the song that I sang the first night you was here, Less Than the Dust. You remember?"

"Yes."

"It is a most sad and beautiful air, the song. I am sorry that I have time for the last verse. I will sing softly, for only for you."

There was a tinkling spray of notes from the harp, and then clear above it the distant magic of a voice:



"Since I, my lord, am nothing unto thee
See, here, thy sword—I make it ... bright!
Love's last reward, death comes to me ...
Farewell ——"

Rod took a swift step towards the French window, and the voice broke on a high ringing note that was at once valedictory and a challenge. There was a startled ripple from the harp, and then other more musical shower, dancing from the harp, softer than tears, purer than bells—laughter. He stood quite still, listening to it die away in the distance, and after it had drifted into silence it still hung in the air about him, a lingering ghost of sound.

A USE FOR CLODS

(Continued from Page 15)

" Roberts explained. "You stick id here and keep her headed right we get under way. Chiswick don't stand the temperament of this en-

e other assented and climbed out on ow of the boat to let Roberts pass. ts went astern. The workmen in the cabin raised a shouting chorus of Van Wert saw a dozen men clustered the engine cabin, through whom ts pushed his way; heard the voice man Tom Jack as he climbed out on Tom Jack shouted something in his tongue, and the other men laughed

thing that happened came very y. First a man's startled oath; in- a louder cry. Van Wert thought was more light aft than there had Then a small sound like the ripping ndkerchief swelled till it might have ne ripping of the very fabric of the s, and flames showed. A man d, screaming, into the water over-

e was the noise of a puff, like the lion from a giant's lungs, and the fter part of the boat was disrupted cano of liquid flame, roaring flame. Wert's senses were perfectly clear, muscles would not function. He in the least frightened, but he was ed. He could not move, could not ould not cry out. Yet he saw with of vision which was photographic; who cried out, moving frantically hout aim to and fro; saw little ick beating tentatively at the vith a blanket from the mass of amidships. Other men erupted cabin and raised their voices in a tongues. Everyone moved with inary and fruitless speed; the vere unnaturally loud, with an ne like a shriek.

w Tom Jack again, withdrawn mass, busy with some peculiar ne little man had stepped to one of the tumult, and had taken off From the pocket of his coat he ething which Van Wert could not put it in his cap and jammed the ly on his head. Then he looked he darkness toward the shores on le. Still Van Wert stood par- He was not yet afraid; but he nself immensely interested in the ts of Tom Jack.

mes were moving forward very ressing the men back till Van d himself in the center of a thick hem. One man was crowded off nto the water, and bobbed there, and clutching at the sides of the while, and then Van Wert did im any more. He perceived that of the boat was lower in the I thought with dull interest:

We're sinking! How are we et ashore?"

om Jack began to shout; and vas not, as the others had been, y loud. It was merely firm and en no one paid any heed to his e began to sing; and that was that everyone hushed to listen. Jack ceased singing and spoke uickly, half in English, half in ngue; and Van Wert saw that inting toward the right-hand hen he was done speaking a protest and outcry arose. The of the flames illumined them all. rged and twisted in a mass, and his mass Tom Jack picked his ere Van Wert stood. To Van id cheerfully:

ter take a swim now. No boat. go away from here." He ownward, grinning amiably. ver there," he added, gesturing shore. "You better come along."

t's lips moved stiffly.

d, "All right!"

k nodded.

ood," he assented. "All right!

d in a matter-of-fact way and n the edge of the deck at Van , and turned around so that he himself into the water. Van seen him kick off the rubber which he wore outside his felt Van Wert took his knife and n laces and tossed his boots away. Tom Jack was in the water, moving toward shore, and two or three men had followed him. He turned to shout back some laughing remark, and a dozen men laughed with him and jumped into the water. Van Wert discarded his coat; then he slid gingerly over the side. It was as though a sharp knife cut him where the water touched his flesh. He shivered, was instantly too cold to shiver, and began to swim, welcoming the exertion. The water about him was dotted with the heads of men. Other men on the boat behind screamed and ran to and fro in desperate indecision.

The swimming men came presently to ice; thin ice that would not bear their weight. They broke it away in front of them, leaning on it to rest a little when their exertions were more than they could bear. Van Wert heard something roar behind them, and looked back into a great glare of light, which vanished to leave only blackness and the sound of anguished cries, which lessened and ceased. Then Tom Jack's voice from ahead shouted encouragingly, and he forgot the lost boat and pushed forward, thrashing at the thin ice angrily. A man at his shoulder strangled and clutched at him and sank while Van Wert instinctively shuddered away.

He was a strong swimmer, and the men ahead of him were breaking the ice, so that he had little to do. When they were wearied and fell to one side he passed them, and so by and by found himself shoulder to shoulder with Tom Jack himself in the bitter water.

Tom Jack looked at him and grinned as cheerfully as ever, and said in a steady tone, "So you come along! Tha's all right too!"

Van Wert nodded stiffly, his teeth set; numb with cold and with the sense of ruthless, simple tragedy.

"It's cold," he said.

Tom Jack crushed away the ice before him, pressing shoreward.

"Col' enough to put some ice on the devil's whisker," he agreed cheerfully. "Bes' to work ver' hard and keep warm so."

The man seemed tireless. Van Wert watched him for a moment with a weary and indifferent admiration as he methodically broke the ice by bearing his weight upon it or by beating it with his fists, and thrust the floating cakes behind him and pushed on. The competitive instinct awoke in him and he began to keep pace with the other, driving himself by sheer will. His efforts were clumsy; once he splashed water on Tom Jack's head and the little man turned on him fiercely.

"Don' do that! I got matches in my cap!" he cried.

Van Wert remembered his glimpse of Tom Jack on the boat taking something from his pocket, stowing it within his cap. Even in that overwhelming moment, when his own faculties were paralyzed, Tom Jack had been able to plan ahead, to think. Van Wert's opinion of the little man was being greatly modified. He remembered his first impression with something like chagrin, and strove more mightily to keep pace with the other's tireless efforts.

One of the men splashing through the water behind them began to wail, a doleful, crooning, dirgelike sound. Tom Jack paused long enough to fling a word over his shoulder. A harsh, challenging word, if tone meant anything. His voice cracked like a whip; then became melting and humorous, chuckles running through it. And from the floundering, freezing men in the bitter water low and choking laughter answered his. Tom Jack was content, flung himself against the ice again.

The long ordeal of that passage toward the shore seemed to Van Wert an eternity of torture. The cold was pain beyond belief. At first the bitter water had burned his skin, had seemed to cut and scour at him. Then it struck in; his feet and hands began to ache; this blinding ache extended up his legs and his arms. Yet the water was warmer than the air. When he lifted his shoulders to break down obstructing ice the wind cut him to the bone, so that he was almost glad to shelter himself in the freezing water again. His hands no longer seemed to belong to him. His legs had ceased to function. He did not swim; rather pulled himself flounderingly along by pawing at the inert and maddeningly stubborn ice.

It seemed to him that it became harder and harder to break a shoreward way. He thought his strength was failing, and a vast surrender embraced his spirit and seemed to offer it peace and rest.

Then Tom Jack slapped him stingingly upon the cheek and cried, "Come on, bo! She'll hol' us up now pretty soon!"

And he saw that the ice was, indeed, thicker here; they were come into a cove somewhat sheltered from the full sweep of the wind by a point off to the northward. The water, less disturbed, had had more time to freeze. He could hear the men struggling behind them. They had begun to call out to Tom Jack; and Tom Jack answered, heartening and encouraging the weaker ones.

He was able to estimate afterward that they had been a full half hour in that icy water before the end came. It came suddenly. He perceived that Tom Jack, on hands and knees, was out on the ice and that it bore his weight.

Then the little man shouted something over his shoulder, added to Van Wert in English, "I'm go'n' make some fire. You come along quick," and began to crawl swiftly toward the shore, his weight distributed upon the ice.

Van Wert himself was heavier; the crust still broke with him; but presently another man scuttled away toward the shore from a point at one side; and then another; and then he found the ice would no longer break beneath him, and he dragged himself forward across the crumbling edges and lay on his stomach, breathing gaspingly, till the scourge of the wind woke new agonies in his tormented body and flogged him toward where a fire, gloriously beautiful to his ice-rimmed eyes, was already leaping upward among the trees.

Followed an interval when his senses reeled drunkenly; when he was conscious of a great heat and a great cold, like two monsters fighting for this body of his; when his garments steamed and scorched above his aching flesh. Seventeen of them, there were, about that fire. There had been many more aboard the motor boat when she started on that trip up Summacook. Chiswick and Roberts had been in the engine cabin; the others were gone in nameless, solitary ways with none near to see.

By and by came shouts from the lake, and lights, men running in across the ice with warm clothing and whisky and hot things to drink; and Van Wert lost touch with what went on about him; was glad to let his soul slide into a warm oblivion.

It was three weeks before he saw Tom Jack again, for while the little man went to next morning to his appointed place in the woods Van Wert was abed, given over to tenderness and care, lost in a lovely delirium. But when he was able Van Wert sought out the other, for he had things to say.

Tom Jack saw him coming and grinned and held up his hand and called, "How-do, mister? You feel better now?"

Van Wert gripped that hand, and he said earnestly and huskily, "Tom Jack, I've come up here to apologize to you."

Tom Jack stared at him a little.

"Tha's new one on me," he said. "What is it?"

"I just want to tell you," the boy awkwardly explained, "that I think you're a man, a real man; and I'm proud to know you."

"Sure I'm a man!" Tom Jack exclaimed in bewilderment. "Anybody can see that, I guess."

"I couldn't, first time I saw you," Van Wert told him, warm with the pleasure of amends. "I thought you weren't worth much, just because you needed a bath."

Tom Jack stared at him; then he chuckled; then he laughed.

"Ho!" he cried uproariously. "But I was ver' drunk that day." He saw Van Wert was hurt by his laughter, and touched the boy on the arm. "Tha's all right, mister," he said soothingly. "Anybody would think so when I was like that. But I am not real dirty, you see; I wash myself when I need it, every time."

"Sure you do!" Van Wert assented lamely.

Tom Jack opened his hands in an expressive gesture.

"So, you see, tha's not your fault," he explained. "If you had known about washing it would have been all right—we are fr'en's."

Van Wert laughed a little, and gripped the other's hand again.

"That's the main thing, anyway Jack," he agreed. "Just so we are fr'en's."

DIFFERENT SHADES OF ROSE

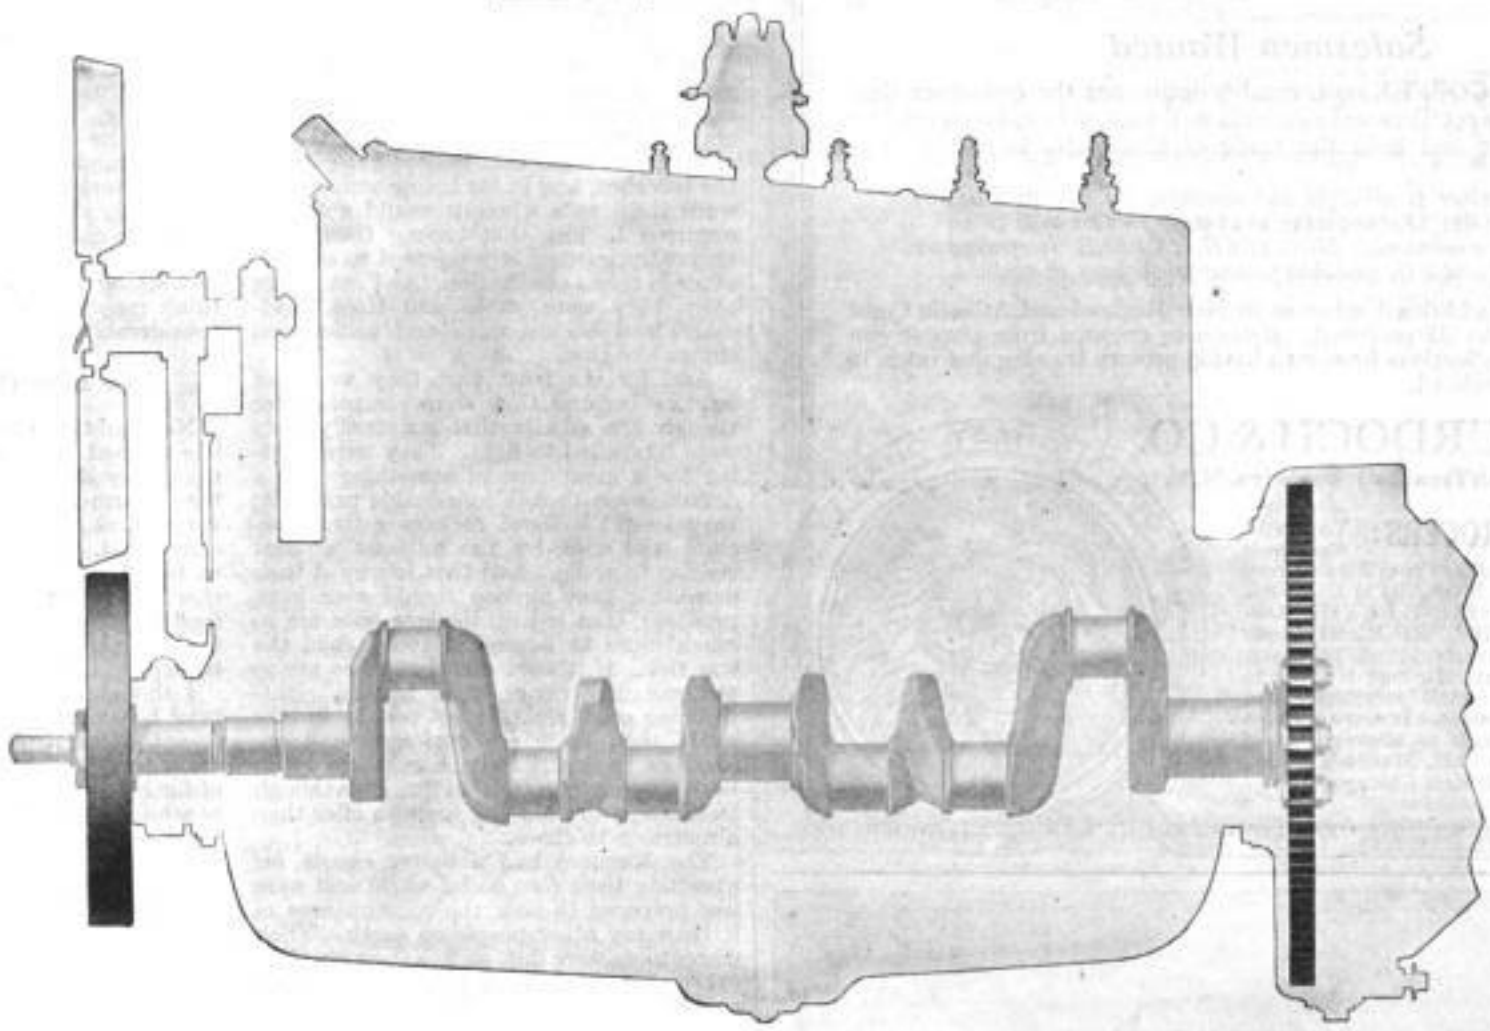
(Continued from Page 11)

sincere and enlightened reformers and earnest experimenters they might be relied upon, perhaps, to retain their mental honesty for at least a sufficient period. And in the end they would come to realize that they had been helping to twist the rope with which it was designed that they themselves should eventually be hanged.

Whether or not Mr. Lenine was being supported by German money when he and his colleages, in 1917, plunged Russia into the chaos in which Russia is wallowing now is of very little importance. He probably was, but if he was he was accepting this support not in the interest of Germany but in the interest solely of his own project. He would have no more compunction about double-crossing a bourgeois-capitalistic-autocratic state than he would have about killing a counter-revolutionist. He hated the German Government no less than he hated all other governments, and if the German Government chose to help him back into Russia and to finance him in his purpose to stop the capitalistic war on the Russian front he was just that much closer to a realization of his desire to overthrow the German Government. If he accepted German assistance these were his thinking processes; there can be no doubt about it.

Everybody will remember how, when the war began in 1914, the socialist parties in all countries were split up into many factions warring among themselves over the question as to whether the socialist stand against war—approved in solemn resolutions on many occasions—was to be maintained. Everybody will remember that a majority of socialists in all countries redeemed themselves in a large measure in the eyes of their political opponents by rallying to the support of the war with everything they had unitedly or individually to offer. Lenine, alone among the great leaders, standing in the midst of the wreck of all he had helped to create, remained steadfast and true to his principles. He openly condemned the war as being a capitalistic war, undertaken for purposes solely of plunder, and for which the world proletariat would pay, while only the bourgeoisie would reap a rich reward. It is a curious fact that except when Russia is concerned Mr. Lenine seems to be incapable of thinking in terms of nationalities. He thinks only in terms of class.

He rallied round himself the nucleus of a company of supporters, adherents and tenants, and began systematically and indiscriminately to sow the seeds of disaffection and discontent in all armies. He was living in the utmost obscurity and few people ever heard the name of Lenine, but during his retreat in Switzerland he published subtle or merely inflammatory appeals through various channels into a whispering gallery which penetrated in all directions and which was especially well provided with receivers in the Russian army. His propaganda was revolutionary and his aim was to change the war in every country into civil war; or, more accurately, into a world war of class against class. He sold himself to nobody, and if any people bought with him to his advantage for the furtherance of their own ends it was they who did the selling. He made his appeal to the "proletarian slaves driven to the shambles by the capitalistic-bourgeois exploiting oppressors" and advised them to turn on these fiends incarnate and destroy them, or words to that effect. He saw in the suffering of all classes the best chance the down-trodden proletarian class had ever had, or perhaps ever would have; which is a pretty point of view as it concerns the rest of us.



Just when he began to realize the possibility of putting his theories into practice I doubt if anybody knows, but as the strain of the war grew greater, as the casualties and the unthinkable sacrifices piled up and up, as the sickness of the world grew heavier and heavier, he must have dreamed great dreams of how wonderful it would be if he should [illegible]

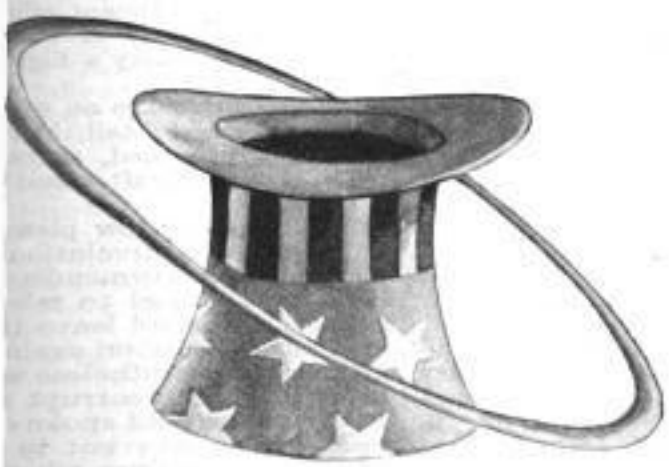
ORGANIZATION BUILDS SUCCESS

Two flywheels —not just one!!

Here in simple graphic form is revealed the secret of the famous Rickenbacker vibrationless motor.

Two flywheels instead of the conventional one—perfectly balanced at every speed—plus a new idea in crankshaft construction, make possible this revolutionary motor.



Two flywheels, properly placed, make possible equal distribution of weight under all conditions.

An exceptionally large crankshaft of new design (which is oversize for bore and stroke) makes possible absolute rigidity and balance.

Think of it! Positive smooth-as-oil-motion—at all speeds—at all times—without vibration.

Be sure and see the famous Rickenbacker Six before you buy your next car.

Let this great car tell its own great story. Its performance will fairly take your breath away.

MONARCH COFFEE

NONE BETTER
OBTAINABLE AT ANY PRICE

SWEET PICKLES—CATSUP
SALAD DRESSING *and other*
FOOD PRODUCTS

Salesmen Wanted

MONARCH COFFEE so favorably impresses the consumer that progressive retailers welcome this well-known brand as a quality leader to attract and hold the trade of those who buy high-class groceries.

The container is air-tight and sanitary, yet it costs much less than tin. Labor-saving machinery reduces costs to an absolute minimum. MONARCH COFFEE is packed only in 1 and 3 lb. containers, either whole bean or steel-cut.

We are placing additional salesmen in New England and Atlantic Coast States. Men under 35 preferred. References required from present employers. Only applications from men having grocery training and made in person will be considered.

REID, MURDOCH & CO.
882 Third Av. (Bush Terminal), Brooklyn, N.Y.

"OUR HIGHEST QUALITY"

TRADE MARK

TO RETAIL GROCERS: You add something definite to the net value of your Estate every time you purchase MONARCH COFFEE because THERE IS NONE BETTER OBTAINABLE AT ANY PRICE and *it costs you less.* A trial on your table will bring you positive proof. Particular care is given to mail orders from retail merchants not reached by our salesmen. In territory east of Pittsburgh, address as above; west of Pittsburgh, address Reid, Murdoch & Co., Clark Street Bridge, Chicago, Ill.

ESTABLISHED 1853

(Continued from Page 114)

the power suddenly to scramble the whole orderly but terrible business and set Germans to fighting Germans, Frenchmen to fighting Frenchmen, Britons to fighting Britons, Americans to fighting Americans, Italians to fighting Italians, and so on through the whole category of belligerents, to the end that all the pompous officers, all the ministers of state, all the buyers and the bankers, all the sellers and the profiteers, all the silly women and the vain men, all the preachers and the teachers should be done away with, while the Tommies and the poilus, the doughboys and the Germans, the Italians and the Belgians—they must all have had pet names of some kind, but I don't know what they were—should return home, possess themselves of all visible possessions and begin to run things to suit themselves.

He would have failed to consider, I imagine, that a great many of these victims of exploitation of all nationalities had either crawled or fought their way out of the lap of luxury in order that they might get into the trenches, and in his loving attitude toward them as a whole it would not have occurred to him that among themselves they very infrequently referred to one another in terms of affection. As I remember them they were yanks and frogs, beefeaters and boches, wops and willies, and things like that.

And for the most part they were not fighting because they were compelled to; though one admits that eventually they were compelled to fight. They were fighting for a great love of something; for a definite even though indefinable principle; they fought without reckoning their sacrifice and died by the millions without ceasing to smile. And that is why it is so damnable that anyone should ever have profited; that is why the war poor are so much more to be envied today than the war rich. If it were not that there are so tremendously many more honest, right-thinking and right-living people in the world than there are exploiters and oppressors, profiteers and pirates, there would be some excuse for Bolshevism, even though Bolshevism has nothing more to offer than a reversion to chaos.

The Russians had a better excuse for upsetting their own social world and were less prepared to bear the consequences of it than any other people on earth. Their discontents were due, as was their eventual expression of them in extreme measures, to undeniable abuses. But let us be fair as we go along. Many of the abuses in their later developments were due to extreme expressions of discontent—not on the part of the people but on the part of organized agitators—which not only threatened the overthrow of established authority but advocated its abolition and the substitution of anarchy, unbridled and undisguised.

Detained for the Public Good

It was not just by way of being playful that the government kept such men as Lenine and Trotzky out of the country, and as many of their kind in prison as they could lay their hands on. Nor yet was it by way of being cruel and oppressive. It was by way of self-preservation. Far be it from me to make any kind of excuses for autocracy in any form, though it may be that one of the things that is the matter with the world today is that there is not enough of it; but I have an idea that if our own great democratic Government were threatened by any such dangers as threatened the government of the Czars for so many years our Government would resort to repressive measures no less severe than the severest that any Russian ever thought of. We always do things better than anybody else.

We will not tolerate so much open criticism and opposition even now, not by any means so much, as the Russian Government tolerated over a long period, while for rank sedition our punishments are as drastic as we can make them. Czarism was admittedly an inexcusable institution, but its awkward struggle to maintain itself was not among its inexcusable offenses. Yet it was largely upon the sob features of that struggle that Bolshevism based its most effective propaganda.

Which reminds me that I wish I knew what the political leanings are of certain American writers who once upon a time wrote with such excellent effect about the horrors of prison life in Siberia. There is no doubt at all that their pictures were drawn with absolute and unfailing regard for the truth, but I should like to take some of them now into the prisons of Soviet Russia that are maintained for people of their own class; maintained for the most part by ex-political prisoners associated in the majority cases with just plain brutal criminals. There were only two offending classes in Russia after the great communistic upheaval was established. One of them is known as the bourgeoisie and the other as the intelligentzia. There were a few aristocrats, to be sure, but not enough of them to make an experiment in communism pay. The bourgeoisie had most of the money, while the intelligentzia put up the brains and argument against confiscating it and turning order into chaos; so the bourgeoisie and the intelligentzia went to jail together. [illegible] Bolshevistic, socialistic, communistic, anarchistic—call it what you will—propaganda the "comrades" were always "seized" and "thrown" into prison, where they invariably "languished." The charges against the communistic state are mostly "placed under restraint" and "detained in the interest of the general welfare." [illegible] if anybody should come along and offer one of these a chance of exile to Siberia with an occasional square meal and the privilege of washing his face, if only in the snow, I think maybe the offer would tempt him considerably.

The Bloodless Revolution

No doubt the soviet authorities would like to treat their political prisoners better than they do. They would like to feed them warm and clean perhaps, but fuel is very scarce and so few communists like to chop wood. And probably they would like to feed them, too, but it would be very shortsighted on their part to waste good food on offenders against the general welfare when there are so many "comrades" to be kept in line by preferential treatment.

I thought I was going along with a brief historical sketch until I had touched upon the Czar deposed; the provisional government established; the return to Russia of Lenine and Trotzky with their numerous henchmen and colleagues; the development of the soviets—not under Bolshevism, but under Kerensky socialism; the incompetence and wild disorder of the provisional government; the rise of Kerensky; the penetration of the army and the soviets by Bolshevist propaganda; the promise of "peace and the land"; the friction between the provisional government and the Petrograd Soviet of Workmen's Soldiers' and Peasants' Deputies; the terrific clash of opinion with regard to Russia's position and duty in the World War; the further penetration of Bolshevist propaganda; the creeping paralysis of the provisional government; the preparation of Kornilov to occupy Petrograd with dependable troops and to establish a military dictatorship; the fatal weakness of Kerensky, who would not surrender the supremacy of authority; the successful coup of the Bolsheviki to the Petrograd garrison to rally to the support of the soviets; the days of utter suspense when neither side knew what the other side might be preparing to do; the gradual occupation by the Bolsheviki of the government offices one by one; the fading away of the provisional government; Kerensky's flight; the triumph of Lenine!

I thought I should go on with all this in at least very brief detail, but there is not a sufficient background, perhaps, for the picture of what came after and what is to be looked upon.

We all remember how pleased we were with the Russian Revolution of March, 1917. It interfered tremendously with our interests; it promised to release the German armies in the east and leave them free for immediate concentration against the Allies in the west, but nevertheless we applauded the overthrow of the corrupt and inefficient Russian autocracy and spoke of it as one of the most important event in modern history, even in those times when history was setting a record that we are all accustomed to place in a class by itself as being unprecedented, unparalleled, unbelievable and altogether undesirable.

The March Revolution was practically bloodless and was accepted by all Russia with complete acquiescence—all Russia that is, except an inconsequential handful of irreconcilable monarchists and autocrats. We commented upon this fact at the time with wonderment and unstinted approval, congratulating the Russians

few who did this, but the
rganization as a whole went

All ministers and heads of departments were naturally deposed by the Bolshevik *coup d'état*, but there were harmless, necessary undersecretaries of various kinds; there were clerks and accountants; specialists in finance; specialists in interior affairs; specialists in army and navy administration; specialists in the administration of justice; specialists in railways and other lines of communication; professors in universities; scientists in state laboratories; a whole internal and external revenue outfit; various kinds of officials in provinces and counties, townships and towns—just think what the gradual withering away of a state would involve! Even after the overthrow of the monarchy and through the feeble days of the provisional government the Russian state was a going concern because the men who were responsible for the details of it remained at their posts. But with the triumph of the Bolsheviki they quit—in sufficient numbers, at least, to produce a collapse—saying they would not work under the domination of a band of thieves and traitors.

Under Bolshevik Rule

In writing all this I am more or less quoting numbers of these men with whom I have talked. Most of them have spent months in prison on one charge or another since then; they have lived through amazing times; they have suffered the confiscation or the gradual withering away of all they ever possessed; they are like gentlemen who have become degraded through some vice or terrible misfortune; they are clothed in the remnants of a former respectability; they button their one-time smart coats close up across their chests and wear little odds and ends of mufflers or stocks round their collarless throats; they are dirty; they had come to the stage of hunger when I talked with them—many of them, that is; their families were in distress, and nearly always what they told me about themselves was merely incidental to an almost breathless and an always gentle and apologetic question as to whether or not I might be able to arrange to have a food package sent to them from the United States.

If you should ask me who these people are I should tell you that they are everybody of a certain class in Russia, the class with which any ordinary American of good standing would naturally associate. If among them there are any exceptions, any who have escaped the wrath, I neither met them nor heard of them. But if I should mention any names I would be exposing to further persecution men and women who have suffered enough. The Reign of Terror is supposed to be over in Russia, but it is not, and I think I talked with nobody outside governmental circles who did not ask me to forget his identity and to regard him merely as a type.

The average Russian proletarian and peasant is wholly illiterate, and at the time when the Bolsheviki came into power this kind of man had his mind fastened upon nothing but the golden opportunity presented to him to loot and to seize; to strut and to swagger in his new-found place; to satisfy his lusts of every imaginable variety. Yet it was on just this kind of citizen that the Bolshevik presidium—the little coterie of fanatics at the top—had to depend for administrative service in government and upon whom it bestowed its spoils of victory.

I have no intention of going on with generalities and writing nothing but history, but there is another piece of background to be set in, without which no picture of Communist Russia would be complete and without a definite understanding of which nobody would ever be able to get an adequate conception of what the Russian situation means to the rest of us. I am not pretending to be a discoverer; I am merely assuming that a great many people have ceased to remind themselves in so many words that such and such things are true.

Nero fiddled while Rome burned. Nicolai Lenine set in motion forces that were to destroy the national life of a great empire together with the individual lives of millions of its citizens; and while these forces gathered momentum, while Red Terror raged round him, growing redder and more terrible, while millions of people fled the wrath of him and his kind and other millions sank before his eyes into unfathomable depths of misery and degradation, while his country was being looted and ravaged from one end to the other, while its

The History of the Pneumatic Tire

1—*Square-woven fabric—Invented in* 1888.
2—*Cord-fabric—Commercialized in* 1915.
3—*Carlisle ROPE Tires—Introduced in* 1917.

CORD tires were a real improvement over square-woven fabric tires because the loose weave of the cord-fabric, which runs parallel, permits more rubber between the cords and the amount of *internal* friction caused by the rubbing of one cord against another is reduced.

The principle on which Carlisle tires are built, with only two plies of ropes, is another significant step *forward*. Each rope is surrounded by a *thick* cushion of rubber, thus practically abolishing *internal friction*—the heart disease of tires and the principal cause of the blow-out.

There are seven fundamental and basic features in tire construction, resulting from Carlisle patents, that make—

resources were being dissipated and its properties destroyed, while in the world outside war was being fought and peace was being made—Nicolai Lenine sat in his high place nursing his monstrous obsession. To him the destruction of Russia was a mere incident. His fixed and fanatic desire was to destroy the whole world.

There may be some who will question my judgment in holding Lenine always to the forefront as an isolated figure, but it is thus that he appears to my mind. He seems to me to be as much a figure of command in everything that has occurred in Russia as Napoleon ever was at the head of his armies; and in Russia, in his own capital of Moscow, one gets this impression of him. Nobody else occupies in the common mind a position in any way comparable to his. Trotzky is a big blustering brute in comparison with him. Trotzky is canine; Lenine is feline. Trotzky can be got at; he can be barked at when he barks; he can be loved or hated, approved or disapproved, smiled with or laughed at; he is a keen-eyed, whiskery embodiment of perpetual motion that may fill one with fear but never with nameless dread. He is a much more capable man than Lenine when it comes to organization and specific administration—his Red Army being the only going concern in Russia today—but he is too visible to be awe inspiring, even though it is invariably difficult to determine what he is up to or why. To take advantage, with due acknowledgment, of the motion-picture simile, Lenine does a perpetual fade-out. He is a sick man; his eyes are tired; his face is drawn in lines of weariness; and only his hand, with a firm grasp on the reins of authority, is in perfect focus and always in full view.

It will be remembered how, in 1914, in his diatribes against the imperialistic war, Lenine repudiated the Second International because of its conservative stand on the immediate questions of the day, a stand which he characterized as petty bourgeois opportunism. He would have none of it. He called names and hurled bitter accusations against moderate socialists of every nationality. Then, in 1915, at a meeting in Bern with the stray, exiled, refugee or fugitive members of the Russian Social Democratic Labor Party who were knocking about Europe at the time, he announced his intention of organizing a Third International. And think, if you can, what it would have meant to him to be able at that moment to dream of what eventually transpired. Three years later as one of the foremost figures on earth he launched the Third International in Petrograd! And while the whole program of Bolshevism is the overthrow of established forms of government and the substitution of proletarian dictatorships, the program of the Third International was a minutely detailed and thoroughly planned program of world revolution with no remotest corner of the earth left out of consideration.

Lenine's Sweeping Program

A prominent member of the high-up Bolshevist group was making a speech one day in Berlin about Russia's problems and difficulties. The Bolsheviki were at that time engaged in their struggle for the possession of the ports on the Baltic Sea and were getting the worst of it at the hands of the Letts, Esthonians, Lithuanians and others who would have none of them or of their doctrines, and this gentleman, lashing himself into a state of great indignation, exclaimed:

"Imagine the Letts and those tribes demanding the right of self-determination! Next thing we know the Eskimos will be rising up and asking for home rule!"

Which only goes to show how inconsistent a Bolshevik can be. This insult was widely quoted in the Latvian press, with the result that the noble Letts were sorely wounded in their pride and got their backs up just a little bit stiffer than they were before.

The story was told to me in Riga by one of Latvia's political leaders, and at the moment my mind could occupy itself with no picture but a picture of Lenine standing before a meeting of the organization congress of the Third International outlining his plan for the proletarian conquest of the world. He would whip into line as irredeemably Russian every smallest state that had ever been attached to Russia, but at the same time he would grasp the power represented in an international organization of proletarian revolutionists and use it to overthrow established [illegible] every country large or small, [illegible] dependent, rich or poor, [illegible] generate, on the face of the earth. [illegible] vels at his knowledge of geogra[illegible] mental hold upon the broad aspe[illegible] political affiliations and economic [illegible] ships. His mind sweeps [illegible] earth as though he were the [illegible] Jew himself with the fruits of [illegible] of personal experience stored [illegible] mind. He is arrogant with the [illegible] fanatic and never-analyzed [illegible] it is therefore that much of wha[illegible] say is only remotely related to [illegible] fact.

He would aim directly at the [illegible] of all the major states, but at [illegible] time he would strike at them [illegible] through their colonial possess[illegible] sponsibilities if they have any, as [illegible] he talked before the organiz[illegible] the Third International about [illegible] comrades in India, the Dutch East [illegible] the Philippine Islands, the Africa[illegible] encies, the South Sea Islands [illegible] remote but important and burie[illegible] calities should have been enough [illegible] British, Dutch, American, Fre[illegible] and other colleagues away from [illegible] shuddering disgust. But it was [illegible] this only goes to prove that [illegible] Borneo are not the only [illegible] specialize in the production of [illegible]

I am quite aware that a large [illegible] this is merely a review of [illegible] tory, but I think I am right [illegible] in believing it to be a review [illegible] forgotten truths, and it is just [illegible] everybody should continue to [illegible] very vividly why Russia has [illegible] for so long and held away by the [illegible] world as something to be fear[illegible] that within the past few months [illegible] Lenine and all his pack have [illegible] spots, but it is much safer to be [illegible] chiefly by a suspicion that they [illegible] put on sheep's clothing.

At the Genoa Conference

It is not at all unlikely that [illegible] can get into print a good many [illegible] have been made in the strict[illegible] heaven knows I hope so! I [illegible] will be such changes as will [illegible] present concern to appear [illegible] if they should happen to be [illegible] would involve my country in a [illegible] in its attitude toward Bolshevism [illegible] cern would be only deepened [illegible] more profound. I do not believe [illegible] ernment will be in any hurry to [illegible] policy with regard to Soviet [illegible] know there are powerful agen[illegible] Bolshevistic nor Russian, that [illegible] stantly in operation in Wash[illegible] the object of bringing about [illegible]

Moreover, at the Genoa [illegible] Bolsheviki, as usual, played a [illegible] narily clever game; Mr. Lloyd [illegible] ready to come to almost any [illegible] ment that promised an early [illegible] the difficulties by which the [illegible] Various observers influenced [illegible] who really have more interest [illegible] commercial considerations [illegible] possibly have in the soul of a [illegible] though it might happen to be [illegible] their own.

There are correspondents [illegible] are baiting the Bolshevik a[illegible] splendid time with them. Some [illegible] with entertaining levity; [illegible] regard them with grave alarm [illegible] analyzes them, or attempts to [illegible] everybody agrees that wh[illegible] conference would be an exce[illegible] affair. Only one writer so far [illegible] them as they present themse[illegible] mind. He quotes a European [illegible] saying: "The conference has [illegible] Bolshevists with a high po[illegible] with a mighty sounding horn [illegible] have used and propose to use [illegible] most."

I was in Moscow when the [illegible] gation left, and one of the [illegible] asked if he expected the con[illegible] ceed said: "As a conference [illegible] means for getting a hearing [illegible] Russia, very decidedly—[illegible]

I thought when the mem[illegible] tion started on their way, what [illegible] thing it would have been [illegible] world—with a full knowledge [illegible] were to represent, of course [illegible] witnessed their departure [illegible] old city of Moscow. They [illegible]

Charles M. Schwab says:

CHARLES M. SCHWAB
NEW YORK
25 BROADWAY

April 4, 1922.

My dear Mr. Gillette:

Your letter of March 30th received. I have used the new razor constantly ever since you sent it to me and it has given me the greatest satisfaction. It is infinitely better than the old one. The question of adjustment was always a troublesome one to me. Now I keep it screwed down tight and have not the slightest difficulty. I am well pleased with it and heartily congratulate you upon this invention.

I hope I may have the pleasure of seeing you soon, to renew our old acquaintance.

With kindest regards, I am

Sincerely yours,

Chas. M. Schwab

Mr. King C. Gillette,

CHAMPION SPARK PLUG CO. TOLEDO, OHIO

SHALER
5 MINUTE
VULCANIZER

A Friend in Need!

Last tube punctured—patches won't stick—you're ready to start home on the rim. Then along comes a helpful friend and shows you how to vulcanize that puncture for good in five minutes. He'll tell you that he wouldn't take ten dollars for the feeling of security his Shaler Vulcanizer gives him and advise you to get one at the next garage or accessory store you pass. You'll do it, and next time the emergency comes you'll thank your lucky star that you were prepared.

Costs Only $1.50

Slightly higher west of Denver and in Canada. Vulcanizes boots, rubbers, gloves, coats, etc. No gasoline. Each Patch-&-Heat Unit contains its own fuel. A match is all you need.

C. A. SHALER COMPANY
1402 Fourth St., Waupun, Wis., U. S. A.

(Continued from Page 118)

the midst of a fearful ruin which they themselves had wrought in the sacred name of the proletariat, themselves, presumably, being proletarian dictators; but they fared forth in such magnificence as poor old Russia had not beheld in many a day.

Just why they should have dressed up like an Easter parade and assumed the disguise of high government officials representing an ordinary, well-kept and self-respecting government, it is difficult to determine, but Inconsistency, thou art a gem, and there is no getting away from it. Their boast is that they are proletarians; their business and pastime for more than four years have been the discouragement of everybody who ever owned a starched shirt or wore a white collar, this discouragement having taken every form from petty persecution to death at dawn in front of a firing squad; they have reduced everybody in Russia to degradation and dirt, to say nothing of hunger and cold and misery unspeakable. And all this being true, it seemed to me that they should have parked their luxuries in the Kremlin for the time being, and left Russia under a red flag and in the habiliments of what they pretend to be. They should have worn neat but serviceable trousers belted over the always specially noble-looking flannel shirt—open at the throat—which seemed to be affected by our very best proletarians.

On the cover of the official organ of their party, a magazine called The Communist International, there is a representation of such a man. He is outrageously handsome, even though he has a wild look in his glorious eyes. He is swinging a great hammer with which he is about to smash a world all wrapped in chains. One realizes that he sees only the chains, of course, and that it is the chains he is aiming at, but one knows at a glance that if he ever lets go and his blow falls it is going to be poor old world, good night!

Anyhow, his make-up is the proper make-up for a proper proletarian, and the representatives of his kind at the Genoa conference should have adopted it. Also they should have had embroidered or pasted on them somewhere the red emblems of their red state—the crossed hammer and sickle and the big red star—and they should have been a bit gaunt and lean, looking the part of martyrs who had suffered for a noble cause. Instead of all of which they took their departure—a company of very good-looking high-mucky-moguls—got up as though each of them kept a London tailor and a French valet.

Which reminds me that the first time I heard of Trotzky's valet I exclaimed in astonishment: "His what?" "His valet," answered the man with whom I was talking, as though it was a perfectly natural and to-be-expected thing that Trotzky should have a valet. Whereupon we went on talking about whatever it was we were talking about.

Incidentally and also, the Russian delegation to Genoa left Moscow in probably the most luxurious private train that [illegible] in all Europe. Everybody who saw it was agog with excitement about it. And no wonder. Everybody wanted to know where on earth they had been keeping it. We all knew that each of them had a private car of his own, but nobody knew that such a train was in existence. It was decided that it must have been the private train of the Czar himself, and that they had had it wrapped away somewhere in cotton wool. Which is a sign that they know how to take care of things if they wish to.

There is not a piece of rolling stock in all Russia that has had a fresh coat of paint on it in five years. Railway equipment everywhere looks as though it had been standing out in all the weathers of a man's average lifetime. Yet here one beheld a string of shining palace cars that could not be surpassed. One observed pretty decorations round crystal-clear windows and got glimpses inside of silken upholstery, [illegible] draperies, softly shaded lights and such elegance generally as one is privileged occasionally to look at but seldom to see at.

Though I don't mean that exactly. I enjoy looking at beautiful things and am always thankful that there are rich people who produce them for my benefit. The rich people have all the responsibility for them, while I have at least a part of the enjoyment. One of my pet loves is a love for florists. I cannot afford homes of orchids and roses and feathery ferns and show for myself of all the beauties of the world of flowers as these beauties unfold through the seasons, but the florists, in their sordid pursuit of gain, make me a present of this show in their beautiful windows and, passing by in simple and unhampered happiness, I thank them. This is a theme that I could go on with all the way from florists' windows up templed mountains, but my thought at the moment is that, dollars to doughnuts, when the Bolsheviki train de luxe pulled out of Moscow on its way to Genoa—or to the end of the broad-gauge track—there was an American relief agent somewhere in Russia engaged in the business of distributing a piece of Russian rolling stock in order that he might make his way in some degree of personal safety from one area of distress to another.

I knew that on the way out of Russia the shining cars of the train de luxe would be hammered upon and smeared, perhaps by many little cold bare fists, and that the cystal-clear glass of their windows would not be thick enough to shut out the multitudinous and incessant cry: "Give us bread! For God's sake give us bread!" But I really hoped that in Genoa the new aristocratic proletarian dictators would find some way to resolve the affairs of Communistic Russia to the end that the wail of the people would be stilled, while the light of a restoration to well-being and contentment should begin to dawn upon them.

Editor's Note—This is the second of a series of articles by Mrs. Egan. The next will appear in an early issue.

ams and letters that follow sequent relations.

lay a delegation of Colorado ur party in their own sleepers Las Vegas. When we arrived s New Mexican town a great s at the station. There were real, live cowboys in the crowd. They yelled and waved their hats when Roosevelt appeared, and shot off their revolvers. The town was alive day and night the three days we spent there. Everything was wide open. No pen can describe Roosevelt's enthusiasm. He bubbled over every minute. Our car was filled with Rough Riders, who told lurid stories of experiences in Cuba. One of the cowboys with a big scar on his face said, "Colonel, do you remember the night it rained hell and wildcats?"

"By George, wasn't that a bully storm!" and the white teeth snapped.

We left Las Vegas amid the same sort of demonstration as on our arrival. Roosevelt stood on the back platform and waved his cowboy sombrero until the foothills shut off the view of the town.

One of the Colorado delegates, a high state official, came into Morton's car and said to me, "I want to apologize to you."

"What for?"

"Well, you put the word 'gold' into the Republican platform in '96. That gave Colorado the worst blow she ever had. We faced ruin. If you had come to Denver or any other Colorado city at that time you would have been mobbed. We have been together for four days and I want to apologize for the hatred I bore you."

The return to Chicago was quieter than the going west. At night we discussed national and industrial affairs. Roosevelt was very much interested in Paul Morton's views of the railroad situation, and the legislation necessary to carry out the reforms he suggested. They were later put into effect when Roosevelt became President. He offered Morton the post of Secretary of the Navy in 1904.

Morton at first declined the position with the remark, "The only ship I know anything about is the prairie schooner."

Roosevelt said, "Don't worry about that. I know all about ships. What I want is your railroad knowledge."

From Chicago, Roosevelt went to Milwaukee to deliver a speech. Next day I joined him and went to New York. We arrived in Laporte, Indiana, as Roosevelt was ready for bed. There were about a thousand people at the station calling for him. He did not hear them until I opened his stateroom door. Hastily pulling on his trousers over his pajamas he rushed to the rear platform as the train started, and yelled, "Good night and good luck!"

Early next morning we arrived in Buffalo. There was no cheering crowd to welcome him; only the train men were about.

I said, "Governor, you are at home."

He answered, "Yes, by George, they know me here."

During the day I suggested he send a telegram to President McKinley telling of the sentiment he found in the West for his renomination in 1900, and the proffer of his personal support. I wired the Associated Press correspondent to please meet the train at Albany. Roosevelt gave him an interview and read him his message to McKinley.

A few days later I received a wire from him saying he had received a telegram from the President to bring Mrs. Roosevelt and spend Sunday at the White House.

ALBANY

July 1, 1899.

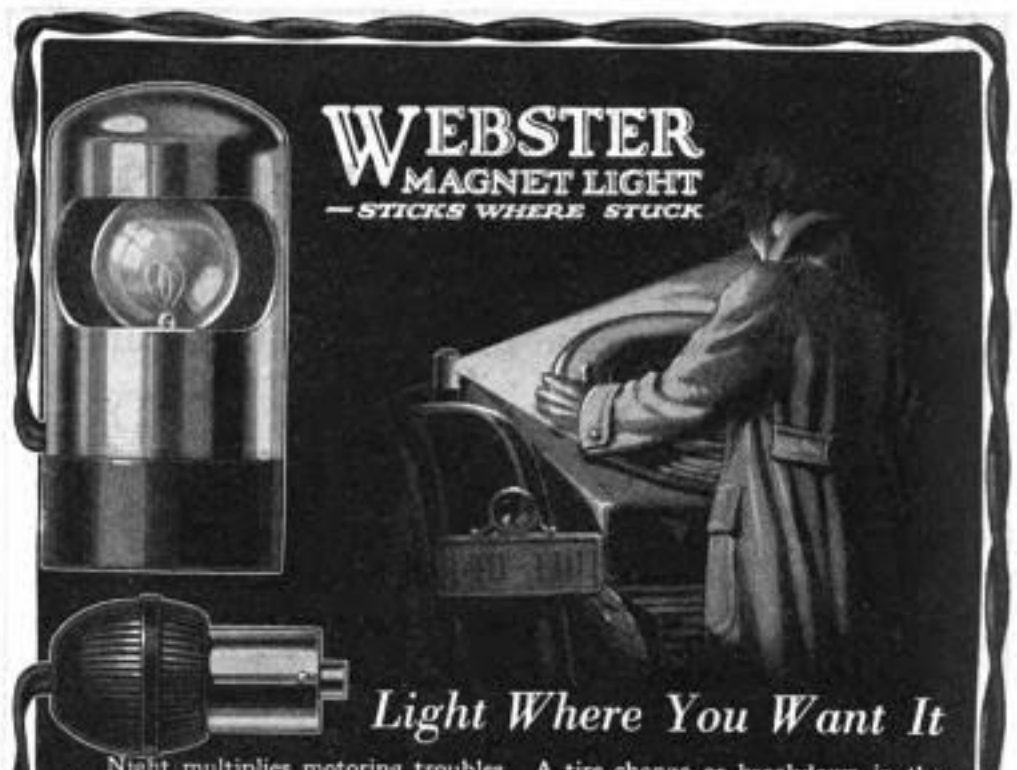
My dear Mr. Kohlsaat: Was my McKinley interview all right?

Remember me warmly to Mrs. Kohlsaat.

Incidentally, permit me to remark that you are a trump and no mistake! Didn't we have a good week together? Faithfully yours,

THEODORE ROOSEVELT.

STATE OF NEW YORK
EXECUTIVE CHAMBER
ALBANY



At OYSTER BAY, N. Y., July 5, 1899.

My dear Mr. Kohlsaat: I thank you for yours of the 2d inst. and was greatly interested in the clipping you sent me. I am delighted that you like my interview. I cannot say how I enjoyed meeting you, and indeed, our whole trip. I am now receiving numerous invitations to go West at different times. I shall consult you before accepting any. It hardly seems necessary to go out this summer or fall again. Does it to you?

Again heartily thanking you, I am,

Faithfully yours,

THEODORE ROOSEVELT.

Light Where You Want It

Night multiplies motoring troubles. A tire change or breakdown in the dark is the most disheartening thing in the world—unless you have a Webster Magnet Light. Then you have light where you want it, when you want it.

Just push the plug of the Webster Magnet Light into any lamp socket about the car, touch the electro-magnet base of this handy little trouble light to any convenient steel or iron surface (paint or enamel doesn't impair its efficiency) and you're all set. The Webster Magnet Light ***"sticks where stuck"*** and stays on the job as long as it is needed. Twelve feet of cord enables you to reach any part of the car.

A nickel-plated reflector directs light where needed, keeps glare out of your eyes and protects the bulb from damage when tucked away in the side pocket of the car.

If your dealer cannot supply you, send check or money-order for $2.50 direct to address below. Specify make and model of your car.

WEBSTER ELECTRIC COMPANY
RACINE WISCONSIN U.S.A.

STATE OF NEW YORK
EXECUTIVE CHAMBER
ALBANY

At OYSTER BAY, N. Y., Aug. 7, 1899.

My dear Mr. Kohlsaat: I write you for two bits of advice.

1. The Minnesota League of Republican Clubs wants me to come out there on November 1. I do not feel much like going at this time. I do not see that the good that I could do would counterbalance the strain and effort, and think I had better keep my Western trip for some future time. What do you think?

2. How about trusts? I know this is a very large question, but more and more it seems to me that there will be a good deal of importance to the trust matter in the next campaign and I want to consult with men whom I trust as to what line of policy should be pursued. During the last few months I have been growing exceedingly alarmed at the growth of popular unrest and popular distrust on this question. It is largely aimless and baseless, but there is a very unpleasant side to this overrun trust development and what I fear is if we do not have some consistent policy to advocate, then the multitudes will follow the crank who advocates an absurd policy, but who does advocate something. Have you thought enough about the matter to say whether any legislation, and if so, what, should be undertaken? Or, whether there is any other remedy that can be wisely applied.

Faithfully yours,
THEODORE ROOSEVELT.

TELEGRAM

OYSTER BAY, Aug. 11, 1899.

ill he be proud of you when he grows up?

HAT little boy of yours—that little boy who believes in you with all his heart—who sits so still as you read to him at night and who calls u "Daddy" in a way that thrills you to your very ul—will he be proud of you when he grows up?

Why, you'd give your right arm for that boy. you hold him in your arms—as he snuggles close that irresistible way that youngsters have—you ow that there is nothing you would not do to make happy.

oday, in his childish eyes, you are the greatest ddy of them all. Don't let him lose that regard he years go by and understanding comes.

ive—ten—fifteen years from now, will he be ud to introduce you as "my father" when the ows come to the house? Will you be able to buy the things you want him to have—to provide him the education you missed as a boy?

he answer depends on yourself. If you are not ing ahead in your work, it is because you lack thing that employers everywhere are searching *-training!*—the ability to do some one thing

aybe you got a bad start.

ns of thousands of young men enter business year without the slightest training for the work are to do. Most of them take the first position comes their way, believing that if they just along they will, in some mysterious way, become ssful.

ou can't do that any more than you can hang out shingle without any previous training and suc- as a doctor. These days you've got to study *lifferent* branches of business just as thoroughly u would study medicine, or law, or engineering.

r the problems of business are just as complex— ewards as large *(or larger!)* for the men who fy as specialists in some branch or branches of nercial work.

ER all, there are very few geniuses. Remem- er, the great business men of today were not s great. At 20, 25 and 30 most of them were most ordinary occupations.

n N. Willys was a laundryman. Frank A. erlip, "the most aggressive financier in Amer- was a machinist. Thomas E. Wilson, of Wilson , was a railway clerk. T. Coleman duPont was l miner. John H. Patterson, who founded the National Cash Register Co., was a toll collector. Charles M. Schwab was a grocery clerk.

All of these men were born poor. Many of them had greater handicaps than you will ever know.

But sooner or later every one of them woke to the fact that in himself—and in himself alone—lay the power to do the thing he wanted to do and to be the man he wanted to be.

And that same realization must come sooner or later to you. You can, if you will, know the joy of getting ahead in business and in life. All you need is the will to do and the decision to start now.

YOU need not worry about the method. For there is a simple, practical plan that more than two million have proved successful in the last 30 years. It is to let the International Correspondence Schools help you. There is no doubt, no question about your ability to prepare yourself for promotion and more money—for the position you want in the work you like best.

Every mail brings letters from students of the International Correspondence Schools telling of advancement and increased salaries won through spare-time study.

These advancements are not only in the technical subjects, such as Electrical, Mechanical and Civil Engineering, or Architecture, Chemistry, etc., but also in Salesmanship, Business Management, Advertising, Accounting, Traffic Management, etc.

One investigation of the incomes of a number of I. C. S. students shows some with incomes of $50,000 a year; others earning $25,000; still more with incomes of $10,000 a year and better; and hundreds earning $5,000 a year. Still another investigation of nearly 1,000 I. C. S. students shows an average salary increase of 350% over what they were earning at the time they enrolled.

The success of the I. C. S. has been due not only to its distinctive, individual method of instruction, but also to the high business and professional character of the men who have assisted in the preparation of the courses. Among these men are:

J. Lee Nicholson, C.P.A., First President of the National Association of Cost Accountants; Edgar P. Trask, Assistant Naval Architect, The William Cramp & Sons Shipbuilding Co.; Charles J. Nasmyth, F.A.A., C.P.A.; Dr. Owen L. Shinn, Professor of Chemistry, University of Pennsylvania; Stanley Rhoades, Telephone and Telegraph Engineer, New York Central Railroad; J. H. King, Research Engineer, Babcock & Wilcox Company, New York; Bradley Stoughton, Mining Engineer and formerly Secretary of the American Institute of Mining Engineers; S. G. Whitehead, Special Traffic Agent of the American Express Company; A. Hamilton Church, the well-known industrial engineer; Edward P. Moxey, Jr., A.M., C.P.A., Professor of Accounting at the University of Pennsylvania; Nelson H. Prouty, F.A.A., C.P.A., Fellow Central Association of Accountants, London; and Dr. Clarence Stratton, Director of English, Cleveland Public Schools.

WHATEVER the course, if it is an I. C. S. course, you can be sure it represents the best thought of men who are leaders in that particular field and is drawn from their practical experience.

Why not at least find out what the I. C. S. can do for you? It takes but a moment to tear out the coupon printed below, mark the work of your choice and mail. There's no obligation and not a penny of cost. Yet that seemingly simple little act may be the means of changing your whole life.

Today—not Tomorrow—is the day to take that first step forward.

What could you do with a hog?

What if somebody gave you a live hog?

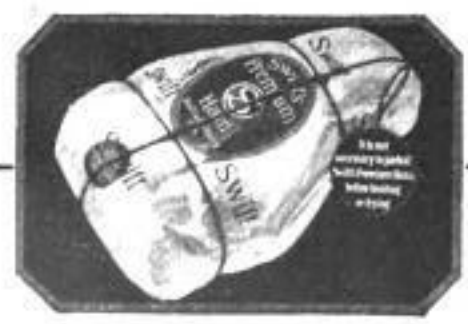
What could you do with it? What value would it have for you?

But when it appears as pork chops, or "Premium" Ham, or "Premium" Bacon, it's a different matter.

It is worth something to you then; you can use and enjoy it in that shape.

This is just a little illustration of what Swift & Company means to all of us.

This is how it serves, by turning live hogs into meats that you want, and that are good for you; making them valuable to *you*, and to the men that raise them and want them converted into meat.



Swift & Company buys hogs daily at all large packing centers; dresses them under conditions of scrupulous cleanliness and Government inspection; cures and smokes suitable parts of them; keeps all these meat products clean and wholesome by careful handling under refrigeration, and distributes them by a thorough system of car routes and branch houses to cities, towns, and villages throughout the country.

Not only that, but Swift & Company treats the world to two of its greatest delicacies—Swift's Premium Ham and Premium Bacon—by careful selection from choicest animals and by advanced methods in curing and smoking.

Swift & Company, U. S. A.

Founded 1868

A nation-wide organization owned by more than 45,000 shareholders

America's Blue Ribbon Sport Car

The HAYNES 75 SPEEDSTER

A blue ribbon attached to the steering wheel of the Haynes 75 Speedster identifies the Speedster as America's blue ribbon sport car that is capable of attaining seventy-five miles an hour. The blue ribbon is fastened to the Haynes 75 Speedster when it is shipped from the factory, and signifies that the car has been thoroughly inspected and tested. It certifies, too, that the Haynes 75 Speedster is similar in every respect to the Speedster which was tested by Howard Wilcox in his famous run.

"On Thursday, March 9, 1922, I drove a strictly stock Haynes 75 Speedster over the Indianapolis Motor Speedway course at Indianapolis, Indiana. I attained speeds ranging from seventy-four (74) to eighty (80) miles an hour. The speeds were clocked officially by the Indianapolis Motor Speedway electric timing machine. In my opinion, the Haynes-built 75 six cylinder engine is a remarkable stock motor. It has the necessary speed, stamina and get-away to meet the requirements of the most exacting motorist, and at topmost speed it showed a decided lack of motor vibration. It is the sturdiest and fastest stock sport car I have ever driven to date."

(Signed) "HOWDY" WILCOX

Howard Wilcox, internationally known racing driver, and winner of the Indianapolis Motor Speedway International 500-mile classic. Mr. Wilcox has driven many leading racing cars of foreign manufacture, and several of the finest American stock cars, in tests and races.

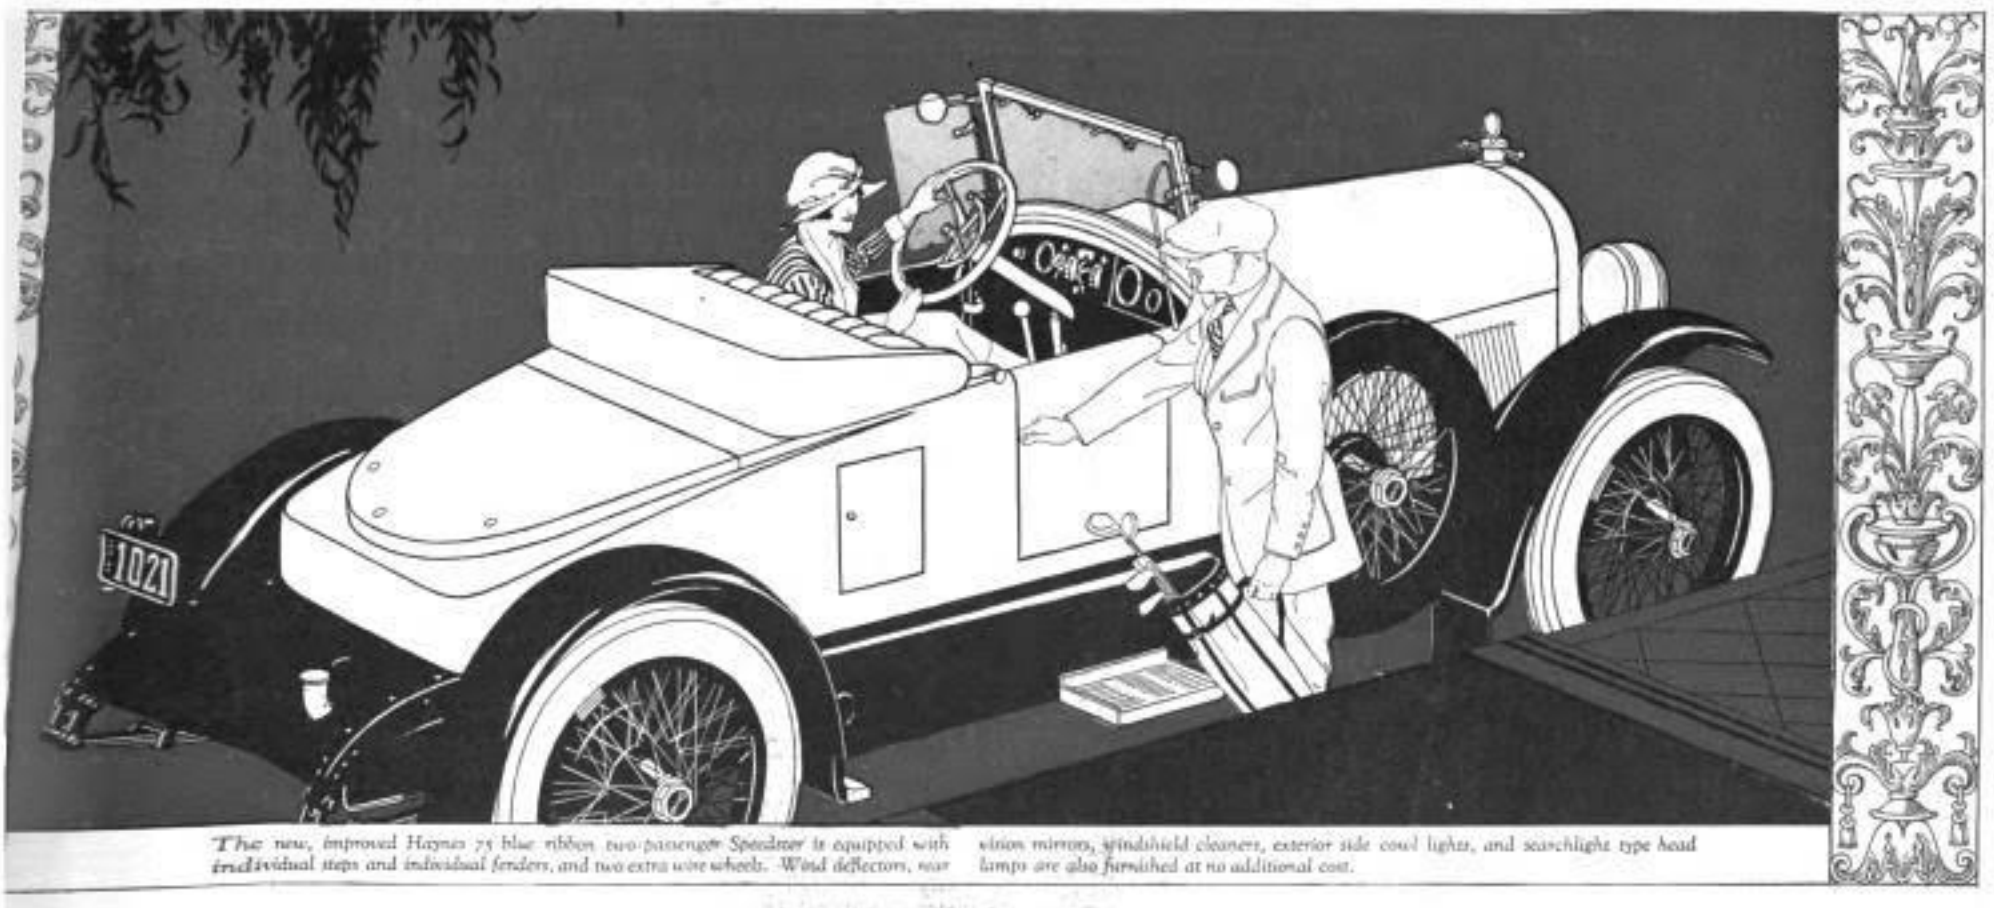
POWER, BALANCE, SPEED—*a Mile in 48 Seconds*

'hen Howard Wilcox established the rformance record for the strictly stock ynes 75 Speedster, he demonstrated the rth of the high quality of steels and ier materials used in the manufacture of s fast sport car.

e mechanical reasons which enabled . Wilcox to attain an average speed of enty-five miles an hour, are the same ich give any owner of a Haynes 75 edster dominance on the road.

th a car of such phenomenal power and ina, only a very small portion of its city is employed in ordinary driving. s means that the Haynes 75 blue ribbon Speedster will give more satisfactory service for a greater number of years than the car whose maximum power is required for every day's use.

The liberal use of tested steels and drop forgings makes this car safe at the high speeds the Haynes 75 blue ribbon Speedster will naturally be driven by its enthusiastic owner. The blue ribbon award for speed, stamina, power, reliability and endurance, to the Haynes 75 Speedster, is a fitting tribute to the famous Haynes engineers who alone have the distinction and honor of designing and perfecting automobiles for more than a quarter of a century.



The Haynes 75 blue ribbon Speedster is a strikingly beautiful car in appearance; its owners are deservedly proud of it.

In its class it may unhesitatingly be said to be the greatest value possible. See it at the nearest Haynes dealer's showroom and place your order at once, so that you may secure delivery in plenty of time to enjoy the Haynes 75 blue ribbon Speedster through the season. Descriptive literature will be mailed promptly on request.

$2395
F. O. B. FACTORY

THE HAYNES AUTOMOBILE COMPANY, *Kokomo, Indiana* · EXPORT OFFICE: 1715 Broadway, New York City, U. S. A.

© 1922, by T. H. A. Co.

The new, improved Haynes 75 blue ribbon two-passenger Speedster is equipped with individual steps and individual fenders, and two extra wire wheels. Wind deflectors, rear vision mirrors, windshield cleaners, exterior side cowl lights, and searchlight type head lamps are also furnished at no additional cost.

Try This Shortcake

2 cups GOLD MEDAL FLOUR.
½ teaspoon salt.
2 tablespoons sugar.
4 teaspoons baking powder.
¼ cup shortening.
1 cup milk.
1 quart raspberries.
Sugar to sweeten berries.

Sift dry ingredients. Cut in shortening and add liquid. Spread evenly with spoon in greased cake tin. Bake in hot oven about 20 minutes. Sweeten berries to taste. Split cake. Use berries with juice generously between halves and on top. Sprinkle with powdered sugar or top with whipped cream. Serve hot.

RASPBERRY Shortcake! Can't you almost taste it now – hundreds of luscious, sun-ripe berries, half crushed between layers of tender, rich, golden crusted cake – wine-red juice trickling all over – puffs of whipped cream on top.

Have some for dinner tonight! It's so easy to make with the accompanying recipe – and oh, so good; for you know GOLD MEDAL FLOUR makes just as perfect shortcakes as it does bread, biscuits, doughnuts, cakes and pastries.

For other recipes and baking information, write the Educational Department, Washburn-Crosby Company, Minneapolis, Minnesota.

GOLD MEDAL FLOUR *'Too Good to be Cheap'*
